This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

PREFACE.

THIS volume of the ANNUAL CYCLOPÆDIA, for the year 1869, presents the United States in a condition of peaceful development. The armies have entirely disappeared, the wounds of the recent conflict are healing, the angry passions are calmed, legitimate authority exerts its powerful sway, institutions are moulded to the new order of affairs, industry is everywhere active, improvements of every conceivable kind are projected, and a buoyant spirit inspires the nation with vast anticipations of future prosperity. A change in the persons who administered the Federal Government took place during the year, which secured unanimity and coöperation in all departments. Immediate steps were taken to hasten the work of reconstruction in the three States then unrepresented at Washington. Conventions were held, constitutions drafted and discussed, amended and submitted to the people, and adopted; State officers were chosen, and the entire organization of local governments completed. The progress of the other reconstructed States, under the joint rule of the white and colored man, as a citizen, a legislator, and a judicial officer, the contests of factions, the disturbances of citizens, the relaxation of restraints upon those active in the late hostilities, and the recuperative power of the people, socially and financially, are herein presented. The proposition to throw open the ballot of the country to every citizen, without distinction of race, color, or previous condition; the debates in Congress upon the measure, the arguments in its favor, and the objections against it; the numerous aspects of the question presented and discussed, with the final action of that body and the formal submission of the question to the Legislatures of the States, are also contained in these pages.

The details of the internal affairs of the United States comprise the revenue and expenditures of the Government, the measures taken to reduce the public debt, the modifications of its currency, and the discussions relative to the same; its fluctuations, the changes in the system of taxation to promote the relief of the people, with its effects upon their industrial interests and prosperity; the banking system, with its expansions and contractions; the fruits of agriculture, and the spread of internal trade and commerce; the proceedings in the Southern States to establish securely their social affairs; the various political conventions

of the year, both national and State; the results of elections; the acts of State Legislatures; the rapid improvement of educational and charitable institutions under the care of the State governments; the surprising extension of the facilities of transportation, especially of railroads; the resources of the several States, and all those facts which manifest their rapid progress.

In Europe, the progress of the peaceful reconstruction of the Government of France, under the control of Napoleon, has awakened unusual interest. The improvements in Turkey and the unsettled relations with Egypt; the movements in Spain, under the conduct of a provisional government, to inaugurate popular institutions; the modifications in the relations existing between England and Ireland; the unsettled state of affairs in Italy, together with other events of less importance, and the movements among the nations of Eastern Asia for a more free and friendly intercourse with the civilized world, are very fully narrated in these pages.

The progress of mechanical industry was displayed by the completion of the Pacific Railroad, and the opening for navigation of the Suez Canal, besides many other works less extensive and important, which are herein noticed.

The diplomatic relations of the Federal Government were of a most friendly character during the year, and the discussions or efforts to arrange every vexed question were, by common consent, as it were, laid aside. Negotiations for authority to construct a canal across the Isthmus of Darien, and for the acquisition of San Domingo, were successfully made, and are stated in these pages.

The advance in the various branches of Astronomical, Chemical, and other sciences, with new applications to useful purposes, are extensively described.

Geographical discoveries have been actively pushed forward in various quarters of the globe, with interesting results.

The record of Literature and Literary Progress is as extensive as during any previous year. The titles of all the more important works have been presented, with some remarks on the nature of their contents.

The history of the religious denominations of the country, with an account of their conventions, plans of union, branches, membership, views on public affairs and progress of opinions, are presented from official sources. The preliminary proceedings and opening of the Œcumenical Council in Rome are also fully narrated.

A brief tribute has been given to the memory of deceased persons of note in every department of society.

All important documents, messages, orders, treaties, and letters from official persons, have been inserted entire.

THE

ANNUAL CYCLOPÆDIA.

A

ABYSSINIA (Arabic, *Hâbesh*), an empire in Eastern Africa, consists of the three former kingdoms of Amhara, Shoa, and Tigré. It has an area estimated at 158,392 square miles, and a population of from three to four millions. The inhabitants are mostly Ethiopian Christians, but there are many Mohammedans in the towns, the most important of which are the following: Adoa, with a population variously estimated at from 3,500 to 10,000 inhabitants; Aliya Amba, 2,500; Aouzienne (Tigré), 2,000; Dixan (Sarae), 2,000; Gondar, 5,000 to 12,000; Methemmeh, 1,200 to 5,000; Mota (Godjam), 3,000; Tchelenkot (Tigré), 3,000; Kurata has become the most important town since the destruction of Gondar.* The soil of Abyssinia is exceedingly fertile; but the population is subject to exorbitant taxes and continued plundering, and thereby reduced to wretched poverty.

The great interest which the civilized world has for several years taken in Abyssinia has nearly come to an end with the close of the English expedition. The Emperor Theodore II., whose life and tragic death have been narrated in the preceding volumes of the ANNUAL CYCLOPÆDIA, was, by his superior statesmanship and barbaric energy, on the point of consolidating the incongruous tribes which inhabit that country into one, of creating an Abyssinian nationality, and of securing for his country a recognized rank among the nations of the earth. No more conclusive proof of the exceptional ability of Theodore could be given, than a comparison of his administration with the anarchy into which Abyssinia is now relapsing for want of a man who can follow in his footsteps. In fact, the whole history of Abyssinia from December, 1868, to October, 1869, the date of our latest advices, has been an uninterrupted civil war. Three princes are aspiring to the inheritance of Theodore. Kassai, Prince of Tigré, who last year concluded friendship with Sir Robert Napier, keeps at his court at Adoa two German missionaries, and an English officer, Colonel Kirkham, who renders him important services as instructor of his army; and he intends, as soon as his troops shall have been well drilled, to begin a campaign against Gobazie, the ruler of Amhara, and Menilek, the Prince of Shoa, the former of whom last year caused himself to be proclaimed Emperor of Ethiopia. The occasion for this imminent war has been furnished by the expected arrival of a new Abuna, or head of the Abyssinian Church, who, as usual, is sent by the Coptic Patriarch of Cairo, and for the reception of whom Kassai has sent an embassy to Egypt with costly presents. Gobazie disputes with his neighbor the possession of the Abuna, who generally resides in Amhara; for it is the privilege of the Abuna to crown the Emperor of Ethiopia.

Prince Kassai, one of the three competitors for the throne, has abolished the slave-trade, and the export and import duties. His chiefs have been ordered to assist foreign merchants. Kassai has also established a market for foreign goods at Adoa, and offers large tracts of uncultivated land for the culture of cotton, coffee, indigo, and sugar.

The people of Abyssinia are so well aware of the great loss which their country has suffered by the death of Theodore, that they have begun to venerate him as a saint. The German missionaries in Abyssinia report that thousands of pilgrims visit his grave, where a number of miracles are said to have occurred. A greater influence, however, upon the destinies of Abyssinia, than by the miracles of St. Theodore, is likely to be exercised by the progress which neighboring Egypt cannot fail to make in consequence of the opening of the Isthmus of Suez.

There still are in Abyssinia a few distinguished Europeans who hold a high position. A German naturalist, Wilhelm Schimper, who

* For a fuller account of the topography of the country, see AMERICAN ANNUAL CYCLOPÆDIA for 1868.

had left for the East in 1834, settled, after several years' travelling, in Abyssinia, married a native woman, and won the confidence of the Prince Ubié, of Tigré, to such a degree, as to be intrusted by him with the administration of the district of Antilecho. Another German, Eduard Zander, went to Abyssinia in 1847, and obtained likewise an influential position with Ubié. After the decisive battle, in 1855, Zander entered the service with Theodore, was appointed commander of the fortified island of Gorgora in the Lake Tsana, and rose to the highest military rank. He still was with Theodore in February, 1868, but has not been heard from since. Dr. Munzinger, a native of Switzerland, has been for many years English consul at Massowah, near the Abyssinian frontier, where he still resides. He is also married to a native woman, and author of some of the best works on the country and its languages. The Lutheran Church of Sweden, a few years ago, established a mission in Abyssinia, which remained undisturbed by Theodore, and new German missionaries were sent to the country in 1868. The continuance of civil war made, however, the life of foreigners in Abyssynia very insecure. An Englishman, Mr. Powell, his wife, his son, a Swedish missionary, Mr. Elfbold, and several attendants, were, in April, 1869, murdered by the natives. A brother of Mr. Powell, and another relative, Mr. Jenkins, succeeded, subsequently, in tracing the mutilated bones, which, by certain infallible proofs —such as peculiar stoppages of teeth—they were able to identify as the remains of their murdered relatives. Moreover, they avenged the murder by marching with an armed force, placed at their disposal by Prince Kassai, of Tigré, against the Shangalla tribe, the perpetrators of the cruel deed. The Shangallas, however, were informed of the expedition before the followers of Mr. Powell were ready for the attack, and the greater portion escaped free through the jungle, which in this neighborhood is very high. Eight Shangalla savages were killed in the affray, one of whom wore the murdered Mr. Powell's coat, and had, it subsequently transpired, been the chief instigator of the crime. Five villages, numbering fifty-two houses, in which two guns and other relics were found, were ignited and razed to the ground. Fourteen hundred head of cattle were captured, and, in short, every thing was done to show the Shangalla tribe the punishment they had laid themselves open to.

In England, the interest in the Abyssinian question was somewhat kept up by the discovery that the actual cost of the war exceeded all previous calculation. The work already mentioned by Captain Hozier, who was Assistant Military Secretary to Lord Napier, gives on this point some new information, which supplements our previous accounts of the English expedition. If Captain Hozier's statements can be relied upon, in the long records of English blunderings in former wars, nothing can be found to surpass the absurdity of the preparations for the Abyssinian war made in Bombay. The following is a specimen of the complaints of the author: Every thing depended on land transport, and this, according to Captain Hozier, was intentionally crippled. The early difficulties of the expedition were traceable to defective organization, which Sir Robert Napier had to remodel after he took the field. The first of the series of posts by which the British line of march was secured was Senafe, about seven thousand feet above the sea-level, and sixty-five miles from Zulla. The road between these two places was made by the army, and it was liable to be interrupted in the rainy season, so that it was absolutely necessary to accumulate supplies in Senafe sufficient to feed the army in the event of communications being temporarily severed. The only food that could be obtained in the country was meat, and, in order to maintain the health of the troops, vegetables, tea, sugar, and spirits, had to be carried on every day's march. The supplies of these articles required by an army of even moderate dimensions quickly swell up to an enormous amount, and demand a large quantity of carriage. In this requisite the force was still deficient at the end of January, nearly a month after the commander-in-chief and a large part of his army had landed at Zulla. Sufficient time had not yet elapsed to repair an originally defective organization, and the ravages of epidemic among the animals. At Adigerat, in February, an alteration was made in the general organization of the Transport Corps. It was separated into two divisions. One, called the lowland division, carried supplies from Zulla to Adigerat. The other, called the highland division, worked between Adigerat and the army advancing on Magdala. The highland train consisted of four divisions, of two thousand mules each, which were subdivided into troops of one hundred and fifty mules. Its organization was entirely military, and it worked under the department of the quartermaster-general. The two Punjab mule-trains were the nucleus of the highland trains. The muleteers were armed, and under strict discipline, and, consequently, the highland train was independent of the regular army for escorts or convoys, or for guards for grass-cutters. In fact, this train had now become what Sir Robert Napier had wished to have originally. The cold nights of the highland region rendered blankets and warm clothing necessary, and thus increased the baggage necessarily carried by the troops; but, on the other hand, the followers, which are indispensable in India, were left behind at Zulla as an encumbrance.

The English expedition, which was accompanied by a large number of able scholars, has, as was to be expected, called forth many able works on Abyssinia, which have considerably added to our knowledge of the country. Among them we mention: Graham, "Glimpses of Abyssinia" (London, 1867);

Dufton, "Narrative of a Journey through Abyssinia;" the works of Hotton, Chandler, Plowden, Peacock, Abbadie, Lejean, Dr. H. Blanc's "Narrative of Captivity in Abyssinia," etc. (London, 1868); Markham, "A History of the Abyssinian Expedition" (London, 1869. Mr. Markham accompanied the expedition as official geographer); Prideau, "A Journey through the Soudan and Western Abyssinia" (London, 1869); Stern, "The Captive Missionary" (London, 1869); Hozier, "The British Expedition to Abyssinia" (London, 1869).

The following works of German missionaries and *savants* on Abyssinia are the most important: Heuglin's "Reise nach Abyssinien," in 1861–'62 (Jena, 1868); also his "Reise zu Kaiser Theodorus" (1862); R. Andree's "Abyssinia" (Leipsic, 1868); Th. Waldmeier (pilgrim-missionary), "Erlebnisse in Abyssinien in 1858–'68," prefaced by Dr. L. Krapf (Basle, 1869); T. M. Flad, "Zwölf Jahre in Abyssinien, oder Geschichte des Königs Theodor's II. und der Mission unter seiner Regierung" (Basle, 1869); Rohlf's "Im Auftrage sr. Maj. des Königs von Preussen mit dem Englischen Expeditions-corps in Abyssinien" (Bremen, 1869); Count of Seckendorff, "Meine Erlebnisse mit dem Englischen Expeditions-corps in Abyssinien" (Potsdam, 1869); Lieutenant F. Stumm, under the same title (Frankfort, 1868).

An interesting work on the Abyssinian Jews (Falasha) has been published by the German missionary, Flad, "Kurze Schilderung der bisher fast ganz unbekannten Abessinischen Juden" (Basle, 1869). The author, by a long sojourn among the Falashas, was fully competent to give trustworthy information on the life, the manners, and customs, of that interesting tribe. The chief subjects of the book are their origin, country, physical constitution, food, and occupation, religious service, sacrifices, monks, nuns, priests, prophets, magicians, festivals, purification-laws, books, betrothals, wedding, marriage, death, and burial. The Falashas, according to Flad, inhabit the following fourteen provinces: Semia, Vogera, Armatshoho, Valkait, Tchelga, Dembea, Daguaa, Tankel, Atafa, Kunsula, Wandigio, Atschafer, Agau-meder, and Quara. Since 1862, a few hundred families have been living in Shire, and, after the plundering of Dembea, in 1863, many families have emigrated to Begemder, Lasta, and Bellessa. As to their number, only an estimate can be given; according to Flad, they may amount to two hundred thousand souls.

AFGHANISTAN, the Persian name of the land of the Afghans. This country is acquiring a great importance in consequence of its connection with the approaching solution of the Central Asian question (*see* ASIA). It has an area estimated at 225,000 English square miles; it rises toward the northeast to more than 6,000 feet above the sea, and sinks to 1,600 feet toward the southwest. It is bounded on the north by the Hindoo Koosh, the Kohi-Baba, and the Ghoor mountain-ranges. On the east the desolate range of Takht-i-Suleiman separates Afghanistan from India. The river Cabool flows through the eastern mountains, and empties into the Indus. Owing to the diversified elevation of the land, its climatic character offers striking contrasts; the protected valleys producing various fruits, tobacco, and cotton, while snow-storms rage in the northern highlands. Bears, wolves, and foxes, are found, besides lions, tigers, and camels. The mountains seem to abound in valuable minerals and metals, such as iron, lead, gold, and sulphur. The number of inhabitants is variously estimated at from 5,000,000 to 9,000,000. The Afghans belong to the Iranic race, and are divided into an eastern and a western group. Of a vigorous and proud temper, they appear disinclined to amalgamation, though they have been, of late, politically united. War is their element.

The present ruler of Afghanistan, Shere Ali, is the son of the powerful and energetic Dost Mohammed, the ally of England, and the conqueror of Herat, the key to India. Shere Ali succeeded him in 1863. He concluded peace with Persia, but Afghanistan soon fell again a prey to discord and civil war, which ended in January, 1869, after Shere Ali had completely routed his adversaries.

Afghanistan is not so much threatened by the savage tribes of Central Asia as by England and Russia, both of which desire the possession of Herat. Shere Ali owes his success in part to English subsidies in money and arms, for the fall of Samarcand, and the Russian advance toward the Oxus, made it an imperative necessity for England to acquire a trustworthy ally and friend at the gates of India. The grand reception of the Afghan ruler in British India, and his conference with Lord Mayo at Umballa, in March, 1869, created a great sensation in Persia and Russia. England recognized him formally as the sovereign of Afghanistan. In order to strengthen his power in the interior, Shere Ali introduced various changes, the most important of which is the reduction of his former allies to the status of subjects. It would seem, however, as if the plans of Russia had a greater chance of success. The conquests of the generals Kaufmann and Abramow have changed the Emir of Bokhara from a bitter enemy to a devoted vassal to Russia, and opened the way to the very gates of Afghanistan. The relations of Russia to Persia secure to her the influence of Nasredin-Shah, who recently concluded a kind of compromise with Shere Ali by which a portion of Afghan Sûstan has been ceded to the Persians, who erected, immediately, some forts on the eastern shore of the Lake Zare, while the Russians are building roads to Budukshan and Balkh. Iskender-Khan, the legitimate heir of Herat, has been taken to St. Petersburg by General Kaufmann, and entered the Russian army, in the hope of reobtaining his paternal inheritance by Russian assistance.

The literature on the history and geography

of Afghanistan is not very copious. Among the best works are: Raye, "History of the War in Afghanistan," London, 1861; Bellew, "Journal of a Political Mission to Afghanistan," London, 1862; the reports of travels by Conolly, Burnes, Masson, Ferrier, Bellew, Vambéry, etc.

The Afghan language (Pukhtu) belongs to the Iranic group of the Indo-Germanic languages; it is mixed with Persian, Arabic, Syriac, and Chaldean elements, and written in Persian characters. It has an eastern and a western dialect.

Recent works on Afghan language and literature are scarce; among them are, Raverty, "Grammar of the Pukhtu," "Dictionary of the Pukhtu," and the reader "Gulshan-i-rôh" (Selections from the Poetry of the Afghans), together, 3 vols., London, 1860–'61. Müller, "Die Conjugation des Afghan. Verbums" (Vienna, 1867). There exists, besides, a translation of the New Testament and the historical books of the Old into the Pukhtu, made by T. Lõwenthal, and edited by the Serampore Bible Society in India.

AFRICA. The year 1869 will remain in the history of Africa of prominent importance. Not only for many years, but for many centuries, no event has occurred which could stand any comparison with the opening of the Suez Canal, in November, 1869. It was one of the great sensations of the year, and not of late has an equal solemnity on African soil been witnessed. The attendance, at the festivities, of the Empress of France, the Emperor of Austria, the Crown-prince of Prussia, and the representatives of the chief newspapers of Europe and America, gave a brilliant and weighty expression to the belief of the whole Christian world that the opening of the Suez Canal signifies an entire revolution in the relation of this part of Africa to the family of the civilized nations. It is now the common expectation that a revolution of trade and commerce must commence; that Egypt must rise from its past lethargy; that it cannot much longer remain a vassal of Turkey, but must become the seat of a new and great empire, with an extensive commerce, on the one hand, with Turkey, Greece, Italy, France, Spain, Portugal, Great Britain, and the remainder of Europe, and, on the other, with Hindostan, Persia, the western and southern coast of Asia, and the eastern coast of Africa. The annual progress of Egypt will henceforth command in the annals of contemporaneous history a much more prominent place, and its natural influence upon its weak neighbors cannot fail to lead, ere long, to considerable changes in the map of Africa. From a religious point of view, the transformation which Egypt, under the influence of European ideas, is sure to undergo, and the effect this may have upon the Mohammedan world at large, will be a problem well worthy to be watched. In Egypt as well as in Turkey, both the government and the people anticipate that a struggle for the independence of Egypt is near at hand. Throughout the year 1869 the Government of Egypt was involved in an open diplomatic war with the Sultan, and several times the outbreak of hostilities appeared imminent. At the close of the year the submission of the Khedive of Egypt to the ultimatum of Turkey was announced. (*See* EGYPT.)

The celebrated constructor of the Suez Canal, Ferdinand de Lesseps, is meditating another project, equally grand in its conception, and which, if carried out, cannot fail to have, likewise, a great influence on the future destinies of the African Continent—the conversion of the Desert of Sahara into a great inland sea. The plan is seriously studied and prepared, but no steps to its realization have yet been taken.

Abyssinia has lost again the transient importance which the English expedition imparted to it. Civil war again reigns supreme, and there appears to be no immediate prospect of the establishment of a strong and consolidated Abyssinian empire. The effects of the war were, however, still visible during the year in the production of a large number of able works, by English, German, and other scholars, which have greatly improved our knowledge of the people and the country, and facilitated the way for the establishment of a closer intercourse between Abyssinia and the civilized world. (For some interesting details of these literary researches, *see* ABYSSINIA.)

An event which cannot fail to have a considerable influence upon the progress of civilization in Africa is, the conversion to Christianity of the Queen of Madagascar. For about half a century the rulers of this important island have been vacillating between Christianity and paganism, between civilization and barbaric isolation. Now the victory of Christianity and civilization seems to have been forever decided. Paganism had long been undermined, and was only upheld by the influence of the court. Now there is a rush of the civil officers of all classes, and of the leading men of the island, to solicit admission into the Christian Church, and the utter collapse of paganism is drawing near with remarkable celerity. Madagascar, with its five million inhabitants, will be the largest among the independent Christian states, the others being Abyssinia, Liberia, the Orange Free State, and the Transvaal Republic. (*See* MADAGASCAR.)

In September the town of Bonny, on the coast of Western Africa, was almost wholly destroyed in a fight, lasting thirty-six hours, between two rival chiefs, Oko Jumbo and Ja Ja. These native conflicts are becoming much more sanguinary than formerly, because the parties are supplying themselves largely from the Europeans with guns, rifles, and munitions of war. Under the treaty between Great Britain and the king and chiefs of Bonny, they undertake not to go to war so long as they are indebted to the merchants trading for goods, under the penalty of a fine of two hundred puncheons of

palm-oil (worth about six thousand pounds), besides all damages and expenses. This is the only safeguard white men have against a disturbance like the present becoming most disastrous.

The population of Africa is estimated, by the best authorities, at about one hundred and eighty-eight millions. A real census of the population is only made in the European colonies, and even there it is, in most cases, based, not upon an actual count, but upon taxes and hearths. In the dependencies of Turkey nothing but estimates are made; only Egypt has taken a few censuses, but the method of taking them has inspired but little confidence in their accuracy. As to the interior, the vague statements of travellers are the only source of our information. This source has, of late, however, become much more abundant than in former years. If we do not know yet the actual number of the population, we already have a tolerably trustworthy picture of the density of the population in the different sections of the country. The densest population is to be found on the land-girdle encircling the Gulf of Guinea. The territory to the north of this girdle is but thinly settled, even Nubia, Kordofan, Taka, and Abyssinia, not excepted. In the countries of the Gallas, and the shores of the White Nile, the population is again more numerous; farther south, down to Sofala, the population again declines; Livingstone found it on the Zambesi small in comparison with what the country would be able to support. British Kaffraria has about twenty-two men to a square mile, but the southern extremity of Africa is, again, thinly peopled. Only on the Cunene we again find an increase in the density of the population, which from there increases steadily in Benguela, Angola, up to the equator.

AGRICULTURE. The necessity of issuing the ANNUAL CYCLOPÆDIA early in the year succeeding that whose date it bears, renders it impossible to obtain accurate and complete returns of the crops of the preceding year, agricultural statistics being always very slow of collection. We are compelled, therefore, in this, as in the last volume, to give the complete returns of the year before the last in a condensed form, which have just been published by the Agricultural Department, and then to make our estimates of the principal crops for 1869 from the data furnished by the monthly reports. This is the less to be regretted, because these monthly reports have now attained to such a measure of accuracy as to approximate with sufficient nearness to the official returns, to answer all practical purposes. The final returns of the principal crops for 1868, and the comparative crops of 1860 and 1867, were as follows:

CROPS.	1860.	1867.	1868.	Value of Crops of 1868.
Corn ..... bushels....	838,792,740	768,320,000	906,527,000	$569,512,460
Wheat ..... "	173,104,924	217,875,400	224,036,600	319,195,290
Rye ..... "	21,101,380	23,490,000	22,504,800	28,683,677
Oats ..... "	172,643,185	275,098,000	254,960,800	142,484,910
Barley ..... "	15,825,898	25,727,000	22,896,100	29,809,931
Buckwheat ..... "	17,571,818	21,359,000	19,863,700	20,814,315
Potatoes ..... "	111,148,867	67,783,000	106,090,000	84,150,040
Tobacco ..... pounds....	434,209,461	323,724,000	320,982,000	40,081,942
Hay ..... tons....	19,033,896	26,277,000	26,141,900	351,941,930
Cotton ..... bales of 400 pounds....	5,387,052	2,300,000	2,500,000	225,000,000
Wool ..... pounds....	60,264,913	112,000,000	104,000,000	51,500,000
Aggregate value of principal crops in 1868				$1,862,674,495

How much should be added for the crops of sugar (cane, sorghum, maple, and beet-root), honey, and wax, peas, beans, rice, hemp, flax, hops, sweet potatoes, beets, turnips, parsnips, squashes, melons, cucumbers, onions, silk, fruits of all kinds, and dairy products, is, of course, a matter of conjecture; but, basing our estimates on the census of 1860, with the known increase in many particulars, both in quantity and price, we are satisfied that $400,000,000 is not an over-estimate, which would give for agricultural products, aside from live-stock, or the meat and skins of slaughtered animals, $2,262,674,495 as the agricultural productions of the year 1868.

The following table shows the number, average price, and total value, of the domestic animals in the United States, in February, 1869, together with the number of cattle, sheep, and swine, in Great Britain and Ireland, in 1868:

LIVE-STOCK IN UNITED STATES, FEBRUARY, 1869.	Number.	Average Price.	Total Value.	Cattle, etc., in Great Britain and Ireland in 1868.
Horses	6,332,793	$84 16	$533,024,787	.....
Mules and Asses	921,662	106 74	98,386,359	.....
Milch Cows	9,247,714	39 11	361,752,676	3,625,137
Oxen and other Cattle	12,185,385	25 12	306,211,473	5,458,279
Sheep	37,724,279	2 17	82,139,979	35,607,812
Swine	23,316,476	6 26	146,188,755	3,189,167
Total value of live-stock in United States			$1,527,704,029	

We now proceed with our usual summary of the crops of 1869.

Wheat.—The crop was in most sections better than in 1868, and a large acreage was sown. Had the spring-wheat been equal to the winter-wheat, the crop would have been unprecedented; but floods in some sections injured the spring-wheat seriously, and the long wet season caused it to smut and to lodge. The average improvement on the previous year is 11 per cent., and some of the great wheat States do even better than this. The aggregate cannot vary greatly from 260,000,000 bushels.

The *Corn* crop was in some of the largest corn-growing States very much below that of 1868. A greater breadth was sown, and some of the new States and Territories raised larger quantities than ever before. We put this crop at 846,000,000 bushels.

Rye was on the average about six per cent. better than in 1868, and did not vary much from the crop of 1867. We estimate it at 23,850,000 bushels.

Oats were materially better, both in quantity and quality, than in 1868, averaging 16 per cent. advance in quantity, and a considerably greater weight. We estimate the crop at 295,750,000 bushels.

Barley is never a large crop, and its use for malting purposes is decreasing, from the substitution of cheap sugars. Still we have every year imported considerable quantities from Europe. The crop of 1869 was about 12 per cent. better than that of 1868, amounting to 25,640,000 bushels.

Buckwheat was worse than in 1868 by about 7½ per cent., and the crop did not probably exceed 18,400,000 bushels.

The yield of *Potatoes* was large, but the quality was not so good as the previous year. We estimate the crop at 114,600,000 bushels.

Tobacco fell off slightly from the high average of the previous year. The yield is estimated at 319,377,000 pounds.

The *Hay* crop has varied but little for three years past. It approximates very closely to that of 1867, being not less than 26,250,000 tons.

The *Cotton* crop was larger than in any year since 1860, amounting to not less than 2,700,000 commercial bales, of 466.8 lbs. average weight, or fully 3,000,000 bales of 400 lbs.

The *Root* crops generally were large—as were also the melons, squash, pumpkin, and cucumber crops—and of excellent quality.

Of *Fruits*, the small fruits, owing to the wet and cool season, were not as plentiful or of as good quality as usual. Grapes were abundant, and generally of fine quality. Peaches were very plentiful, but not quite as large as usual. Apples were not abundant, but of good quality. Pears were of fine size and flavor, and moderately plentiful. Of most other fruits there was a deficiency.

The *Hop* crop was not so large as the previous year, but of better quality, and commanded somewhat better prices.

Wool is still laboring under a considerable degree of depression, but there are indications of improvement. The failure of several heavy manufacturers of woollen goods, early in the year, and the very low price at which foreign wools were thrown upon the market, have contributed to increase the discouragement of the wool-growers, but these difficulties are now receding, and a considerable number of new woollen mills have been put in operation, especially on the Pacific coast. The price of wool in the later months of 1869 advanced slightly, but at the close of the year there was again a declension in price. The entire wool product of the year, including both the clip and pulled wool, did not probably exceed 100,000,000 pounds, of which nearly one-fifth was grown on the Pacific coast.

The *Wine* product of the year was very large, and every year increases it. The California vineyards produced nearly ten million gallons, aside from the large quantity of spurious wines which, we are sorry to say, are manufactured in San Francisco; and the vineyards on the Hudson River, on the shores of Seneca and Crooked Lakes, on Lake Erie, at Cincinnati and its vicinity, and in Missouri, have added not less than six million gallons more to the supply. A considerable amount of brandy is also distilled from these wines.

The production of flax and hemp has fallen off of late years. Flax is grown largely for the seed, but the greater part of the lint is wasted, because jute, a greatly inferior but easily manufactured fibre, can be imported more cheaply than the flax can be produced. Less than one-fourth of the quantity of hemp is now grown in Kentucky and Missouri which was produced there in 1860, because manilla and other Eastern fibres can be imported more cheaply than hemp can be raised.

The number of *Hogs* slaughtered for the pork-packing trade up to March 1, 1869, were about 2,400,000, against 2,781,180 the previous year, a falling off of 14 per cent., caused largely by the prevalence of hog-cholera, and perhaps influenced to a slight extent by the alarm in regard to the presence of trichinæ and the germs of tape-worm in pork.

We give below two tables: the first showing the number of acres devoted to each of the principal crops in the United States in 1867 and 1868 (the acreage for 1869 will not be made up for several months to come), and the space devoted to the same crops, or a part of them, in Great Britain and Ireland, together with the average yield per acre of each crop, and its average value per acre, in the United States; the second giving the average yield of farm products to the acre in each State in 1868, and the average value of all crops per acre in each State the same year. This last table will be an excellent guide to the comparative value of farming-lands in different States.

PRODUCTS	No. of Acres, 1867.	No. of Acres, 1868.	Average yield per Acre in United States.	Average value of farm products per acre in the United States.	Acreage in 1868, United Kingdom.	Average yield to Acre, 1868, United Kingdom.

The diseases among cattle and live-stock generally have not been as prevalent as in 1868. There has been, however, in the West a considerable amount of the Spanish, or, as Prof. Gamgee calls it, "splenic fever," and it seems to be traced to the Texas cattle. Just at the close of the year a disease, bearing resemblance to rinderpest, made its appearance in some of the Hudson River counties of New York, but has not as yet spread to any extent. Notice has been sent to our Government by some of our consuls in Europe of the existence there of a new disease of cattle, known as "the foot and mouth disease," contagious and debilitating, but not generally fatal, and precautions have been taken to prevent its introduction here. The "hog cholera" has greatly diminished in its prevalence, and severity, but still destroys a considerable number of swine. The treatment of the foot-rot

in sheep with the cresylic foot-dip, a cheap carbolic-acid soap, has proved effectual wherever it has been tried.

Considerable attention has been paid to the testing of new fibrous vegetables, not so much for the making of woven fabrics as for the supply of material for making paper, though both have been considered in the investigations which have taken place. The new demands for paper, not only for books and newspapers, but for collars, and cuffs, for stereotyping, for papier maché goods of all kinds, for boats, the walls of houses, for roofing and sheathing purposes, as a substitute for leather, etc., etc., have quite outrun the old supply of material for it, raised the price of rags so high as to make them too costly for the paper-maker's use, and compelled him to turn to other fibrous materials for the production of this indispensable article. Straw and husks answer a very tolerable purpose for binders' boards, and the coarser papers generally, but the paper made from them is too brittle and tender, and often too variable in color, for many purposes. The bamboo, the giant rush or cane of the Southern coast, the large *malva* or mallow of the Jersey swamps, basswood shavings, and a variety of other articles, have been used. All these will make paper, and most of them paper of good quality; but the practical question is, can they be furnished in sufficient quantity, and at a price sufficiently low, to make paper-making profitable? The English paper-makers have been using for some years past a fibrous grass, known as *esparto* grass, growing upon the barren heath-lands of Spain, and gathered by the poor there. There are two genera of this, the true and the bastard *Atocha*, known botanically as *Macrochloa tenacissima*, and *Lygeum spartum*. This material makes an excellent paper, and the English manufacturers consumed, in 1868, 95,000 tons of it. At first it was used in connection with rags, but after a time it was found to make better paper alone than with rags, and the process was materially simplified. The present duty on the *esparto* grass prohibits its importation here at such a price as would make it profitable; but an effort, which promises to be successful, has been made to encourage its growth on the waste and sandy lands of the sea-coast in the Southern States, which are now unimproved, but are well adapted to the crop. Meantime, attention has been attracted to a species of grass found abundantly in river-bottoms and marshy lands, especially in the Mississippi Valley. It is called marsh or cord grass, and, by the botanists, *Spartina cynosuroides*. It can be mowed in September or October, and brought to a market near at hand for about five dollars a ton. There are no joints in the stalk, and experts pronounce it a better fibre for paper than the *esparto*. A Mr. Woodruff, a paper-manufacturer of Quincy, Illinois, has used many hundred tons of it for making a fine quality of wrapping-paper, and has recently changed his mill into a print and book paper-mill, in which he purposes using this stock only. On the Pacific coast the manufacturers are beginning to utilize the *tule* rushes for the same purpose. Still more recently, the paper-makers of the Atlantic States have been making experiments to ascertain the practicability of using the okra-plant for paper-making. Its fibre is sufficiently strong to answer the purpose, and it is contended that it will yield such immense quantities to the acre, that it will prove a profitable crop to cultivate for paper pulp. For this purpose, as well as for the production of fibres for cordage and for bagging, it has been proposed to bring cargoes of the textile fibre (*Bromelia sylvestris*) from the Isthmus of Tehuantepec; or of some of the agaves, from Yucatan, Campeachy, or the Mexican coast. The fibrous portions of these may be easily extracted, and they cost little besides the transportation. From some of these sources, or those indicated in previous volumes of the AMERICAN ANNUAL CYCLOPÆDIA, it is probable that an ample supply of material for paper-manufacture will be obtained.

FISH-CULTURE has made great progress in most of the Eastern States within a few years past, and in every State on the Atlantic slope there are numerous ponds and hatching-houses for the rearing of brook and lake trout, salmon, whitefish, black bass, etc., while the rivers are fast becoming better stocked with the finny tribes. An effort is now making to introduce the system of oyster cultivation which has proved so successful and profitable in France. The whole business of oyster-planting on our coasts has been conducted in a careless, wasteful, hap-hazard way, which has involved a great loss of the valuable bivalves from overcrowding, silting over, and the needless destruction of millions of the *spat* or embryo oysters; and, though the oysters of the American coast are the finest in the world, a few more years of the reckless mismanagement of past years would enhance their value above the means of the common people. Oyster-breeding is a very simple and easily-acquired art, and the oyster is so prolific, two million ova being often found in a single female at the breeding-season, that there is no difficulty with ordinary care in obtaining a largely-remunerative crop. About three years are required to bring the oyster to perfection, but, by planting them in successive years, there can be always an ample crop each year after the first is ready for the market.

The culture of the beet for sugar, though not proving so successful as was expected, at Chatsworth, Illinois, owing to the lack of skilled workmen, or some other cause, has been taken up and prosecuted largely and with most admirable results, in Wisconsin, in California, where it bids fair to attain a great success, and become a leading article among the agricultural products of that fertile State, and in New Jer-

sey, where some of the light and sandy loams have proved well adapted to the production of a superior quality of the white sugar-beet. It will doubtless become in a few years one of our most valuable articles of produce. The methods of extracting, reducing, and clarifying the syrup, have been much cheapened and simplified within a year or two past, and there seems to be no good reason why beet-sugar should not be produced as cheaply as that from the cane. The rearing and feeding of silk-worms, and the sale of their eggs and cocoons, are becoming a very considerable business, and will hasten the period now fast approaching when the silk consumed in this country shall be wholly manufactured here. California is admirably adapted for silk culture, and is embarking in it extensively. She is already exporting very largely both of silk-worms' eggs and cocoons, and her cocoons command the highest prices of any in the world. The silk-worm is not affected with disease there, nor is it killed by the thunder-storms which prove so fatal in Europe.

The Agricultural Colleges and agricultural departments of previously-existing colleges, established under the agricultural land-grants of Congress, have not as yet achieved the success which was expected of them. This has resulted from several causes: there were, previously to the establishment of these institutions, no schools in this country in which a thorough training in many branches of agricultural science could be acquired, and the European agricultural schools and colleges were intended to supply intelligent agriculturists for a different climate, soil, and circumstances, and the sudden demand for so many agricultural professors could not readily be met by men competent for the work which they undertook. There has been also a great degree of ignorance on the part of many of the trustees of these institutions of what was required for an agricultural college. The model farms have been very far from what ordinary farms could or should be made; and the whole course of instruction lacked clearness and definiteness of purpose. There are, in all, twenty-one of these colleges or collegiate departments organized, and in a few of them there is the prospect of a better state of things; but, as most of them are at present constituted, we believe the young man who aspires to become a skilful and successful farmer would do better to hire himself out, at no matter what wages, for three years, to some clear-headed, intelligent farmer, and learn by actual experience the practical value of his plans of farming, studying meanwhile at all intervals of leisure those sciences which have a direct bearing upon agriculture. He would in this way acquire fewer theories, but more and better practical knowledge. A very important question to agriculturists and those intending to become farmers is, how long it will be possible to obtain land at any reasonable price. Already in most, even of the newer States, the Government lands, except the most sterile and worthless, are already taken up, and farming lands advantageously situated are not to be obtained below ten, fifteen, or twenty dollars the acre. The tendency to accumulate large landed estates is greatly on the increase; and farms, ranches, or estates, of from 50,000 to 800,000 acres are by no means uncommon in the regions west of the Mississippi River and on the Pacific slope. It is not too much to believe, what is roundly asserted by many of the most intelligent land-owners at the West, that by the year 1900 there will be no Government lands worth having (except perhaps in Alaska) to be purchased, and that no good farming-lands will be purchasable under a hundred dollars per acre in our vast domain. There is, indeed, a large amount as yet professedly unsold; but of this the greater part is as yet unsurveyed, though its available tracts are staked for preëmption, location with land-warrants, or under the homestead act, or destined to be secured by some of the land-grant railroad companies, or set apart for educational or charitable purposes. Vast tracts, too, especially in the Rocky Mountain and Pacific regions consist of mountain-summits, or desert and uninhabitable lands, like the bad lands (*mauvaises terres*) of Nebraska and Dakota, or covered with extensive lakes like much of Minnesota and Wisconsin, or great masses of primitive rock. Mr. Ezra Cornell, the wealthy and shrewd founder of Cornell University, though employing for three years past one of the best land-buyers in the West, and expending money very freely to secure good opportunities for locating land-warrants, has found it impossible to locate the whole amount of the agricultural land-grant of New York (990,000 acres) advantageously, and is still securing lands wherever he can find those which are available for his purpose. The farmer who has ample capital, and farms on a large scale, with the improved methods of ploughing, cultivating, sowing, reaping, mowing, thrashing, and packing his products by machinery, driven by steam or other motive power, has greatly the advantage of the small farmer, and can reckon up his profits each year by scores of thousands of dollars; this style of farming may be expected therefore almost wholly to monopolize agriculture as it is already doing manufacturing, commerce, mining, and trade. This tendency to land monopoly is a great evil; for land differs from other descriptions of property in giving to its owner a greater measure of independence, as well as a more permanent interest in the national welfare. Especially is this the case in a country where suffrage is free. Were every voter a landholder, our legislation would be far more thoughtful and judicious than it now is. A nation, the large overwhelming majority of whose voters are dependent upon others, and have no tie binding them to the soil, is on the high-road to ruin.

ALABAMA. During this year there was no election for State officers held, except in one or two districts, to fill vacancies in the Legislature. On the first Tuesday in August there was held an election for representatives to the Forty-first Congress, resulting in the choice of Messrs. Buck, Buckley, Heflin, and Hays, the Republican candidates in the first, second, third, and fourth districts respectively; and Dox and Sherrod, Democrats, in the fifth and sixth districts respectively.

In December, 1868, a resolution was passed by the Legislature, directing the Executive to initiate proceedings for the annexation of the territory of Western Florida. Accordingly Governor Smith appointed three commissioners, who, in May, met three commissioners appointed by the Governor of Florida, and terms were agreed upon for the proposed transfer. The leading features of the contract are as follows: 1. It conveys to the State of Alabama jurisdiction over all the country west of the Appalachicola River. 2. It vests the State with a title to all the lands belonging to the State of Florida west of the Appalachicola, which are estimated at over two million acres, and are supposed to be of the average value of $1.25 per acre; and with the right to five per cent. of the proceeds of the sale of public lands. It is provided that these lands shall continue subject to the trusts imposed by the act of Congress donating them. 3. The contract requires that the State of Alabama shall issue its bonds in favor of the State of Florida for $1,000,000, payable in thirty years and bearing eight per cent. interest; and that two railroads, radiating from Pensacola, one in the direction of Appalachicola, and the other in the direction of Pollard, shall receive the benefit of the indorsement law of the State of Alabama, approved September 22, 1868, and entitled "An Act to amend the law to establish a system of internal improvement in the State of Alabama." If this contract is consummated, it will add to the State of Alabama the eight counties of West Florida, which are represented to have contained, in 1867, a white population of 17,813, and a black population of 8,858, and paid a revenue to the State of $31,245.92. By the adoption of the contract, Alabama will acquire about 10,000 square miles (6,400,000 acres) of territory, with a water front on the Gulf of Mexico of about 180 miles, including the harbors of Pensacola, St. Joseph, St. Andrews, and Appalachicola. The harbor of Pensacola is unquestionably the best on the Gulf of Mexico, as it affords a safe anchorage, and an entrance for vessels drawing twenty-four feet of water. The question was submitted to a popular vote on the 2d of November, in those counties of Florida to be transferred. There were 1,162 votes cast in favor of annexation to Alabama, and 661 against it.

Before taking effect, it is provided that the agreement shall be approved by the Legislatures of both States and by Congress.

On the 2d of June an Immigration Convention met at Montgomery to adopt measures for the encouragement of immigration into the State. A committee of five was appointed to prepare an address to the people of the United States and of Europe, setting forth the advantages offered by the State, and the true feeling of the people toward immigrants from any and all sections. After stating the agricultural, mineral, commercial, manufacturing, and railway advantages, the address concludes:

But, one and all, this convention of the State of Alabama declares with no dissentient voice:

1. That all new population, from whatever country or section, coming among us to aid in the recuperation and development of our material interests, is heartily and honestly welcome.

2. That all latitude of opinion, thought, and expression, will be found to obtain among us; and that neither nationality, sect, nor political views, will be found to injure any man in his business interests, or subject him to social annoyance in any degree—far less to cause him the least danger of any outrage whatever.

3. That any and all immigrants, who come from any point whatever for the purpose of aiding their own material interests—and, through them, of benefiting the State at large—not only meet encouragement, but hearty welcome, and every facility we can offer.

Exertions have been made during the year to connect Northern and Southern Alabama by means of the South and North Alabama Railroad, the charter of which provides for its extension from Montgomery to Decatur. On the 16th of February the Board of Directors met and elected ex-Governor R. M. Patton as president, *vice* John Whiting, deceased. Under the contract, closed in April, work was to be commenced at Montgomery, and the road completed to Lime Kiln by the 1st of October, 1870, to Elyton by the 1st of April, 1871, and to Decatur by the 1st of December, 1871. The contracting parties are to receive for building the road, in round numbers, $5,014,000. One-fourth of this amount is payable in State indorsed bonds, and the remainder is payable in cash so far as the remaining indorsed State bonds, the city bonds, and the three per cent. fund, will go. If the cash realized from these sources does not complete the payment, the remainder is payable in second-mortgage bonds at 66⅔ cents, convertible into stock within ten years.

On the 1st of December a meeting of the stockholders of this road was held, and F. M. Gilmer, Jr., elected president for the ensuing year. During the year there has been fair progress in the construction of the Montgomery and Eufaula and the Montgomery and Selma railroads. The latter road runs along the southern bank of the Alabama River to Selma, there connecting with roads to Vicksburg, Memphis, Rome, Dalton, etc., and will establish a continous railroad line between the Mississippi and the Atlantic.

The Executive, in his message to the Legislature, having called the attention of that body

to the policy of railroad management, whereby there was an unjust discrimination between the through and local freight tariffs, operating to the prejudice of Alabama merchants, a convention of the officers of the various railroad companies in the State was held at Montgomery on the 6th of November, and a committee appointed to confer with a joint committee of the Legislature for the adoption of a plan securing the best interests of the State.

In accordance with the law requiring the indorsement of railroad bonds by the State to the amount of $16,000 per mile, indorsements from September, 1868, to the meeting of the Legislature, November 15, 1869, were made as follows:

For the Alabama and Chattanooga Railroad	$1,800,000
For the Montgomery and Eufaula Railroad	480,000
For the Selma, and Marion, and Memphis Railroad	320,000
	$2,600,000

The aggregate number of convicts in the penitentiary on the 15th of November was three hundred and seventy-four, of whom less than forty were mechanics, over two hundred were common laborers, and the balance farmers, cooks, barbers, waiters, etc. Under the lease made in 1866 with Messrs. Smith and McMillan, for the period of six years, they are authorized to employ the convicts anywhere in the State, in coal-fields, iron-mines, and in the building of railroads. The policy of employing the convicts in this way seems to have been adopted mainly as a means of avoiding the expense that would have been entailed upon the State if they had remained within the prison.

The finances of the State are in a sound condition. For the fiscal year ending September 30th, the expenditures amounted to $1,412,857.81, of which the sum of $380,453.39 was for expenses incurred during the previous year. The receipts from all sources during the year amounted to $686,451.02, which, with the balance in the treasury at the beginning of the year, made a total of $902,238. The surplus remaining in the treasury at the end of the fiscal year was $127,136.15. The present bonded indebtedness of the State amounts to $5,370,400, on which the annual interest amounts to $307,854.

The school-lands in Nebraska given to Alabama, in exchange for the sixteenth sections embraced in the twelve miles square reservation in this State, realized by sale $20,480.

The eighth annual fair of the Alabama State Agricultural Society was held at Montgomery on the 23d to the 26th of November. The amount of the premiums exceeded $5,000, and the contributions in the various departments were indicative of the general industrial prosperity of the State.

The Legislature assembled at Montgomery on the 15th of November; Governor Smith submitted the usual message. After congratulating the Legislature on the favorable auspices under which it had assembled, he stated that the removal of political disabilities was a wise measure, and hoped that Congress would pass a general law for the removal of all those which were imposed by the fourteenth amendment; he spoke favorably of the freedmen in their exercise of the elective franchise, argued in favor of immigration as a means of developing the material resources of the State and advancing its prosperity, and recommended a repeal of the law requiring the indorsement by the State of railroad bonds to the amount of $16,000 per mile. He regarded the registration law as too complicated and too easily manipulated by designing men, and recommended a simplification of the system so as to provide against the abuses to which it was liable. A reduction of the rate of taxation was recommended to one-half, or at most six-tenths of one per cent., instead of three-fourths of one per cent. He transmitted also, with his approval, the fifteenth amendment to the Constitution of the United States.

The Legislature at once proceeded to the consideration of this important measure, which was ratified by both Senate and House without delay. The vote in the Senate was yeas 24, nays none; in the House it was yeas 69, nays 16. A bill was presented for the reorganization of the municipal-government of Mobile. This bill provided for vacating the municipal offices of the city, and constituted the Lieutenant-Governor, the Speaker of the House, and the Attorney-General, a board of commissioners, whose duty it should be to appoint a mayor, twenty-four aldermen, and eight members of the Common Council. It was made the duty of the Executive immediately to commission such appointees, who should continue in office until the election and qualification of their successors. It was further provided, that an election should be held in Mobile on the Tuesday after the first Monday in December, 1870, and every year thereafter, for the election of municipal officers, who should hold office for one year, from the first of January next following their election.

In consequence of the movements in the State during this year, in favor of immigration, considerable attention has been attracted to the material resources of Alabama. With reference to its physical and industrial features, the State may be divided into five great divisions, viz.: The timber region, containing 11,000 square miles; the cotton region, 11,500; the agricultural and manufacturing region, 8,700; the mineral region, 15,200; the stock and agricultural region, 4,322. Total, 50,722 sq. miles.

The timber region, bordering on the Gulf of Mexico and the State of Florida, extends across the southern portion of the State, and northwardly one hundred and thirty-two miles from the Gulf, and forty miles from the Florida line. This section, covered with forests of long-leaf yellow pine, yields excellent timber, tar,

pitch, and turpentine. On the low lands along the rivers is found white, black, and Spanish oak, also bald and black cypress, the timber of which is noted for its durability. The soil, composed largely of sand and clay in its natural condition, is best adapted to the cultivation of grapes, apples, peaches, and pears; but, by manuring, may be made productive of cotton and corn. The mild climate and the natural pastures of the pine-forests afford unusual advantages for profitable stock-rearing. Fish and oysters in great abundance are supplied from the waters of the Gulf of Mexico and the Bay of Mobile. This section is watered by the Alabama and Tombigbee rivers, and has good railroad facilities in all directions. It has long been a popular summer resort for families from all parts of the State. Land here is increasing in value, but good locations may be obtained at prices ranging from $1.50 to $4 per acre.

The cotton region joins the timber region on the north, and has a width of about one hundred and two miles on the western, and sixty miles on the eastern line of the State. This belt of land, interspersed with large prairies, with an unsurpassed climate, and having a stiff, black soil, remarkably rich, from two to twenty feet deep, is especially adapted to the cultivation of cotton, corn, and provisions, and is considered one of the most healthy and fertile agricultural tracts in the South. Its railroad and river facilities afford easy access to markets. Prior to the late war, this section was much sought after by planters, on account of its great advantages of soil and climate, and plantations commanded prices ranging from $30 to $50 per acre. Now, rich, cultivated plantations, convenient to rivers and railroads, may be obtained for from $5 to $10 per acre. This land will produce from fifty to sixty bushels of corn, or 800 to 900 pounds of seed-cotton per acre.

Immediately north of the cotton region lies the agricultural and manufacturing district, extending eastwardly and westwardly across the State, and having an average breadth of about thirty-five miles. The soil, being sandy, is poor; but there are numerous streams, affording good water-power for manufacturing purposes. This is a healthy section of country, and has good railroad facilities.

The mineral region occupies the northeastern corner of the State, extends in a southwesterly direction about 160 miles, and has an average width of about eighty miles. In the southeastern corner of this section, white marble of remarkable brilliancy is found, some of it not inferior to Carrara marble, and has been successfully worked. Soapstone, flagstones, graphite or plumbago, and granite, of good quality, are also quarried here. In this region there are three distinct coal-fields, covering an area of 4,000 square miles, namely, the Warrior, Cahawba, and Tennessee fields. The beds of these fields are from one to eight feet thick. The coal is bituminous, generally soft, and well adapted for generating steam, and for the manufacture of gas, coke, and iron. Near these coal-fields are extensive beds of limestone, sandstone, and iron-ore; the iron mines have been worked with good results, the ores producing from 36 to 58 per cent. of metallic iron. There are also abundant materials, of good quality, for the manufacture of bricks, lime, and millstones. In the mineral region are numerous fertile valleys, well adapted to the production of wheat, corn, and cotton, and the rearing of stock. Lands in the mineral district may be bought at prices ranging from 12½ cents to $2 per acre.

The stock and agricultural region occupies the northwestern portion of the State; its products are cotton, corn, grains, grapes, and stock. The climate is mild and healthy, and the soil rich. Previous to the war, there were many valuable plantations here, and extensive stock-farms; cultivated lands were valued at from $30 to $50 per acre. Present prices vary from $5 to $10 per acre.

Alabama is a valuable timber country, which produces in abundance nearly every kind of useful timber. Besides the long-leaf yellow pine, there grow here the different varieties of oak—white, red, black, Spanish, port-pin, and overcup; also sweet and black gum, poplar, ash, walnut, hickory, locust, chestnut, red and white cedar, dogwood, maple, and elm. By its great advantages of soil and climate, Alabama has always held a high rank as an agricultural State; and, from the above exhibit of its industrial resources, it will be seen that good advantages are offered to those wishing to engage in the raising of cotton, corn, or stock, fruits or vegetables; making wine; manufacturing cotton, iron, or lime; or supplying coal, marble, or granite.

ALASKA. As yet there has been little increase in the white population of this Territory, which is still under the military government of the United States. Time enough has not elapsed for the acquisition of much information in regard to its industrial resources. Our knowledge is confined mostly to its shores, comparatively little being known of the interior. Since Alaska became a part of the United States, an Anglo-Russian newspaper has been projected, and is carried on with success. It is reported that game abounds, but none except Indians hunt it. Ducks are abundant, and the grouse are of excellent flavor. There is a large variety of fish, of which the salmon is said to be most delicious; but no oysters have yet been discovered by the whites. Of shell-fish, there is the crab, enormously large, and whose sweetness increases with its size, the clam, and the muscle. During the past summer there was an abundance of berries, principally a berry called the salmon-berry, from its strong resemblance to the roe of that fish, both in color and in its collection of little globules like fish-eggs; it is very palatable,

and lasts during nearly the whole summer. Cranberries are plentiful, and of excellent quality. The potatoes are small and watery; cabbages will not generally head, while tomatoes and peas do not thrive. Corn, wheat, barley, oats, and such grains, will not ripen, as there is too little sunshine and too much rain.

During this year Alaska has been visited by two distinguished observers, the accounts of whose observations materially differ. One of these, William H. Seward, arrived at Alaska in August, by way of the Portland Canal, passed through the Prince of Wales Archipelago, Peril, and Chatham Straits, and Lynn Channel, up the Chilcat River to the base of Mount Fairweather, thence returning through Clarence Straits to Sitka. According to his account, given in a speech at Sitka in August, the skies were bright and serene, and, during his visit, there were more clear than cloudy days. The scenery of the southwestern coast was full of grandeur. The Coast Range of mountains, which begins in Mexico, is continued into the territory and "invades the seas of Alaska, rising to an exalted height, and clothed with eternal snow and crystalline glaciers." The plains between the mountains, as well as the sides of the mountains themselves, almost to their summits, are covered with forests so dark and dense as to be impenetrable, except to wild beasts and savage huntsmen. On the lowest intervale cotton-wood grows. The birch-tree sometimes appears upon the river-side, upon the level above the cotton-wood, and is generally found a comely and stately tree. The forests of Alaska consist mainly of the pine, the cedar, the cypress, the spruce, the fir, the larch, and the hemlock. These forests begin almost at the water's edge, and they rise with regular gradation to a height of two thousand feet. The cedar, sometimes called the yellow cedar, on the coasts of the islands and rivers, attains an immense growth both in height and circumference. The cultivation of gardens, fields, and meadows, has been attempted by natives and soldiers with most encouraging results. The native grasses preserve their nutritive properties, and the climate is so mild that cattle and horses require but slight provision of shelter during the winter. There is reason to believe that, beyond the Coast Range of mountains in Alaska, there is an extension of the rich and habitable valley-lands of Oregon, Washington Territory, and British Columbia.

In regard to the animal productions of the forests, he says the elk and deer are so plenty as to be undervalued for food or skins by both natives and strangers. The bear of many families, black, grizzly, and cinnamon; the mountain-sheep, inestimable for his fleece; the wolf, the fox, the beaver, the otter, the mink, the raccoon, the marten, the ermine, the squirrel, gray, black, brown, and flying, are among the land fur-bearing animals. The furs thus found here have been the chief element for more than a century of the profitable commerce of the Hudson Bay Company. This fur-trade, together with the sea fur-trade within the Territory, was the sole basis of Russian commerce, and the present supply of furs in Alaska is not diminished. It has not yet been proved that the supply of ice may be made a source of wealth, since it is obtained chiefly upon the small lakes and ponds; and it is not yet ascertained that glacier ice is pure, and practical for commerce. The range of hills, nearly two thousand feet high and thirty miles long, extending along the Chilcat River, abounds in iron, while limestone and marble crop out on the banks of the same river, and in many other places. Coal-beds, accessible to navigation, are found on Kootznoo, but the concentrated resin in the coal renders it too inflammable to be used by steamers. What seems to be excellent cannel-coal is also found in the Prince of Wales Archipelago.

The natives are the only laborers at present in the Territory, the whites going there as traders and soldiers. Considering how greatly most of the tribes are reduced in numbers, and how precarious their vocations are, they are neither indolent nor incapable, but they are vigorous, energetic, docile, and gentle in their intercourse with the whites. The Indian tribes here must do as they have done in Washington Territory and British Columbia—retreat before the advance of civilization. The citizens of Sitka are the pioneers—the future population of Alaska. The resources of the Territory, its singularly-salubrious climate, and sublime scenery, must attract immigrants from our own States, Europe, and Asia. Such is Alaska, as seen by the ex-Secretary of State of the United States.

The other account is by General George H. Thomas, the commander of the military district of the United States which embraces Alaska. His report of his observations in this Territory was made to the War Department, and dated at San Francisco on the 27th of September. On the 22d of July he reached Sitka, formerly the headquarters of the Russian-American Fur Company, now the military headquarters of the Territory. According to General Thomas's report, the Indians are treacherous, warlike, and, until recently, discontented with the change of governments. It will be necessary, he thinks, to maintain a large garrison at Sitka to protect the traders from Indians, and to preserve order and good behavior among the whites and half-breeds.

General Thomas left Sitka on the 25th of July, and arrived at Kenay, about one hundred miles up Cook's Inlet, on the 30th. This is the old Russian-American trading-post of St. Nicholas, and is now occupied by one company of artillery. There is a village of Aleuts, numbering about two hundred, near by; another small village, a few miles below; and a settlement of some half-dozen Russian families

thirty miles below. There are no other settlements, either white or Indian, near. On the eastern shore of the inlet, about sixty miles below Kenay, General Thomas examined a coal-deposit, and found in it a fine quality of cannel-coal, in veins of from four to eight feet thick. About twenty miles below this point another deposit was observed; mining works were established here a few years ago by the Russian-American Fur Company, but were subsequently abandoned, because the coal proved to be comparatively worthless. On the 3d of August Kodiak was reached. Near this place, which is garrisoned by a company of artillery, is the establishment of the ice company which supplies San Francisco with ice, and it is the most southern point on the coast where ice can be produced with certainty. General Thomas did not think there was any necessity for the continuance of this post or the one at Kenay, but did not deem it wise to disturb them until regulations should be established to govern intercourse with the natives. On St. Paul's Island he found a post established to secure the enforcement of the law of Congress regulating the killing of seals, to support the revenue officers, and to preserve order on the islands. The revenue officers restrict the killing of seals to the smallest number necessary for the maintenance of the natives. General Thomas was not favorably impressed with the moral condition of the Aleuts: "Though nearly all members of the Greek Church," he says, "they seem to have no control over their passion for ardent spirits, nor have they very correct ideas in regard to chastity; consequently the effects of contact with the stronger-willed Americans are apparent, as venereal diseases and scrofula are quite common, and there are scarcely any, either male or female, who will not get intoxicated if they have the opportunity; almost the first thing they ask for is whiskey." He saw no evidence of dissipation among the people of Kenay and the islands of St. George and St. Paul, but was favorably impressed with their intelligence and honesty, and found many of the men skilled in mechanical arts.

The fur-bearing seals, he reports, are found only on St. Paul and St. George's Islands, and are killed for their furs and oil. Here, from April to September or October, are seen immense numbers of these animals—estimated at from five to fifteen millions—lying in the rookeries, and covering hundreds of acres. During the season between fall and spring they are not seen, nor is it known where they pass the winter. He thinks that legislation regulating the hunting and killing of these animals is necessary, to prevent the destruction of the rookeries; that with such legislation, and with a wholesome superintendence of the Indians and Aleuts, one garrison of two hundred or three hundred men, and a revenue-cutter, will be all the forces needed in Alaska. The fur-trade of the interior, on account of the fatigue and hardship attending it, will never be carried on by white men. He recommends that a mail-route be established between Port Townsend, Washington Territory, and Sitka, touching at San Juan Island, Tongass, and Wrangle, all of which ports are immediately on the route to Sitka. In regard to the settlement of Alaska, General Thomas says: "I see no immediate prospect of the country being settled up. The climate is too rigid; there is too much rain and too little sun for agricultural purposes. At most of the posts there are gardens, in which are raised radishes, turnips, lettuce, and other watery vegetables, and fair potatoes, though they will not keep any time. The moisture of the climate is so great that these vegetables continue to grow, but do not ripen. The same difficulty has attended all attempts to raise barley, oats, or wheat; the stalk grows green and rank, but the seed does not come to maturity or ripen. There is comparatively little land suitable for agriculture; the largest tract and best climate known is the plateau on the east side of Cook's Inlet, extending from Kenay to Chogotshaik Bay. The soil is an alluvial sandy loam, very rich and deep, but the summer, though pleasant while it lasts, is not long enough for successful farming. Though the timber is of the finest quality, and in many places conveniently located, still the supply in Oregon, Washington, and British Columbia, is equally good and abundant, and much better located for a market. The fishing-banks along the northeastern coast of the Aleutian Peninsula and islands are very extensive and bountiful, and salmon abounds in all the streams. In addition to the coal mentioned as being at Chogotshaik, there are many other known localities of coal."

Congress has as yet taken no steps for the formation of a Territorial government for Alaska, and this outlying possession will probably remain under the control of the military authorities of the nation for the present.

ALLEN, CHARLES, LL. D., an eminent jurist of Massachusetts, born in Worcester, Mass., August 9, 1797; died in Worcester, August 6, 1869. He was a graduate of Harvard College, studied law in his native town, and was admitted to the bar in 1821. In 1829 he was elected to the State Legislature, and again in 1833, 1834, 1836, and 1840, and was a member of the State Senate in 1835, 1838, and 1839. He was a commissioner to negotiate the Webster Treaty in 1842, and judge of the Court of Common Pleas from 1842 to 1844. In 1848, he took an active part in the Free-Soil movement, and that year was elected to Congress from the Worcester District, and reëlected in 1850. His political views, and his known hostility to slavery, placed him to a considerable extent under the ban in Congress; but he displayed marked ability in all that he had the opportunity of doing. In 1849 he had the editorial charge for some time of the Boston *Whig*, or, as it was subsequently called, the Boston *Re-*

publican, a paper owned and sustained by his friend Charles Francis Adams. In 1858, he was appointed Chief Justice of the Superior Court of Suffolk County, and, on the abolition of that court in 1859, he was appointed Chief Justice of the Superior Court of the State, which office he held until 1867, when he resigned in consequence of his age. He was a delegate to the Peace Congress of 1861, but maintained there a firm and statesmanlike position. Judge Allen received the honorary degree of LL. D. from Yale College in 1836, and from Harvard in 1863. His decisions in the Superior Court were regarded as very able, and as evincing his profound legal knowledge. In private life he was highly esteemed.

ALLIANCE, EVANGELICAL. The meeting of the Evangelical Alliance, for holding which in New York, in 1869, arrangements had been made, has been postponed to 1870, for reasons which were explained by Dr. Schaff, at a meeting of the American Branch of the Alliance held in New York, on the 4th of November. Dr. Schaff had just returned from a visit to Europe, where his mission had been to consult upon the holding of the proposed meeting. At the meeting of the British Branch of the Alliance held on the 6th of May, the subject of the contemplated meeting was a prominent topic. Serious difficulties concerning the expense of the conference had arisen in the course of correspondence between the American committee and the British council. These difficulties were entirely removed after a full and frank discussion, and terms of satisfactory coöperation on a fraternal basis of perfect equality were unanimously agreed upon. The programme for the meeting is drawn up on the basis prepared by the New York Executive Committee, but is considerably changed, in conformity to the wishes of the English and Continental brethren. It embraces the leading religious questions of the age, such as Christian unity and coöperation, Christianity and its antagonists, Protestanism and Roman Catholicism, Christianity and civil government, Christian union and Christian life, foreign and domestic missions, Christianity and social evils; also reports on the Society of Protestant Christendom by the delegates.

The Congregational Union of England and Wales, which Dr. Schaff subsequently attended, passed unanimously a resolution in reference to the meeting, expressing the hope that they might send a delegate, and desiring that events might continue to favor its arrangements, and that the Divine blessing may crown its accomplishment. Dr. Schaff also attended the two General Assemblies of the Established and of the Free Churches of Scotland, and a number of meetings specially held for the objects of the Alliance, all of which returned a unanimous response to the invitation. The Archbishop of Canterbury would not commit himself, but expressed himself very happy to correspond on the subject. The Dean of Canterbury is to prepare a paper, and, from the position of the Church of England, extend the hand of brotherhood to all evangelical nations. Several eminent Evangelical clergymen of England have promised to attend, and "in Germany, France, Holland, and Switzerland," said Dr. Schaff, "the subject has been greatly agitated, and they have promised us their best men, who have truly a representative name and character. The conditions and the circumstances are very favorable. I am confident that, if a meeting had been held this year, it would have been a failure." After hearing the remarks of Dr. Schaff, the New York meeting adopted the following resolutions:

Resolved, That we have listened with feelings of lively interest and grateful satisfaction to the report of Rev. Dr. Schaff, and, while gladly welcoming home the distinguished representative of the American Branch of the Evangelical Alliance, beg to exchange with him our warm congratulations upon the successful issue of his mission, and thank him for the important and efficient service he has rendered.

Resolved, That as we heartily approve, so we are prepared to second, with Christian zeal, the steps which have been taken in furtherance of our cherished purpose, and, as we believe, the general desire, to hold a Conference of the Evangelical Alliance in the United States; and, therefore, be it further

Resolved, That we hereby extend a whole-hearted American invitation and welcome to the several branches of the Evangelical Alliance in the various parts of Christendom, to meet in General Conference in the city of New York, at a date hereafter to be agreed upon, during the autumn of the year 1870.

Resolved, That we are eminently gratified to learn, by the report of Rev. Dr. Schaff, that the preliminary invitation of the American Branch, conveyed through him, to our brethren in Europe, has been so kindly received that we have already good reason to expect the attendance of a number of distinguished delegates, and that we have pleasing encouragement to anticipate a large representation from Great Britain and the Continent.

Resolved, That, in offering to our brethren abroad the hospitalities of New York, we propose, under God, more than open doors and hearts full of welcome, looking forward as we do to such communion in Christ, and such "sweet counsel together" touching the interests of His Kingdom, as shall bring down upon our churches and the world we seek to evangelize a fresh baptism of blessing, and help us all, who now labor in Christian unity and spiritual fellowship, to the achievement, through Christ, of a heavenly fellowship when labor shall cease and love be inthroned forever.

ALMONTE, JUAN N., a distinguished Mexican general, statesman, and diplomatist, born about the year 1812; died in Paris, March 22, 1869. He was the reputed son of the priest Morelos, the famous partisan chief, who was shot in 1813. His youth was spent in the United States, where he managed, by the energy of his character, to support himself while obtaining an education. Returning to his native land, he entered upon a military career, and was chosen by Santa Anna one of his aides-de-camp, in which capacity he served in the Texas campaign against General Houston, being made prisoner with his chief at the battle of San Jacinto. On regaining his liberty he was made Secretary of State, and was subsequently appointed minister plenipotentiary at Wash-

ington; but, when the annexation of Texas was resolved upon, he demanded his passports, protesting at the same time against that measure. In 1845 he was a candidate for the presidency of the Republic of Mexico, but failed; and was afterward, upon the elevation of Paredes to power, appointed, first, Minister of War, and then ambassador to Paris. He was on his way to France when he heard, at Havana, of the return of Santa Anna to power, upon which he immediately went back to Mexico, and, joining Santa Anna, took part in the war against the United States, distinguishing himself at the battles of Buena Vista, Cerro Gordo, and Churubusco. After the close of the war he entered the ranks of the Liberal opposition, and for the second time became a candidate for the presidency, but again without success. He was solaced, however, with an appointment as Mexican minister at Paris, which office he held at the period when President Miramon was overthrown by Juarez. He returned to Mexico with the allied expedition in 1862. Juarez protested against his presence in the French camp, and demanded that Almonte should be delivered up to him; but, although General Prim and Sir Charles Wyke, the English commissioner, were willing to comply with this demand, the French commander refused, and shortly after a proclamation was issued by General Taboada, declaring Juarez deposed, and Almonte invested with supreme power in his place. He found himself, however, unable to organize a government; and General Forey, on his arrival in Mexico, annulled Taboada's decree, and announced to the Mexicans that they were free to choose a new government. After the decisive victory of the French arms, Almonte became one of the triumvirate to whom they intrusted the management of affairs in Mexico, assigning him the Foreign Department and the Finances. He was appointed Lieutenant of the Empire by Maximilian in April, 1864, and some weeks later Marshal of the Empire. He adhered to the fortunes of his imperial patron throughout his short reign, and, when Maximilian fell, left his country for Europe, spending the last days of his restless life in exile.

AMERICA. No territorial change affected the map of America during the year 1869. The Senate of the United States took no action upon the purchase of the two Danish islands, St. Thomas and St. John, which had been negotiated by Mr. Seward, and had been ratified by an almost unanimous vote of the population of the two islands, and this scheme of annexation may therefore be regarded as having for the present failed. At the close of the year, the project of an annexation of San Domingo to the United States again assumed a more tangible shape, having received the full approval of President Baez. In Cuba, the war for establishing the independence of the island continued throughout the year, and in the course of the year the Cubans were recognized by a number of the South American republics as belligerents. In British North America, the scheme of consolidating all the colonial possessions, inclusive of British Columbia, into one empire, received the open and emphatic indorsement of the British Government; but the dissatisfaction of the people of Nova Scotia remained unabated, and a party openly advocating annexation to the United States gained in the course of the year considerable strength.

The war in Paraguay was in October, 1869, not ended, although a provisional government had been established in Asuncion. The strength of President Lopez had been greatly impaired, but, driven from one stronghold, he always had another ready to fall back upon. (*See* PARAGUAY.)

In other parts of South America the number of civil wars and revolutions was somewhat smaller than usual. The lawful government was overthrown in Ecuador, and in San Domingo, Hayti, and Venezuela, civil war raged almost without interruption; but in many of the other States the reign of order appears to be fortified, and the beginning of a new era of peaceful development and progress to be secured. Besides Chili, the model republic of Latin America, Mexico, Colombia, Peru, and especially the Argentine Republic, under the wise administration of President Sarmiento, enjoyed a year of peace, and in many respects a year of real progress.

The Pacific Railroad was pushed forward in the latter part of the year 1868, and in the first months of the year 1869, with a rapidity heretofore unknown, and thus it was completed long before the time heretofore anticipated. The final tie was placed on the 10th of May, 1869, with as much display as possible. Many deficiencies were complained of in the first transcontinental road, but the intercourse between the Atlantic and the Pacific remained uninterrupted. The important influence which this connection of the two oceans by means of railroads must have upon the development of the resources of the continent, was everywhere recognized. Numerous schemes of a similar character are under consideration; among them is one connecting the Atlantic and Pacific coasts of British North America, and another connecting Chili and the Argentine Republic across the Andes.

While transcontinental railroads are bringing into closer contact West with East, and North with South, new transatlantic cables are strengthening the electric communications between the Old and the New World, and placing their uninterrupted intercourse beyond any danger from accidents. To the English-American cable, which has now been in successful operation for several years, a French-American was, in 1869, added; besides, a contract for the laying of a Belgian-American cable was concluded, and negotiations for laying one between Portugal and South America were in active progress.

The immigration from Europe to America by far exceeded, in 1869, that of any of the preceding years. The great bulk continues to go to the United States, but in several South American republics there has also been for years a considerable increase. A new feature in the history of immigration is the extraordinary rush to America of the Chinese, who, it seems, may now come not only in as large numbers as the Europeans, but much larger. It is now certain that this new immigration of people from Asia will greatly enhance the rate of increase of the population of the American Continent, but, on the other hand, grave dangers are feared by some economists from a large admixture of Mongolians with the present population of America, and the dangers of a coming Chinese question are discussed.

Censuses were taken, in 1869, in Mexico and the Argentine Republic, both of which showed a considerable increase of population over the previous official statements. The population of America, at the present day, certainly exceeds 85,000,000, of which, at least, 78,000,000 are inhabitants of independent American States.

ANGLICAN CHURCHES. The *Church Almanac* for 1870 gives the following statistical summary of the Protestant Episcopal Church in the United States* for the year 1868–'69:

Dioceses			39
Bishops			51
Bishops elect			1
Priests and Deacons			2,711
Whole number of Clergy			2,762
Parishes			2,512
Ordinations—Deacons,	in 26 Dioceses		115
Priests,	in 24 "		85
Total,	in 28 "		200
Candidates for Orders,	in 20 "		208
Churches consecrated,	in 18 "		47
Baptisms—Infants,	in 26 "		20,749
Adults,	in 26 "		5,030
Not specified,	in 6 "		3,760
Total,	in 32 "		29,539
Confirmations,	in 36 "		20,798
Communicants—increase in 23 Dioceses during past year			7,186
Number reported in 33 Dioceses			176,696
Present number in the whole Church			200,000
Marriages, in 30 Dioceses			7,647
Burials, in 30 "			12,475
Sunday-School Teachers, in 27 Dioceses			18,644
Scholars, in 30 "			185,975
Contributions,	in 31 "		$4,205,029,41

The following table exhibits the number of clergymen, parishes, baptisms, communicants, teachers and scholars of Sunday-schools, and the amount of missionary and charitable contributions for each diocese:

DIOCESES AND MISSIONS.	Clergy.	Parishes.	Baptisms.	Communicants.	Sunday-Schools. Teachers.	Sunday-Schools. Scholars.	Contributions for Missionary and Church purposes.
Alabama	28	26					
Albany	86	104	1,343	7,897	915	6,708	$186,242 58
California	43	40

Montana	7	5	77	130	37	316	12,014 67

* It will be seen, on examination, that the above summary does not include, in some of its items, the statistics of *the whole Church*. Several of the convention journals were not published when the *Church Almanac* went to press, and of those published and received by the editor, *two contained no abstract of the parochial reports, and no summary of statistics for the conventional year.*

† The statistics marked with daggers are taken from the Convention Journal of 1868.

The total statistics of the bishops and clergy of the Anglican Church in Great Britain, Ireland, and the British Colonies, were, in 1869, as follows:

England and Wales.—Archbishops, 2; bishops, 26; deans, 30; archdeacons, 71; benefices, 12,837; curates, 5,678; rural deaneries, 613; church sittings, 5,643,492.

Ireland.—Archbishops, 2; bishops, 10; deans, 32; archdeacons, 34; benefices, 1,560; curates, 599.

Scotland.—Bishops, 8; clergy, 169; parsonages, 72; churches, 168; schools, 101.

The Colonies.—Dioceses (including those in process of formation), 51; bishops, 49; clergy, 2,400.

The contributions to the Board of Missions for the year ending October 1, 1869, were $127,710.35. There is a deficit of funds of over $19,000. The mission to Greece is in a condition of financial embarrassment. Dr. Hill's resignation of his position there was to take effect in November. Bishop Paine, of the African mission, has returned to the United States to recover his health. The China mission is in a promising condition. A translation of the Bible into the Mandarin dialect is being made. No agent has been appointed among the freedmen since the death of Mr. Gillette.

The anniversaries of the Low-Church party were held in November, in Philadelphia. The total receipts of the American Church Missionary Society were $98,172.39: of which $49,-824.89 were for its own purposes; $38,837.98 for objects kindred to the work, but not under the control of the committee; and $9,509.52 for foreign missions. The year was reported the first in which the payments exceeded the receipts. The society has had 108 missionaries in the field. At the twenty-second annual meeting of the Society for the Promotion of Evangelical Knowledge, the receipts of the society were reported at $51,583; the expenditures at $49,443; the property, at $82,000. The "Evangelical Education Society" held its third anniversary. Its receipts during the year were $31,659; its expenditure, $41,881. The close of the year leaves the society with 112 students wholly or in part dependent upon it.

The Church of England is divided into two convocations, Canterbury and York. The Upper House of Canterbury consists of the archbishops and the bishops (21 in number) of the several dioceses. The Lower House consists of 24 deans attached to the several dioceses, 58 archdeacons, 25 proctors for the chapters, and 42 proctors for the clergy; in all, 149 members.

The Upper House of the province of York consists of the archbishops and bishops of the dioceses (7 members). The Lower House consists of 6 deans, 15 archdeacons, 7 proctors for the chapters, and 31 proctors for the clergy; in all, 59 members.

The two great schools of the Church of England are the Universities of Oxford and Cambridge. The twenty-six colleges and halls of the University of Oxford had in January, 1868, 4,190 "members of convocation," and 7,535 "members on the books." The number of professorships was 41. The seventeen colleges and halls of the University of Cambridge had (including 127 members not on the college books) 5,435 members of the senate; 1,927 undergraduates; and 8,974 members on the books. The number of professors was 35.

The Society for the Propagation of the Gospel in Foreign Parts report a general fund of £76,784 12s. 1d.; appropriated funds, £12,-108 8s. 5d.; special fund, £14,238 19. 6d.; making a total of £103,132. The receipts of other church societies during the year closing May, 1869, were as follows: Church Missionary Society, £157,330; South American Missionary Society, £10,551; Colonial and Continental Church Society, £35,445; Colonial Missionary Society, £4,030; Church Pastoral Aid Society, £51,845; Bishop of London's Fund, £49,608; Additional Curates' Society, £30,588; Irish Church Missions to Roman Catholics, £24,445; Incorporated Church Building Society, £13,757; Church of England Scripture Readers' Association, £11,732.

The religious homes, houses of mercy, missions, religious houses, and institutions of similar character, of which a considerable number have sprung up within a few years past, are various in organization, from voluntary parochial and benevolent associations, to societies approaching the character of monastic institutions. The *Kalendar*, published by the "English Church Union," enumerates fifty-five homes, penitentiaries, missions, and orphanages; twenty guilds and brotherhoods, and twenty institutions and societies. The last are open associations. Many of the religious homes have a number of institutions under their charge. Thus, the "Sisters of All Saints," Margaret Street, London, have the care of twelve subordinate institutions, dispensaries, homes for aged women, industrial schools, orphanages, etc. Many of these homes, which generally are sisterhoods, in the larger towns, have established reformatories for fallen women. The guilds and brotherhoods are more strictly devotional in character. The English Order of St. Benedict, founded by "Father Ignatius," as he styles himself, corresponds in character with the Roman Catholic ascetic institutions. The "Guild of St. Alban the Martyr," with nineteen branches, or brotherhoods and sisterhoods; the "Society of St. Osmund;" the "Confraternity of the Blessed Sacrament of the Body and Blood of Christ," and others, have for their object the elevation of the ritual, the cultivation of a more devotional spirit and observance of the purity of the Church in doctrine and practice, and other similar ends. Others are more or less open associations, for prayers, for missionary work, for benevolent purposes, for the assistance of poor churches, etc.

The most notable event in the year's history of the Anglican Church was the enactment of the law for the disestablishment and disendowment of the Irish Church. The bill was introduced by Mr. Gladstone on the 1st of March, when it was read a first time. It passed a second reading, after a long and excited debate, on the 24th of the same month, by a vote of 368 to 250, showing a majority, in favor of the passage, of 118. The bill, which contained sixty clauses, was entitled "A bill to put an end to the establishment of the Church of Ireland, and to make provision in respect to the temporalities thereof, and in respect to the Royal College of Maynooth." The disestablishment was to be total, but was not to take place until the first of January, 1870, when the ecclesiastical courts were to be abolished, the ecclesiastical laws to cease to have any authority, the bishops to be no longer peers of Parliament, and all ecclesiastical corporations in the country to be dissolved. The disendowment was technically and legally to be total and immediate. Provision was made for winding up the ecclesiastical commission, and the constitution of a new commission composed of ten members, in which the whole property of the Irish Church was to be vested from the day the measure received the royal assent. A distinction was made between public endowments (valued at £15,500,000) including every thing in the nature of a state grant or revenue, which were to be resumed by the state, and private endowments (valued at £500,000), which were defined as money contributed from private sources since 1660, which were to be restored to the disestablished church. Provision was made for compensation to vested interests, including those connected with Maynooth College, and the Presbyterians, who were in receipt of the *regium donum*. Among these interests, the largest in the aggregate were those of incumbents, to each of whom was secured during his life, provided he continued to discharge the duties of his benefice, the amount to which he was entitled, deducting the amount he might have paid for curates; or the interest might, under certain circumstances, be commuted, upon his application for a life-annuity. Other personal interests provided for were those of curates, permanent and temporary, and lay compensations, including claims of parish clerks and sextons. The amount of the Maynooth grant and the *regium donum* was to be valued at fourteen years' purchase, and a capital sum equal to it handed over to the respective representatives of the Presbyterians and of the Roman Catholics. The aggregate of the payments would amount to about £8,000,000, leaving about £7,500,000, giving an annual income of about £30,000 at the disposal of Parliament. This was to be appropriated "mainly to the relief of unavoidable calamity and suffering," but in such a way as not to interfere with the obligation imposed upon property by the poor-laws. When the affairs of the established Church shall have been wound up, the commissioners were to report to the Queen that the objects immediately contemplated by the act have all been provided for, and to report the amount of surplus available for charitable purposes. The bill presumed that, immediately after the disestablishment, the bishops, clergy, and laity would proceed to constitute something in the nature of a governing body, which the Queen would be empowered, not to create, but to recognize, to constitute the disestablished Church, and come in possession of the private endowments.

The bill was introduced into the House of Lords in almost the same shape in which it was introduced in the Commons, and was carried to a second reading, on the 19th of June, by a majority of 33, in a House of 300 members, and about 30 pairs. Vigorous efforts were afterward made to attack the principles of the bill, and save something of the establishment in committee. Among other provisions, the Lords sought to allot £3,000,000 to the disestablished Church. Their amendments were nearly all rejected, or remodelled in form or expression. This treatment was received with great indignation by the Lords, so that the further progress of the bill was stopped, and its withdrawal was looked for. A compromise was effected, however, in Cabinet council, by which the clergy who commute their incomes are to be allowed 12 per cent. over the value of ordinary lives, while the disposal of the surplus of the public endowments, instead of being left to the discretion of the Government, was placed under the direct control of Parliament. With these amendments, and a few unimportant alterations supported by the Lords, the bill was adopted by both Houses, with very little opposition, and received the royal assent on the 26th of July.

Among the amendments which were urged in the House of Lords was a scheme of "concurrent endowment," proposing to give a parsonage-house and ten acres of land to each clergyman in the Roman Catholic and Presbyterian as well as in the Episcopal bodies. It commanded a small but earnest majority in the Lords, but was rejected in the Commons without debate.

The separation thus accomplished between the Anglican Church in Ireland and the State Government compelled the former to undertake a reconstruction upon a voluntary basis. The General Synod of the Irish Church, a union of the two Provincial Synods of Dublin and Armagh, met on September 14th, at Dublin. It was the first Synod held in Ireland since 1713. The Provincial Synod of Armagh had met a few days previously, but that of Dublin had to be formally constituted, prior to the union of the two into one General Synod. In the Upper House, the Primate (the Archbishop of Armagh) presided; the Lower House elected the Rev. Dr. West, Dean of St. Patrick's and Christ Church, its prolocutor. A

protest against the disestablishment of the Church was adopted by the Lower House, unanimously, while, in the Upper House, the Bishop of Down objected to it as unnecessary. As to finance, all parties seemed to be agreed that the remainder of the old possessions of the Church which may be retained will require to be largely supplemented by private liberality, if the Church is to be made efficient. In the matter of government, the Synod adopted a "Scheme for the Reform of the Provincial Synods, with a view to a union of the bishops, clergy, and laity of the Church of Ireland in General Synod." It proposed that the clergy of each diocese should meet in a Diocesan Synod, and elect a certain number of their brethren to represent them in a General Synod, with whom were to be included one dean and one archdeacon for each diocese, who, with certain officers of Trinity College, Dublin, were to sit *ex officio*. The latter part of the scheme excited much discussion, and an amendment, proposed by the Dean of Cashel, omitting the *ex-officio* members, was carried, after an earnest debate, by 107 to 29. It was also unanimously agreed that all parochial clergy, whether beneficed or not, should be entitled to vote for clerical representatives, and that the representation should be in the proportion of one to ten in the clergy. These amendments were accepted by the Lower House.

In October, there was a three days' conference of lay delegates of the Irish Church in Dublin. The Duke of Abercorn presided, and some four hundred delegates were present, including a number of noblemen, members of Parliament, and other influential and wealthy members of the Irish Church. One of the resolutions adopted was to the effect that the clerical and lay representatives should sit and discuss all questions together in the General Synod, with the right to vote by orders, if demanded by three of either order at the meeting. It was explained that this recommendation of the Conference was not to apply to Diocesan Synods, but to the General Convention, which is to be afterward formed. On the question of the relative proportions of the representatives of the dioceses, and also of the clergy and the laity, a resolution was adopted, that the number of lay representatives for the respective dioceses should be partly based on population and partly on the old parochial system. As regards the proportion of clergy to laity, the following resolution was carried by an overwhelming majority:

> That, in the opinion of this meeting, it is expedient that the number of lay representatives in the General Synod should be to the clerical in the proportion of two to one.

The clergy also had a private meeting, in October, under the presidency of the Archbishop of Dublin, at which it was resolved, by a large majority, that the laity should have a common right with the clergy to decide on matters of doctrine and discipline in the future councils of the Church. The bishops, at a meeting held in November, resolved to sit and vote as a separate order, when they deem proper; or, in other words, to have the power of vetoing any proposal with which they disagree. This view of the bishops is, however, by no means acceptable to a large portion of the laity. At a meeting of lay delegates, held at Nenagh, and presided over by Lord Rosse, it was moved by Lord Dunalley, and agreed to, that the meeting greatly regretted the resolution of the bishops, and understood "voting by order" to mean, that a majority of bishops and clergy together and a majority of lay representatives should be sufficient to pass any motion. The meeting also strongly protested against the bishops having the power of a veto in Diocesan Synods.

The judgment in the case of Martin against Mackonochie has been the cause of much excitement among the advocates of ritualistic doctrines and practices in the Church of England. The views they have taken of the course that it would be proper for them to pursue have been various. Shortly after the judgment was rendered (January 12th), a meeting was held, at which Archdeacon Denison presided. Its action was limited to the passage of resolutions, protesting against the condemnation of Mr. Mackonochie to the costs in the case as "a course of unusual and exceptional severity," and declaring that the meeting did not consider the existing Court of Final Appeal "qualified to declare the law of the Church of England upon either doctrine or ceremonial;" but that, with respect to the particular judgment of the court in Mr. Mackonochie's case, the meeting, "feeling the great difficulty of the present case, thinks there are many reasons why those who have used the ceremonials or practices now condemned by the judicial committee of the Privy Council may be anxious to wait rather than to give immediate effect to the decision so pronounced, and considers it is a matter best left to the individual judgment and circumstances of each priest who has been accustomed to use the ceremonials in question."

The course was generally adopted of conforming to the explicit directions of the judgment under protest, and with the manifestation of such outward signs of adherence to the theories on which their practices were based as should not directly conflict with the terms of the decision. A few, of extreme views, determined to set the decisions at naught, regarding it as their duty "explicitly to obey the law of the Church on those points where it differed from the law of the land, as expounded by the High Court of Appeals." The English Church Union adopted a resolution, offered by Dr. Pusey, calling upon all churchmen to unite and defend the principle on which the English Church was based—"namely, the appeal to Catholic and primitive antiquity," and to address a memorial to the convocations of both

provinces, praying them to take measures for promoting the reform of the Courts of Appeal. It also recommended that the particular ornaments from which Dr. Mackonochie had been commanded to abstain ought not to be defended by the Union in any future suit, unless the council was satisfied that the case was one which it was a duty to the Church of England to have submitted to the proper tribunal, and that caution should be exercised in defending ornaments and usages not specifically prohibited by the monition, though indirectly and generally coming within the reasonings or principles of the report. A small party advocated secession from the Established Church, and a larger one favored the repeal of the establishment, and the entire independence of the church and state, removing ecclesiastical questions entirely from the supervision of civil tribunals.

The ninth Church Congress, which was held at Liverpool, was the scene of exciting discussions between the ritualists and their opponents. The appointment of Rev. Mr. Mackonochie to read a paper was much opposed, because of his having incurred judicial censure, but prevailed on the ground that he had purged himself of whatever faults he might have committed by submitting to the decision of the court. Very strong papers were read by members of the ritualistic party, and attracted much attention. A very large meeting of workingmen was held in connection with the Congress, at which great interest was manifested. During the sessions a meeting of the English Church Union was also held, at which the increase of the Episcopate and the reunion of Christendom were discussed.

The case of Bishop Colenso continues in an unsettled condition. The Bishop of Capetown, who, as Metropolitan, had excommunicated him, and deposed him from his diocese, has followed up his act by the consecration of Bishop Macrorie, the act being approved and substantially coöperated in by the other South African bishops meeting in Synod, and who recognize the new bishop, both officially and unofficially. This act is regarded by English churchmen as a substantial assertion of the independence of church and state, and as a first step to the erection of a free church in South Africa. It is not regarded by them as legal, eminent authorities in ecclesiastical law having declared, when consulted on the subject, that no power existed of calling Bishop Colenso to account for his presumed heresies, and the Privy Council having decided that the Metropolitan had no jurisdiction over him. The prevailing opinion is expressed in England that, having been appointed by law, Bishop Colenso had an indefeasible right to the title, emoluments, and functions of a bishop, beyond the control even of the royal supremacy.

On the death of Dr. Philpotts, Bishop of Exeter, Dr. Temple, of Rugby, was nominated by the Crown to the vacant see. The appointment was opposed by the High Churchmen and the Low-Church "Evangelicals," on account of the association of Dr. Temple's name with the authorship of one of the papers in the celebrated "Essays and Reviews." Their remonstrances did not prevail, however, with the chapter, a majority of which confirmed the appointment of Dr. Temple, and accepted him as the bishop of the diocese.

The efforts for bringing on an intercommunion between the Anglican and the Oriental Churches are continued, by the friends of the movement in England, with great zeal. By far the most important event that has yet occurred, in the entire history of this movement, is a letter from the Patriarch of Constantinople* to the Archbishop of Canterbury. It was written in reply to the address of the Pan-Anglican Synod, which was sent to him in common with the heads of other foreign Churches. The language of the Patriarch has greatly elated the friends of the intercommunion movement. They find that his heart beats in response to the desire expressed for union; they consider some of his criticisms upon the English Articles as fully justified, and hope that the convocations may, in particular, repeal the Nineteenth Article, which accuses the ancient Sees of Antioch, Alexandria, and Jerusalem, of false doctrines. The High Church Societies, in particular, the Eastern Church Society, and the English Church Union, are urged to send to the Patriarch of Constantinople, and other learned and influential prelates of the East, copies of the best Anglican explanatory works on the Articles, and also a collection of the devotional manuals and hymnals in common use in Anglican Churches, and to ask the patriarchs and metropolitans of the East to solicit the prayers of their priests and people that the two churches may be brought into more perfect union.

The differences of opinion respecting the construction of laws and usages in the Protestant Episcopal Church have given rise to several cases of church discipline, as in the case of the Rev. Mr. Tyng, Jr., who was tried and censured, in 1868, for preaching within the geographical limits of another parish than his own, without previously obtaining the consent of the rector thereof; and in the trial of the Rev. Mr. Hubbard, of Rhode Island, for inviting and permitting a minister, not in Episcopal orders, to preach in the church of which he was rector. Of the cases which have sprung up during the last year, the most noted are those of the Rev. Mr. Tate, in Ohio, tried for violations of the rubric in the introduction of surpliced-choirs in the church, in which the court decided that it had no jurisdiction; and of the Rev. Mr. Cheney, of Illinois, for the practice of omitting the word regeneration in reciting the baptismal service.

* The full text of the letter is given in the Article GREEK CHURCH, in the present volume of the CYCLOPÆDIA.

A circular was issued in February, signed by twenty-three presbyters of Illinois, and about fifty clergymen through the United States at large, in protest against the progress of ritualistic doctrines and practices in the Church, and calling a convention, of those who agreed in the views it set forth, to meet in Chicago in June. It met, pursuant to the call, on the 16th of June, and spent two days in discussion of the questions suggested by the protest. It declared a careful revision of the "Book of Common Prayer" to be needful to the best interests of the Protestant Episcopal Church, and particularly recommended "that all words or phrases seeming to teach that the Christian ministry is a priesthood, or the Lord's Supper a sacrifice, or that regeneration is inseparable from baptism, should be removed from the Prayer Book." It recommended discussion, of "the vital questions which now agitate the Church," through the pulpit and the press, and that the evangelical clergy of the Church "avail themselves of all such measures as they may deem best to promote fraternal and Christian relations with the ministers of other Churches, especially by uniting with them in such great national institutions as the American Bible Society." A standing committee of clergy and laity were appointed, to sit as often as they might deem expedient, and to be a body in perpetuity for the promotion of the general objects contemplated by the Conference.

A second Conference was held, in connection with the anniversaries of the Low-Church Societies, in Philadelphia, in November, and passed several important resolutions. The committee on revision was continued by a unanimous vote. The request to the bishops in sympathy with the Conference, to carry out their purpose of striving to obtain certain modifications in the baptismal office, was passed by a decided majority, and would have been unanimous but that some apprehended that by asking only this they precluded themselves from asking other reforms, for which they were equally desirous. The resolution expressing a desire for a thorough revision passed by a large majority, upon a division of the house. The resolution, requesting the bishops to seek the repeal of the canon on the service of those not ministers of the Anglican Church, was unanimously passed. A resolution, requesting the bishops in sympathy with the Conference to inquire whether false doctrine is held and taught by any bishops of the Church, and, if so, to institute proceedings to bring any such bishop to trial, was passed without one dissentient vote. The Conference also, by a unanimous vote, resolved to prepare and mature a plan for the organization of a brotherhood, upon evangelical and truly catholic principle. The new association of the Low-Church party, thus inaugurated, is based upon the following statement of principles and objects:

1. The maintenance of the purity of the doctrine of the Church as opposed to sacerdotalism on the one hand and infidelity on the other. The doctrinal basis of the brotherhood shall be the Creeds and the Thirty-nine Articles, with such latitude of interpretation as shall be between the extremes just indicated.

2. The assertion and maintenance of those inalienable liberties which belong to ministers of Christ, as such, and which cannot be impaired by the fact that they are also ministers of the Protestant Episcopal Church. Among these liberties is, that of unrestricted fellowship with such churches and ministers as hold with us the substance of the faith; the liberty of preaching, so far as territorial limits are concerned, with no other restrictions but such as Christian courtesy and propriety shall dictate; and such liberty in the use or modification of our formularies of worship as shall seem best adapted to the salvation of souls and the edification of the people of God.

3. The denial of the claim that any civil or ecclesiastical authority can stand to any man in the place of his own conscience; and the assertion that, in the event of any collision between the two, the claims of conscience are paramount.

4. The development of higher spiritual life in our own souls, by frequent systematic and united devotional exercises; by united efforts to promote peace and good-will, and by mutual exhortation and encouragement to works of love, for the good of man and the glory of God.

Nine Low-Church bishops of the Protestant Episcopal Church sent in November the following circular to their brethren in the Episcopate, in behalf of a revision of the Prayer Book:

To our Brethren: In consequence of very serious indications of a state of mind among many of the clergy and laity of our Church, having regard to alleged difficulties in the Prayer Book, and contemplating action most earnestly to be deprecated, some of the bishops requested a meeting, in New York, of several clergymen and laymen from various parts of the country, whose knowledge of the facts, and whose opinions as to needed measures, would be valuable. The object was to get such information and comparison of views as might assist the bishops in forming a right judgment of their duty to God, and to the Church, and to their brethren in the state of mind alluded to.

It became painfully evident that many in our Church are so burdened and distressed in the use of certain expressions in our formularies, that the inquiry is obligatory as to what ought to be done, in brotherly kindness and charity, for their relief.

The result is the conviction that, if alternate phrases or some equivalent modification in the office for the ministration of baptism of infants were allowed, the pressing necessity would be met, and a measure of relief would be afforded, of great importance to the peace and unity of the Church.

We have always been fully persuaded that our formularies of faith and worship, in their just interpretation, embody the truth of Christ, are warranted by the teaching of Holy Scripture, and are a faithful following of the doctrines professed and defended by our Anglican Reformers.

The difficulties referred to we ascribe, in a great measure, to the bold innovations in doctrine and usage which at the present time so unhappily agitate our communion, and expose the Protestant and

Scriptural character of our Church to distrust and reproach.

The conscientious scruples of men of godly conversation and usefulness deserve the most respectful and affectionate consideration of their brethren. We hope they will be so regarded by the next General Convention. We will not allow ourselves to doubt that there will be found in that body such large-heartedness, brotherly kindness, and fervent desire to promote the peace and prosperity of our Church, as will consent to the relief already indicated.

In this confidence we address ourselves affectionately and respectfully to our brother bishops, and request their kind and fraternal coöperation in our effort to accomplish the desired result, for the glory of our blessed Lord, and the harmony of our beloved Church.

C. P. McIlvaine, Alfred Lee, John Johns, John Payne, G. T. Bedell, William Bacon Stevens, Thomas H. Vail, Oxi W. Whitaker, Henry W. Lee.

ARGENTINE REPUBLIC, a republic in South America. President, from 1868 to 1874, Domingo F. Sarmiento. The area is estimated to be 826,828 English square miles; the population, in 1864, was estimated by F. C. Ford (*La République Argentine*, Paris, 1867) at 1,465,000; in 1868, in the work "Die Argentinische Republik" (Berne, 1869), published by the Committee of Immigration in Buenos Ayres, at 1,801,000. The confederation is divided into the following fourteen States or provinces:

Provinces.	Inhabitants, 1868.*	Capitals.	Inhabitants.
Buenos Ayres	550,000	Buenos Ayres	200,000
Santa Fé	60,000	Santa Fé	8,000
Entre Rios	160,000	Entre Rios	16,000
Corrientes y Misiones	115,000	Concepcion	8,000
La Rioja	45,000	La Rioja	4,000
Catamarca	110,000	Catamarca	6,000
San Juan	80,000	San Juan	20,000
Mendoza	66,000	Mendoza	10,000
Cordova	165,000	Cordova	25,000
San Luis	68,000	San Luis	5,000
Santiago	125,000	Santiago	6,000
Tucuman	105,000	Tucuman	11,000
Salta	105,000	Salta	11,300
Jujuy	45,000	Jujuy	6,900

A new census was taken in 1869, and the results, as far as they have been published (December, 1869), show a large increase of the population. Thus the province of Santa Fé has advanced from 45,000 inhabitants, in 1864, to 90,000; that of Cordova from 140,000 to 200,000; that of the city of Buenos Ayres from 120,000 to 200,000.

The imports and exports in Buenos Ayres, from 1865 to 1867, were as follows (value expressed in pesos fuertes; one peso fuerte = 5 francs 10 centimes = 94 cents):

YEAR.	IMPORTS.	EXPORTS.
1867	33,370,000	28,080,000
1866	32,270,000	23,030,000
1865	27,100,000	22,000,000

The movement of shipping in the port of Buenos Ayres was as follows:

YEAR.	ENTERED.		CLEARED.	
	Vessels.	Tons.	Vessels.	Tons.
1866	1,036	267,213	1,103	263,339
1867	1,136	297,307	1,316	337,541

Among the vessels which entered there were, in 1866, 437, and in 1867, 882 steamships.

The administration of President Sarmiento has, by the wisdom which has marked its acts, won for itself an exalted place in the opinion of the people. In spite of the efforts put forth by the opposition to embarrass the Government, the great majority of the population, both native and foreign, fully appreciate the eminent qualities which distinguish the President, and the efforts he is making to promote the moral and material interests of the country. It is felt that the republic has entered upon a new career, full of brilliant promise. Peace and order have been reëstablished in the provinces which had been desolated by civil war.

President Sarmiento is making the utmost exertions to promote immigration and education. In fact, European immigration has given a great impetus to the progress of the country in the arts of industry within the last fifteen years. During this period towns and villages have sprung up, roads have been opened, railways and tramways have been built, canals have been opened, and other improvements in navigation adopted, and manufactories of all kinds established. And all of this has been accomplished in spite of the civil dissensions by which the country has been agitated. These improvements are especially noticeable in the province of Buenos Ayres. Here there are four lines of railway in active operation. Streets are being opened, and new buildings erected on every hand, in this great, wealthy, and splendid city; while, within a circuit of from five to six leagues around the city, several beautiful villages have appeared as if by enchantment, besides the manufacturing and commercial towns of Boca and Barraccas. To give an idea of the importance of these two towns, distant three miles from each other, it may be stated that not only are they connected with the capital by a railway to both, but that a second line runs from Barraccas to Buenos Ayres. The population of the two towns is to-day nearly 40,000 souls. That of Barraccas is largely Basque; and, as the activity of the Basques is powerful, it is no wonder that this town thrives so remarkably, or that the heads of its principal establishments take the lead in the progressive movement. In order to give new encouragement to agriculture and immigration, Congress passed a law appropriating $200,000 (gold) for the national exhibition at Cordova, set down for April, 1870.

Religious toleration is strictly maintained, and no complaint, in this respect, is heard from the numerous German and Swiss immigrants

*For the population of the several provinces in 1864, see ANNUAL AMERICAN CYCLOPÆDIA for 1868.

who are Protestants. Though the Catholic countries of Southern Europe continue to furnish a larger contingent of immigrants than Germany and Switzerland, the latter have already established a number of colonies, in all of which the Protestant element is strongly represented. In the state of Entre Rios the colony of Villa de Urquiza, near Parana, is almost wholly German. The next largest German population is found in San José, near Concepcion. La Esperanza, near Santa Fé, is likewise a wholly German colony, which, in 1868, had 850 Catholics and 710 Protestants, with a Protestant church and school. In San Geronimo, a little farther to the southwest, there were 460 German-Swiss; in San Carlos, 406 Swiss and 16 Germans. In Buenos Ayres the Germans have a Protestant church and school, and a German newspaper.

Immigration is increasing with great rapidity. While from 1858 to 1862 the number of immigrants amounted to 28,066, or an annual average of 5,613, it rose, in the period from 1863 to 1867, to 64,599, an annual average of 12,920; and, during the year 1868, reached the unprecedented figure of 29,284. According to nationality, the immigrants were divided as follows:

	1866.	1867.	1868.
Italians	6,880	8,955	10,004
French	2,330	3,091	8,856
Swiss	883	1,033	
Spaniards	1,850	1,250	3,818
English	1,310	1,350	1,096
Germans	460	530	1,044
Others	497	837	5,066
Total	13,960	17,046	29,384

The Argentine Central Railroad, to connect Rosario and Cordova, 250 miles, is progressing rapidly. A submarine telegraph connects Buenos Ayres with Montevideo. The telegraph from Buenos Ayres to Rosario is completed. It is nearly 300 miles long. The tariff is, for ten words, under 100 miles, 40 cents (gold); over 100 and under 200 miles, 80 cents; and for over 200 miles, $1.20 (gold). President Sarmiento had the wires of the telegraph carried to his house, and his annual message to Congress was conveyed by the wires to their most distant point, and then it was taken by couriers and spread over the republic in the shortest time ever known in South America. The province of Buenos Ayres passed a law authorizing the loan of £800,000 sterling for the extension of the Western Railroad.

The export of meat forming an important staple, Congress voted the sum of 40,000 francs to be awarded as a prize to the inventor of that process which, upon trial, should be proved to be the best for the preservation of fresh meat.

The credit of the nation in 1869 greatly improved, and the interest and percentage of bonds were punctually paid. The budget of the current financial year, it is true, showed a deficit of $9,000,000, but it is chiefly caused by the extraordinary expenses of the Paraguayan War. The annual revenue of the country is rapidly increasing, the total receipts for the past fiscal year having reached the unprecedented sum of $14,000,000. The indebtedness for the war is $20,000,000 (gold). The estimates for 1870 amount to $16,000,000. But for the disastrous war with Paraguay, the government would be in possession of a considerable surplus.

A bill passed Congress for removing the national capital to Rosario as early as the year 1872. The Executive has, however, vetoed this measure.

As to foreign policy, President Sarmiento declared, in his opening speech, at the commencement of the session of the Chambers, that the strongest friendship existed between the allied South American powers; that they felt none but generous feelings for the Paraguayans, and they now proposed to establish a provisional government at Asuncion for the benefit of the people. (*See* PARAGUAY.)

The new United States minister, Mr. Kirk, was specially charged by our Government to be vigilant in creating and perpetuating fraternal relations between the two governments. Sarmiento's warm reply, on the occasion of the new minister's reception, concluded with these words: "If you have read our recent parliamentary debates, you will have observed with satisfaction that Story, Webster, Taney, Cushing, and Pomeroy, are almost Argentine citizens, and masters who point out the way establishing among us your institutions, as remarkable for respect for private liberty as for preserving public tranquillity and the supremacy of the Federal Constitution. Be, then, most cordially welcome, as minister resident of the United States, to the Argentine Republic."

ARKANSAS. A history of Arkansas, since its first settlement by white men, and of its political existence to the present time, has not been published, perhaps not written. Some statements upon this subject, put together mainly from the official journal kept by departmental regulations at the military post of Little Rock, may prove not uninteresting. Though the narrative is intended chiefly to trace up the origin and subsequent growth of Little Rock, now the capital of the State, it points also to earlier explorations and settlements made by Europeans in that region generally. It says: "No history of the State of Arkansas has ever been published. Fernando de Soto was its first explorer of any note, and historians still disagree as to whether he was buried beneath the waters of the mighty stream with which his name is inseparably linked, or under the turbid waves of the Arkansas. As De Soto did not explore the country with a direct view to its settlement or improvement, neither he nor his Spanish followers left any permanent memorials of their visits, in its nomenclature, except in a single instance—

Bayou Departée. No river bears a Spanish name. But the enterprise of the subsequent French settlers is manifest in the names of streams and localities.

"Louis XV., in 1720, made a grant of twelve square miles to the celebrated John Law, on the Arkansas River, on condition that he should settle on it fifteen hundred German immigrants, and maintain at his own expense a sufficient military force to protect them against the Indians. Two hundred Alsatians arrived, and five hundred negroes were imported from Africa by the Mississippi Company, of which John Law was the founder, and which has given his name a notorious immortality. The scheme, as is well known, failed, and the colony, after a few struggling years, was abandoned. It moved to a place about thirty miles from New Orleans, which has since been called 'Côte d'Or,' or the 'Golden Coast,' from the wealth and prosperity of the descendants of the original colony, among whom the French language eventually took the place of the German.

"Except by enterprising French explorers, in search of gold, no visit was made to the State for a long time afterward. It is probable that the next permanent settlement was made near the close of the last century, but it cannot be definitely ascertained. The site then selected was one hundred miles below Little Rock, on the Arkansas River. No splendid patronage of a world-renowned financier gave prestige to the undertaking, which was, this time, the result of the gradual increase of the prosperity of Arkansas. This colony had great difficulties to encounter. Their village was on the low, alluvial soil of the river-bank, and disease made extensive ravages. The surrounding forest was unbroken, and formed an obstacle to the clearing and settlement of the country. The colony would probably have perished in oblivion, were it not for the cession of the Louisiana Territory to the United States, which threw the country open to the enterprise of a new race of people. The Territory of Arkansas was established by an act of Congress, March 2, 1819, the whole population not exceeding one thousand, exclusive of Indians. The point at 'Le Petit Rocher,' or 'The Little Rock,' had been a regular place for crossing the river with the Indians from time immemorial. Though it has never been fordable there, yet a break in the hills rendered it a favorable place for transition. The great Indian trail passed over the present site of the city. A few families settled there, and Little Rock became the extreme outpost on the western frontier of the United States. Practically it was as far from the national capital as Alaska is at present. A mail-carrier on horseback once a month supplied the people of the place with news from Washington City, at least three months old. Governor Miller was the first executive of the Territory. Mr. William E. Woodruff, who survives as a citizen of Little Rock, on November 20, 1819, issued the first newspaper ever published in the Territory, called the *Arkansas Gazette*, which still flourishes, under the supervision of his son. The settlement was named Arkapolis, by some aspiring student, but it soon resumed the descriptive title it now bears. After the Territory was admitted into the Union, in 1836, the growth of the State became more rapid, though still retarded by lawsuits concerning conflicting titles to the land on which the town is situated. A final disposition of these cases was not made till the December term of the United States Supreme Court for 1867. The war, which desolated so many fair cities, seems here to have stayed its insatiate hand, and rather to have developed than injured its prosperity. Large property-holders had been compelled, by pecuniary need, to relinquish town lots to more energetic and enterprising men, who erected fine houses and stores. The capital of Arkansas has its elegant mansions, its business blocks, its temples of worship, its courts of justice, its public buildings, and every necessary characteristic of a thriving city, except its hotels."

With regard to the Spanish and French explorers, or settlers, alluded to in the foregoing narrative, it may be observed here that about the middle of the last century a Spanish fort was built on the high land bordering the Arkansas River, some sixty miles above its mouth, with a view to establishing and protecting the fur-trading post from the Indians, and more effectually to secure that Government's claim to the territory against the encroachments of the French from the Upper Mississippi and the Illinois country. The fort exists no longer, but its site and adjoining grounds are occupied at present by a village called the "Fort," designating by its name the place once guarded by a military force. The grandchildren of Don Carlos de Villemont, Governor of the fort 125 years ago, and those of De Vallière (his immediate successor in that capacity under the short French rule), are still living in the vicinity. Upon Arkansas having been made a Territory by act of Congress in 1819, the seat of its government was located in the above-named village, where it remained for about two years, when the inhabitants transferred it to Little Rock, where the Legislature held its first session after such removal, on the 1st day of October, 1821. Little Rock has continued to be the capital of Arkansas both during its Territorial condition and since it has been admitted into the Union as a State in 1836. The place in which the city of Little Rock now stands, and which the French settlers, or explorers, had originally called "Le Petit Rocher," in order to distinguish it from "Le Grand Rocher," or "Big Rock" (now a town of this name), two miles above, began to be permanently settled about the year 1818; but at the end of 1822, nearly two years after it had become the capital of the Territory, there were not more than

five or six families dwelling in it. By July, 1824, however, that number of families had increased to forty, and the population of the place has been steadily augmenting, especially since the final settlement of land-titles by the Supreme Court of the United States in 1867.

The local affairs of a public character in Arkansas last year continued about the same as they had been during the twelve months next preceding, as was mentioned in the CYCLOPÆDIA for 1868.

The General Assembly met again at Little Rock after the holiday recess, and continued its regular sittings till the 10th of April, 1869, when both Houses adjourned *sine die*. Within this period, and that of the session held before the holidays, from the 17th of November, 1868, the Legislature transacted a vast amount of business, many important bills, more or less immediately connected with the general interests of the people, having been discussed and finally passed.

The martial law proclaimed and executed by Governor Clayton in numerous sections of the State, on account of assassinations and other crimes perpetrated mostly on individuals known as Union men, not to mention the frequent acts of open defiance to the law, and resistance offered to civil officers in the exercise of their duty, met with great disapprobation, and complaints were made by a large portion of the community throughout the State, especially by the inhabitants of the counties designated as subject to it. In several of these were held mass-meetings, promiscuously attended by persons belonging to opposite political parties, without distinction, in order publicly to condemn all violations of the laws of the State. They engaged to keep the peace themselves and to cause others to keep it within their county, and to assist the officers of the law in suppressing all infractions of it, and bringing the offenders to justice. In some of these counties the most prominent residents met together for the purpose of deprecating the continuance of its enforcement, solemnly pledging themselves to the Executive for the future tranquillity of their county, as well as for the peaceful and ready obedience of their fellow-citizens to the requirements of the civil officers. A meeting for such a purpose was held in Crittenden County on January 18, 1869, when the following preamble and resolutions were unanimously adopted:

Whereas, His Excellency, Powell Clayton, Governor of Arkansas, has thought proper to declare martial law in the county of Crittenden, for the purpose of more effectually enforcing the laws of the State; and, whereas, by order of the Governor, the county of Crittenden has been, and is now, occupied by the Arkansas State guards; and, whereas, the occupation by the State guards aforesaid is very expensive, both to the State of Arkansas and county of Crittenden, and has a tendency to disturb all business within the county of Crittenden: now, therefore, we, the citizens of the county, do

Resolve, That we, the citizens of the county, whose names are here subscribed, do state upon honor that we have had nothing to do with the organization known as the Ku-klux Klan, directly or indirectly, to our knowledge.

Resolved, That we deprecate the shooting and hanging of men without a trial by the proper authorities, and that we do solemnly pledge ourselves to the Governor of the State of Arkansas, if he will move or cause to be moved from the county of Crittenden the Arkansas State guards, to assist the sheriff of the county of Crittenden in enforcing the laws of the State, and in preserving good order in said county.

Resolved, That we pledge ourselves, in order to carry out the above resolutions, that we will sustain and defend each other against all unlawful opposition.

Which preamble and resolutions, after being read, were adopted by the meeting without a dissenting voice.

The heavy arm of military force and its summary proceedings, however, did not weigh long upon these counties; and that of Crittenden was the last one from which it was withdrawn. In a message to the Legislature, dated February 6, 1869, the Governor announced "the speedy revocation of martial law in every county in the State, except in the county of Crittenden," wherein a small force would be retained; and by a subsequent message, under date of March 22d, he informed the General Assembly that "he had issued a proclamation restoring civil authority in Crittenden County, to take effect upon its receipt by the officer in charge; also, directing prisoners in charge to be turned over to the civil authorities, and the force there disbanded. He announces that therewith "martial law ceased throughout the State."

The vigorous execution of this extraordinary measure, though loudly denounced and inveighed against by a large portion of the people and the press, seems to have produced a good effect in checking the perpetration of crimes, previously frequent, and restoring the country to a somewhat normal condition of tranquillity. In the last-cited message the Governor avers, "The counties lately under martial law can now punish desperate characters;" adding, "letters from citizens of all parts of the State bear evidence that quiet, security, and good order, are enjoyed by all classes." This beneficial result may be also inferred from the fact that the General Assembly, which was in session during the whole time when martial law was in operation, not only made repeated appropriations of money to pay the militia occupying the three districts respectively assigned them for that purpose, but voted public thanks to their commanders, and even passed an act fully indorsing the proclamations and action of the Governor in this respect, as follows:

An act to declare valid and conclusive certain proclamations of the Governor of the State of Arkansas and acts done in pursuance thereof, or of his orders in the declaration of martial law.

SECTION 1. That after the 3d day of November, 1868, and before the first day of May, 1869, respecting martial law, military trials by courts-martial or military commissions, or the arrest, imprisonment, or trial of persons charged with any offences against the State, or any

resistance to the laws thereof, or as aiders or abettors thereof, or as guilty of any disloyal practice in aid thereof, or of affording aid and comfort to those engaged therein, and all proceedings and acts done by the military forces, or had by the courts-martial or military commissions, or arrests, imprisonments, searches, or seizures, made in the premises by any person by the authority of the orders or proclamations of the Governor of the State made as aforesaid, or in aid thereof, or otherwise, are hereby approved in all respects, legalized, and made valid to the same extent and with the same effect as if said orders, proclamations, and acts, had been issued and made, and said arrests, imprisonments, searches, seizures, proceedings, and acts, had been done under the previous express authority and direction of the General Assembly of the State of Arkansas, and in pursuance of the laws thereof previously enacted, and expressly authorizing and directing the same to be done; and no courts of the State of Arkansas shall have or take jurisdiction of, or in any manner review any of the proceedings had, or acts done as aforesaid; nor shall any person be held to answer in any court of said State for any acts done or omitted to be done, in pursuance of or in aid of any of said proclamations or orders, or otherwise, by any of said force or forces within the period aforesaid, and all officers and other persons in the State of Arkansas or who acted in aid thereof, acting in the premises or otherwise, shall be held *prima facie* to have been authorized by the Governor of the State: *Provided*, that nothing herein contained shall be so construed as to prohibit the convening of courts-martial for the trial of persons belonging to the militia or State guards of the State.

SEC. 2. This act to take effect from and after its passage.

A vast number of residents within the counties under martial law suffered heavy losses on account of its operation, private property of all kinds having been taken away from them for the use of the military force stationed therein, by order of the officer, and in many cases they were violently deprived of it by the soldiers without authority. In the above-cited message of March 22d, the Governor acknowledges, "Evils have resulted to individuals by the occupancy of counties by the militia;" and adds, "in some cases unauthorized bands have robbed and plundered indiscriminately." In justice to those people, therefore, he urged on the Legislature the necessity of establishing "a court of claims to adjudicate demands arising out of the operations of martial law," this court "to sit for a sufficient period in each county where martial law existed, and holding a final session at the seat of government, being empowered to examine and adjudicate in reference to all supplies taken by the quartermaster's and subsistence departments, so that those who are properly entitled may receive pay for supplies furnished." This matter, however, had been taken in hand already by members belonging to both branches of the Legislature, a bill having been introduced in the lower House on March 19th, "authorizing the Governor to appoint a court of claims to take proof of the indebtedness of the State to citizens for property taken by the State guards; appropriating for that purpose $50,000 out of the military funds not otherwise appropriated." A similar bill was introduced on the 20th in the Senate, where it passed, with some amendments, on April 8th, by a vote of twelve to three. The House bill, or rather its substitute, appointing, instead of a court to be established by the Governor, "a committee of the members of the Legislature to audit and adjudicate claims against the State on account of property taken by the militia forces of the State," and appropriating for it "the sum of $200,000," instead of $50,000, was passed on April 9th, the vote being thirty-nine yeas and fifteen nays. The Senate, to whom the passage of the bill was announced by message on the same day, took it up on the next before noon, the hour previously fixed by a joint resolution for adjournment, when other bills were sought to be pushed through, and thus it was not finally acted upon.

One of the most remarkable enactments made by the General Assembly of Arkansas at the last session was the "funding of the public State debt," a large proportion of it being of a very extraordinary character. The bill "authorizes and requires the Governor to fund the debt of the State, consisting of the bonds issued by the State to the Real Estate Bank and State banks, by issuing new bonds of the State in lieu of the old bonds issued to the said Real Estate and State banks;" ordaining, that "the amount of the new bonds (of $1,000 each, payable in thirty years after date—the 1st of January, 1870—and bearing interest at the rate of six per cent. per annum, with coupon-warrants attached) shall be the amount of the old bonds with accrued interest thereon; said interest to be computed from the time of the last payment of interest upon said old bonds to the date of the issue of the new bonds;" that is, amount of the old bonds issued to the Real Estate Bank, $500,000, interest accrued on the same from September 7, 1840, to January 1, 1870, $870,000, making together $1,370,000, and bearing an annual interest to be paid by the State of $82,200. The proposal of this measure excited great opposition both within the halls of the Legislature, and among the people and press throughout the State, the opponents professing their readiness to pay whatever the State owed on any account, but refusing to sanction the proposed bill, because, so far as the bonds issued to the Real Estate Bank may be concerned, above three-fourths of the debt sought to be funded and imposed upon the State had no existence whatever. The facts connected with the origin and subsequent circumstances of the said bonds were well known, and set down in a decision by the Supreme Court of Arkansas, as follows:

On the 1st of January, 1840, the State issued to the Real Estate Bank, in pursuance of its charter, five hundred bonds for $1,000 each, bearing interest, etc., to be sold at par, for the purpose of procuring banking capital, etc. On the 7th of September, 1840, the cashier of the bank, with the approval of two of the bond commissioners, entered into a contract with the North American Trust and Banking Company of New York, by which that company agreed to loan the

Real Estate Bank $250,000, upon a pledge or hypothecation of the bonds referred to, which sum was to be advanced by instalments and repaid at stipulated periods, with interest, etc. In pursuance of this contract, the bonds were delivered to the North American Trust and Banking Company, and it is admitted that the Real Estate Bank received, through its agents, and appropriated to its use, the sum of $121,336.59. No further sum was advanced.

About the 1st of December, 1840, the North American Trust and Banking Company pledged the same bonds to James Holford & Co., bankers, of London, for a loan of $325,000. Afterward Holford became the sole owner of the debt, and holder of the bonds so pledged, by transfer from his partner. The North American Trust and Banking Company went into liquidation upon being declared insolvent. Three referees, two counsellors-at-law, and one merchant, were appointed by the Court to ascertain what collateral securities had been assigned to secure sums due from the insolvent company, who, after a laborious investigation, reported that among the collateral securities assigned to Holford by the Trust Company were the five hundred Arkansas bonds, which they ascertained to be of the actual value of $425,000 on the 1st of October, 1857.

Whence the opponents of the bill inferred, as a self-evident conclusion, that these bonds, being affected by no other debt than the sum of $121,336.59 loaned on them, and interest, whatever amount above this was now sought to be funded, under the title of State debt, on account of the said bonds, was clearly out of existence; as the State of Arkansas cannot possibly owe more than that amount to the present holder of the bonds, who is vested with the rights of the lender; by the same reason by which the Trust and Banking Company itself, if it had not failed and still held the bonds in its possession, could demand of the Real Estate Bank, or the State, the payment only of the sum it actually advanced on the bonds and interest; as a pawnee, who gives fifty dollars on a value of one thousand, deposited with him as security, or his successor, cannot ask of the debtor the payment of as much money as the pledge is worth, and interest, but must be content to receive only the fifty dollars which he loaned on it, and interest. Yet the bill funding the public State debt for the whole amount of the said old bonds, and interest thereon since 1840, passed the House of Representatives on April 1st, by a vote of 38 to 18, and the Senate on the 3d, with yeas 13, nays 4; and the Governor approved the act on the 6th.

The State Board of Education held meetings to arrange details for carrying the general school law into effect as soon as practicable, the most beneficial results being anticipated from its execution; though there were some differences of opinion as to the propriety and expediency of establishing separate schools for white and colored children. The Legislature also took commendable interest in this important subject during the last session. Among other provisions made tending to promote general instruction, they adopted a joint resolution, requesting Congress, through the Senators and Representatives of Arkansas at Washington, "to grant the State such aid in lands as will enable it to establish a male and female normal school;" and passed an act "to donate the property in the city of Arkadelphia, formerly known as the Arkansas Blind Institute, to said city, for the purpose of establishing free high schools." They made "an appropriation for the purchase of books for convicts in the penitentiary."

The General Assembly also took steps "to establish the Arkansas Deaf and Mute Institute," by amending the first four sections of an act previously passed for that purpose.

In regard to the blind, the Legislature, besides passing a general act "for the benefit of blind persons of the State," adopted a joint resolution "to request Congress to grant one hundred sections of land for the benefit of the Blind Institute of Arkansas," and passed an act "making appropriations for the Blind Institute, for the years 1869 and 1870, and to supply a deficiency for the year 1868." This establishment, however, seems very well managed and in a prosperous condition; its inmates, both male and female, being successfully taught and trained up to execute a variety of useful works adapted to their state.

Internal improvements, tending to develop and make available the great natural resources of the State, are not neglected by the Government. The various branches of agriculture are attended to with success, especially the growth of cotton, to the profitable cultivation of which the soil of Arkansas, the river-bottom-lands above all, is peculiarly adapted. The crop of this staple in Arkansas, in 1869, was estimated at "nearly 300,000 bales." In order to redeem swamps and overflowed lands, and restore them to cultivation, several acts were passed by the Legislature, "providing for the building and repairing the public levees of the State," and a joint resolution adopted, "requesting Congress to confirm the lands donated to the State by Congress, for the construction of levees and drains." The new public system of levees is considered about the best that could be devised, and represented as being now vigorously prosecuted. The *Arkansas Gazette* of November 30, 1869, briefly describes it in these words: "A majority of the owners of the land to be reclaimed present their petition to the county commissioner, who lays it before the county court. The county court may reject the petition, and, in case of granting it, it is forwarded to the Superintendent of Public Works at Little Rock. The superintendent advertises the contract thirty days, in which to receive bids, and gives the work to the lowest bidder, who files an approved bond to the amount of the estimated cost of the work, for the performance of his contract. The State pays the contractors in bonds of the State, due in thirty years, the lands protected to pay interest thereon, being taxed at a valuation of about twenty-five cents an acre, from lists of said lands, contained in

the original petition of the land-owners and such others as may be added to such list by the county court."

To promote internal improvements, the General Assembly made provisions for the regulation of trade, and transportation companies, by land or water, and adopted several joint resolutions, requesting the Post-Office Department at Washington "to increase the mail service on certain routes of the State," by establishing it on new routes where it had never existed, and reëstablishing it on old ones where it had been discontinued.

The people of Arkansas, however, seem fully to appreciate the importance of railroads, and are desirous to extend their lines into a general system, this being the quickest mode of bringing the distant portions of the State into close communication with one another and with the neighboring States. For this purpose, two acts were passed by the Legislature in the preceding session, approved on July 21 and 23, 1868, respectively, and both ratified by the people's suffrage at the general election in November, that year. The first one of these acts, under the title, "An act to aid in the construction of railroads," authorized the loaning the State credit to assist railway companies in constructing their lines; the other, entitled, "An act to provide for a general system of railroad incorporations," fixes at 850 the aggregate number of miles of road to which the State aid is to be granted, and, for the carrying out its provisions, appoints a board of commissioners, who were "empowered to receive applications, and required to designate the lines to which the State aid is to be granted." In the session of 1869, however, this subject was taken up again, a remarkable bill having been introduced in the Senate, discussed and voted for by a majority of its members, whereby, professing to carry out the wish of the people, expressed by their ratifying the act "to aid in the construction of railroads," the Legislature repeals those sections of the other act, equally ratified by the people, which appoints a board of commissioners to designate the roads for the award of the State aid, and assumes the exercise of this function itself, by actually designating five different lines of road, and granting the State aid, under certain conditions and restrictions, for 850 miles in the aggregate, at the rate of ten and fifteen thousand dollars per mile respectively. This bill, involving some ten millions of the State or people's money, was warmly opposed, as being unconstitutional, and therefore null, because of the already existing law ratified by the people, whose enactments could not be repealed by the Legislature, nor, in this case, by the people themselves, since third parties had entered into contract under its provisions, and been vested with rights which could not be taken away from them by any legal power. The opponents added the less weighty reason that the provisions of the proposed bill were partial and inexpedient, as it loaned the State credit to unimportant, perhaps only imaginary roads, and omitted most important ones, as the Memphis and Little Rock, considered of paramount advantage to the State. The bill passed the Senate on March 11, 1869, by a vote of fourteen to seven; but in the House of Representatives it was not finally acted upon.

The banking interest in the State appears to be quite large, considering the number of its population, which is estimated at about 600,000, and in a favorable condition.

Taxation in Arkansas is a subject of much complaint by the people, and presses generally heavily, on account both of the high rate of valuation at which property is assessed, and of the amount levied on it for State, county, and municipal purposes, though some cities and counties are taxed more than others. An apparently correct idea of this whole subject may be formed from the subjoined statement relative to Pulaski County: "The people of Pulaski County, and of Little Rock, have been more oppressed by taxation than any county and city in the State. Our property is all assessed fifty per cent. above its cash value; and, on that valuation, in 1868, a tax of more than three per cent. was levied. The present year, the same assessment is continued, and our people are taxed, for State, county, and city purposes, six per cent., the United States taxes increasing it to not less than eight per cent. Last year, the taxes amounted, in Pulaski County, almost to $270,000; this year they will be $500,000, which, to a population of 10,000 souls, white and black, is unprecedented—to use no harsher term."

The sum of the public expenditures of the State is said by many to be swelling up much faster, and to a greater extent, than her growth can bear or justify. A general appropriation bill was passed by both Houses of the Legislature in the last session, the act fixing both the items of this expenditure, and the amounts per annum to be paid for each during the period of two years.

The political excitement in Arkansas last year, as previously, ran high—higher, perhaps, and with more violent movements, than in other States of the Union. It is not improbable that the public disturbances, which provoked the proclamation of martial law in many of its counties in November, 1868, were prompted chiefly by party spirit, and that the manner in which that law was enforced, by those intrusted with its execution, proceeded from the same cause. Between the white and negro residents of the State, however, a reciprocal good feeling toward each other seems to be cherished. Within and outside the halls of the Legislature the Republican party is the larger in number and influence, especially because a large proportion of citizens who would probably belong to the Democratic party are disqualified and ineligible according to the provisions of the reconstruction acts; though

they are being gradually rehabilitated. At present, the government of Arkansas, in all its departments, civil as well as political, is in the hands of Republicans. A contrariety of sentiment, however, which had been growing for some time within their own ranks, broke out at last into an open rupture, as appears from the preamble and resolutions unanimously adopted at a meeting held in Little Rock on the 8th of April, 1869, and attended by eighteen Republican members of the legislative body, both Senators and Representatives, utterly condemning and repudiating the acts as well as the policy of the present State administration and Legislature, on principle, and inviting their fellow-Republicans to coöperate with them as follows:

Whereas, In the bad management of our State government under the unwise administration of Governor Powell Clayton, and in the rash, reckless, and improvident legislation of the General Assembly, under the control of the Governor and his partisans, the Republican party of Arkansas has received wounds, from the effects of which the most energetic and untiring efforts of its true friends and defenders can alone rescue it, and save it from threatened defeat and overthrow: therefore,

Resolved, That, renewing our allegiance to the National Union Republican party, and our fidelity and devotion to the true principles and doctrines of that party, as set forth and declared in the platform of the Chicago Convention, we do most solemnly protest, in the name of the Republican party and of the people of Arkansas, against all those great errors, abuses and corruptions of the administration, which have caused so much dissatisfaction and discontent in the party, and brought so much trouble and distress upon the country.

Resolved, That while it is needless to specify, in detail, all the numerous acts and measures, so universally known and reprobated, that characterize and make up the policy and administration of the government; yet we deem it proper to enumerate the following among the more prominent causes of complaint:

1. The criminal abuse of power and dereliction of duty on the part of the Governor as commander-in-chief of the militia forces of the State, under the late reign of martial law, whereby that which was intended by its friends and advisers as a wise and wholesome measure of safety to the government and safety to the private citizen, has been turned into a means of wrong, crime, and oppression.

2. The criminal and corrupt mismanagement of our great and important railroad interests, whereby a large portion of the State has been entirely ignored and overlooked in the dispensation of "State aid," and nearly all the leading authorized routes of the State been seized upon by an organized "ring" of penniless adventurers under the convenient arrangements of a General Incorporation Act passed for that purpose, who, in connection with the board of railroad commissioners under the control of the chief Executive, have been made the recipients and beneficiaries of all the benefits of the "loan bill," by which some thirteen millions of dollars have been awarded.

3. The improvident, not to say corrupt, management of the funding bill, by which a debt of several millions of dollars, being a portion of the Holford claim, which the State neither legally nor morally owes, has been assumed and funded without the authority or consent of the people, and contrary to the constitution of the State.

4. The general spirit of reckless expenditure and extravagant appropriation, which has characterized the administration of the government in all its departments, whereby the annual expenses of the State government, which the representatives of the party promised the people, in their speeches and through their press during the late presidential canvass, should not exceed two or three hundred thousand dollars, have run up to the enormous and almost incredible sum of a million and a half dollars per annum.

Resolved, That with such a record of improvidence, folly, and crime, to father, it will be utterly impossible for the Republican party to maintain itself, or hope for future success: therefore, that as the only means of safety and protection that is left us, we hereby, in the name of the Republican party, repudiate said record and its authors, aiders, and abettors; and, planting ourselves upon the true principles of the platform of the party, we earnestly call upon every true Republican in the State, colored as well as white, to unite and coöperate with us in our future efforts to save the organization of the party, and preserve the purity and integrity of its principles.

On the evening of October 15, 1869, Governor Clayton made a speech from the steps of the capitol, solemnly declaring the policy which he intended to pursue—namely, "favoring the earliest possible enfranchisement of the people, and retrenchment and reform in public expenditures." These declarations, received with satisfaction by the people, and applauded by the press generally, produced the effect of blunting the edge of that opposition which had previously existed.

The proposed amendment to the Constitution of the United States, known as Article Fifteenth, was ratified by the Legislature of Arkansas in their last session almost unanimously; though several members refused their assent to the second section of the said article, which provides that "the Congress shall have power to enforce this article by appropriate legislation," as infringing upon the rights of the individual States.

ARMY, UNITED STATES. At the commencement of the year the Department of War was under the charge of Major-General J. M. Schofield, and General U. S. Grant was in command of the Army. The latter, on March 4th, became President, and was succeeded in command by Lieutenant-General W. T. Sherman, who was promoted to the rank of General. On March 12th, General John A. Rawlins became Secretary of War, which post he filled until his death, on September 6th. The President then appointed General Sherman Secretary *pro tem.*, and on November 1st, General W. W. Belknap succeeded to the office. For the purpose of military government, the United States are divided into twelve departments and three districts, each of which is under the command of an experienced general officer, who, by law, is invested with all the powers of the commanding general of an army in the field, and is held responsible for the discipline and maintenance of the troops, the preservation of good order, so far as the military authority extends, and for the care of all the public property that belongs to the army. These departments, with the commanding officers, are as follows:

Department of Dakota—Major-General Hancock.

Department of the Platte—Brevet Major-General Augur.

Department of the Missouri—Brevet Major-General Schofield.

Department of the Cumberland—Brevet Major-General Cooke.

Department of Louisiana—Brevet Major-General Mower.

Department of Mississippi—Brevet Major-General Ames.

Department of the South—Brevet Major-General Terry.

Department of the East—Brevet Major-General McDowell.

Department of the Lakes—Brevet Major-General Pope.

Department of California—Brevet Major-General Ord.

Department of Columbia—Brevet Major-General Crook.

Department of Alaska—Brevet Major-General Davis.

The three military districts are Virginia, Brevet Major-General Canby; Mississippi, Brevet Major-General Ames; Texas, Brevet Major-General Reynolds.

The four military divisions of the country, with their commanders, are as follows: Division of Missouri, Lieutenant-General Sheridan, embracing the departments of Dakota, the Platte, and the Missouri; the division of the South, Major-General Halleck, embracing the States of Kentucky, Tennessee, West Virginia, Arkansas, Louisiana, Mississippi, Alabama, Florida, Georgia, and North and South Carolina; the division of the Atlantic, Major-General Meade, embracing the States of Ohio, Michigan, Indiana, and Wisconsin; the New-England States, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, and the District of Columbia; the division of the Pacific, Major-General Thomas, embracing California, Columbia, and Alaska.

A further reduction of the forty-five regiments of infantry belonging to the peace establishment was made during the year. This was ordered in a clause attached to the general appropriation bill passed March 3, 1869, which provided, "That there shall be no new commissions, no promotions, and no enlistments in any infantry regiment until the total number of infantry regiments is reduced to twenty-five, and the Secretary is hereby directed to consolidate the infantry regiments as rapidly as the requirements of the public service and the reduction of the number of officers will permit." By the same act the period of enlistments was changed from three to five years. The Secretary of War determined not to wait until the consolidation should be effected by the progress of time, but to make it at once, and on March 10th issued orders for that object. The colonels and field-officers were selected at Washington and announced in general orders, but the captains and lieutenants were selected by the commanding general of the department in which the regiments were to serve. Generally the senior officer of each grade was retained. After this consolidation there remained 509 unattached officers. All of these were soon assigned to duty, except 156, who were considered as awaiting orders.

The maximum of the army at the close of the year was 52,234 enlisted men. Relying upon two-thirds for actual service, the number of men is 34,822. A plan for the reorganization of the army is proposed by General Sherman. It retains the present number of regiments, which is forty, and allows a maximum of seventy-five privates to each company. This would give for the line of the Army 2,135 commissioned officers and 42,490 men. Allowing two-thirds as the proportion which can be relied on for actual service, it would give 29,750 men. This number is not estimated to be above the necessities of the country.

The staff of the army consists of those officers and men who administer to the wants of the military establishments, and are classified as adjutants-general, inspectors-general, bureau of military justice, quartermasters, commissaries, surgeons, paymasters, and ordnance department, corps of engineers, chief signal-officer, and post-chaplains. In the Adjutant-General's Department nothing of importance has occurred. The results of the inspection service during the past year have been to discover and bring to the notice of the proper authorities the qualifications of officers to fill the positions assigned them; the condition of troops in regard to discipline, drill, and efficiency—whether duty has been neglected; laws, regulations, or orders violated; public property misapplied, lost, or wantonly destroyed; whether there have been extravagant or unnecessary expenditures of public money, stores, or material; and the personal responsibility for all irregularities and abuses, with suggestions for remedial action. Through the agency of this branch of the service there has been continued improvement in the discipline and efficiency of the troops, as well as the promotion of a more discriminating and careful regard for the economical application of public money and property.

The Bureau of Military Justice has received, reviewed, and registered 14,944 records of military courts. It has also been charged with the duty of arranging and indexing the important state papers of the late judge advocate and the provost-marshal during the war.

The expenditures of the Quartermaster's Department have decreased $14,500,000, as compared with last year. The number of civilians engaged in the department has been reduced from 10,000 to 4,000 during the year. The scattered condition of the troops increases the expenditures. To this is to be added the peculiarly sterile character of the country in which they are kept. The troops are stationed

by companies in posts in the most inhospitable parts of the continent, to which every article of food, forage, clothing, ammunition, etc., must be hauled in wagons, at great cost. A heavy item of expenditure is the cost of fuel and materials for making huts, sometimes at a distance of one or two hundred miles from a place where a growing sapling may be found. A reduction of the estimates to those before the war would make it necessary to withdraw the troops from a large part of the distant Territories. The railroad companies to whom the materials of the department were sold, at the close of the war, incurred a debt of $7,591,406, which increased, by interest, to $9,000,000. About one-half of this amount has been paid. Suits have been commenced against those not manifesting a disposition to cancel their obligations. The transportation of the department over the railroads of the country has been made at less than the war rates, and has amounted to $2,253,804. The water transportation has cost $1,424,222. Of the former amount $933,166.21 was paid to the Pacific Railroads, one-half being paid in cash, and the other half retained in the Treasury to meet the interest on the bonds guaranteed by the United States. During the year 96,000 persons, 3,700 animals, and 62,000 tons of stores, have been moved by water, and 60,000 persons, 14,000 animals, and 40,000 tons of stores, by railroad. 27,000 tons of stores have been moved by contractors for wagon transportation. The Pacific Railroad has occupied some of the principal routes of former wagon transportation, and has saved the Government much money in supplying the posts along its line. The clothing and equipage on hand at the close of the war has been reduced by sales, but the amount that still remains is estimated at more than $42,000,000 in value. The two most important depots are the Schuylkill Arsenal and the one at Jeffersonville, Indiana. The number of national cemeteries is seventy-two, and there are three hundred and thirteen local posts and private cemeteries in which soldiers lie buried.

The subsistence supplies for the Army have been mainly procured in the large market cities of the country. The average cost of the ration at these markets has been about twenty-three cents. Efforts to procure salt meats on the Pacific coast for troops stationed there have met with great success; supplies of excellent quality have been obtained at favorable prices. Tobacco, at an average monthly value of $19,000, has been furnished to troops at cost prices, and the Freedmen's Bureau has been supplied with stores to the value of nearly $250,000.

The issues to Indians at various points have amounted to more than $150,000, and, at the request of the Interior Department, stores valued at $37,500 were issued to destitute Osages and others to prevent starvation during the winter. Under an arrangement between the War Department and the Department of the Interior, the Indian Department is furnished with food for the Indians on several reservations on the Missouri River and in the Indian Territory.

There has been paid $27,621.75 as commutation of rations to Union soldiers while prisoners of war. Claims for supplies furnished the Army during the war, amounting to $2,899,806.15, have been received, of which $288,038.87 have been allowed, and $2,581,064.13 have been rejected.

During the fiscal year 11,907 accounts and returns have been received from various officers, of which 11,787 have been examined and referred to the Third Auditor for final settlement.

The current expenditures of the Medical Department amounted to $233,561. At Key West the troops were attacked with yellow fever, but by their prompt removal the ravages of the disease were at once stopped. The number of cases on the sick list during the year was 104,235. The average number constantly on the sick report was about 5.5 per cent.

The Engineer Department of the Army has charge of the construction of the permanent forts, the improvement of rivers and harbors, with such other duties as are imposed by special laws. A very interesting subject has been under consideration in this Department during the year. It relates to the alterations required in the various forts in consequence of the increased weight of ordnance. Nearly all the sea-coast forts were planned at a time when the eight-inch gun was the heaviest afloat, and before rifled guns came into use. Now, however, that ordnance of the fifteen and twenty inch calibres, throwing a shot over one thousand pounds in weight with a velocity of fifteen hundred feet per second, have come into general use, the problem of resistance is entirely changed. It is believed that casemate forts, no matter how reënforced with iron, are not able to resist these shot, and changes must be made to meet this change of facts. The engineer officers have carefully studied this subject and made many most valuable experiments. The Board of Engineers in New York has laid down five general propositions for application to all modifications of the sea-coast forts, viz.:

1. The use of barbette batteries of earth, with deep parapet, and a liberal number of bomb-proof and magazine traverses.

2. The use of the heaviest guns practicable, with carriages admitting of the gun being depressed below the parapet for loading.

3. An abundant supply of heavy mortars.

4. The use of torpedoes.

5. Entanglements to hold a fleet long enough for destruction.

These propositions seem to fulfil all the conditions required. No foreign army will be likely to attempt a landing on the coast, and a hostile fleet can only endeavor to run by the

forts and lay the cities under contribution. On firm land guns of a heavier calibre can be handled, and with more accuracy of aim than by an enemy afloat. It is also doubtful if any armored ship yet built can long exist within the range of twenty-inch guns, or even of fifteen-inch guns, if skilfully handled. The river and harbor works of the country have progressed as rapidly as the appropriations would permit. In the territory west of the Mississippi reconnoissances and geographical and geological explorations have been continued, and the geological survey from the Sierra Nevada to the Rocky Mountains completed.

All the troops are now supplied with breech-loading small-arms of the best kind. It appears that the experience of the late war has demonstrated that for field-guns the Napoleon twelve-pounder, smooth bore, and the three-inch ordnance rifled gun, are unsurpassed. In respect to heavy coast ordnance there exists a diversity of opinion. Some think that for the heavy sea-coast forts the ten-inch, fifteen-inch, and twenty-inch smooth-bore cast-iron guns for the great mass of fire, with mortars of the same calibre, and using the same shot, would be the most useful. A joint committee of Congress, appointed to investigate this with other subjects, made a report on ordnance, on March 20th. The conclusions to which their investigations led them were as follows:

1. That no more heavy guns should be purchased for mounting in the fortifications or use on shipboard until such improvements are made in the methods of fabrication as will insure more reliable endurance than has heretofore been exhibited.

2. That the Rodman system of gun-making, while partially successful in smooth bores and small calibres, has so far failed in rifles of large calibre as to show it to be unworthy of further confidence. Recent improvements in defensive works and armor-plating render heavy rifled guns the most efficient means of attack, and no system of fabrication which does not furnish such guns should be adopted or continued. The principle of initial tension, which is the basis of the Rodman system, appears to be of doubtful utility, as applied by General Rodman, especially for rifled guns. This tension, it is admitted, gradually disappears from the gun with age, and in time is entirely lost.

3. That guns cast solid, in the manner practised in the navy under the direction of Rear-Admiral Dahlgren, while exhibiting satisfactory endurance as smooth bores with small charges and hollow projectiles, have not the requisite strength for rifles of large calibre. This mode of casting seems to be defective in principle, as the tensions inaugurated in cooling have a tendency to aid the powder to rupture the gun.

4. That experiments should be at once conducted for the purpose of ascertaining the real cause of the bursting of heavy guns, and of determining upon some method of fabrication that will secure uniform endurance.

5. That every encouragement should be given to inventors, and a full and fair trial accorded to all devices offered to the Government that promise a solution of the ordnance problem.

6. That more efficient means for harbor defence should be adopted. The late war demonstrated that sand was the best material for defensive works, and that forts of masonry, such as we have now mainly to rely upon for the protection of our seaboard cities, are inefficient to prevent the passage of armored, or even wooden vessels. The destruction of such defences is only a question of time to ordinary guns of heavy calibre. It was also demonstrated that forts alone, of whatever character, cannot resist the entrance to harbors of powerfully-armed ships, if the preponderance of guns on the assailing fleet is sufficient. In the opinion of the committee, obstructions must be largely relied upon for harbor defence, in connection with properly-constructed fortifications.

7. That no officer of the Army or Navy should be allowed to receive a patent for any article required, or likely to be required, for use in those branches of the public service, or be in any way interested in the manufacture or procurement of such articles. It should be the duty of Congress to recognize by suitable rewards the services of such officers as might make inventions of especial value to the Government.

8. That the Ordnance Department of the Army can be entirely abolished with great advantage as to economy, and without detriment to the good of the service. The duties now performed by officers of that corps could be performed by officers detailed from the artillery service, under the direction of a chief stationed at Washington. In this manner the whole expense of the ordinance establishment would be saved, and artillery officers, who have not only scientific training, but practical experience, would have a voice in the selection of the guns and ammunition they are required to use.

This committee declared the present ordnance system to be a failure, and that the country was without a single rifled gun of large calibre.

Instruction in signals has been continued in every department, for the purpose of so diffusing a knowledge of the service and distributing apparatus that every officer may have such information of the duty as may suffice in case of emergency to save life in, or prevent disaster to, his command. The signal service has been brought into active use in operations against the Indians on the plains. The organization and development of the field telegraph has received especial attention, and continued tests have been made with portable lines, such as are used with trains in the field. The field telegraph trains are organized in a military form, which requires all movements to be executed at the word of command. An object has been to provide a train so equipped and organized as to enable four portable lines, carried in it, to be erected simultaneously, at about the rate of three miles an hour.

The operations of the Freedmen's Bureau have been closed, except the educational and bounty divisions. All the hospitals but two have been closed or transferred to the civil authorities. Of the two, one is about to be closed and the other will remain in the District of Columbia. The number of persons which the Bureau has had under its care is 584,178. During the existence of the Bureau about one in two hundred, or one-half of one per cent. of the freed people, have been supported by the Government. The freedmen were advised to make written contracts with their employers, and have the same explained

and approved by a Bureau officer. In a single State more than fifty thousand such contracts were made. The labor of the freedmen has produced nearly all the food consumed in the South, besides large amounts of rice, sugar, and tobacco for exportation, and about two million bales of cotton per year, on which were paid into the United States Treasury, during the years 1866 and 1867, taxes amounting to more than forty million dollars.

Much disappointment and ill feeling were caused by the failure of the original plan to lease or sell the abandoned lands in small tracts to refugees and freedmen. Information has been published respecting lands under the homestead act of June 21, 1866, and some aid given to those who desired to enter them. Attention is beginning to turn in that direction, and about four thousand families have already made entries and obtained homes of their own. In a few instances freedmen have united in the purchase of farms under cultivation. They are anxious to become landowners.

More attention has been given to their education than to any subject respecting them. In each State at least one normal school has been organized. Several chartered colleges for freed people are in operation; also a university in the District of Columbia. In the 2,118 schools under the care of the Bureau, and officially reported, the number of teachers employed is 2,455, and the number of pupils is 114,522. Adding those estimated in private and Sabbath schools, the number under instruction of some kind during the last year was not less than 250,000. The freed people have, during the last year, paid for tuition and the construction of buildings about $200,000.

The whole amount of bounties paid since April 17, 1867, when the first treasury certificate was received, is $5,831,417.89. The balance on deposit now due to claimants is $1,220,066.52. Three thousand three hundred and eleven applications for bounty are now under examination in this office, and 18,000 such claims are now on file in the Second Auditor's office awaiting settlement, and it is believed that about twenty-five thousand claims of this kind remain to be presented. The work of paying bounties to freedmen is, therefore, not yet complete.

The expenses of the Bureau were met the first year with the proceeds of rents, sales of crops, school taxes and tuition, and sale of Confederate States property. The amount received from all these miscellaneous sources was $1,865,645.80, and from appropriations by Congress since July, 1866, $11,084,750, making a total of $12,950,395.80 received from all sources. The expenditures, including the accounts of the "Department of Negro Affairs," from June 1, 1865, to August 31, 1869, have been $11,194,028.10.

In addition to this, subsistence, medical supplies, and quartermasters' supplies, were expended, amounting in cash to $2,330,788.72, but whose real value when transferred to the Bureau was probably less than one million dollars. Adding their original cost to the cash expended, the total expenses of the Bureau have been $13,524,816.82.

It seems that the Board of Visitors to the Military Academy thought that an entire reorganization of that institution should be made, as in its present condition it was inadequate to meet the future demands of the country. They recommended that the institution should be enlarged, the number of cadets greatly increased, the standard of admission be raised, and the cadets be divided into two classes, one pursuing an ordinary course of military instruction and its members returned to civil life upon graduation, to spread a knowledge of the military art throughout the land, and supply trained officers for the emergencies of war; the other, selected from the promising members of the former class, and equal in number only to the yearly wants of the Army, to pursue their studies and practice to the very limits of military science.

These recommendations would doubtless be much modified by those of practical officers.

The actual expenditures of the Army for the fiscal year were, including the Freedmen's Bureau, $56,761,732. To this must be added, for old war debts paid, $23,882,310, making the total $80,644,042. Of this amount there was expended for reconstruction purposes, $406,419.

It is manifest that the military administration of the Army has been effective and its discipline unimpaired. The duties devolving upon the commanders of the three military districts of Virginia, Mississippi, and Texas have been performed under many embarrassments, with fidelity and good judgment.

Of the pensioned widows of soldiers in the Revolutionary War there survive: One of those married prior to 1783, 54 of those married between 1783 and 1794, 88 of those married between 1794 and 1800, and 795 of those married since 1800—887 in all, and only one less than the preceding year.

There are on the rolls the names of 1,293 widows and children of soldiers who served in the wars subsequent to the Revolution and prior to that of 1861—a decrease of five since the last annual report. The number of invalid pensioners who served in said wars is 2,350.

During the past year there were examined and allowed 7,120 new applications for invalid pensions of soldiers, at an aggregate annual rate of $468,144, and 2,908 applications for increased pension of invalid soldiers, at an annual aggregate rate of $164,798. During the same period 15,695 original pensions to widows, orphans, and dependent relatives of soldiers, were allowed, at an aggregate annual rate of $1,577,281; and 11,998 applications by the same class for increased pay were also admitted, at a total annual rate of $784,549. On the 30th June, 1869, there were on the rolls 81,579 in-

valid military pensioners, whose yearly pensions amounted to $7,362,804, and 103,546 widows, orphans, and dependent relatives of soldiers, whose yearly pensions amounted to $13,567,679, making the total aggregate of army pensioners 185,125, at a total annual rate of $20,930,483. The whole amount paid during the last fiscal year to invalid military pensioners was $9,383,715, to widows, orphans, and dependent relatives, $18,609,153—a grand total of $27,992,868, which includes the expenses of the disbursing agencies.

With regard to the Indian tribes of the West, no permanent policy has yet been established. They have generally remained peaceful during the year.

The completion of one of the great lines of railway to the Pacific coast has totally changed the conditions under which the civilized population of the country come in contact with the wild tribes. Instead of a slowly advancing tide of migration, making its gradual inroads upon the circumference of the great interior wilderness, the very centre of the desert has been pierced. Every station upon the railway has become a nucleus for a civilized settlement, and a base from which lines of exploration for both mineral and agricultural wealth are pushed in every direction. Daily trains are carrying thousands of citizens and untold values of merchandise across the continent, and must be protected from the danger of having hostile tribes on either side of the route. The range of the buffalo is being rapidly restricted, and the chase is becoming an uncertain reliance to the Indian for the sustenance of his family. If he is in want he will rob, as white men do in the like circumstances, and robbery is but the beginning of war, in which savage barbarities and retaliations soon cause a cry of extermination to be raised along the whole frontier.

It has long been the policy of the Government to require of the tribes most nearly in contact with white settlements that they should fix their abode upon definite reservations, and abandon the wandering life to which they had been accustomed. To encourage them in civilization, large expenditures have been made in furnishing them with the means of agriculture and with clothing adapted to their new mode of life.

A new policy is not so much needed as an enlarged and more enlightened application of the general principles of the old one. This policy looks to two objects: First, the location of the Indians upon fixed reservations, so that the pioneers and settlers may be freed from the terrors of wandering hostile tribes; and, second, an earnest effort at their civilization, so that they may themselves be elevated in the scale of humanity, and our obligation to them as fellow-men be discharged. In carrying out this policy, a great practical difficulty has arisen from the fact that in most instances a separate reservation was given to each tribe. These reservations have been surrounded and gradually invaded by the white settlers, and the Indians crowded out of their homes and forced to negotiate for a new settlement, because their presence, their habits, and their manners, were distasteful to their new and more powerful neighbors.

The Indians north of the Platte River are not yet prepared for a similar concentration; but the time cannot be far distant when two or three principal Indian territories may properly embrace all the tribes east of the Rocky Mountains.

The same policy of concentrating the tribes will apply to the country west of the Rocky Mountains, and will be equally necessary whenever and wherever the feuds existing among them can be so far settled that they can live together in peaceful neighborhood.

In the recent organization of the Indian Bureau itself it was deemed advisable to depart from the usual mode of selecting and appointing the superintendents and agents. The tribes in Nebraska and Kansas, and some of those most recently placed upon reservations in the Indian territory, were placed under control of the members of the Society of Friends; the others were given in charge of military officers, who were waiting orders under the laws for the reduction of the Army.

These sweeping changes were made because it was believed that the public opinion of the country demanded a radical reorganization of this branch of the service. The selection of the officers of the Army was made partly for economical reasons, as they were on pay though not on duty, and the salaries of many civil officers could thus be saved; and partly because it was believed they furnished a corps of public servants whose integrity and faithfulness could be relied upon, and in whom the public were prepared to have confidence.

The Friends were appointed not because they were believed to have any monopoly of honesty or of good-will toward the Indians, but because their selection would of itself be understood by the country to indicate the policy adopted, namely—the sincere cultivation of peaceful relations with the tribes, and the choice of agents who did not, for personal profit, seek the service, but were sought for it because they were at least deemed fit for its duties. The two yearly meetings of "Friends" were asked to select men in whom they had confidence, and who might become at once the business agents of the Government and zealous missionaries of civilization. The persons so selected were appointed, and, although it was somewhat late in the season when they were sent to their posts, enough has been seen of their labors to make it certain that the mode of selection was not a mistake. It is due to these societies to say that they have at their own cost sent officers of their own body to inspect the work of the agents as far as it aimed at the civilization and instruction of the In-

dians. The moral support and encouragement thus given to the agents must be valuable.

In accordance with the same general plan of bringing moral influences to bear upon the conduct of Indian affairs, the present Congress authorized the President to appoint a commission of philanthropic citizens to serve without pay in such supervisory and visitorial duty as might be assigned to them. No difficulty was found in securing the services of men of the highest character and known benevolence. By an Executive order they were authorized to inspect all the accounts and records of the Bureau, to be present at the purchases of Indian goods, and advise as to the conduct of the same, and visit and inspect the tribes in their reservations, and examine the business of all the agencies. The officers of the department were also directed to give respectful heed to the suggestions and reports of the commission. No direct responsibility, either pecuniary or administrative, was put upon the commission, because it was believed that their usefulness would not be increased thereby. They now constitute an entirely disinterested body of intelligent advisers, with full power to throw the light of the most searching scrutiny upon the conduct of our relations with the Indians, and to give the public, through their reports, the most reliable knowledge of the condition and progress of the several tribes.

ASIA. During the year 1869, no territorial changes have taken place in Asia; but a change of vast importance, and which must affect the destinies of this whole division of the world, is irrepressibly drawing near. The independence of the powerless States in Central Asia must sooner or later come to an end. They, even now, live entirely upon the mercy of Russia and England. What remains to be decided is, whether they shall fall to the one or the other of these States; and this constitutes the Central Asian question, which is fast growing to be one of the foremost political questions of our age. Central Asia would make a very large addition to the Russian Empire; and, as the powerful Russians will, in the course of time, have no difficulty in absorbing these uncivilized and comparatively small tribes into the compact Russian nationality, both in Russia and in England, the development of the Central Asian question is studied with intense interest. Some, as Grant Duff, the English Under-Secretary for India, believe that the continuance of peace between the two great European rivals in Central Asia is for the present sufficiently secured by the circumstance that an almost inaccessible tract of land, of nearly 800 miles, still constitutes an insurmountable wall of separation between the new Russian conquests and India. Others, however, show that Russia, having now exclusive possession of the Caspian Sea, the Aral Sea, and Oxus, could carry out aggressive designs against India in a much easier way than by a march through Central Asia. Steamships could carry a large Russian force to Affghanistan, and only the possession of, or, what would be equal to it, the protectorate over, the northern part of Affghanistan, or the territory of Cabul, would be required for the Russians, to reach the northwestern frontier of British India. It will be seen, therefore, that Affghanistan is becoming a country of considerable interest, and we have, on that account, deemed it best to include Affghanistan in the list of important countries which are the subjects of special articles in this volume of the AMERICAN ANNUAL CYCLOPÆDIA. (*See* RUSSIA; AFFGHANISTAN.)

None of the Asiatic countries have during the year been the scene of such momentous internal changes as Japan. The long struggle between the Mikado on the one hand, and the Tycoon and the northern Daimios on the other, is at an end. A Parliament has met for the first time, which, though it consisted merely of princes and nobles, has yet introduced Japan into the number of constitutional monarchies. The Japanese have again made remarkable progress in the reorganization of their army, and of public instruction. The number of young men who are pursuing their studies in the United States and in Europe is increasing, and emigration is bringing large numbers of the people into close contact with foreign nations.

The Chinese Government has not verified the sinister predictions that it would reject the Burlingame treaties, and only try to hoodwink the Governments of the United States and of Europe. Toward the close of the year, the treaties were formally ratified in Pekin, and the relations with foreign powers were as amicable as they had been at any previous period. A large class of the population were hostile to foreigners and Christians, and a number of missionaries were cruelly massacred; but the Government on every occasion showed an earnest desire to conform to the treaties, and to remain on good terms with the treaty powers. (*See* CHINA.)

A serious difficulty arose between the two great representatives of Asiatic Mohammedanism, Turkey and Persia, concerning the regulation of the frontier. For a time, a great war appeared to be inevitable, and, as Russia was reported to sympathize strongly with Persia, it was even anticipated that through this conflict the Eastern question might enter a new stage. These anticipations were, however, not fulfilled, and the difficulty was for the present amicably settled. (*See* PERSIA.)

The opening of the Suez Canal will largely increase the commerce of southwestern and southern Asia, and thus probably awaken a new life in the countries of these regions. The vast projects of railroads and telegraph lines which have for several years been under consideration, or in the course of progress, and which are to connect the Asiatic countries with Europe and with each other, must thus

receive a new impetus, while the commerce of eastern Asia with western America is rapidly developing under the influence of the regular steamboat connection through the Pacific. The combination of so many vivifying influences causes the beginning of an entirely new era in the history of Asia, and, as Asia is the largest and by far the most populous among the great divisions of the world, it cannot fail, even to a large extent, to give to the world's history a new aspect.

Thus far the colonies of England and France in India lead the van in this new period of peaceful progress. Both have enjoyed a peaceful year, and made new progress in commerce, general prosperity, and especially in point of education.

ASTRONOMICAL PHENOMENA AND PROGRESS. *The Total Eclipse of* 1869.—The novel and interesting discoveries made by observers—particularly those at the spectroscope—on the occasion of the August eclipse of 1868 (*see* AMERICAN CYCLOPÆDIA of that year), created an unusual scientific curiosity with regard to the total eclipse which was to occur August 7, 1869, and which would be visible, in its totality, throughout a long and well-populated tract of the United States. The line of total obscuration entered the North American Continent at Behring's Straits, about the 65th degree of latitude, longitude 90° west of Washington, and left at the Atlantic shore in latitude 34° and the meridian of Washington itself, passing through Alaska, Iowa, Illinois, Kentucky, West Virginia, North Carolina, and other States. Congress appropriated a sufficient sum to enable observations to be taken by the superintendent of the *Nautical Almanac* (Professor Coffin); and the Navy, War, and Coast Survey Departments extended liberal aid to the same object, and sent out scientific parties to the points most favorable for witnessing the phenomenon. Professor Coffin fitted out expeditions for Burlington, Mount Pleasant, and Ottumwa, Iowa, along the central line of totality. The Coast Survey had parties in Alaska, at Des Moines, Iowa, Springfield, Illinois, and Abingdon, West Virginia. The Navy Department was represented at a station on the western shore of Behring's Straits, and the War Department detailed Dr. Curtis to take photographs of the eclipse at Des Moines. The principal colleges and observatories in the country sent their professors of astronomy, and spectroscopic and meteorological experts, to points on the line. At no one time in this country has so large an amount of astronomical and mathematical talent been concentrated upon the examination of a celestial phenomenon.

At Des Moines, Iowa, a series of very successful observations was taken by the Government parties and expeditions from several American colleges. The sky was unclouded, though a slight haze prevented a satisfactory search for the supposed intra-Mercurial planets. According to Professor T. H. Safford, of Chicago, the first contact occurred at $3^h\ 43^m\ 48^s$; the commencement of the total obscurity at $4^h\ 45^m\ 30^s$; the end of the totality at $5^h\ 48^m\ 22^s$; the last contact at $5^h\ 45^m\ 11^s$—those points of time being from 6° to 22° later than calculated at Washington. The total obscuration lasted $2^m\ 52\frac{1}{2}^s$. The corona proper assumed a pyramidal shape, extending toward the northeast (taking the zenith as north), having a breadth of about 25° of the moon's disk, and 3 digits deep. On the west side was one of similar size and shape. On the east side was a mass of light 50° at the base and 3 digits deep, but not so brilliant as the opposite one. On the north the corona was about 30° wide, and 3 to 4 digits high. The masses seemed to consist of thin streaks of light radiating from the central direction, and lying on a less brilliant background, while the lengths of the contiguous rays were widely different, giving the outline of the perimeter a jagged appearance. Says the correspondent of the Chicago *Tribune:*

The most deficient part of the corona was on the southeastern quarter, where it averaged not more than two-thirds of the other, and was badly broken. It is remarkable that this part was the scene of a long line of rose-colored protuberances, which stood out like a string of beads from the moon's disk, and possibly caused an optical shortening in the coronal rays, though it is not impossible that the convulsion in the photosphere produced by these glowing masses caused a surging over of the photosphere, while it is also not improbable that the greater number of these protuberances than usual caused the outline of the corona to be more jagged than had been anticipated from the descriptions of previous eclipses. The apparent motion of the corona with the sun was very marked, that on the west side increasing in breadth, while the eastern side lessened as the total phase advanced. The corona burst on the vision like a flash of glory on the instant of total obscuration, and departed like a vision of the night when the first faint thread of light shone out on the western limb. Some observers thought they saw the corona for a second or two before the total eclipse, but this was probably due to the haze in the atmosphere.

The protuberances were grand. The ocular observations of these made by Professor Hilgard's brother were the best. From the lowest point of the disk a large, rosy patch shot out at the instant of totality, extending 16° and protruding half a digit, or 35,000 miles. From the middle of this protruded a pendulous mass of about 100,000 miles long, and 20,000 wide, which seemed to divide into three narrow strips. The upper mass was of a deeper rose tint than either of the other protuberances, and is described by Hilger as nebulous in structure, almost like a cirrus cloud, and shaped like a bird's wing underlaid by a fleshy tumor, the fleshy substance being something like a flying pile of down, illuminated with a pink light, or pink-rose color. Due east was another protuberance, paler and about 5° on the base, perhaps 20,000 miles high. Ten degrees below this was another like it in size and color, both masses being nearly rectangular. These two disappeared near the middle of totality, and then three smaller ones sprung up on the west side, one due west, another 60° below it, and the third midway between them. The one on the southwest was nebular, and rose out as a thin stem 10,000 miles high, from which sprung out two long streaks like an antelope's horns, some 10° in length from tip to tip. The large one first described appeared from first to

last of totality, and sensibly changed its form and brilliancy, as if in violent commotion. It seemed to the writer like a huge dense beacon-fire on a distant hill-top, shorn of its tongues of flame, and seen through an inverting telescope. There were several variations of light and shade perceptible in its breadth. In depth it varied only in intensity, being slightly faintest toward the horizon.

A correspondent of the Chicago *Times*, writing from Des Moines, remarks that Professor N. A. Rogers took a measurement, by means of the micrometer, of the largest colored protuberance, and estimates its greatest extension at 38,000 miles. It seemed to grow up to that height in a moment of time, like a flame, from about half the size at first. At its base was a mass tinged a crimson color, and like cumulous clouds in composition. Along the southeastern side of the sun, just before any portion of his disk appeared after total eclipse, a long and low line of crimson protuberances appeared, which was dissipated by the full blaze of the crescent sun a moment afterward.

Dr. Peters made a spectrum analysis, and found in all the five protuberances the red, blue, and violet lines, which indicate hydrogen in a state of high temperature. He discovered also the double yellow lines that indicate sodium. In addition to these, the spectrum showed green lines and other shades of color, indicative of still other metallic elements in the sun's atmosphere, which are common to the earth. Dr. Peters was of opinion that the observations taken will throw much light upon the problems of the sun's constitution, and the sources of his light and heat. So far as the hydrogen lines of the spectroscope are concerned, his observations verify those made by Rayet and Herschel during the eclipse last year in India. Professors Rogers and Hall directed their attention just before and after the total eclipse to the solution of the question of a lunar atmosphere. They acted upon the hypothesis that, if there was such an atmosphere, the ends of the sun's crescent just before and after totality would have been partially obscured by coming in contact with the moon's atmosphere. These observers found no such phenomena, the cusps being well defined and sharp throughout. Hence they draw the deduction that the moon is devoid of an atmosphere.

The Naval Observatory party at Des Moines succeeded in taking 123 photographs of the eclipse, two being of the totality. They applied the spectrum analysis to five prominences, no two of which were found to give the same lines. No absorption lines were visible in the spectrum of the corona; it gave a continuous spectrum with but one bright line. Professor Harkness conducted this branch of the observations. The thermometer, as observed by Professor Eastman, showed a fall of 18° during the progress of the eclipse.

Professor Newcomb searched, with two six-inch object-glasses, for intra-Mercurial planets, but none were visible. Venus and Mercury appeared distinctly to the naked eye.

Professor C. A. Young, of Dartmouth College, who was with the Nautical Almanac party at Burlington, Iowa, submitted two reports of his observations to the American Association, in August, the substance of which he afterward furnished to the *American Journal of Science*. The following are the most important parts of the paper:

The spectroscopic combination employed was compiled for the occasion from various instruments belonging to Dartmouth College, and differed so much in the relative proportion and arrangement of its parts from those hitherto used, that a brief description is perhaps necessary.

The telescope which formed the solar image was a comet-seeker by Merz & Son, of 4 inches aperture and 30 inches focal length. An ordinary Huyghenian eye-piece enlarged the image so that, when it fell upon the slit of the spectroscope at a distance of 5 inches, it was 2½ inches in diameter. The use of an eye-piece gave an easy means for securing the accurate focus of the limb at the slit, an adjustment of great importance. The spectroscope proper had telescopes of 2½ inches aperture and 16½ focal length (by Alvan Clark). The eye-telescope was provided with an eye-piece magnifying 18 times, and a wire micrometer, constructed from a reading microscope, for determining the position of any new lines in the spectrum by referring them to those already known. This, although a very accurate method, was too slow to be well adapted to eclipse observations, but was the only arrangement I could construct with the time and means at my command.

The collimator had a slit ½ of an inch long and of adjustable width. It was provided with a small prism, which could be turned up so as to throw into half the slit light from an electric spark formed between platinum electrodes by a small induction coil and Leyden jar.

It also carried a thin brass disk about 2½ inches in diameter, placed in front of the slit, with a hole of ½ of an inch in the centre. This disk was covered with white paper and graduated into sectors of 10° by lines radiating from the centre. This graduated screen, upon which the image of the sun was clearly visible even during the totality, answered the purpose of a finder, and its graduation furnished the means of determining within less than 3° the position of any object observed on the sun's limb, or of bringing any desired portion of the limb to the slit.

The spectrum was formed by a train of 5 prisms of 45° each, with faces 2½ by 3½ inches. They gave a dispersion of about 18° between A and H, with a total deviation of about 165° for the D line. The box which contained them was so connected by a link with the arm which carried the eye-telescope, that whenever the latter was moved by its tangent-screw along the spectrum the prism-box would turn through an angle just half as great. Thus the prisms were kept in the position of best definition for whatever lines were in the middle of the field of view, the extent of which was sufficient to embrace D and E together.

The telescope and spectroscope proper were firmly secured to a wooden framework, and this was mounted equatorially, with slow-motion screws in both right ascension and declination.

The spectrum was about 1¾ inches broad (referred to a distance of 10 inches) and about 45 long. It showed all the lines on Kirchoff's maps of the spectrum; such lines as the nickel line between D_1 and D_2 being perfectly distinct.

Having arranged my instrument with the computed point of contact across the centre of the slit, I had the unspeakable gratification of seeing every thing take place as expected. First, a full half-minute before the time of contact, the sharp point of the needle was truncated by the dark edge of the moon, then it

grew steadily shorter (not *less brilliant* what remained of it), until finally its last spark vanished, the C line became exactly like its neighbors, and the contact was effected.

The observation was as easy and definite as that of the transit of a moderately slow star. I am confident the observation may be relied upon within a fraction of a second, although it was from 5 to 15 seconds earlier than the time assigned by any of the other observers. I am informed by Professor Mayer, however, who had charge of the photographic operations of our party, that it agrees within one-third of a second with the time deduced from a preliminary measurement of a photograph taken about 15 seconds after the contact was announced.

With an instrument of sufficient dispersive power, the slit might be opened somewhat widely, and placed *tangent* to the sun's limb. In this case a slight error in the estimated point of contact would not interfere with the accuracy of the observation.

I wish to call attention to the applicability of this method at the coming transits of Venus. It is not possible, perhaps, to predict just how great will be the effect of her atmosphere; but it is difficult to see in what respects this method will suffer from it more than any other. It certainly presents this great advantage, that the observer will perceive and watch the planet's approach long before the instant to be observed, and thus have all the benefit of preparation.

It seems likely also that the instant of *internal contact* will be more easily seized with the spectroscope than with any other instrument. Instead of the rupture of a black ligament, it ought to show the sudden formation of a brilliant line running the whole length of a before dusky spectrum, a phenomenon much more striking than the other.

While the moon was advancing upon the sun, special attention was paid to the appearance of the spectrum lines near her limb. They came up to the edge perfectly square and straight, even when the limb made an angle of only 5° or 6° with the slit; and the longitudinal line of demarcation, before referred to, between the brilliant and dusky portions of the spectrum, was hard and sharp, in striking contrast with the effect of the sun's limb, which, under similar circumstances, always gives a boundary more or less hazy and indefinite, and this to a degree continually changing from minute to minute. This contrast was beautifully exhibited a few seconds before the totality, when the limbs of both sun and moon were on the spectrum together, the width of the visible portion of the sun having become less than the length of the slit. It was at first thought that this appearance was decisive against the existence of a lunar atmosphere, however rare; but a little consideration shows that on the other hand it is, if any thing, favorable, being a simple consequence of that brightening of the sun's disk near the moon's limb which is so beautifully evident upon the photographs; and which is most easily accounted for by admitting a slight refraction suffered by that portion of the sunlight which grazes the moon. Possibly, however, it may yet be explained as a case of simple inflection of light.

Before the eclipse began, the existence of prominences on the limb of the sun had been ascertained in the following positions (reckoning from the north point through the east). A large but faint one near +90°, a small but bright one at +146° (the photographs show *two* here), a long low one at −70°, very near the point of first contact, and an enormous and very bright one at −130°, with several others of small elevation, but considerable length, on different parts of the limb.

In his examination of the prominences Professor Young observed 9 bright lines, the most remarkable of which were C. F. and an orange line.

A faint continuous spectrum, without any traces of dark lines in it, was also visible, evidently due to the corona. Its light, tested by a tourmaline applied next the eye, proved to be very strongly polarized in a plane passing through the centre of the sun. I am not sure, however, but that this polarization, as suggested by Professor Pickering, may have been produced by the successive refractions through the prisms. This explanation at once removes the difficulty otherwise arising from the absence of dark lines.

My observations decide nothing as to specific differences between the different protuberances, since, from the smallness of my field of view, I was obliged to observe a portion of the spectrum on one of the prominences and the rest on another.

In conclusion, Professor Young remarks that, at present, it seems pretty likely that the spectra of the corona and the aurora borealis are identical, with only such differences as we might naturally expect, and that very probably the identity extends to the essential nature of the phenomena themselves. With reference to the iron line observed in the spectrum, he says it will be of interest to inquire whether we are to admit the existence of iron vapors in and above our atmosphere, or whether in the spectrum of iron this line owes its presence to some foreign substance—probably some occluded gas, as yet unknown, and perhaps standing in relation to the magnetic powers of that metal.

Professor Edward C. Pickering, who was also with the Nautical Almanac party at Burlington, sends the result of his observations to the *Philosophical Magazine*. He says that, in examining the photographs taken by the party, it was noticed that, while the light diminished near the edge of the sun, the moon's limb was very distinct, and that there was a marked increase in the light of the parts nearest it. The best explanation of this phenomenon the author thinks is to assume the presence of a lunar atmosphere. The corona would then be caused by refraction of light reaching the observer from parts of the sun already eclipsed. This hypothesis is strengthened by other observations. The protuberances have often seemed to indent the moon's edge, an appearance usually ascribed to irradiation. An atmosphere of rapidly-increasing density might produce this effect by reflection, and of course would not influence the corona if it was caused by refraction. The principal reason for supposing the corona a portion of the sun is, that, during totality, it does not appear to move with the moon, but remains concentric with the sun, or, more properly, is brightest where the sun's edge is nearest. Many of the photographs show this very well, the difference on the two opposite sides of the moon being very marked. This effect could be explained equally well by supposing the corona caused by refraction. For the centres of the sun and moon never differ during totality by more than half a digit, while the breadth of the corona is sometimes several times as much; so that merely covering a small portion of it would not produce a greater diminution of

light than would be caused by a slight change in the direction of the sun's rays shining through a lunar atmosphere. On the other hand, it is difficult to conceive of an atmosphere dense enough to produce these effects, and yet so transparent that the edges of the full moon are perfectly distinct, and that the light of the sun during an eclipse should be increased rather than diminished. Professor Pickering concludes that the polariscope gives only negative results, and cannot be regarded as proving that the light is reflected. The evidence of the spectroscope needs confirmation, since the dark lines may have been invisible owing to the feeble light of the corona. But, if the spectroscopic observations were correct, the self-luminous character of the corona is established; and the thermometric and actinic experiments point toward a lunar atmosphere as the cause of the corona. The absence of a lunar atmosphere is so generally admitted, that the author suggests its existence only with reluctance, and as the most natural explanation of the phenomena observed.

Professor C. F. Himes reports some interesting facts about meteoric appearances seen during the eclipse. He says that Mr. Zeutmayer, examining the ground glass of the camera from time to time, to notice the position of the image of the sun, called the author's attention to small luminous bodies like meteors, which were crossing the dark image of the moon from cusp to cusp. Subsequently, they were seen to pass over from outside of the field on to the image of the sun, where, of course, they were lost, always coming from the same side. The observers were led by this circumstance to regard them as most likely to be optical illusions, perhaps insects with transparent wings or bodies; but the fact, that observers at other places report a shower of meteors during the eclipse, between the moon and the earth, which seemed to be identical in their appearance with those observed by the author, leads Professor Himes to suppose that the objects seen by Mr. Zeutmayer and himself may have been meteors. At any rate, he concludes that the apparition was caused by objects not less than two thousand feet distant.

Dr. J. Gardiner contributes to the *Cincinnati Gazette* an interesting account of his experiences in photographing the eclipse at Bedford, Ind. He had made careful preparations for the occasion, and had the assistance of a competent corps of photographic artists. Some of the results of the observations are thus described:

Our corps were all in place ready for business; when, at four o'clock and twenty-one and a half minutes, contact was observed in the magnified image on the ground glass. A half-minute later the watching crowds on the streets caught sight of it, and a low murmur, swelling gradually into a shout, heralded the fact. Up to this time no noticeable change had taken place in the whole range of nature. At the first sign of contact, I called for a plate, which was coated at once, sensitized and passed to me. The first picture was taken five minutes after contact, and the sun, only shining on the plate the tenth part of a second, impressed its image there. "Exposed too long!" was called from the dark-room. Four minutes later the next picture was taken. No change yet in the temperature. Third, fourth, and fifth taken at three, four, and five minutes apart. No change still in the appearance of the earth, no falling of the temperature. Sixth picture forty-nine minutes after four, and a falling of one degree in temperature. A perceptible change; a darkness was also seen to be creeping over the face of the earth. The lights of the foliage gradually took a peculiar hue, which is difficult to describe. It seemed as though they emitted light that had been stored within. Yet the light was not like any other that we had ever seen. It had a peculiar bronze-like, lurid tint, that was weird-like and ghostly.

Next picture, four minutes later; growing darker; birds here seemed agitated, and acted as though they had made a mistake in time; swallows began to collect in flocks. Six more pictures were taken in nineteen minutes, and darkness still growing on the earth. Four minutes later, and sixteen after five, the thermometer fell to 72°, and stars became visible. A flock of foraging geese now marched by, homeward bound, and evidently wondering at the shortness of these degenerate days. A ghastliness rested upon the faces of our corps of operators. Pictures were then taken at intervals of two and one minutes, at which time the crescentic margin of the sun, remaining unobscured, was but a tenuous line, passing one-third or one-fourth around the sun. Forty-five seconds, and the eclipse is total, and another exposure is made. A flaming orange and red corona was visible about the margin of the moon, shooting its rays out seemingly a distance equal to half the diameter of the sun. The whole face of the moon had a dusky hue, like old copper, and was visibly globe-shaped. The scene was awfully sublime, and produced a sensation similar to that which I have felt in witnessing a great battle. Chimney-swallows circled in the air above the court-house in a dense column, several hundred feet in height. A sudden rush of wind marked the moment of totality, and one thermometer in the open air showed a falling of 5°; another, attached to the shady side of a dead tree standing in the sunshine, showed a variation of 14° in the course of an hour.

Birds went to roost; domestic fowls retired to their perches, and a premature darkness—a darkness different from that of any other—gave the earth a more sombre mantle than that of night.

Two more pictures were attempted at intervals of a minute each, and then a line of the sun's margin emerged, and light once more flooded the face of the earth. A cheer ran out along the street, and the sublimest spectacle of the generation was drawing to a close. During the time of the greatest obscuration a bright bead-like body was observed at the right lower limb of the sun, which sent out a fan-shaped, fiery tail equal to one-third of the breadth of the sun itself. This part was all we succeeded in getting photographed during totality. We hope that a future examination of the enlarged prints will show it to be of more value to science than if we had succeeded in getting the whole corona. As darkness suddenly shut in the earth like a curtain (during the greatest obscuration), so it flashed out instantaneously into light as the sun emerged. Men's faces looked like the faces of negroes, and some amusing mistakes occurred on the streets, by persons thinking others they met were "American citizens of African descent." As the darkness was thickest, the katydids chirped their nocturnal notes, but hushed into silence as soon as they found that they were "victims of misplaced confidence." Twenty-one pictures were taken, seventeen before and during totality, and four after. Two attempts during the total phase were failures, but one other gave the bright prominence before described.

At Shelbyville, Ky., there were strong delegations of scientific observers from different parts of the country. Among those present were Prof. Joseph Winlock, of Harvard University; Alvin G. Clark, of Cambridge; Assistants George W. Dean and F. Blake, Jr., of the Coast Survey; J. A. Whipple, of Boston, assisted by Messrs. George Clark and J. Prendergast, having charge of the photographic business; Prof. S. M. Searle, of New York, who was to look out for intra-Mercurial planets; and Prof. Seymour, of Louisville, who watched the meteorological phenomena. Ten or twelve mounted instruments were in use on the occasion, the chief of these being the Shelbyville College telescope, which once ranked third in the United States, handled by Prof. Winlock. A shower of meteors was observed between the earth and the moon. Arcturus, Vega, Venus, and Mercury, were visible to the naked eye during the totality, but no intra-Mercurial planets could be detected, nothing fainter than Regulus being discerned near the sun. The photographs of the eclipse were highly successful, and accord with those of which fuller accounts are given in the records of observations elsewhere.

In a report of observations by Professor Winlock, published in the *American Journal of Science*, he remarks that the cromosphere was carefully examined both before and after the phenomenon; and only three lines could be seen, C, one D and F. During totality only the highest protuberance on the lower limb of the sun was examined carefully, and nothing was seen but a faint continuous spectrum; but, since the observing telescope (an equatorial, by Merz, of 7¼ inches aperture and 9½ feet focal length) took in only a small part of the spectrum at once, nothing conclusive could be inferred from the observation as to the non-existence of bright lines in the corona.

During totality eleven bright lines were seen. Besides the three described above, there was a short line at or very near E, the three lines of *b* were bright and very sharp, and there were four lines above F. Although these lines were very bright on a dark ground, all of them but the three seen before the eclipse disappeared instantly on the first burst of sunlight, and the same point in the sun's disk was examined with great care after totality without finding any of the lines but those above described. The photograph of the corona taken at Shelbyville shows a flattening at the extremities of the sun's axis, and an elevation about the equatorial region. The appearance can be explained by the hypothesis that it is a photographic view of the sun's atmosphere, and the form is that which it would assume from the sun's rotation about its axis, with its upper surface disturbed by the protuberances or flames below, and by large waves which are to be expected in such an atmosphere.

Dr. B. A. Gould, in a letter to Professor Morton, which appears in the *Journal of the Franklin Institute* for October, says:

An examination of the beautiful photographs made at Burlington and Ottumwa, by the sections of your party in charge of Professors Mayer and Himes, and a comparison of them with my sketches of the corona, have led me to the conviction that the radiance around the moon, in the pictures made during totality, is not the corona at all, but is actually the image of what Lockyer has called the chromosphere.

This interesting fact is indicated by many different considerations. The directions of maximum radiance do not coincide with those of the great beams of the corona; they remained constant while the latter were variable; there is a diameter, approximately corresponding to the solar axis, near the extremities of which the radiance upon the photographs is a minimum, whereas the coronal beams in these directions were especially marked during a great part of the total obscuration. The corona beams stood in no apparent relation to the protuberances, whereas the aureole, seen upon the photographs, is most marked in their immediate vicinity. Indeed, the great protuberance, at 230° to 245°, seems to have formed a southern limit to the radiance on the western side, while a sharp northern limit is seen on all the photographs at about 350°, the intermediate arc being thickly studded with protuberances, which the moon displayed at the close of totality. The exquisite masses of flocculent light on the following limb are upon the two sides of that curious prominence at 98°, which at first resembled an ear of corn, as you have said, but which in the later pictures, after it had been more occulted, and its southern branch thus rendered more conspicuous, was like a pair of antelope-horns, to which some observers compared it. Whatever of this aureole is shown upon the photographs, was occulted or displayed by the lunar motion, precisely as the protuberances were. The variations in the form of the corona, on the other hand, did not seem to be dependent in any degree upon the moon's motion.

The singular and elegant structural indications, in the special aggregations of light on the eastern side, may be of high value in guiding to a further knowledge of the cromosphere. They are manifest in all the photographs by your parties which I have seen, but are especially marked in those of shortest exposure, such as the first one at Ottumwa. In some of the later views they may be detected on the other side of the sun, though less distinct. But the very irregular and jagged outline of the chromosphere, as described by Janssen and Lockyer, is exhibited in perfection.

A scientific party from the University of Georgia made successful observations of the eclipse at Bristol, Tenn., which was near the central line of totality. A corps of observers from the United States Coast Survey, under General Cutts, and a large number of other scientific gentlemen representing learned institutions, were on the ground. The weather was favorable, and the result of the observations highly gratifying. Prof. W. Leroy Brown, of the University of Georgia, in a report to Chancellor Lipscomb, describes the operations of his party, and the successive stages of the eclipse, as follows:

Just at the calculated time ($4^h\ 43^m\ 36^s$), though no evidence whatever of the position of the moon could be previously seen, I observed a slight tremulous motion on the western limb, $128^d\ 16^m$ from the vexter, immediately at the point where it was known by calculation the first point of contact would occur. In a few moments it became visible to the crowd assembled around. The dark spots of the sun were carefully observed, and the time of first contact and total immersion of the most important of them noted. No change whatever was observed either in the penumbra or umbra of any of the spots during the approach or recession of the moon. As the moon gradually covered the sun from view, its outline was projected back on the disk of the sun—not in a reg-

ular, well-defined curve, but in quite a roughened, serrated outline, indicative of its mountains and valleys.

Just before total obscuration occurred, the crescent of the sun gradually and rapidly faded to a delicate thread of silver light. My attention was concentrated on this line of fading light, to detect, if possible, what astronomers designate as *Baily's beads*; that is, the sudden breaking up of this thread of light into a number of segments, or distinct points of light, like disjointed silver beads. I detected no indication whatever of such separate points of light. The extinction of this thread of light was sudden and instantaneous. I am inclined to the opinion that one would anticipate naturally, from the serrated character of the moon's disk projected on the sun, that such would be the case, and, with his mind thus prepared to observe such an effect, it would not be difficult to mistake the optical effect, produced by refraction of light through different media, for separate points or *beads*.

On the eve of total obscuration, directions were given to the crowd to be silent, so as to hear the beats of the chronometer. The instant the silver line of light disappeared, a universal exclamation of amazement and wonder burst from the crowd at the superb spectacle of beauty immediately revealed. The disk of the moon projected on a sky of livid hue was plainly seen, of a dark, grayish color, caused by the reflected earth-light, surrounded by a bright halo of gradually-fading silver light, extending through a breadth of at least half the sun's diameter. Through the bright halo of light there radiated off from the sun great mountain-peaks of roseate light of exquisite beauty. One of the largest was plainly discernible with the naked eye, and pointed toward the horizon. Its base, resting on the disk of the moon, was of extreme brilliance, like a living coal of fire, while its mass appeared radiating off from the sun as a gushing fountain of rose-colored light, shading off in intensity toward its apex in delicate violet hues. The wonderful beauty of this "solar cloud," which subtended an angle of more than three minutes, and consequently was nearly a hundred thousand miles in height, was so great that, when I directed the large equatorial toward it, it riveted my attention for a full half-minute, and hence I failed to do all I had marked out in the critical two minutes and a half. At the time of total obscuration, Mercury, Venus, and Arcturus, were plainly discernible with the naked eye.

* * * * * *

After the lapse of two minutes and thirty-three seconds, suddenly an intensely diamond-bright ray of light shot out from near the point of first contact, dazzling in its effect, and immediately dissipating the livid gloom that overshadowed the earth, and giving cheer to the affrighted animals and wondering spectators that surrounded us. The thermometer, exposed to the rays of the sun, was observed to fall from 92° to 66° during the time that elapsed from the first contact to the total obscuration. The barometer indicated a fall of only one-twentieth of an inch.

The observers appointed to note terrestrial objects reported that the rapid approach of the dark shadow over the western landscape, which spread out before us with its symmetrical hills and shaded valleys, was plainly discernible. Its effect on reaching the observer was described as almost like a physical object striking the body, so plainly was its passage marked. In a few seconds (for it travelled at about one mile per second) it wrapped in its mantle of gloom the high ridge of the Alleghany Mountains, about fifteen miles distant, which enclosed the southeast view. Hogs and cattle, feeding near by, were observed at the moment of total obscuration to start affrighted, and to hurry homeward; the whippoorwills came out from their retirement, and began their evening song; bats flew around for some moments, and chickens were seen hastening to their roost.

The eclipse, as seen at New York City—ten-twelfths of the sun's disk being obscured—produced a feeling of disappointment in the observers. It had been supposed that considerable darkness would be caused by the phenomenon, and also that the temperature of the air would be lowered several degrees. Mr. Daniel Draper, meteorologist of the Central Park, made thorough investigations of the effects of the eclipse at that point, and reported upon them fully. He declares—corroborating the observations of the public generally—that, when the eclipse was at its height, the light was still sufficient to enable persons to discern objects at any distance, and there was no special quality to be noticed in the character of the illumination, though it resembled twilight more than any thing else. During the first half of the eclipse the thermometer indicated a fall of only one and a quarter degrees, and in the last half only half a degree. From three P. M. to five P. M., about the beginning of the eclipse, the fall had been from 67.25° to 65.50°; and after the eclipse, up to ten P. M., there was a further decrease of temperature of 3°. In the barometer a rise was going on when the eclipse commenced, and continued while the phenomenon lasted; after which, for about an hour, there was a decline, and then the rise was resumed.

Speculations upon the Nature of the Corona.—At a meeting of the Royal Astronomical Society in April, Major Tennent's account of his observations of the solar eclipse of the preceding August, in which he stated that the corona gave strongly-polarized light—thereby indicating that it was simply reflected solar light—came up for discussion. Dr. Weiss, who had charge of the Austrian expedition to observe that eclipse, was present on the occasion, and remarked that the spectrum of the corona was found to be pale but perfectly distinct, and decidedly continuous, without any lines. Mr. De La Rue and Mr. Lockyer expressed the surprise they had felt at this result, and Mr. Huggins remarked that when he first heard that the corona gave a continuous spectrum, he understood it to mean that this spectrum did not differ materially from the ordinary solar spectrum, but he now found that it was destitute of the dark Fraunhofer lines. He wished to know whether it was possible that the dark lines were merely not visible from the feebleness of light of the whole spectrum. Dr. Weiss replied that the paleness was not sufficiently great to lead to such an idea, and suggested that the corona might consist of two parts—reflected light, which would account for the polarization, and light proceeding from some self-luminous gas, and that the dark lines of the former coexisting with the bright lines of the latter might mutually neutralize each other. Mr. Huggins said that there was much difficulty in accepting the existence of self-luminous gas beyond the hydrogen, of which it had been proved that the prominences were formed, and which must probably be the extreme boundary

of the gases. Mr. Lockyer here stated that he and several other persons, including M. Faye, had been led, by a comparison of several observations of solar eclipses (particularly that of 1851), to the belief that the appearance of the corona depended very much on the locality at which it was observed, and that it was probably, in fact, a phenomenon produced by the earth's atmosphere. The Astronomer Royal, Mr. Airy, who was present, expressed his concurrence with this view, which he had, indeed, formed from his own observations of several total eclipses.

The monthly notices of the proceedings of the same Society for May contain a letter from Mr. Baxendell, of Manchester, to Mr. Huggins, suggesting that the results of a great mass of observations on the corona could be best explained on the hypothesis of the existence of an irregular nebulous ring circulating about the sun nearly in the plane of the ecliptic, and at a mean distance of 0.169, and that the reflection of the sun's light upon this caused the appearance of the corona.

Spectroscopic Observations of the Sun.—Mr. Lockyer has communicated to the Royal Society a number of new facts disclosed by his recent spectroscopic examinations of the sun, which he regards as proving the correctness of his assertion—made in 1865, on telescopic evidence only—that a solar spot is the seat of a "downrush" of matter to a region where the selective absorption of the upper strata varies from what it would be at a higher level. He therefore assigns two causes for the darkening of a spot. One is the general absorption of the chromosphere, thicker there than elsewhere, as the spot is a cavity; the other is the greater selective absorption of the lower stratum of sodium, barium, and magnesium, the surface of its last layer being below the ordinary level. By using a wide slit in the spectroscope, without the absorbing media employed by Mr. Huggins, Mr. Lockyer was enabled to study the smallest details of the chromosphere and the prominences, on any bright day. He describes the outline of the chromosphere as varying greatly, sometimes undulating and billowy, sometimes ragged, and sometimes nearly even for some distance, but very uneven near a prominence. The prominences undergo marked changes in a few minutes; in one case, in about ten minutes, a portion of a prominence estimated at 27,000 miles in height entirely disappeared, another portion of it increasing at the same time. The bright F. line was observed, in one instance, to undergo strange contortions, as if some disturbing cause varied the refrangibility of the line. At the same time, and in the same protuberance, the characteristic lines of barium, magnesium, and some unknown substance, were noticed. In this case he supposes that there was an uprush from the photosphere into the chromosphere, accompanying which changes of enormous magnitude occurred in the prominence, and, when the uprush ceased, the prominence died away. In observing a spot very near the sun's limb, Mr. Lockyer found the spectrum of the chromosphere showed that the whole adjacent limb was covered with prominences of various heights blended together. These prominences seemed to be fed from the preceding edge of the spot, as C F and the line near D were very bright on the sun itself. In the prominences C and F were strangely irregular, and the magnesium lines were seen far above the spectrum of the limb. He infers that a portion of the upper layer of the photosphere had been lifted up beyond the usual limits of the chromosphere. He also saw the vapor of sodium in the chromosphere, and, for the first time, the iron lines.

Dr. Tietjen, of Berlin, has been making further observations of the gaseous envelope, and protuberances of the sun, by the spectroscope. The protuberances were frequently indicated by their peculiar bright lines, and their shapes could, in some instances, be traced. On one occasion, a pillar-shaped prominence showed itself, broader at the base than at the apex, and in the course of a few hours became curved. A very beautiful one was seen February 15th, exhibiting its bright lines, that known as C shining with great intensity. Its size was very large, and its form resembled a water-bottle, whose neck rested perpendicularly on the sun's limb. The next morning nothing of it was visible, but short bright lines were seen immediately on the disk. The lines usually observed by Dr. Tietjen were those corresponding to the dark lines of the solar spectrum C and F, and a third near, but not coinciding with the dark line D. Of these the first was nearly always the most luminous; generally, also, longer than F, and frequently than the third near D. March 25th, he saw a fine bright line between D and E, but could not decide whether it coincided accurately with the position of any dark line.

M. Rayet has communicated to the French Academy his method of examining the solar atmosphere. He employs an equatorial with an object-glass having a focal length of five metres, and which was diaphragmed down to eight centimetres. The telescope was thus rendered quite achromatic, and the difference between the brilliancy of the image of the solar disk and that of its atmosphere was greatly reduced. At the principal focus, where the clear image of the sun fell, was placed the very narrow slit of a direct vision-spectroscope. The astronomical telescope, which serves in the latter instruments to examine the spectrum, is movable around an axis which is parallel with the edges of the prisms, and it is quite easy to keep only a small region of the spectrum within the field of vision, viz., that containing one of the brilliant lines. Between the object-glass and the slit of the spectroscope is placed a direct vision-prism, itself preceded by a narrow slit. This arrangement is considered very ad-

vantageous as regards a clear view of the yellow line in the solar atmosphere, which M. Rayet has been engaged in studying. An imperfect image is found a little farther off than the principal focus of the object glass, and from this a determined color is thrown upon the slit of the spectroscope. The author says that the yellow line may be seen upon the whole circumference of the solar disk quite as easily as the three lines of hydrogen, and infers, therefore, that the incandescent gas to which the line corresponds is of the same character as hydrogen, one of the constituent elements of the solar system.

Vapor of Water in the Solar Atmosphere.—Father Secchi, in observing the regions adjacent to the large solar spots, with a spectroscope of high dispersive power, has frequently noticed a series of equidistant nebulous lines, or bands, in the red and orange. These differ in intensity, and appear to consist of five rays enveloped in nebulosity, and are seen in the penumbras and the groups of small spots, but usually disappear in the sun's full disk, and are wanting in the interior of the large spots where the rays never have the form of the bands. January 6th, the bands were seen upon the full disk, but were found to arise from a cirrus in front of the telescope, and disappeared with the cirrus itself. Secchi remarked that, under these circumstances, the bands due to the neighborhood of the solar spots were sensibly increased in intensity. By studying the region near D of the spectrum with a spectroscope of nine prisms, he found that the yellow ray of the protuberances really exists in the sun, and may be recognized far from the border. He concludes, from these observations, that the vapor of water exists in the solar atmosphere in the neighborhood of the large spots.

Solar Activity.—During the early part of the year remarkable evidences of activity in the solar atmosphere were noted. At a meeting of the Royal Astronomical Society Mr. Bidder and Mr. Browning described two enormous spots observed by them. Mr. Huggins, in the discussion that ensued, pointed out the fact that it is only in the neighborhood of the spots that those irregularities of form are to be noticed which have led to the comparison of the granules to willow-leaves, straws, and so on. A cluster of spots measured by Mr. Browning, March 7th, was found to have a length of 97,700 miles, and a breadth of 27,013 miles. The direction of its length was as nearly as possible parallel to the solar equator. Toward the close of the year, a group of spots, measuring in its principal dimension about one-eighth of the sun's diameter, was observed.

Spectra of the Stars.—The spectrum of Sirius has been examined by Father Secchi to determine whether there is any displacement of the hydrogen lines due to a proper movement of the star, a question already examined by Mr. Huggins (see ANNUAL CYCLOPÆDIA for 1868). With a four-prism spectroscope the ray F was observed to be sensibly displaced, the displacement of the centre being apparently equal to the breadth of the rays D′ D″ of sodium, and being toward the less refrangible side. With a spectroscope of two prisms the displacement of certain of the hydrogen rays, with respect to the rays C and F of Sirius, was also observed, and in the same direction. Father Secchi has also examined the spectrum of the variable star R in Gemini, which star attained its maximum brightness with a magnitude of 6.5 in February, 1869. The spectrum exhibits a brilliant hydrogen ray, and also luminous bands, of which the principal correspond to dark bands in the spectrum of Alpha Orionis, and is analogous to that of the variable in Corona Borealis, which appeared in 1866. Father Secchi has found in Aldebaran, Alpha Orionis, and Pollux, the yellow ray noticed in the protuberances of the sun, and also in the body of that orb.

A New Theory of the Universe.—Mr. B. A. Proctor has recently proposed a new theory respecting the arrangement of the stars and nebulæ. Instead of looking upon the nebulæ as for the most part external galaxies of stars, he considers that they belong to our solar system. He discusses the reasons that have been commonly urged for dissociating the nebulæ from our system, and shows that these reasons afford singular evidence in favor of a direct association. He looks upon the stellar system as being far more irregular in its disposition than has been generally supposed, and thinks that it is made up of an almost infinite multiplicity of streams, branches, and clusters; here scattered dispersedly, there more or less aggregated; at one place interlacing, and elsewhere, in the language of Sir John Herschel, "bustling upward from the general level." The Magellanic clouds he looks upon as simply globular aggregations of the sidereal and nebular components which are elsewhere found apart, but which everywhere form but one scheme. The *Popular Science Review*, commenting on this theory, remarks that, according to these views, we see few if any external universes, though our belief in the existence of multitudes of them is in no way affected. On the other hand, our conceptions of the scale on which our own galaxy is constructed, of the grandeur of its plan, and of the immense variety in the forms of matter which compose it, seem to be considerably enhanced by the views put forth by Mr. Proctor.

The Nebular Hypothesis.—Mr. J. S. Aldis, in a contribution to the *Philosophical Magazine*, remarks that a peculiarity in the structure of the earth is worth noting in connection with the nebular hypothesis. There is a tendency in mountain-chains to run north and south, and to present steep slopes to the west, but gentle declivities to the east. This, he suggests, may arise from the contraction of the earth. If a portion of the unsupported crust sinks toward the centre, it will subside on to

that which is moving less rapidly than itself, and in consequence will, so to speak, fall over toward the east, the surface forming a gradual slope to the east, and the fractured edges a precipitous descent to the west. In the moon, too, the author sees proofs of the contraction continued long after the stage in which we now find the earth. The spheroid of the moon has contracted since it assumed that shape, and, contracting less in the longer diameter, is now more spheroidal than it should be according to the theory, while the thickened crust, no longer crushed down on the interior, has left cavities in which the moon's ocean and atmosphere are entombed forever.

The researches of Professor Kirkwood, of Indiana University, by which he has brought the asteroids into due correlation with the other members of the solar system, and derived from the relations which they present an argument in support of the nebular hypothesis, are the subject of an interesting paper in the *Student* for August, 1869, by Mr. Proctor. The author regards Professor Kirkwood's demonstrations as supplying a mathematical proof of the formation of the asteriods from a zone of cosmical matter, according to the processes which Laplace conceived to have been in operation ages ago, in the development of the solar system. In the special instance of the asteroids, these processes have not resulted in the formation of a single planet; but that fact may be accounted for by the neighborhood of so large a body as Jupiter. Had that planet not been so near to the asteroid zone, the matter which composes the asteroids might have united to form one planet. Such is Professor Kirkwood's view. But Mr. Proctor's theory is somewhat different. He thinks that the zone of the asteroids indicates the occurrence of a definite change in the mode of evolution of the planets. Up to that point enormous quantities of matter had been conglobing into planets with noble systems of attendant orbs; indeed, there had been a pretty regular increase from the masses of the giant planets Uranus and Neptune, to the yet vaster Saturn, and to the giant among giants Jupiter. Then the substance of the great revolving disk which had given birth to those enormous bodies seems to have been all but exhausted, so far as the generation of new orbs was concerned. The zone next thrown off seems to have presented too sparse an array of cosmical particles to form a single planet by the action of its parts in producing continual collisions, and so, with much heat and turmoil, a vast rotating, molten, or vaporous globe. With further contraction, the disk seems gradually to have recovered its planet-generating powers; for first, the small planet Mars was formed, then the Earth, with actually an attendant moon. But there the new effort culminated, the next planet Venus being moonless, and appreciably smaller than the Earth, and Mercury being the last and least of the whole series.

The Heat of the Stars.—At a meeting of the Royal Society, in February, Mr. Huggins read a remarkable paper, narrating his experiments to ascertain the heat of the stars. It had occurred to him that the heat received on the earth from the stars might possibly be more easily detected than the solar heat reflected from the moon. He therefore caused to be prepared several thermopiles, and a very sensitive galvanometer, and with this apparatus succeeded in obtaining trustworthy indications of stellar heat in the case of Sirius, Pollux, and Regulus. His method of procedure was as follows: An astatic galvanometer was used, over the upper needle of which a small concave mirror was fixed, by which the image of the flame of a lamp could be thrown upon a scale placed at a distance. Usually, however, he preferred to observe the needle directly by means of a lens so placed that the divisions on the card were magnified, and could be read by the observer when at a little distance from the instrument. To preserve the sensitiveness of the galvanometer, a very careful adjustment of the magnetic power of the needles was made from time to time. So sensitive was the instrument, that the needles would turn through 90° when two pieces of wire, of different kinds of copper, were held between the finger and thumb. The thermopiles consisted of one or two pairs of elements —alloys of bismuth and antimony being employed in some of the experiments. The thermopile was attached to a refractor of eight inches' aperture. Although some of the heat-rays could not be transmitted through the object-glass of the telescope, yet Mr. Huggins decided that the more uniform temperature of the air within the instrument, and some other circumstances, would make the difficulty of preserving the pile from extraneous influences less formidable than if a reflecting telescope were used. The apparatus was fixed to the telescope so that the surface of the thermopile would be at the focal point of the object-glass, and was allowed to remain attached to the telescope for hours, and sometimes for days, the wires being in connection with the galvanometer, until the heat had become uniformly distributed within the apparatus containing the thermopile, and the needle remained at zero, or was steadily deflected to the extent of a degree or two from zero. When observations were to be made, the shutter of the dome was opened, and the telescope, by means of the finder, was directed to a part of the sky near the star to be examined, where there were no bright stars. The needle was then watched, and, if in four or five minutes it had experienced no deviation, then, by means of the finder, the telescope was moved, the small distance necessary to bring the image of the star exactly upon the face of the pile, where it was kept by means of the clock-work attached to the telescope. Almost always the needle began to move as soon as the image of the star fell upon it. The telescope was then moved so as to di-

rect it to the sky near the star, when (generally), in one or two minutes, the needle would resume its original position. In a similar manner, twelve to twenty observations of the same star were made, and repeated on other nights. The mean of a number of observations of Sirius, which did not differ greatly from each other, gave a deflection of the needle of 2°, Regulus gave a deflection of 3°, and Pollux of 1½°. No effect was produced on the needle by Castor. In one observation, Arcturus deflected the needle 3° in fifteen minutes. Mr. Huggins hoped at some future time to resume these investigations with a larger telescope, and to obtain some approximate value of the quantity of heat received at the earth from the brighter stars. He suggests that such observations, if strictly comparable, might be of value, in connection with the spectra of the light of the stars, to help us to determine the condition of the matter from which the light emanates.

Apparatus for Mapping Stars.—Mr. H. M. Parkhurst has invented and described, in the *American Journal of Science*, an ingenious apparatus for mapping the exact right ascension and declination of stars, and also recording their magnitude. By means of it he can map as many as thirty stars a minute in a crowded field, and averages usually, in a night's work, 500 an hour. He has found it easy to take a succession of twelve 15-minute maps in selected places, varying many degrees in right ascension and declination, in but little over three hours. Usually, by predetermining the order of mapping, he can map six or eight stars in quick succession, without an error exceeding two seconds. By the aid of his star-mapper, the inventor discovered a new asteroid (Galatea), September 30, 1862. It had been previously discovered by M. Tempel, in Europe, but that fact was then unknown in the United States. Mr. Parkhurst has also invented a photo-mapper, which he uses in connection with the other apparatus.

Asteroids.—The number of known asteroids has been brought up from 106 to 109 by discoveries during the year. The finding of asteroids has been so common of late that the scientific journals no longer think it important to record each successive addition to that large celestial family. In honor of the discovery of the 100th asteroid, the French Academy issued large medals, bearing upon one face the profiles, in *alto-rilievo*, of Goldsmidt of France, Luther of Belgium, and Hind of England, three gentlemen who have been remarkably successful in looking up new asteroids. Messrs. Peters of Utica, and Watson of Ann Arbor, in this country, have, of late years, done as much as any two European observers in increasing our knowledge of the members of the asteroid zone.

New Comets.—M. Tempel, of Marseilles, discovered a new comet, October 11, which was observed at Bonn October 12, at Carlsruhe October 17, and at Leipsic October 23, from the results of which observations the following elements were calculated by Mr. J. R. Bond, of Twickenham, England:

Perihelion Passage, 1869, Oct. 8.4421 Greenwich M. T.
Longitude of Perihelion, 124°.41′ 1″ } From appt. Equi-
" Ascending Node, 311°.24′ 4″ } nox.
Inclination to Ecliptic, 68°.49′ 8″
Log. perihelion distance, 0° 08995
Heliocentric Motion Retrograde.

The orbit does not resemble that of any comet previously computed. M. Tempel discovered another comet, November 27, in the constellation of Pegasus, R. A. 311° 15′, Polar Distance 75° 44′. The comet is a nebulous mass from 12 to 15 minutes in diameter, having no nucleus, and less luminous at the centre than on the circumference. It was advancing at the rate of 1° per day in R. A., and 55′ in declination.

Winnecke's Periodical Comet.—Observations upon this comet were conducted at different times between April 13 and June 26, 1869, by Schmidt at Athens, Bruns and his assistant Vogel at Leipsic, Schönfeld at Mannheim, and Wolff at Bonn. The remarkable faintness of its light prevented much being done in the way of physical observation. May 14th, Vogel saw, very distinctly, a tail-like lengthening; and Schmidt remarked a small trace of a tail on June 25th. Schönfeld states that, in part of April and May, it appeared to have several centres of condensation, and Vogel, in the beginning of June, detected a much greater resemblance to a star-cluster than to a nebula.

Dr. Winnecke succeeded in finding and observing this comet again on the 4th of August, at half-past 2 A. M., and states that it was then much brighter and larger than when at the same distance from the sun in the month of May before its perihelion passage. He estimated its interior brighter part at 7′ in diameter; but it appeared to be surrounded by diffused faint light of much greater extent. The comet was in perihelion a little before noon on the 30th of June. At the beginning of September, its distance from the sun was about 115 millions of miles, from the earth about 46 millions, nearly the same as it was in the middle of May.

The Common Origin of Certain Comets.—Professor Daniel Kirkwood contributes to the *American Journal of Science* for September, 1869, a paper on the remarkable resemblance between the orbits of the comet of 1812, discovered by Pons, and the fourth comet of 1846. The elements of the two comets are wonderfully like, so much so that diagrams describing their paths are almost exactly similar to the eye. The author remarks that it is infinitely improbable that these coincidences should be accidental; and that they point undoubtedly to a common origin of the two objects. These comets have their aphelions very near the orbit of Neptune, and he argues that the original parabolas in which they moved were probably transformed into ellipses (the present form) by the perturbations of that

planet. Before entering the solar domain they were doubtless members of a cometary system; passing near Neptune at the same time, and at some distance from each other, their different relative positions, with regard to the disturbing body, may account for the slight differences in the elements of their orbits. The question "at what epoch did they enter the solar system," Professor Kirkwood answers thus:

> The mean between the longitudes of the aphelia of the two comets is 271° 41′. Neptune had this longitude in 1775; the comet of 1812, in 1777; and that of 1846, in 1809. Now, with the known period of Neptune and the periods of the comets as determined by Encke and Pierce, we find (neglecting perturbations) that—
>
> Neptune was in longitude 271° 41′ in the year 694 B. C.; the comet of 1812, longitude 271° 41′ in the year 696 B. C.; the comet of 1846, IV., longitude 271° 41′ in the year 696 B. C.
>
> It seems, therefore, that the three bodies were very nearly together about 695 years before the Christian era. It is consequently not improbable that the elliptical form of the two cometary orbits dates from this epoch.

The Constitution of Comets. — Professor Tyndall advances a new theory of comets, after a careful investigation of the phenomena of those bodies. He regards the cometic tail as not matter projected from the head, but matter precipitated on the solar beams which have traversed the head. He shows that such precipitation may occur either with comparative slowness along the beam, or with the velocity with which the beam actually traverses space. Thus the amazing rapidity noticed in the development of the tail is accounted for. As the comet sweeps round the perihelion, the tail is not composed of the same matter, but new matter is precipitated on the solar beams, the part of the old tail which is not protected by the head of the comet being dissipated by the sun's calorific rays, and, the dissipation not being necessarily instantaneous, the tail leans toward that portion of space last quitted by the comet. Occasional lateral streamers are explained as possibly due to the temporary mastery of the actinic rays in parts of the cometary atmosphere not screened by the nucleus. The shrinking of the comet's head as it approaches the sun is due to the beating of the heat-rays against the attenuated fringe of the head which is thus dissipated.

The *Quarterly Journal of Science* for October, alluding to Professor Tyndall's views, says that it cannot at present admit his explanation of lateral streamers, because it leaves us in as much perplexity as we have ever been with respect to that strange phenomenon. When a tail is seen extending in a right line from the head, but at an angle of 60° or so to the radial line from the sun, more is required to account for the peculiarity than the bare possibility that along that line the actinic rays may temporarily have obtained a mastery; and the appearance of six distinct tails spreading from the head in the shape of a fan is still more difficult to explain on the Tyndall theory. The writer in the *Quarterly Journal* concedes, however, that the apparent swinging round of the comet's tail is undoubtedly explained by the new theory.

Professor Tyndall's theory is the subject of two interesting communications to the *Philosophical Magazine* from Mr. Ernest Carpmert and Mr. W. B. Gibbs, F. R. A. S. The former remarks that the theory turns on an assumption hardly compatible with the laws of motion, viz., that the tail of a comet is "matter precipitated on the solar beams traversing the cometary atmosphere." If so, the lineal dimensions of a comet must exceed the length of its tail—that is, in some cases, sixty millions of miles or more. As it seems incredible that such a bulk of vapor can whirl round the sun at the perihelion passage unbroken, the author suggests a slight modification of the Tyndall theory, to avoid this difficulty, and explain equally well all the observed appearances. If there be an extremely thin solar atmosphere, extending considerably farther than the earth's orbit—and if, when a comet approaches the sun, and is therefore exposed to intense heat, its volume becomes comparable with the volume of the sun—the heat of the sun will be shut off from that portion of the solar atmosphere in the shade of the comet (which, though transparent to light, is opaque to heat), and actinic clouds will be formed in the solar atmosphere, thus giving the appearance of a tail to the comet; and, if the shape of the comet be irregular, there may be more than one tail. After the comet makes its perihelion passage, it recedes from the sun, and, at the same time, gradually cools and contracts, and the tail would therefore slowly diminish and fade away. Mr. Gibbs does not think that the theory explains some of the cometary phenomena observed by the telescope. Immediately behind the nucleus, where, according to the theory, we should expect a very luminous region, we commonly have a dark space. Also, the matter which forms the tail frequently streams out from the head toward the sun, as was the case with Halley's comet in 1836. The author cites Professor Bond's description of Donati's comet, where he says that "the material, after being thrown off from the nucleus, instead of being at once driven into the tail, formed a dense cloud of nebulosity, into which the luminous matter continued for some time to stream. This cloud extended itself on the sunward side, remaining in its vicinity for several days. When it had acquired a certain stage, the discharge took place mainly from the corners or cusps on either side in two streams, which, coalescing with those issuing from other envelopes, formed the two branches of the tail." Then, too, some comets have several series of envelopes, which rise up toward the sun. In Donati's comet seven were detected, and in the great comet of 1861 no less than eleven. The force which causes the ascent of these envelopes is intermit-

tent and finally dies away. In the comet of 1861 Mr. Webb noticed the descent of the envelopes on the nucleus; and Herschel and Schroeter remarked the same peculiarity in the comet of 1811. From these facts the author thinks that, although Professor Tyndall's hypothesis accounts for some of the phenomena, yet the true theory is still to be discovered.

Mr. Huggins, in the Rede Lecture, delivered at Cambridge in May, details his spectroscopic observations on Winnecke's comet (II., 1868), and the comparison of its spectrum with that of various hydrocarbons, and concludes therefrom that the cometary matter from which the light comes is the luminous vapor of carbon. To this theory it may be objected that the degree of solar heat to which the comet was exposed would be insufficient to convert carbon into vapor. Mr. Huggins replies to this, that carbon may possibly exist in an allotropic state, in which it may be much less fixed, and so be capable of passing into vapor at a comparatively low temperature. At all events, the matter which emanates from the nucleus, and is distinguished by a blue tint, does give a light which the prism shows to be identical with that emitted by the vapor of carbon; therefore it is certain that the light which has the blue color is not due to reflection from a cloud, of which the particles are too small to reflect the longer waves of its less refrangible colors. The invisible spaces between the envelopes may possibly correspond to a condition of the vapor too cool to emit light, and yet not condensed so as to reflect light; and the exterior parts of the coma, or tail, which have been found to be polarized in a plane, showing the light to come from the sun, may be supposed to consist of the vapor of the nucleus, condensed into widely-scattered particles of great minuteness. Mr. Huggins does not support the Tyndall theory on the ground that it is inconsistent with the observed appearances and forms of the tails, and especially with the rays frequently projected in a direction different from that of the tail; and adds that, for further knowledge of the nature of cometary phenomena, we must, doubtless, wait until the spectrum analysis can be applied to the series of changes presented by a brilliant comet.

Prizes for the Discovery of Comets.—The Imperial Academy of Sciences of Vienna have issued a circular, offering prizes for the discovery of comets. It says that, for several years past, there have been remarkably few discoveries of new comets—a fact attributed to the special attention given by observers to small planets. The Academy regard it as very desirable, that more should be known about comets, in view of the recently-established connection between those bodies and meteors. They, therefore, propose to award a gold medal, or twenty Austrian ducats, representing its value in money, as the receiver may choose, for the discovery of any new comet during the three years between May 31, 1869, and May 31, 1872. The awards will be subject to the following regulations:

1. The prize will be given only for the first eight comets discovered in each of the three years named, and only for such comets as are telescopic at time of discovery, that is, invisible to the naked eye. The comet must not have been before seen by another observer, and must not be one whose appearance could securely be predicted.

2. The discovery must be communicated immediately, and without waiting for further observations, to the Imperial Academy of Sciences, by telegraph if practicable; and otherwise by the earliest post. The Academy undertakes to transmit the news immediately to other observatories.

3. The time and place of discovery with the plan and course of the comet must be given as exactly as possible with the first notice. This first notice is to be supplemented by such later observations as may be made.

4. If the discovery should be confirmed by other observers the prize will not be awarded unless the observations of the discoverer suffice for the determination of the orbit.

5. The prizes will be awarded in the general meeting of the Academy held at the end of May of each year. In case the first notice of a discovery arrives between the first of January and the end of May, the final award of the prize will be deferred till the general meeting in May in the following year.

6. Application for the prize must be made to the Academy within five months from the time of the arrival of the first notice. Later applications will not be considered.

7. The Imperial Academy will procure the decision of the permanent astronomers of the Observatory at Vienna as to the fulfilment of the conditions in Nos. 1, 3, and 4.

The Radiation of Heat from the Moon.—At the May meeting of the Royal Society, the Earl of Rosse presented a paper giving the fruits of his experiments to estimate the amount of heat which reaches the earth's surface from the moon. Professor Piazzi Smith had experimented for the same purpose, on the Peak of Teneriffe, with a thermopile, but apparently without any means of concentrating the moon's heat beyond the ordinary polished metal cone. Melloni had employed a glass lens of about 3 feet diameter, but, as glass absorbs rays of low refrangibility, it was not so well adapted to concentrate heat as a metallic mirror. The point sought to be determined by Lord Rosse was, in what proportions the moon's heat consists of: (1.) That coming from the interior of the moon which will not vary with the phase. (2.) That which falls from the sun on the moon's surface and is at once reflected regularly and irregularly. (3.) That which, falling from the sun on the moon's surface, is absorbed, raises the temperature of the moon, and is afterward radiated to the earth as heat of low refrangibility. The apparatus consisted of a thermopile of two elements, on which all the moon's heat, which falls on the large speculum of the author's 8-foot telescope, was concentrated by means of a concave mirror of 3½ inches aperture, and 2.8 inches focal length. Two wires were connected with the two poles of each pile, and the ends of the wires joined two by two close to a Thompson's reflecting galvanometer, in such

a manner that a given amount of heat on the anterior face of one pile would produce a deviation equal in amount and opposite in direction to that produced by an equal amount of heat on the anterior face of the other pile. The result of the experiments may be summed up as follows: The law of the variation of the moon's heat is found to differ not much from that of the moon's light. It may therefore be inferred that not more than a small part of the moon's heat comes from the first of the three sources mentioned. Readings of the galvanometer taken on four different nights at the time of full moon showed a deviation of about six or eight divisions. The probable per centage of the moon's heat which passed through disks of thin plate-glass placed in front of each pile was 8 or rather less. The greater part of the moon's heat which reaches the earth appears to have been first absorbed by the lunar surface. The ratio of the heat of the sun, which reaches the earth, to that of the moon, is estimated at about 89,819 to 1. The value of the readings of the galvanometer was determined by comparison with those obtained by using a vessel of hot water coated with shellac and lampblack varnish as a source of heat. The vessel was of tin, circular, and subtended the same angle at the small concave reflectors as the large mirror of the telescope. It was thus found that (the radiating power of the moon being supposed to be equal to that of the lampblack surface, and the earth's atmosphere not to influence the result) a deviation of 90 for full moon appears to indicate an elevation of temperature at the moon's surface of about 500° F. In deducing this result, allowance has been made for the imperfect absorption of the solar rays by the lunar surface. Of this estimated high temperature at the moon the author remarks that it is quite in accordance with the views of Sir John Herschel on the subject ("Outlines of Astronomy," section 732 and preceding sections), where he says that, "in consequence of the long period of rotation of the moon on its axis, and still more the absence of an atmosphere, the climate of the moon must be most extraordinary, the alternation being that of unmitigated and burning sunshine, fiercer than that of an equatorial noon, and the keenest severity of frost, far exceeding that of our polar winters for an equal time." And again, "the surface of the full moon exposed to us must necessarily be very much heated, possibly to a degree much exceeding that of boiling water."

Captain John Ericsson, the distinguished American inventor, reported to the American Association, at its meeting in August, conclusions derived from a series of original experiments, exactly opposite to those submitted by Earl Rosse. Captain Ericsson proceeded upon the generally-accepted theory that the moon has no atmosphere, and sought to ascertain what was the temperature of the solar rays in absolute space—that is, before entering the atmosphere of the earth—arguing that the heat at the surface of the moon, by reason of the absence of an atmosphere, would be the same as that in absolute space. His experiments led him to believe that the temperature of absolute space, and, therefore, at the lunar surface, is more than 300° below the freezing-point of water. The atmosphere of the earth imprisons, so to speak, the solar rays, which are then absorbed into the earth, until the heat of the surface is increased to the existing average temperature, when other causes interfere to prevent it going higher. In other words, the heat received by the earth from the sun is prevented by the atmosphere from being reflected off into space; but no such cause exists to check the reflection into space of the solar heat falling on the moon's surface. On Captain Ericsson's theory, the moon is a mass of ice, and the heat noticed by Earl Rosse is reflected, as heat might be from the coldest surfaces, and not radiated from it.

Report of the Lunar Committee on Changes in the Moon.—The report of the Lunar Committee, at the August meeting of the British Association, contains some items of interest. Mr. Birt stated that, since the appointment of the committee, in 1868, a surface of 100 square degrees—i. e., 10 degrees of south latitude and 10 of west longitude—has been carefully surveyed; the outlines of 433 objects laid down on a scale of 200 inches to the moon's diameter, and a catalogue prepared, containing numerous notices of important phenomena bearing on the questions relative to the physical aspect of our satellite. The great question of continued lunar change, either transient or permanent, as contrasted with apparent change dependent upon illuminating and visual angle, is one, he remarks, for posterity to settle. Several instances were adduced to show that the moon's surface had undergone successive changes during its past history. The determination of these changes rests on the strong indications afforded by a careful study of photograms of the priority and posteriority of well-marked features, which can only be realized by contemplating the lunar pictures in the seclusion of the study. The report alludes to certain differences between the photograms, particularly one with respect to a crater figured by Lohrmann, and found on De La Rue's map, but not a vestige of which can be discovered on Rutherfurd's. The comparison of photograms appears to open up a line of investigation of great promise. Some attention has been given to apparent changes of brightness and tint; and three or four somewhat conspicuous spots were referred to as exhibiting these alterations.

In a paper subsequently read before the Association by Mr. Birt, he spoke of the number of changes which have been observed, during the last 49 years, on the lunar crater Plato. From records in his possession, it appears that no less than 24 spots have been seen, at different times, on the smooth, dark

floor of that crater. Previous to February, 1869, 15 had been recorded, of which 6 have been observed recently. In and since February, 1869, 9 additional spots have been observed, of which 5 have been more or less constantly seen by two observers. The remaining 13 have either become invisible, or are but rarely seen. Certain peaks on the western wall of the crater Plato have been measured by Beer and Mädler, and their height found to be from 5,000 to 7,000 English feet. These peaks, at sunrise, cast well-defined, long shadows, which have been measured by Professor Challis, of Cambridge. The shadows of the three principal peaks come in proximity to three very minute craters on the floor of Plato, thus furnishing a means of identifying these craters at any future time.

Transits of Venus.—Preparatory arrangements were made in England during the year for the efficient observation of the important transit of Venus, which will take place in December, 1874. Numerous stations have been selected for observing the phenomenon in its various stages and conditions. For observing the ingress of Venus upon the sun's disk, as accelerated by parallax, Owhyhee and the neighboring islands, the Marquesas Islands, the Aleutian Islands, and the mouth of the Amoor, are regarded as more or less favorably situated. For observing the ingress retarded by parallax, Kerguelen Island and Croyet's Island are well situated, though geographically unfavorable. Next in order come Rodriguez, Mauritius, and Bourbon Islands, Madras, and Bombay. The egress accelerated by parallax can be best observed in Auckland Islands, Canterbury, Wellington, and Auckland, Norfolk Island, Melbourne, and Sydney; while Omsk, Orsk, Astrakhan, Erzeroum, Aleppo, Smyrna, and Alexandria, are highly suitable places for noting the retardation of the egress by parallax. Mr. De La Rue has been investigating the practicability of taking photographs of Venus in transit, at several well-separated stations, as an auxiliary means of estimating the sun's distance. He points out that the close correspondence between the result obtained by micrometrical measurements applied to his eclipse photographs in 1860, and the elements calculated by Mr. Farley, in the *Nautical Almanac*, show that a very close approximation to the truth is to be looked for in the case of the transit of Venus. The difficulty of measuring the solar and lunar disks presented in an eclipse photograph is very much greater than that attending the corresponding measurements in a transit photograph. Moreover, the observer of a transit would not be hurried like the observer of an eclipse, since the former phenomenon is several hours in progress, while the latter lasts but a few minutes. The photographing could be as easily done as that which occurs daily at the Kew Observatory. Mr. Stone, of Greenwich, suggests that the three following points should be carefully attended to in making the telescopic observations; that telescopes of nearly the same aperture should be employed; that magnifying powers should be nearly the same; and that attention should be directed to observations of real internal contact as the chief points. By "real internal contact," he means the formation of the "black drop," as it is called, simultaneously with the complete ingress of the planet upon the solar disk. The transit of 1874 does not afford the same opportunity which was had in that of 1769, for estimating the sun's distance from the different duration of the transit as observed from different points of the earth's surface; nor is there a probability, according to Mr. Airy's calculations, of applying that method in the transit of 1882. The latter transit, as well as that of 1874, takes place in December, when the southern or sea hemisphere of the earth is turned toward the sun. The transits of 1761 and 1769 (the most important observed last century) happened in June, when the northern hemisphere was bowed to the sun. Stations for observing the transit of 1882 have already been chosen.

Transit of Mercury.—The recent transit of Mercury was observed by Mr. Row (a Hindoo astronomer), at Vizagapatam. The observer and some of his friends noticed that near the middle of the transit a "wavy tint of light" darted from the upper edge of the planet. This light was occasionally disturbed, but continued visible for some time. No change of focal length or of the eye-piece employed had any effect on the phenomenon. It is said to be the first instance of the kind occurring during a transit of Mercury.

AURORA BOREALIS. An auroral display of extraordinary extent and splendor occurred on the night of April 15th. It was seen throughout Canada, being especially brilliant at St. John, N. B., Montreal, and Toronto, in the north and middle western part of the United States, and in the upper portion of the Southern States. At Boston the spectacle was remarkably fine between 7 and 8 P. M., surpassing in richness and beauty any previous exhibition of the kind at that point for many years. The Western Union Telegraph Company operated their lines in that city without the aid of a battery, and the same was done in many other places. From Philadelphia to Pittsburg the telegraph lines were worked by the auroral electricity alone. At Cincinnati it was noticed that all the lines, except those running south and west, were disturbed, the currents being sometimes too strong, and at others almost neutralized. The operation of lines at St. John, N. B., was seriously interfered with, and communication almost entirely ceased between Plaister Cove and Heart's Content, N. B. The phenomenon, as seen at Richmond, Va., is described as a belt of white, apparently about six feet wide, extending across the sky from east and west, drifting northward, and finally gathering as a fan closes, and then dis-

appearing, after which the ordinary Aurora Borealis was seen in the northern horizon. As far southwest as Louisville, Ky., the aurora made but little show, and its effects on the telegraph wires were barely perceptible. Seen from Indianapolis, the phenomenon was of a whitish color, looking like clouds rent by the winds. An hour later (at 9 o'clock) the sky was illuminated first in the northwest, then in the east, and streaked with spots of red light which rapidly came and went. The display at that place lasted about an hour and a half. In New York City and vicinity the appearance of the phenomenon is accurately given in the following, from an account furnished by W. S. Gilman, Jr., to the *American Journal of Science* for July. He was stationed on the roof of Mr. Jacob Campbell's observatory in Brooklyn, N. Y., a favorable position for a good view. At 7½ P. M., Mr. Gilman first observed thin streaky clouds pointing upward from the horizon, and evidently the beginning of an auroral display. In a few minutes afterward the beams shot toward the zenith, and the familiar auroral corona was formed. The nucleus or apex of the aurora was seemingly a cloud shaped like the internal area described by a bow with the string drawn aside. The southwest was clear, as it was generally during the evening. From that point the wind had been blowing all day. To the south the auroral beams did not extend nearer the horizon than Sirius, and at no time exhibited great strength on the horizon. At 7ʰ 40ᵐ rosy tints appeared at different points of the compass, those to the east and west of the zenith being remarkably deep, and generally at an altitude of 45° or more. At 8 P. M. the phenomenon brightened after a brief dull period, and the rose-tints were then very beautiful. Sulphurous-yellow and greenish hues were also visible. At 10 o'clock the aurora was faint, though striking in its arrangement; but at 10½ o'clock the aurora reappeared with redoubled brilliancy, the nucleus of light being much larger than it was earlier in the evening, and in shape resembling the denser part of the great nebula of Orion. At 2 A. M. when Mr. Gilman's observations ceased, only faint beams were perceptible in the north, proceeding from the dark segment along the horizon from N. N. E. to N. N. W. He regards this aurora as inferior in brilliancy to one that he witnessed at Mount Desert, Me., September 15, 1868, but possessing more interest than the latter in the greater grotesqueness of the clouds forming the corona, and the rosy, greenish, and yellowish tints assumed by the broad sheets of light which streamed on all sides from the nucleus overhead.

Mr. E. T. Kingston, connected with the Magnetic Observatory at Toronto, Canada, in a communication to the same magazine, treats of the aurora as seen at that place, in some of its more scientific aspects. He says:

A very grand exhibition of aurora, occupying more or less the whole sky, took place on the night of April 15th, and continued, with but slight interruption, from dusk till daylight on the following morning.

One part of the display, deserving notice from its comparative rarity, was a dark segment similar to those commonly seen in the north, though not so well defined, which appeared about 9 P. M. in the south, with an altitude of about 25°. But the feature of still more unusual occurrence consisted in a belt of luminous haze from 5° to 10° in width, extending through the zenith from the eastern to the western point of the horizon, the material of which (*in appearance*) moved like a torrent from east to west with prodigious velocity.

The *apparent* movement of translation continued from about 13ʰ 10 to 13ʰ 50ᵐ, when the matter composing the belt became affected by pulsations, which succeeded each other in the order from east to west, and with a rapidity still greater than that of the previous apparent motion of translation.

About 14ʰ the belt broke up and the pulsations became visible over the whole sky, the order of their succession being from the horizon to the zenith. At 15ʰ the pulsations became intermittent, and ceased to maintain any apparent order in the their occurrence: they gradually became more feeble and ceased with daybreak.

Throughout the night a generally diffused luminosity prevailed, such as is commonly seen with a full moon and hazy sky. This was evidently not occasioned by the moon, which was scarcely four days old, and was low in the horizon, but was part of the aurora itself, the brilliancy of whose more active features it greatly impaired.

Throughout the day and night a considerable magnetic disturbance was going on.

Declination.—As regards the declination, the average deviation was 15′ of arc, or three times the limit required to entitle a disturbance to be considered as large. The easterly deviations were the more numerous, but the westerly were on the average fifty per cent. greater in extent.

The greatest easterly deviation was 98′ at 8 P. M., and the greatest westerly deviation 85′ at 7ʰ 15ᵐ P. M.

The deviations after midnight were nearly all easterly.

Total Force.—The disturbances of the total force were on the average nearly seven times what may be designated as the inferior limit of a disturbance, or .0004 of the total force.

The number of the disturbances which increased, and of those which diminished the force, were nearly equal; but the average magnitude of the latter was to that of the former in the ratio of 8 to 5.

The greatest disturbance which increased the force was 11 (the unit being .0004), and occurred at 5ʰ 15ᵐ P. M., while the greatest disturbance diminishing the force was 23, and occurred at 8 P. M.

The disturbances which diminished the force nearly all took place between 6.30 P. M. and midnight.

Inclination or Dip.—The disturbances of the dip had an average value of about 15′, or 15 times the disturbance limit.

The disturbances which increased the dip were the more numerous, but those which diminished the dip were of nearly twice their magnitude. The greatest increase of dip was 35, and occurred at 10ʰ 30ᵐ P. M., and the greatest diminution of dip was 64′, and occurred at 3 P. M.

The disturbances increasing the dip nearly all took place after 7 P. M., those that diminished the dip having occurred during the day.

On the whole, the aurora, together with the magnetic disturbance which preceded and accompanied it, was more remarkable than any that have been witnessed at Toronto since September, 1859.

J. A. Angström sends to Poggendorff's *Annalen* a report of his spectroscopic studies of the aurora. He says that, in the winter of

1868–'69, he was several times able to observe the spectrum of the luminous arc which surrounds the dark segment, and is never wanting in faint auroras. The light was almost monochromatic, and consisted of a single bright line, which was on the left of the well-known group of lines of calcium. Traces of three very faint bands were also observed, which extended nearly as far as F. Only once, when the luminous arc was much agitated, did he see the regions in question momentarily illuminated by some faint spectrum lines; yet, from the feeble intensity of those rays, he could still say that the light of the luminous arc is almost monochromatic. In March of 1867 he observed, for a whole week, the same line in the zodiacal light, which at that time displayed an extraordinary intensity. Finally, on a starlight night, when the whole sky was in some degree phosphorescent, he found traces of the line even in the faint light which proceeded from all parts of the heavens. This line, so far as he has investigated it, does not coincide with any of the known lines of simple or of compound gases. He suggests that an intense northern light, such as can be observed within the polar circle, will probably give a more complex spectrum.

AUSTRALIA. This continent is now divided into five colonies: *New South Wales* and *Queensland* in the east, *Western Australia* in the west, *South Australia* in the southwest, and *Victoria*, the smallest, but most important, in the southeast.

The area of *Victoria* is 86,831 English square miles, or about as large as that of Great Britain. Its population was, at the end of 1868, about 684,000. The proportion of the male population to the female is as 4 to 3. The soil is for the greater part undulated and traversed by some mountain-ranges of considerable height. Of its area, 40,700 square miles are adapted for sheep-breeding, 26,000 for agriculture, 583 square miles are calculated to be auriferous, the unexplored land being about 20,000 square miles. There are numerous rivers, but only one, the Murray, is large; it has a length of 2,400 miles, 2,000 of which are navigable. The climate is dry, but pleasant.

Gold-mining is now principally in the hands of companies, and is regulated like any other branch of industry. But there still are many diggers who work on their own account, and would not work for any wages in the richest quartz-works.

The yield of gold amounted in 1867 to 1,433,687 ounces. There were 470 steam machines in the alluvial works, and 532 in the quartz-works. The total value of the machines used in the gold-works amounted to 2,068,527 pounds sterling. The average wages of the miners was £87 2s. sterling. The total value of gold obtained in this colony up to the end of 1867 was £136,000,000 sterling. The yield of gold in 1868 amounted to 1,657,598 ounces, and the value of machinery to £2,150,432. There was obtained in 1867 silver valued at £3,462, tin at £195,000, copper at £4,000, antimony at £30,000, coal at £3,000, slate and flagstone at £18,000, diamonds and jewels at £8,000. The number of miners has for several years continually been on the decrease. It was, in 1868, 63,000, 15,000 of whom were Chinese. The main centre of the gold-diggings is Ballarat. The city contains a very industrious population of 28,000. The annual receipts of the municipality amount to more than £20,000. A railroad connects it with Melbourne *via* Geelong. The next mining cities in importance are Bandigo and Castlemaine.

The present agricultural population is about 14,000. The yield in wheat is about twenty bushels, in oats about twenty-two bushels, an acre. The dry climate is favorable to wheat, which is of excellent quality. There were, in 1868, 121,000 horses, 622,000 cattle, 77,000 hogs, 8,460,000 sheep. The export of wool amounted to £3,800,000. The value of agriculture was, in 1866, £865,693. The squatters had 1,156 stations for sheep-breeding, extending over thirty-two million acres. The cultivation of tobacco, flax, and the vine, is progressing favorably. The vineyards, in 1868, covered 5,000 acres. The Society of Acclimatization manifests great activity. Almost all the domestic animals, fruit, vegetables, and corn, are acclimatized, and thriving very well. The want of sufficient flowing water, arising from the nature of the hard upper strata, has been a serious drawback both for mining and agriculture, so that the supply of water has become the matter of paramount importance. Among other means of remedying this want, the large river Murray is to be brought into communication with many other rivers, gigantic reservoirs are to be constructed, large salt lakes to be emptied, and changed into reservoirs.

All other branches of industry have also been greatly developed. There were, in 1866, 114 grinding-mills, with a capital of £384,385; 86 breweries, with a capital of £266,000; and of other manufactories there were 786, with a total capital of £1,980,911.

With this development of domestic industry the English export has decreased. The legislature was compelled to introduce an almost prohibitory protective tariff. Wages are exceedingly high, and every industrious and competent working-man finds occupation readily, as may be perceived by the fact that the deposits in the savings-banks amount to a sum of £8,000,000. The Government of Victoria aids immigration but very little now, the legislature, which is elected by universal suffrage, representing the views of the laboring classes, who think that immigration depresses wages. The squatters are mostly Scotchmen, the farmers mostly Irish. The English are not so numerous; they are mostly shopkeepers and mechanics. The miners are for the greater part from Wales and Cornwall; they are skilled miners and smiths. The considerable immigration of Chinese is

worthy of note. They are ill-treated, though they have proved themselves useful to the colony by their skill, industry, and spirit of enterprise.

The revenues of the colony amounted, in 1868, to £3,320,354, the expense to £3,272,693. The revenues for 1869 are estimated at £3,294,161, the expenses at £3,293,042. The capital city, Melbourne, has in wonderful development been excelled only by a few American cities. It contains (with the suburbs) 170,000 inhabitants.

Port Darwin is said by recent explorers to be the best port in the Australian colonies. It lies southwest from Adam Bay, into which the Adelaide River empties.

The foreign trade of the colony of Victoria continues to show an increase. In the first eleven months of 1868, the imports amounted in value to £11,891,938, an increase of £1,416,503 over the corresponding period in 1867. The exports amounted to £12,814,750, an increase of £2,625,211.

The Victoria Parliament passed a bill for a loan of £2,100,000 for railway purposes. Arrangements for intercolonial free trade were being organized.

New South Wales.—This colony embraces an area of 207,000,000 acres. The eastern coast runs a distance of 700 miles from Point Danger to Cape Howe. The colony extends 500 miles from the sea into the interior. The coast is high and rocky; but there is a number of bays, affording excellent, spacious, and safe harbors. The country is undulating, and abounds in rivers, fertile valleys, and extensive grass plains. North of Sydney, and east of the Blue Mountains, there are nine rivers watering fertile agricultural districts with prospering towns. There is a regular steam connection between these rivers and Sydney. These districts are well adapted for the culture of cotton, tobacco, sugar-cane, and other tropical productions, as well as the grape-vine; the southern portion is celebrated all over Australia for its rich yield of cereals. Cattle are excellent. But the richest resources of the colony are its immense pasture-grounds. Tallow, hides, bones, leather, and meat, are valuable export articles, while wool is the great staple of the country. The export of wool amounts now to £30,000,000 a year; while the export of wool of all Australia amounts to £100,000,000. The squatters (sheep-breeders) are a very wealthy class, and form the territorial aristocracy of the colony. The area owned as free property (i. e., disposed of by the crown) consisted, in 1867, of about 46,000,000 acres, only 230,000 of which were cultivated; of the 120,000,000 acres of leased land, only 160,000 were cultivated. Wheat, corn, oats, barley, and tobacco, were the chief articles of cultivation. The culture of the grape has increased, while that of sugar is beginning to grow important in the northern parts. The interior of New South Wales suffers terribly from want of water. The drought of 1868 and 1869 lasted in some parts through the whole year, causing an immense destruction among the animals. This colony is rich in gold, silver, copper, iron, lead, tin, and quicksilver; all these treasures are as yet but very little worked. There is an abundance of coal, the great coal stratum extending as far as Queensland. Of the 1,780,000 tons yielded a year on an average during the last ten years, more than one-half was taken to India, China, and the neighboring colonies. Twenty thousand tons of coal are raised at Newcastle every week. The strata of iron are exceedingly valuable. A silver-mine has been opened on the southern coast, 200 miles distant from Sydney; and a rich stratum of red sulphuret of mercury (cinnabar) was discovered in the beginning of 1869. The yield of gold amounted, in 1866, to 235,898 ounces. The population was, in 1866, 420,000 souls. The constitution is similar to that of Victoria, except that the members of the Legislative Council are appointed by the Crown (the Governor). The railroads and telegraphs are in the hands of the government, and yield a considerable revenue. The Southern Railroad, from Sydney to Goulburn, is 128 miles long. The revenues of the colony amounted, in 1868, to £2,107,157; its debt to £9,585,890, contracted for railroads and other public works. The exports from England to the colony rose, in 1868, to £2,872,000. Sydney, the capital of the colony, is seven miles from the mouth of the beautiful Bay of Port Jackson. An international exhibition was opened in this city in May, 1869.

Queensland.—This colony occupies the northeastern part of the continent; its length, from the southern boundary to Cape York, is 1,200 miles; its area, 678,000 square miles (about four times that of France). The great bays form numerous harbors. Moreton Bay, at the head of which is Brisbane, the capital, is 60 miles long and 20 miles wide, and encircled by fertile coasts. East of the range of mountains running at a distance of 60 to 70 miles from the coast, numerous broad and partly navigable rivers run through rich alluvial bottoms, while west of the mountains there is an expansive table-land, the Downs. Ipswich, the second city of the colony, has about 6,000 inhabitants. The country around Maryborough is excellent for agriculture. Gladstone is the harbor of the bay Port Curtis, which, being deep, wide, and safe, is considered to be, after Sydney, the best port on the eastern coast of Australia. The climate is healthy. Rockhampton, 80 miles from the mouth of the Fitzroy (in Keppel Bay) is a notable city, the future metropolis of Northern Australia. The coast near the Gulf of Carpentaria is not adapted for sheep-breeding or agriculture; but it abounds in minerals.

On the whole, Queensland is exceedingly well adapted for sheep-breeding; its pasture-lands of an enormous extent and excellent quality. The interior is grass-land. Soil and

climate adapt the Downs especially for wheat, barley, oats, and the vegetables and fruit of the temperate zone; the coast-lands producing corn, and most of the fruits and spices of the subtropic zone. The exhibition of the Horticultural and Agricultural Society of Drayton and Toowoomba, in February, 1869, in the Darling Downs, has proved the country to be excellent for producing wheat and other cereals. On the other hand, the exhibition of the Agricultural Society of East Moreton, opened at Brisbane, showed excellent specimens of grapes, oranges, lemons, gigantic sugar-cane, rich cotton, and fragrant tobacco. The cotton equals our Sea Island staple in fineness and evenness, but is not as strong. Its export rose from 14,344 pounds in 1862 to 412,741 pounds in 1867. There were, in 1866, only 2,884 acres of cotton; in 1867 there were 8,149 acres; so that its export in 1868 can hardly have been below a million pounds. The colony is rich in valuable woods.

The colony is particularly favorable for farmers with small means, and they have been well provided for by the legislature. Besides the favorable conditions for the purchase or lease of large tracts (as high as 10,000 acres), any father of a family can occupy 80 acres of agricultural land or 160 acres of pasture-land, by paying for five years nine pence a year per acre of the former, or sixpence for the latter kind of land. The discovery of gold has essentially improved Queensland. The city of Nashville, in the gold district of Gympie, already contains 10,000 inhabitants. New and rich quartz strata were found in March, 1869. To develop this industry, however, an uninterrupted supply of water is needed. The export of gold from Queensland amounted, in 1868, to 163,000 ounces. The Peak Downs contain copper strata of great extent. A rich stratum of galena was discovered, in February, 1869, in the Burnett district. The population was about 100,000 persons in 1868. Railroads and telegraphs are controlled by the Colonial Government. The telegraph was, in March, 1869, advanced as far as Tadesville, on Cleveland Bay, and will soon, by a submarine cable to Java and Singapore, connect Australia with Europe, etc. Public instruction has received early attention, there being many primary and grammar schools.

Western Australia is separated from the other colonies by the great interior desert. It is now the only Crown colony in Australia. Its length from north to south is 1,200 miles, its width 800; the entire length of the coast is 2,000 miles. The Darling and Roe Mountain-ranges traverse the colony from north to south, have a height of 1,500 to 2,000 feet and a width of 20 to 25 miles. Beyond them are the wide, undulating grass prairies, with extensive pastures, but slightly wooded and well watered by the rivers Swan, Canning, Albany, and Augustus. Farther east begins the great desert. The land produces potatoes, vegetables, and fruits of all kinds. The climate is healthy and very favorable to European settlers, who are encouraged by very favorable conditions. The extensive forests furnish woods of great value. The colony is as yet but little explored. Between the Murchison and the Upper Irwin, at a distance of 40 miles from the sea, a district of 4,000 square miles contains coal, copper, and lead in abundance. Pearl-fishing is very advantageous. According to official statements, each European manager obtains about a ton of shells a month, which is worth £100 on the spot. The country abounds in fish. The export from this colony to England was, in the first months of 1869, very lively in wool, pearl shells, copper-ore, gum; timber is sent to Southern Australia and Victoria, railroad-ties to India, horses to Singapore, Madras, and Calcutta. The exports amounted, in 1868, to £107,636, the imports to £212,488. The population, in 1867, was 23,231 persons, two-thirds of whom were males. There were 33 public schools. The revenues of the colony were, in 1868, £83,038; the expenses, £82,294.

Southern Australia is chiefly important for sheep-breeding, agriculture, and mining. The Crown had sold, in 1868, over 3,000,000 acres; 241,712,459 acres (378,300 square miles) remaining still unsold. Its area is three times as large as Great Britain and Ireland. Breeding sheep and cattle is the most important business, the squatters forming an aristocratic class and living in a princely style. The yield in wheat amounted, in 1868, to more than 5,000,000 bushels. The colony is immensely rich in copper; it exported to England, in 1868, 14,841 tons of copper-ore. The port of Wallaroo is a thriving town of 5,000 inhabitants. The capital of the colony is Adelaide. The population amounts to about 180,000. The imports from England rose, in 1868, to £1,177,638. The government consists of a Governor, a Legislative Council, and a House of Assembly. Both Houses of the Legislature are chosen by the people. The Council consists of 18 members, the Assembly of 36.

The exports of England to Australia amounted, in 1868, to £12,071,435; £1,105,400 of which were paid for fancy goods, £971,003 for clothing, £966,697 for cotton goods, £649,058 for woollens, £324,455 for linen, £924,507 for boots and shoes, £477,295 for beer. The export of Australian staple articles to England, in 1868, shows: for hides, 14,641 tons; raw copper, 93,000 cwt.; tallow, 215,418 cwt.; wool, 155,745,199 cwt. The gold imported from Australia and New Zealand to England amounted, in 1868, to £6,989,594. The total exports from England to Australia rose, in 1865, to £12,339,241.

AUSTRIA, an empire in Europe. Emperor, Francis Joseph I., born August 18, 1830; succeeded his uncle, Ferdinand I., on December 2, 1848. Heir-apparent, Archduke Rudolph, born August 21, 1858. In this article we treat of the affairs belonging to the Austrian

monarchy as a whole, and those belonging to Austria proper, or the cis-Leithan provinces, reserving the affairs of the trans-Leithan provinces for the article HUNGARY.

The area of the Austrian empire, according to the latest official statements, amounts to 240,381 square miles, and the population, in 1867, to 35,553,000 inhabitants. An official census was to be taken during the first months of the year 1870. The previous census was of 1857, which showed the population of the provinces now constituting Austria (Lombardy and Venetia have since been lost) to amount to 32,530,000.

In no country of the world is the difference of nationality of so great political importance as in Austria, as it has been the primary cause of all the territorial losses which the empire has suffered since 1815, and of nearly all the commotions which still threaten its unity. According to a new work on the subject, by a writer of recognized reputation, Dr. Ficker (*Die Völkerstämme der Oestreich.—Ungarischen Monarchie*, Vienna, 1869), the numerical strength of the principal nationalities in Austria proper (cis-Leithan provinces), and the lands subject to the Hungarian crown (trans-Leithan provinces), were as follows:

COUNTRIES.	Germans.	Northern Slavi.	Southern Slavi.	Western Rumanians.	Eastern Rumanians.	Magyars.	All others.
Austria	7,280,000	9,822,000	1,734,000	592,000	213,000	18,000	742,000
Hungary	1,765,000	2,210,000	1,509,000	1,000	2,501,000	5,408,000	611,000
Military Frontier	45,000	12,000	932,000	500	147,000	5,000	500
Total	9,040,000	12,044,000	4,175,000	594,000	2,862,000	5,431,000	1,854,000

The following is a list of the provinces into which each of the two halves of the empire is divided, with the population in 1867, as ascertained by adding the excess of births over deaths to the official statements of the census of 1857:

I. *Cis-Leithan Provinces (Austria Proper):*

1. Lower Austria	1,762,784
2. Upper Austria	719,427
3. Salzburg	146,870
4. Styria	1,091,647
5. Carinthia	342,656
6. Carniola	475,437
7. Goertz, Gradisca, Istria, and Trieste	566,666
8. Tyrol and Vorarlberg	878,733
9. Bohemia	5,153,602
10. Moravia	2,008,572
11. Silesia	493,825
12. Galicia	5,147,021
13. Bukovina	516,418
14. Dalmatia	446,660
Total	19,750,318
Adding army, and travelling population—about	20,205,000

II. *Trans-Leithan Provinces (Hungary):*

15. Hungary	10,814,206
16. Croatia and Slavonia	962,031
17. Transylvania	2,095,215
The Military Frontier	1,181,502
Total	15,002,954
Adding army, and travelling population—about	15,848,000
Total of I. and II., or the whole monarchy,	35,553,000

In the budget of 1868, for the whole monarchy, the estimates of expenditure and receipts were as follows:

Expenditures.	Austrian florins.
1. Common Ministry for Foreign Affairs	4,226,471
2. Common Ministry of War:	
(1.) for the Army	78,778,357
(2.) for the Navy	9,933,265
3. Common Ministry on Finances	1,743,507
4. Common Chamber of Accounts	104,095
Total	94,785,695
Receipts.	
Receipts of Ministry of War	3,214,000
Receipts from Customs	12,000,000
Receipts from Consulates	112,000
	15,326,900
Remaining	79,459,695

Of which sum the cis-Leithan provinces furnish 70 per cent., or 55,621,787; and the trans-Leithan provinces 30 per cent., or 23,837,908.

The budget of 1868, for the cis-Leithan provinces, was as follows: Receipts, 299,380,999; expenditures, 302,999,534; deficit, 3,618,535. The public debt, on December 31, 1868, was 2,692,067,316 florins.

The army in 1869 consisted of 246,695 on the peace footing, and 822,472 on the war footing.

The endeavor to assimilate and to govern the incongruous parts of the Austrian monarchy still constitutes a difficult task. Speaking, first of all, of West Austria, its constitutional system, as at present existing, rests upon the coöperation of the Germans with the Poles. The Germans of Austria are in the main centralists; the Poles are wedded to theories of decentralization or provincial self-government. This fundamental difference of political principles is always threatening to bring about a rupture between the Austrian Germans and the Austrian Poles, however prudently and moderately the political leaders on both sides may act toward each other. There is a serious difference between the West Austrian Government and its supporters in the Reichsrath, on the one side, and the Galician deputies on the other. When the constitutional reforms of 1867 were passed by the Reichsrath, by the joint efforts of the German and Galician deputies, the former regarded the work as a finality; the latter, on the other hand, declared from the first that the demands of their province, in the matter of self-government, were not satisfied, and that their constituents could not let the constitution remain as the reforms of 1867 had left it. The Galician Diet passed, in fact, a series of resolutions, which demanded such an extension of the powers of the provincial legislature and executive government as would conform the position of Galicia, toward the rest of West Austria, to that held by Croatia since the conclusion of the new settlement in the Hungarian

group of countries. The constitutionality of these resolutions was disputed by no one, but the Reichsrath was the body alone competent to alter the constitution in the manner proposed by the Galician Diet. The Galician deputies avoided, however, raising the question after the Reichsrath had assembled, because the army bill and the imperial budget for 1869 had not yet been voted, and because, in their estimation, the safety of the empire was a question that took precedence of all others. But after the New Year's vacation the Diet's resolutions were called up in the Reichsrath, and, after a thorough discussion, the committee charged with their consideration agreed that no obligation rests upon the Government to communicate the resolutions of the Galician Diet to the House; nevertheless, and as a compromise, it requested that the Government would, as a matter of favor or political expediency, communicate the said resolutions to the committee (not the House), and that the committee would then lay the resolutions before the House. One immediate result of the raising of this question has been the endeavor to provide the means by which the resolutions of the Diet may from time to time be communicated to the Reichsrath.

Another constituent portion of the empire, Bohemia, claims to be justly discontent. The Czechs belong, as Slavi, to a nationality which embraces a clear majority of the subjects of the Austrian empire, numbering 16,000,000 souls; yet, under the new dualistic system, their pride of race is offended by being subjected to the ascendency of Germans and Magyars, who do not together quite amount to 14,000,000, and, as Bohemians, their patriotic feelings are outraged by seeing the constitutional rights of their ancient kingdom trampled upon and utterly abrogated. It is, therefore, not a little suggestive that Czech leaders were present at the Slavonic Congress of Moscow in 1867.

While the Czechs are sulking and the Austrian Poles watching with anxiety the attitude which the West Austrian Government and legislature intend to take on the subject of the extension of the principle of self-government in Galicia, the Austrian Germans are agitating parliamentary reform. They desire an extension of the number of members for the House of Deputies, and the introduction of direct elections into the Reichsrath. In fact, the example of the sister country, Hungary, with its time-honored system of direct elections, has served to captivate the German liberal mind with such a system, and the West Austrian ministry are considering proposals to these ends before the Reichsrath. The West Austrian House of Deputies consists only of 203 members. This, for a population of 19,500,000 gives a member to every 97,000 of the population. The Hungarian Diet, including the 29 new additions from Croatia, counts 442 members for a population of only 15,000,000, or one member to every 34,000 of the population. It has been proposed to double the present number of the House of Deputies.

The Reichsrath closed on the 14th of May, with a speech of the Emperor, enumerating the labor of the Parliament, and saying:

It was necessary to found an entirely new order of things. This was accomplished by the establishment of the constitution which, while uniting the cis-Leithan provinces, has afforded a large field for the autonomous government of the country, and given the finishing stroke to the compromise with Hungary. The military organization has not only drawn the band of union more closely round the monarchy, but has also increased its power. This fact, together with the friendly relations existing between Austria and the other powers, is a guarantee for the maintenance of peace which the empire so absolutely requires. Referring to the financial situation, his Majesty spoke of the large demands made upon the tax-paying efforts of the people, and said that, thanks to the joint powers of the Government and the administrative bodies, a way had been found by which it was hoped to place the finances upon a sound footing, adding that public economy, the reform of taxation, and the general improvement of commerce, afforded grounds for anticipating that the nation would soon recover from the sacrifices it had made. The speech from the throne then proceeds to enumerate the results of the legislation of the expiring session, mentioning especially the establishment of a supreme tribunal of the empire, the introduction of trial by jury of press offences, the reform of the criminal law, the separation of the Government from the administration of justice, the abolition of imprisonment for debt, the repeal of the usury laws, and many other important measures. Allusion is then made to the numerous railway bills which have been passed; to the conclusion of several commercial, postal, and telegraph conventions; to the adoption of the laws regulating the position of the religious denominations in Austria, by which equal rights are granted to all creeds; to the establishment of civil marriage, and the settlement of the relations between the schools and the Church. His Majesty added: "I trust that these laws will endure as the bases of a peaceful organization between the church and state. The law relating to popular schools will elevate the education of the country to such a degree as must constitute the surest foundations for the welfare of monarchy and the people. I hope that in the next session of the Reichsrath those who still hold aloof from our joint efforts will decide to participate in them. Austria must offer a great home to all her different nationalities, dispensing toward all equal justice and equal good-will." The emperor concluded as follows: "The constitution is the groundwork upon which this object is to be obtained. An understanding among the several races of the empire must certainly be arrived at, because this cannot fail to be the ultimate result, and because Austria alone offers to all her peoples protection, freedom, and the preservation of their independence and peculiar institutions.

In her foreign policy, Austria evidently endeavors to maintain friendly relations to other powers in order to strengthen her inner reforms. The Government has successfully coöperated in averting the threatening Turco-Grecian difference. Mutual marks of sympathy were exchanged between Austria and Italy, and public opinion has been favorable to the *rapprochement* between the two countries. The interests of Austria, and her wish for the preservation of peace, imposed upon

her complete abstinence from interference in the German questions that still remain open. The Premier of Austria, Count von Beust, excited, however, the hostility of the Prussian Government and press by the publication of his Red-book, in consequence of which he explained his views regarding German affairs in two dispatches to Count Wimpiffen, the Austrian Minister at Berlin, in which he says that the hostility on the part of Prussia appears to have been partly caused by the publication of the Red-book. He says that "this publication is a necessity for the Austrian Government, as its foreign policy is not discussed in Parliament, but in the delegations, whose business it is to inquire into the budgets of the War Office and the Foreign Office, and who can only obtain an accurate notion of the relations of Austria with foreign states from the Red-book, which offers them a real and tangible source of information on the subject. As regards the policy of Austria toward Rumania, South Germany, and North Schleswig, the count observes that much has been omitted from the dispatches in the Red-book in order to avoid giving any cause of offence to Prussia, but that Austria cannot reject the sympathy which has been manifested toward her by the South Germans, and that Count von Bismarck himself acknowledged her right to interfere in the North-Schleswig question. The second dispatch relates to the plan of forming a South-German Bund. It is addressed to the Austrian ambassadors at Munich and Stuttgart, and begins by recalling the opinion expressed by Count von Beust on this proposal in November, 1867. He then considered that a Southern Bund would be desirable as a guarantee for the maintenance of peace, and communicated his views on the subject to the Prussian Government as well as to those of Bavaria and Wurtemberg. At the same time, though retaining this opinion, he neither then nor since took any steps to promote the formation of the Bund. "Austria has a legitimate interest in the independence of South Germany, and hence, also, in the maintenance of that independence in a definite and secure form. * * * But for the present we will confine ourselves to urging this important truth on all concerned. We do not wish to have even the appearance of taking an active part in the development of affairs in Germany. We ought to wish for a Southern Bund; perhaps we do wish for it; but we neither can nor will create it, or even help to create it. If it should come into existence, no one shall have the smallest right to describe it as the work of Austrian influences."

The Government presented and carried a bill in the Reichsrath, relative to the landwehr (militia), which is to be under the direct control of the military authorities. The primary-school law was strenuously opposed in the Reichsrath by the Polish and Tyrolese members, who, upon the closing of the debate, submitted a protest against its enactment and quitted the Chamber. The law was passed, and received the Emperor's sanction.

The liberal reforms introduced into the empire continued to encounter a determined opposition from the Catholic and Conservative party. The Bishop of Linz was convicted before a civil court of uttering doctrines subversive of public order, and sentenced to three months' imprisonment. He was, however, immediately pardoned by the Emperor.

A serious revolt broke out, in October, in the province of Dalmatia, the inhabitants of the district of Cattaro resisting the execution of the new military law. The insurgents collected a considerable number of armed men, and had control of several towns, among them Pobosi and Maina, and, strengthened by the mountainous character of the country, kept the Austrian troops at bay for several weeks. A battle lasting four hours took place near Lisio, in which the rebels were totally defeated. From the sympathy with which a number of Russian papers regarded the insurrection, it was inferred that it was not merely an outbreak of discontent with a military law, but that it had a Panslavic tendency, directed against both Turkey and Austria. It was reported that the insurgents received large reënforcements from the inhabitants of Montenegro and the Herzegovina, and that the Prince of Montenegro favored the movement. Numerous arrests were made by the Turkish Government in the provinces bordering upon Dalmatia, and it was claimed that discoveries had been made, showing that the rising was to extend successively to Bosnia, the Herzegovina, Albania, Servia, and Montenegro. The Austrian and Turkish Governments concluded a convention, to mass large bodies of troops on the frontier of the disaffected provinces and resist the spread of the rising by combined action. The Austrian Government received permission from that of Turkey to march its troops through Turkish territory against the Dalmatian insurgents, but the Prince of Montenegro entered a protest against this convention, and was said to be supported by the Government of Prussia.

The new session of the Reichsrath was opened by the Emperor on the 13th of December. In the speech from the throne, the Emperor favored a conciliatory course in dealing with the Dalmatian insurrection, dwelt upon the peaceful appearance of European affairs with satisfaction; and declared that the Austrian empire was in excellent relations with the foreign powers, even on a point which had momentarily caused some trouble. Referring to internal affairs, the Emperor announced that important concessions were to be made to the different nationalities. Modifications of the constitution would be necessary, but must be made in accordance with its spirit. He closed by promising that the autonomy of the provinces would be respected as long as it was compatible with the maintenance of the unity and power of the empire.

B

BACON, JOEL S., D. D., a Baptist clergyman, professor, and college president, born in Cayuga County, N. Y., in 1801; died at Richmond, Va., November 9, 1869. Prior to his entering upon his collegiate course, he was engaged for some time in teaching in Amelia County, Va. In 1826 he graduated with the highest honors, at Hamilton College, Clinton, N. Y., after which he was employed as a classical teacher, at Princeton, N. J. In 1831 he graduated at the Newton Theological Institution, and, about that time, having been elected to the presidency of Georgetown College, Ky., he accepted the position, but resigned it after a period of two years, and subsequently was, for the same length of time, pastor of the Baptist Church, in Lynn, Mass. From 1834 to 1837 he was professor in the institution at Hamilton, N. Y., now Madison University. After his resignation there, he was engaged for a time as agent for Indian missions, his conciliatory course with the Indians rendering important service. In 1843 he became president of Columbian College, Washington, D. C.; which office he held for eleven years, resigning in 1854. In 1845 he received the degree of D. D. from his *alma mater*. After leaving Washington, Dr. Bacon was devoted to teaching in female seminaries. For two years he was at the head of an institution in Tuscaloosa, Ala. In 1859 he became established at Warrenton, Va., where he remained during and after the war, until about two years prior to his death. For some time after leaving Warrenton, he was devoted to the self-sacrificing labor of travelling through the Southern States, as agent of the American and Foreign Bible Society, addressing the colored people on the importance of Sabbath-school education and the study of the Bible.

As a student, Dr. Bacon was possessed of a quick and clear apprehension; acquiring with great readiness valuable information, both from men and books. As a teacher, he had an aptness and fertility of illustration which made him a favorite in the lecture-room. As a preacher, he was earnest and practical. As a man, he was remarkable for urbanity, courtesy, and charity; always taking moderate views in controversy, appreciating the truth partially held by different minds, and never becoming a partisan, or even a leader in new organizations. During the late civil war, he had the entire confidence of the adherents of both sections, whose armies were alternately occupying the town where he resided. Dr. Bacon's versatility of mind caused frequent changes in his public life; but in every position his genial spirit and sprightly conversational powers won him warm friends.

BADEN, a grand-duchy in South Germany. Grand-duke, Friedrich, born September 9, 1826; succeeded his father Leopold, as regent, April 24, 1852; assumed the title of grand-duke September 5, 1856. Area, 5,912 square miles; population, according to the census of 1867, 1,434,970,* of whom 931,000, or 64.9 per cent. (against 65.1 per cent. in 1864) were Roman Catholics, and 475,918 Protestants.

The town population of the grand-duchy is as follows:

Three towns with more than 20,000 inhabitants, together, with 86,813, 6.1 per cent. of total population.
Three towns with more than 10,000 inhabitants, and less than 20,000, together with 45,470, 3.1 per cent.
Eight towns with more than 5,000 inhabitants, and less than 10,000, together, with 57,819, 4.3 per cent.
Three towns with more than 4,000 inhabitants, and less than 5,000, together, with 13,434, 0.9 per cent.
Nineteen towns with more than 3,000 inhabitants, and less than 4,000, together, with 62,950, 4.4 per cent.
Sixty-nine towns with more than 2,000 inhabitants, and less than 3,000, together, with 162,295, 11.3 per cent.
Total one hundred and five towns with more than 2,000 inhabitants, together with 428,470, 29.0 per cent.

The public debt† on January 1, 1869, amounted to 31,285,201 florins; besides which there was a railroad debt of 107,560,330 florins.

The Grand-duke of Baden, several times in the course of the year 1869, declared his sympathy with the union movement going on in Germany, and his wish to see Baden enter the North-German Confederation. In a letter to the Minister of State, Jolly, he stated the task of his reign to be the development of a free public life on the safe basis of mental culture, and a courageous sympathy with the national regeneration of Germany. He expressed himself with a little more reserve on opening the chambers of the grand-duchy in September. The policy of the Grand-duke found a hearty support from the majority of both Chambers. In the first Chamber, the opposition numbered only six out of thirty-one members; in the second, nine out of sixty-two deputies.

BANKS OF THE UNITED STATES. The banking movement of the year 1869, throughout the United States, has been marked by no important changes, or fluctuations, or reverses. The aggregate banking loans of the three leading Atlantic cities have reached $440,000,000, and, at one period, were $396,000,000—a difference of about 10 per cent. The following tables illustrate fully the banking movements of the United States and Great Britain for a series of years.

* The total population here given is what the official accounts call the "actual" ("faktische") population, while the figure (1,438,873) given in the AMERICAN ANNUAL CYCLOPÆDIA for 1868, is designated as the "Customs Union Enumeration" ("Zollvereinsabrechnungs") population. In the same volume of the CYCLOPÆDIA some fuller statements are given of the ecclesiastical statistics and of the large towns.

† For further financial and military statistics, see AMERICAN ANNUAL CYCLOPÆDIA for 1868.

Wisconsin	12	171	120	9,989
Total in the U. States.	651	12,011	8,695	1,121,988

The number of baptisms during the year was reported as 60,787.

Some of these returns, especially those from the South, are pronounced very imperfect, through failure of clerks and others, upon whom compilers are dependent, to make full returns. The table is therefore unsafe for purposes of comparison, and places the gains of the denomination very much below what they really are.

Thirty-five periodicals are enumerated in the *American Baptist Year Book*, as published in the United States, of which twenty-one are weekly, twelve monthly, and two quarterly. Two of these are published in the German, and one in the Welsh language. Four weekly periodicals are published in the British Provinces. There are twenty-five Baptist colleges in the United States, and one in Nova Scotia. The number of theological seminaries and theological departments is fourteen.

The anniversaries of the (Northern) Baptist Societies were held in May, in Boston. The fifty-fifth anniversary of the *American Baptist Missionary Union* occurred on May 18th. A summary of this report shows that the whole number of the missions is 18, the increase being one in the African mission during the year. In the Asiatic mission there are 19 stations where American missionaries reside, 328 outstations, and 315 churches, having an aggregate of 15,974 members, and the baptisms during the year were 1,295. The whole number of Americans connected with this mission, including those under appointment, is 101, of whom 47 are males and 54 are females. The native teachers, preachers, and colporteurs, number 423, of whom 74 are ordained. Taking those churches in Burmah not immediately under its supervision, the Union has 427 out-stations, 414 churches, with a membership of 20,193, and 1,528 baptisms during the year. The native helpers number 512, of whom 80 are ordained. The tables from France and Sweden represent 301 churches, with 24,388 members, 300 preachers and colporteurs, and 678 baptisms during the year. Combining the missions in Europe and Asia, there are 715 churches, with 44,581 members, and there have been during the year 2,207 baptisms. The report of the Secretary of the Home Department showed that the total receipts for the year were $196,897. The total expenditures, including the debt of the year previous, were $210,273, leaving a balance of $13,376 against the treasury on the 1st of April last. The amount received from donations was $168,363, an increase of $11,317 over the year previous; and the legacies of the year were $17,986, against $6,406 the year before. The following amounts were received from foreign mission fields: Assam, $838; Burmah, $25; Madras, $20; China, $866; France, $457; Germany, $187. The treasurer's report further showed that the invested funds of the Union amount to $56,303, and that, of the $180,137 expended, all was for foreign missions except $573 for the Cherokees, $3,712 for publications, $15,412 for agents, and $12,575 for rent, salaries, and other office expenses. The anniversary of the *American Baptist Publication Society* was held May 20th. The receipts amounted to $272,160.63. Of this sum $227,083.88 were received in the business, and $45,076.75 in the missionary department. The increase over last year in the business is $35,973.31. The increase in the missionary work is $1,774.69. The total gain of the two departments over the receipts of the previous year is $37,748. Branch houses have been opened in New York, St. Louis, and Chicago. Sixty-five colporteurs and Sunday-school missionaries have been at work. Number of days of service, 12,991; miles travelled, 195,618; volumes sold, 50,859; volumes given away, 9,521; pages of tracts distributed, 514,170; sermons preached, 5,160; prayer-meetings held, 3,548; persons baptized, 980; families

visited, 32,948; families found without the Bible, 1,730; families supplied with the Bible, 2,188; Sunday-schools organized, 250; churches constituted, 48; visits on vessels, 3,371; Bibles given to seamen, 48. The number of copies of new publications issued during the year has been 161,500; new editions of old publications, 451,000; tracts, 820,000 copies; *Young Reaper*, 3,075,940 copies; total pages, 222,845,020, an excess of more than 40,000,000 over last year. Gratuitously distributed by missionaries, etc., 9,521 books, and 514,170 pages of tracts. Forty-seven white and twenty-eight colored preachers have been provided with small libraries, and 250 students and others have been supplied with one or two books each. Money value of such grants, $12,566. The society accepted the basis of union with the Bible Society unanimously. The thirty-seventh anniversary business meeting of the *American and Foreign Bible Society* was held May 20th. The receipts for the year were reported at $30,186.46; expenditures, $29,629.82; balance, $556.64. From the beginning, the gross receipts have been, from all sources, $1,106,580.92, and the society has put into circulation 2,230,583 volumes of Scripture at home and abroad. The report, in favor of union with the American Baptist Publication Society, was adopted. It transfers the entire Bible work to the Publication Society; the name of the joint organization to be selected after union. The consummation of the union is dependent upon action of the New York Legislature to amend the charter of the Bible Society. Subsequently, there was a joint meeting of the two societies, in commemoration of the anticipated completion of the union. The thirty-seventh anniversary of the *American Baptist Home Mission Society* was held in Boston, May 29th. The report of the Executive Board showed that, six years ago, less than $36,000 constituted the total annual receipts of the society, while during the past year more than $144,000 has been paid into the treasury. The number of missionaries then employed was 96, now there are 276. The embarrassing debt that hung over the society two years ago has been liquidated. Thirty-two States and Territories are represented in the contributions to the funds this year. One-third of the missionary force is employed in the South. Secular education has been prosecuted there to the extent of specific contributions for that purpose, and the preparation of colored preachers has been carried on with energy. The Indian missions are recovering from the hindrances of the late war, and the work among the foreigners in the West has been vigorously carried on with good results. The church edifice fund has been increased $30,000 by the will of the late Tracy H. Harris. There are demands for increased effort in the Northwest, along the line of the Pacific Railway, on the Pacific coast, among the Southern freedmen, and in the Republic of Mexico, and the Board is profoundly impressed with the importance that every lawful and possible agency should be employed to draw forth larger offerings.

The anniversary of the *American Baptist Free Mission Society* was held in Richmond, Va., in May. The cash receipts were reported at $17,222.54, and the expenses at $16,603.88. Twenty-four missionaries have been employed in the home work; eleven in Virginia and the District of Columbia; the rest in the Gulf States. Of the foreign missions, the number of members in the Bassein mission is stated at 5,883, or more than one-fourth of all the Christians in Burmah; and of those in the independent Vintore and Luther's mission, at 2,416, with over one thousand pupils under instruction. The former mission contributes nearly 9,000 rupees annually, and the latter over that sum. The ministers of the Japanese mission are engaged in translating and printing the Bible in Japanese. The society decided in favor of coöperation with the Consolidated Convention and Home Mission Society.

The anniversary of the *National Theological Institute* was held on the 20th of May. The report showed that 90 students were obtaining an education at the Washington school, thirty of whom were in the theological department. The Richmond school has 195 pupils, with two Latin and two Greek classes. These, with the schools at St. Helena, S. C., and Augusta, Ga., are in a thriving condition. Special instruction has been given by Rev. Dr. Parker to 588 colored teachers and preachers in several places. The receipts were reported at $14,615. A resolution was adopted concurring in the unification of the work under the direction and control of the Baptist Home Missionary Society, and recommending that the institute at Washington, D. C., be adopted and sustained by the society.

The *Southern Baptist Convention* met at Macon, Georgia, on the 6th of May. The condition of the colored people was a prominent subject of consideration. The mind and intention of the convention were expressed by the adoption of resolutions recognizing the high and sacred duty of giving a pure gospel and enlightened ministry to the colored population, and recommending district and State associations to pay especial attention to their religious instruction and spiritual interests. The Domestic Mission Board is prosecuting its work among them, as well as in the German and Indian missions, with all the energy in its power, but suffers from the lack of money. Similar reports were made from the Sunday-school Board and other agencies of the Church. A favorable report was given of the conferences with the American Baptist Home Missionary Society. The foreign missions were represented in a progressive condition. An interesting feature of the sessions of the convention was the presence of Mr. Broadus, as a delegate of the North Street Baptist Church

of Tung Chan, China, who read a letter which was written by a native deacon and clerk, without aid or suggestion from the missionary. The theological seminary was represented as in improved condition and prospects, having had during the year forty-six students—the highest number in any Baptist seminary on the continent. The means of obtaining more funds and a greater number of laborers to carry out the enterprises of the Church received a prominent share of attention.

The number of Regular Baptists in the British Provinces of America is as follows:

PROVINCES.	Associations.	Churches.	Ministers.	Members.
Nova Scotia	3	159	87	17,163
New Brunswick	2	66	69	9,472
Ontario and Quebec	10	284	216	14,836
West Indies	....	.....	.....	22,000
Total	15	509	372	63,501

The number of baptisms in the British Provinces was 2,435.

II. FREE-WILL BAPTISTS.—The following are the statistics of this denomination as given in the *Free-Will Baptist Register* for 1870:

YEARLY MEETINGS.	No. of Quarterly Meetings.	No. of Churches.	No. of Ordained Preachers.	No. of Communicants.
New Hampshire	9	135	130	9,338
Maine Western	4	70	58	4,377
Maine Central	5	100	95	6,188
Penobscot	10	114	76	3,986
Vermont	6	62	49	2,864
Rhode Island & Massachusetts	3	45	45	5,263
Holland Purchase	5	41	39	1,968
Genesee	5	31	22	1,517
Susquehanna	5	40	28	1,426
New York and Pennsylvania	4	44	28	1,078
Central New York	5	43	36	19.88
St. Lawrence	2	14	16	661
Union	3	12	13	580
Ohio and Pennsylvania	4	34	23	1,484
Pennsylvania	5	21	14	1,195
Ohio Northern	4	15	12	549
Ohio	2	8	10	700
Ohio River	5	47	29	2,598
Marion, Ohio	3	18	11	880
Indiana	2	10	3	302
Michigan	11	102	91	3,781
St. Joseph's Valley	4	20	19	688
Illinois	8	66	52	2,694
Wisconsin	8	67	63	2,607
Iowa	3	23	19	1,085
Iowa Northern	5	33	30	1,126
Canada West	3	17	13	646
Minnesota	4	23	19	674
Kansas	2	7	4	173
Minnesota Southern	1	13	7	304
Liberty Association	..	27	20	1,798
Ohio Association	..	16	..	646
Quarterly Meetings not connected	6	30	33	897
Churches not connected	..	4	4	54
Total, 33 Yearly Meetings	150	1,375	1,141	66,691

The number of "licensed" preachers is 133. The increase is 97 churches, 26 ministers, and 5,447 members.

The literary institutions of the Free-Will Baptists are Bates College, at Lewistown, Me.; Hillsdale College, at Hillsdale, Mich.; West Virginia College, at Flemington, W. Va., and Ridgeville College, at Ridgeville, Ind. There are thirteen seminaries, academies, etc., and a Society for the Promotion of Education in the South.

III. OTHER BAPTIST DENOMINATIONS IN AMERICA.—The fifty-fifth session of the *Seventh-day Baptist General Conference* met in Shiloh, Cumberland County, N. C., on the 29th of September. The new constitution, proposed at the previous General Conference, was declared not adopted, two-thirds of the churches not having voted in favor of it. The vote was 28 for it, 18 against it, 8 not voting. The reports exhibited a condition of solid growth, both in the churches and in the Sunday-schools. A communication of a fraternal character was received from the Second Adventists, and responded to in a like spirit, though with a qualification against committing the Conference to the importance in which the doctrine of the immediate second coming of Christ is held by that denomination.

The twenty-seventh anniversary of the Seventh-day Baptist Missionary Society was held during the session of the General Conference. It has missions in the home field, and at Shanghae, China. It has a special fund of six thousand dollars, of which the annual interest is applied to current expenses, and the principal is reserved for a "future emergency," like the reënforcement of the China mission, or the establishment of some other mission.

The Seventh-day Baptists have 75 churches in the United States, with a total membership of 7,129. The oldest church is that at Newport, R. I., founded in 1671. They have a flourishing university at Alfred, N. Y.

The number of *Mennonite* churches in the United States is said to be about 400, with 250 ministers and a membership of about 60,000. This estimate does not include the Mennonites of Canada, where the denomination is quite numerous. The estimate of ministers is no doubt far below the actual number, as there are few churches that are not supplied with at least one minister, and a large number of churches have more.

The Menonnites publish an English paper at Elkhart, Ind., and two German at the same place, and at Milford Square, Pa.; two Mennonnite almanacs, one in the English and one in the German language, are published likewise at Elkhart.

IV. BAPTISTS IN GREAT BRITAIN.—The Baptists in England have been classified into four divisions on the question of communion. The union churches are composed of Baptists and Pedo-Baptists. They employ a Baptist pastor when the Baptists are in the majority, and *vice versa*. Another class are the Open-membership Baptist Churches, in which persons are admitted to membership on a simple basis of personal piety, and are afterward baptized if

they wish to be. Of this class are such churches as those of Dr. Landells, Dr. Brock, Baptiste Noel, Stowell Brown, etc. The third class are open communion, with restricted membership. Thus, Mr. Spurgeon holds that adult immersion is the indispensable requisite for church membership, but that all Christian believers may be invited to the communion. A fourth class are the regular strict-communion Baptists, who exclude the unimmersed both from the Lord's table and from membership. Dr. Stork is a representative minister of this class.

The *Baptist Manual* for 1869 reported the statistics of the Baptists in Great Britain as follows:

COUNTRIES.	Number of Churches.	Number of Chapels.	Members.	Sunday-school Scholars.
England	1,840	2,088	168,385	219,565
Wales, etc.	475	527	55,013	43,763
Scotland	100	108	6,855	3,146
Ireland	33	34	1,354	922
Total, Great Britain and Ireland,	2,447	2,707	231,506	267,396

Increase of membership in reporting churches, 9,972.

BATES, EDWARD, LL. D., an eminent statesman and jurist, born in Goochland County, Va., September 4, 1793; died at St. Louis, Mo., March 25, 1869. He descended from a family of "Friends" of some distinction, who had lost their position in that connection, by reason of their having borne arms in the Revolutionary War, and was educated under the supervision of Benjamin Bates, a relative of cultivated literary tastes. While still young, he served in the Virginia militia, at Norfolk, for six months. His elder brother, Frederick Bates, having been appointed Secretary of the new Territory of Missouri, Edward emigrated thither, and under his auspices soon entered upon the practice of the law. As early as 1816 he was appointed Prosecuting Attorney for the St. Louis Circuit, and in 1820 had so gained the confidence of the community as to be elected a delegate to the State Constitutional Convention. Toward the close of the same year, he was appointed Attorney-General of the new State of Missouri, which office he held for two years. In 1822 he was elected to the lower branch of the State Legislature, but in 1824 he abandoned this to accept the appointment, tendered him by President Monroe, of State Attorney for the Missouri District. Active political life still enticed him, and in 1826, while yet quite a young man, he was elected a representative in Congress, serving but one term. Soon afterward he was returned to the State Senate of Missouri. The condition of his private fortune now compelled him definitely to abandon all idea of a further active political career, and, with occasional exceptions in the way of services in the State Legislature, he devoted himself for the next twenty-five or thirty years almost exclusively to the practice of his profession. In 1847 Mr. Bates was sent as a delegate to the Convention for Internal Improvement, held in Chicago, and here made a favorable impression upon the country at large. In 1850 Mr. Fillmore offered him the position of Secretary of War, which he declined. Three years later he accepted the office of Judge of the St. Louis Land Court. In 1856 he presided over the Whig Convention held in Baltimore, and four years later became a prominent candidate for the presidency. Up to this period Mr. Bates had been known solely as a Whig, having been in full sympathy with the most important movements of that party; but, when the question of the repeal of the Missouri Compromise was agitated, he earnestly opposed it; and thus, although his habits of mind and tastes were eminently conservative, he became identified with the "Free-Labor" party in Missouri, and was reckoned by them an ally, not only in measures of State policy, but also in hostility to the admission of Kansas under the Lecompton Constitution. With the growth of antislavery principles in Missouri, he gradually became more prominent as one of the men who were valued for the high personal character they brought to the movement, till, in 1859, when men began to cast about them for a Western candidate for the presidency, to be selected by the Republican party, Mr. Bates's name was prominently mentioned. For a time it seemed probable, or at least possible, that the opposition to Governor Seward might concentrate upon him. The State of Missouri warmly supported him, and his prospects were at one time thought to be excellent. When, however, the convention assembled at Chicago had cast several ballots, and it was apparent that Mr. Lincoln was the favorite Republican candidate, Mr. Bates's name was withdrawn by his friends. When Mr. Lincoln, after his election, decided upon selecting the leading men of the Republican party, including those who had been his principal competitors, for his Cabinet, the eminent reputation of Mr. Bates as a lawyer induced his assignment to the office of Attorney-General. In the Cabinet he played a dignified, safe, and faithful, but not conspicuous part. In 1864 he resigned his position, and returned to the quiet of a retired domestic life at his home in St. Louis. From this time he never again entered into active politics.

BAVARIA, a kingdom in South Germany. King, Ludwig II., born August 25, 1815; succeeded his father, Maximilian II., on March 10, 1864. Prime minister (since January 1, 1867), Prince Clovis von Hohenlohe-Schillingsfürst. Bavaria has an area of 29,373 square miles, and, according to the census of 1867, a population of 4,824,421,* of whom 3,441,029 were Roman Catholics; 1,325,446 Protestants; 49,840 Jews; 3,267 Reformed; 143 Greeks; and

* For the population of each of the eight provinces in 1867, *see* AMERICAN ANNUAL CYCLOPÆDIA, for 1868; also for a statement of the army.

4,696 Mennonites, Baptists, and German Catholics. The population of the principal towns of the kingdom, in 1867, was as follows:

Munich	170,688	Landshut	14,554
Nuremberg	77,895	Hof	14,397
Augsburg	50,067	Passau	13,883
Wurzburg	42,185	Anspach	13,018
Ratisbon	30,357	Amberg	12,312
Bamberg	25,972	Erlangen	11,546
Furth	22,496	Straubing	11,419
Baireuth	19,464	Landau	11,081
Ingolstadt	17,684	Kempten	10,998
Kaiserslautern	15,289	Aschaffenburg	10,288
Spires	14,806	Germersheim	10,181

The public debt, in November, 1868, amounted to 168,197,384 florins. The annual revenue and expenditures during the ninth financial period (1868 and 1869) is estimated at 87,144,606 florins.

A new election of the Second Chamber took place on May 12th. Three parties were in the field, the "Fortschrittspartei" (party of progress), which in the German question sympathized with the National Liberals in Northern Germany, and desired the speedy entrance of Bavaria into the North-German Confederation; the "Mittelpartei" (middle party), which supported the ministry, and advocated intimate alliance, but no political union with Northern Germany; and the "Patriotische Partei" (patriotic party), which made the entire independence of Bavaria its prominent principle and fused with the Catholic party. The election resulted in giving about one-half of the new deputies to the patriotic party, most of the other half to the party of progress, and only a small number to the middle party. On the meeting of the Second Chamber, the two latter parties united in voting for the same candidate for president of the Chamber, when it was found that each candidate received 71 votes. As it was found impossible to arrive at a compromise and thus at an election, the Government dissolved the Chamber and ordered a new election, which took place in November. Though the Government had so changed the electoral districts as to improve the chances of the liberal candidates, the result was a victory of the patriotic party. Prince Hohenlohe, therefore, tendered to the King his resignation, which, however, was not accepted.

BEERIZING PROCESS, The. This recently-patented process consists simply in treating wood with a boiling solution of borax in water, which easily and effectually removes the sap, or all perishable substances, without injuriously affecting the woody fibre; that, on the contrary, becomes harder, impenetrable by and impregnable to water, vermin-proof, indifferent to the moisture or dryness of the atmosphere, and almost incombustible.

No wood is fit to be used for building, or in the arts and trades, in the green state in which it is felled. The tissues, being then distended with sap, contract when the water in the sap evaporates; and, if green wood is placed in a confined situation, the sap rapidly decomposes, and induces the decomposition of the wood. All wood, therefore, has to undergo some process—commonly called "seasoning"—before it can be worked up. The ordinary process of seasoning consists in exposing the green lumber to the action of the air, "*to dry the sap out.*" Its well-known deficiencies are slow and imperfect drying, and considerable loss on shaky, split, and warped lumber.

An excellent way of seasoning wood, which was extensively used in former ages, when lumber was cheap and time no object, consisted in washing the sap out of the wood before it was dried, by placing it, while green, under running water. For the French, and partly for the English Navy, the timber is so prepared. But the slow penetration of wood by water renders this method impracticable and too expensive for general use.

Steaming of wood is another variation, tried and still used, to remove sap by mere action of water. But, while cold water dissolves sap, hot water or steam does not. It coagulates albumen, fills up the pores, and impedes the removal of the sap from inside. The uneven action renders lumber very shaky, and naturally the more so the thicker it is. Still more destructive to the fibre is the fermentation which takes place by steaming, which, being uncontrollable, varies in effect, sometimes honeycombing the lumber, and sometimes sinking it in with concaved outsides. The loss on damaged lumber by steaming varies, but is very considerable.

The method of Beerizing is as follows: In square tanks 12 feet long × 6½ high, and 7 wide, or of other suitable size, with pierced steam-pipes running along the inner side of the bottom, 18 to 20 inches apart from each other, are the boards to be prepared, put close to each other without intermediate space; the wood is then fastened on top to prevent it from floating thereafter, but a space of one or two inches is left to its expansion.

A solution of borax in water, containing about ten pounds of borax to each one thousand feet of lumber to be treated, is then admitted till covering the wood, and the whole heated to boiling. The boiling is continued for about four hours and then the whole left to cool, boiled again for about two hours and the liquid then removed and clean water substituted, in which the lumber is boiled for about two hours. This washing in water may be repeated, according to the quality of lumber and its exposure. If for mere *seasoning* dark lumber, no washing is needed, while white lumber must be repeatedly washed till the water remains nearly colorless thereby, if its light color is desirable.

For *preserving* wood, the operation with the borax solution may be repeated after the first or second washing; and even the washing in water may be repeated, according to the exposure and quality of the lumber. The borax used in this process is not crystallized, but pre-

pared in solution, by adding cautiously, to a boiling solution of one hundred and twenty pounds of sal-soda, one hundred pounds of Italian boracic acid. When the lumber is taken out it is placed in a drying-room, heated by a current of hot air, at from 100° to 180° Fahr. The dissolved sap may be precipitated by alum or otherwise, and the clear liquid treated with a small quantity of lime or soda, or both, and the precipitate may be used as a color or for manure, etc., while the liquid may be used over again, with some additional borax.

Experience and science agree that the most impeding deficiencies to the purity, strength, and lasting durability of wood result from the sap, which remains therein, after the trees have been felled. The sap, being destined by Nature to absorb and retain a sufficient quantity of water for the subsistence of the living tree and to provide all parts of the plant with the proper nourishment, is fully endowed with properties beneficent thereto. Consisting mainly of albuminous substances dissolved in water, it is extremely deliquescent and very prone to spontaneous decomposition. Its quantity in green wood amounts to over fifty per cent. in weight.

The borax acts as a solvent in the most neutral and indifferent manner, neither decomposing itself, nor the wood, nor the soluble matter, which it keeps dissolved, like sugar in water, and can, therefore, always be reworked and used over and over again without any material loss.

Spruce-wood cut for sounding-boards was carefully seasoned, first in the air and then in the heated dry-room of one of our first piano-manufactories, and considered well dried. It was then Beerized, when it was found to have still shrunk more than one inch on every foot in width across the grains and very perceptibly lengthwise. The increased density was easily observed with the naked eye, the knife proved increased hardness, and other trials showed increased strength.

We know that the sap substances, which unprepared wood contains, are of a deliquescent nature, and that timber, therefore, never can be perfectly dried or kept in that condition by mere exposure to action of the air. Scientific researches prove that beams and other timber, after having been kept in a dry place for a century, retain still from twenty to twenty-five per cent. of water, and that wood, when rendered perfectly dry by the aid of heat, re-absorbs a certain quantity of water, when again exposed at common temperature to the atmosphere in its ordinary state of humidity.

The whole quantity of invisible sap-liquid present in apparently dry wood can, therefore, be not less than twenty-five per cent., which acts upon the wooden substance in the same manner as a deliquescent liquid affects paper, that is to say, it expands the wood considerably and diminishes its cohesion, tenacity, and strength.

We have not here the space to enumerate the various advantages consequent to the improved quality wood experiences by its purity, perfect dryness, and complete protection from decay. The chemist will, hereafter, be relieved from many very tedious and still defective operations, he has had thus far to resort to, in getting the wooden substance chemically pure and freed from its soluble portion.

The skilful mechanic will use such prepared wood with admirable success for clock pendules and a thousand other purposes, where the deficiencies of the common wood fail to answer. Other properties of the prepared wood, which may be more generally useful, are the perfect dryness which enables it, in spite of its increased compactness, to readily and thoroughly absorb any oily, resinous, or like matter, with which it may be easily saturated to form a durable, water-tight material. This circumstance, in connection with the absence of all albuminous or putrescible matter, makes such wood highly adaptable to street-pavements. By merely varnishing the prepared wood, the durability and brilliancy of the surface are greatly increased.

In cases where dry wood is objectionable and a surplus quantity of water in the wood is necessary in order to obtain constant pliability, as, for instance, in manufacturing wood-hangings, any deliquescent matter, such as glycerine, chloride of calcium, etc., has to be added to the last water used in the process to extract the borax absorbed by the wood.

In such cases the Beerizing is necessary to protect the wood from decay.

The sound of Beerized wood is materially improved by its purity and compactness, and still more strikingly by traces of borax remaining in the sounding-boards, which contribute considerably to its hardness and elevate its resonant power wonderfully.

The increased hardness consequent on this process results from the same cause from which stale bread becomes harder than fresh bread. But, as hinted above, traces of borax left in the wood increase its hardness very considerably.

A reduction of its inflammability and combustibility by Beerizing wood may easily be obtained by not washing out all the borax used. Mere traces of this fire-proof body will prevent the wood from burning too readily and render its combustibility difficult; the access of air being impeded by the film of fused borax. This process is the invention of Sigismund Beer, of New York.

BELGIUM, a kingdom of Europe. King, Leopold II., born April 9, 1835; succeeded his father, Leopold I., on December 10, 1865. Heir-apparent, the brother of the King, Count Philip of Flanders, born March 24, 1837; married April 25, 1867, to Princess Maria of Hohenzollern-Sigmaringen; has one son, Baldwin Leopold, born June 8, 1869.

The area of Belgium is 11,373 square miles. The population, according to the census of

December 31, 1866, was 4,829,320; and on December 31, 1867, was estimated at 4,897,794. According to an official statement of July 1, 1868, there were at that time, in Belgium, 4,928,814 Roman Catholics, 8,193 Protestants, 1,522 Jews, and 1,844 connected with other ecclesiastical denominations. The Catholic clergy received from the state, on salaries, 3,800,000 francs. The Protestant (inclusive of the Anglican), 60,000 francs, and the Rabbis 25,000 francs. As regards nationality, the Flemish part of the population in the northern provinces is estimated at 58 per cent. of the total population; and the Walloon, in the southern provinces, at 42 per cent. In the eastern districts of the provinces of Luxemburg and Liege there are about 30,000 Germans.

The ministry* remained during the year without change. The budget for 1869, as approved by the Chambers, fixed the revenue at 174,691,700 francs, and the expenditure at 176,163,041 francs.

The exports and imports of Belgium, in 1866 and 1867 were as follows (value in millions of francs):

COUNTRIES.	Exports.		Imports.	
	1866.	1867.	1866.	1867.
Europe	579.27	613.78	611.36	567.86
America	157.78	149.93	29.94	28.56
Asia	8.92	9.08	0.51	0.86
Africa	1.38	2.45	1.29	0.53
Australia	....	....	0.10	....
	747.35	775.24	643.20	597.31

The Belgian Government and Chambers placed an interdict upon the transfer of the "Great Luxemburg Railway" to the "Eastern Company" of France. Considering the part which railways now play in warlike operations, and the geographical situation of the Luxemburg line, the Belgians discovered in the proposed transfer a possible menace to their independence. Besides, by a recent decree, all French railways are placed under the direct control of the Minister of War, and, if the Eastern Company had been allowed to buy up the Luxemburg Railway, the result would have been to give the French War Office authority over an important branch of the international communications of Belgium. In putting a veto on this bargain, the Belgian Parliament only availed itself of a discretionary power which is both claimed and exercised by the governing power of every other state in Europe. The negotiations relative to this matter resulted in a triumph for Belgium, the French Government being obliged to withdraw its pretensions. The contracting parties agreed that the Great Eastern of France and the Luxemburg of Belgium might conclude conventions for traffic with each other. The Eastern Railway may henceforward run through-trains between Antwerp and Basle, the management of which, while upon Belgian territory, will be in the sole charge of Belgian railway officers. Reductions in the tariff may be made between stations in France and stations in Belgium, provided that such reductions are not inconsistent with the tariff of the Belgian line. No reduction is to take place in the rates between Switzerland and Holland, which might induce Swiss shippers to send their goods to Dutch ports rather than to those of Belgium.

The following convention was agreed upon between the United States and Belgium, on the subject of naturalization, and signed at Brussels, November 16, 1868:

The President of the United States of America and his Majesty the King of the Belgians, led by the wish to regulate the citizenship of those persons who emigrate from the United States of America to Belgium and from Belgium to the United States of America, have resolved to make a convention on this subject, and have appointed for their plenipotentiaries, namely: The President of the United States of America, Henry Shelton Sanford, a citizen of the United States, their minister resident near his Majesty the King of the Belgians; and his Majesty the King of the Belgians, the Sieur Jules Vander Stichelen, Grand Cross of the Order of the Dutch Lion, etc., his Minister of Foreign Affairs; who, after having communicated to each other their full powers, found to be in good and proper form, have agreed upon the following articles:

ARTICLE 1. Citizens of the United States who may or shall have been naturalized in Belgium will be considered by the United States as citizens of Belgium. Reciprocally, Belgians who may or shall have been naturalized in the United States will be considered by Belgium as citizens of the United States.

ART. 2. Citizens of either contracting party, in case of their return to their original country, can be prosecuted there for crimes or misdemeanors committed before naturalization, saving to them such limitations as are established by the laws of their original country.

ART. 3. Naturalized citizens of either contracting party, who shall have resided five years in the country which has naturalized them, cannot be held to the obligation of military service in their original country or to incidental obligation resulting therefrom in the event of their return to it, except in cases of desertion from organized and embodied military or naval service, or those that may be assimilated thereto by the laws of that country.

ART. 4. Citizens of the United States naturalized in Belgium shall be considered by Belgium as citizens of the United States when they shall have recovered their character as citizens of the United States, according to the laws of the United States. Reciprocally, Belgians naturalized in the United States shall be considered as Belgians by the United States when they shall have recovered their character as Belgians, according to the laws of Belgium.

ART. 5. The present convention shall enter into execution immediately after the exchange of ratifications, and shall remain in force for ten years. If at the expiration of that period neither of the contracting parties shall have given notice six months in advance of its intention to terminate the same, it shall continue in force until the end of twelve months after one of the contracting parties shall have given notice to the other of such intention.

ART. 6. The present convention shall be ratified by the President of the United States, by and with the advice and consent of the Senate, and by his Majesty

* See the names of the ministers in the AMERICAN ANNUAL CYCLOPÆDIA for 1866.

the King of the Belgians, with the consent of the Parliament; and the ratifications shall be exchanged at Brussels within twelve months from the date hereof, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same and affixed thereto their seals.

Made in duplicate at Brussels the sixteenth of November, one thousand eight hundred and sixty-eight.

JULES VANDER STICHELEN.
H. S. SANFORD.

An additional article to the treaty of commerce and navigation of July 17, 1858, between the same contracting parties, was signed December 20, 1868, and is as follows:

The President of the United States of America and his Majesty the King of the Belgians, deeming it advisable that there should be an additional article to the treaty of commerce and navigation between them, of July 17, 1858, have for this purpose named as their plenipotentiaries, namely: The President of the United States, Henry Shelton Sanford, a citizen of the United States, and minister resident near his Majesty the King of the Belgians; and his Majesty the King of the Belgians, the Sieur Jules Vander Stichelen, Grand Cross of the Order of the Dutch Lion, etc., his Minister of Foreign Affairs; who, after having communicated to each other their full powers, have agreed to and signed the following additional article:

The high contracting parties, desiring to secure complete and efficient protection to the manufacturing industry of their respective citizens, agree that any counterfeiting in one of the two countries of the trade-marks affixed in the other on merchandise, to show its origin and quality, shall be strictly prohibited and shall give ground for an action of damages in favor of the injured party, to be prosecuted in the courts of the country in which the counterfeit shall be proven.

The trade-marks in which the citizens of one of the two countries may wish to secure the right of property in the other must be lodged, to wit: The marks of citizens of the United States at Brussels, in the office of the clerk of the Tribunal of Commerce, and the marks of Belgian citizens at the Patent-Office in Washington.

It is understood that, if a trade-mark has become public property in the country of its origin, it shall be equally free to all in the other country.

This additional article shall have the same duration as the before-mentioned treaty of the 17th July, 1858, to which it is an addition. The ratifications thereof shall be exchanged in the delay of six months, or sooner if possible.

In faith whereof, the respective plenipotentiaries have signed the same and affixed thereto their seals.

Done at Brussels, in duplicate, the twentieth of December, eighteen hundred and sixty-eight.

H. S. SANFORD.
JULES VANDER STICHELEN.

The Belgian Chambers adopted the bill for the abolition of imprisonment for debt, by a large majority, and refused to exempt from the benefit of its provisions even editors unable to pay their fines.

The young Prince Royal died, after a lingering and distressing illness at Brussels, on January 22d. By his decease, the Count de Flanders, brother of the King, became heir-apparent to the throne, and as such took his seat in the Senate.

The import and export trade of Belgium represented before 1830 an annual average of 300,000,000 francs, or £12,000,000. Thence up to 1840 it fluctuated between 300,000,000 francs and 400,000,000 francs; between 1840 and 1850 it increased to an average of about 900,000,000 francs, or £36,000,000; between 1850 and 1860 the average reached 1,700,000,000 francs; and a report presented to the King by the Minister of Foreign Affairs estimates that, for the period between 1860 and 1870, it will reach an annual average of 3,000,000,000 francs, or £120,000,000. The minister, however, remarks in his report that the direct trade between Belgium and countries out of Europe is tardy in its developement; that the Belgian, though apt at manufacture, is slow in finding new markets. The Belgian Government, as a stimulus to foreign trade, has appointed a consul in the Danubian Principalities under the orders of the Belgian legation at Constantinople, a consul-general at Odessa, and a consul-general at Tauris; and a gentleman well versed in commercial matters has been attached to the Belgian legation at Washington, who is to have no fixed residence, but is to move about the United States in order to report where there may be an opening for Belgian trade. Mr. Hugh Wyndham, second secretary of the British legation at Brussels, sending these statements in his last report to the Foreign Office, observes that Belgium has no trade at all with California, and but little with China and Japan; whereas Holland and Switzerland, both small states, are actively fostering their commerce with those distant regions.

BELL, JOHN, a statesman of Tennessee, born near Nashville, Tenn., February 15, 1797; died at Cumberland Iron Works, Tenn., September 10, 1869. His father was a farmer in fair circumstances, who bestowed upon him a good education, and at so early a period that he was graduated at Cumberland College (now the University of Nashville) at the age of seventeen. Devoting himself to the study of the law, he began his professional career at nineteen. A year later, and when he was not of age, he was chosen a member of the Senate of Tennessee; and, though he remained through the term, he would not accept a reëlection, but adhered to his profession until 1826, when he was nominated for Congress, in opposition to the well-known Felix Grundy, over whom he triumphed, after an animated contest, by a thousand majority. He was a Democrat at that time, though General Jackson opposed his election; and he must be classed with the Calhoun branch of the Jackson party. He was so popular that the Jacksonians concluded to overlook his independence; and he was reëlected six times, serving in the House of Representatives until 1841, or fourteen years. Long before the expiration of these years he had left the Democratic party. Opposing the nullifiers, he was separated from Mr. Calhoun; and he parted from President Jackson on the question of the removal of the deposits from the United

States Bank, and virtually became one of the founders of the Whig party, in 1834. That year Mr. Stevenson left the office of Speaker of the House of Representatives, to become minister to England; and the candidates for the vacant chair were Mr. Bell and Mr. Polk. The former was supported by all the Whigs, and by those Democratic members who were opposed to Mr. Van Buren, and he was elected. He joined with Judge White in the anti-Van Buren movement in Tennessee, which completed his sins in the estimation of President Jackson, who could not, however, prevent his return to Congress, as his popularity in his district remained unshaken. When General Harrison became President of the United States, in 1841, he appointed Mr. Bell Secretary of War, in which office he was continued by President Tyler; but, when Mr. Tyler vetoed the bill for creating a third United States Bank, Mr. Bell resigned office, as did all the members of the Cabinet, except Mr. Webster. The Tennessee Legislature then offered him the place of United States Senator, which he refused to accept, on the ground that it ought to be bestowed on Mr. Foster, an eminent Whig. He remained in retirement six years, save that he was chosen a member of the State Senate, in 1847. The same year he was elected to the national Senate, to which he was reëlected in 1853, thus serving two full terms in that body. His entire congressional life extended to twenty-six years. As a member of Congress, Mr. Bell is entitled to honorable mention and remembrance, for he was one of the very few Southern men whose course was really national in its character. When petitions for the abolition of slavery in the District of Columbia were first presented to the House of Representatives, he did not join with those who were for suppressing the irrepressible, but voted for their reception. He also opposed "the Atherton gag." For thus acting, he encountered opposition at home; but his constituents invariably sustained him. He pursued the same course when in the Senate, though the slavery question had then become all-important. It is true he supported the compromises of 1850, but it is not easy to see how he could have done otherwise, when even Mr. Webster was their advocate, and when many other Northern men gave them their voices and their votes. When the Kansas-Nebraska Bill was brought forward, in 1854, Mr. Bell opposed its passage with all his power, taking a position among its most decided opponents, not only as violating the Missouri compact, to which the honor of the South was pledged, but as unsettling the compromise of 1850, to which both the great parties had solemnly subscribed. Four years later, he was equally earnest in his opposition to the Lecompton constitution that had been framed for Kansas. In 1860, Mr. Bell was nominated for the presidency by the "Constitutional Union party," Mr. Everett receiving the nomination for the vice-presidency. This ticket had no chance of success, but it was well supported. After the election of Mr. Lincoln, Mr. Bell was disposed to support his Administration, seeing in his success no reason at all for secession on the part of the South. For some time he remained firmly in this position, but at length he was induced "to go with his State." His after-life was without incidents.

BENTON, NATHANIEL S., an active politician and political leader for many years in New York, born in Cheshire County, New Hampshire, February 19, 1792; died at Little Falls, N. Y., June 29, 1869. He was educated at the Fryeburg Academy, Maine, having for one of his instructors at one time Daniel Webster, who was principal of the institution. During the War of 1812 he served first as private in the Thirty-fourth U. S. Infantry, then as ensign, lieutenant, and adjutant, acting on two occasions as Judge-Advocate-General at Plattsburg. At the conclusion of the war he studied law, and was admitted to practice. In 1816 he removed from New Hampshire to Little Falls in this State. In 1821 he was appointed Surrogate of Herkimer County, which office he held until 1828, when he resigned, in order to take his seat in the State Senate. He remained in the Senate three years and four months, when he resigned to accept the position of United States District Attorney for Northern New York. This office he held until removed by President Harrison in 1841. During this period, in 1832, he was appointed first Judge of Herkimer County by Governor Marcy. In 1845 he was elected Secretary of State by the Legislature, which office he held until 1848, when the new constitution went into effect. At that time the State Superintendency of Public Schools was an *ex officio* duty of the Secretary of State, but generally devolved mainly on a deputy. Mr. Benton had for his efficient deputy Hon. S. S. Randall, since and now Superintendent of Schools in the city of New York, but he gave more personal attention to this department than his predecessors had done. From 1848 to 1856 Mr. Benton was not in office, though he had transferred his allegiance to the "American party," and was their candidate at one time for Canal Commissioner, and at another for Lieutenant-Governor. In 1855 that party was successful in carrying the State, and in electing a majority of the Canal Board. At that time the Auditor of the Canal Department was chosen by the votes of the Canal Board, and Mr. Benton was elected to that office in 1856. He soon began to add to the duties and powers of the office, by securing the passage of certain legislative enactments. One of his first steps was to have the appointment of the Auditor transferred to the Governor and Senate, to fix its duration for three years, and to make the salary $2,500. Other acts were subsequently passed increasing the power of the office, and among them was one making the Auditor a member of the Contracting Board.

With the demise of the "American party," Mr. Benton allied his fortunes with the Republicans. He held the office of Auditor until 1868, a period of twelve years, when he was succeeded by James A. Bell, the present incumbent. Mr. Benton was a man of great industry, strict integrity, and strong will. He took great pains to impress his ideas of canal management upon the canal policy of the State. His reports were ably written, and his arguments clearly stated.

BERLIOZ, Louis Hector, a distinguished French musician, composer, and author, born at Côte-Saint-André, Department of Isère, France, December 11, 1803; died in Paris, March 9, 1869. He was the son of a physician of distinction, who, with the intention of educating him for his own profession, sent him, at an early age, to pursue a course of medical study at Paris, but his passion for music led him, at the age of twenty-three, to desert his college, and enter the *Conservatoire*. Under the instruction of Lesueur, and of Reicha, the influence of whose peculiar teachings has always been more or less perceptible in his works, Berlioz advanced so rapidly as to gain, in 1828, the second prize, and in 1830 the first prize, for musical composition. During his four years at the *Conservatoire*, he wrote a Mass for four voices, chorus and orchestra, the "Waverley" overture, a "Symphonie-Fantastique," a "Fantaisie sur la Tempête," a second "Fantaisie," entitled "Scènes de Faust," the cantata of "Sardanapale," and a "Symphonie Funèbre et Triomphale," in commemoration of the revolutionary events of July. These works were highly valued by musicians, mainly, it would seem, on account of the technical proficiency and the remarkable skill in orchestration which they exhibited; but it does not appear that they attracted any degree of popular attention. In 1830 Berlioz visited Italy, not so much for purposes of study as of recreation. While at Rome, he composed "Lélio, ou le Retour à la Vie," a monodrame; "La Ballade du Pêcheur" (words by Goethe); "Le Chœur des Ombres" (suggested by "Hamlet"), and two overtures, "King Lear" and "Rob Roy." Upon his return to Paris, in 1832, he became a regular contributor to the *Gazette Musicale* and the *Journal des Débats*, his writings in which were models of eloquence, force, and perspicuity. It is probable that he won more adherents by strength of argument than his musical works, unaided, could ever have obtained for him. He became the centre of a little group of enthusiasts, whose united power was sufficient to induce operatic and other managers to give him a hearing, though not to persuade the public to tolerate him. His first opera, "Benvenuto Cellini," produced in 1838, was a disastrous failure, and was condemned by every voice in Paris except those of Berlioz and his friends, the composer himself endeavoring to justify the work in a series of essays, than which nothing more brilliant and spirited has been known in musical literature. The world admired the writer, but refused to admit the claims of the composer. The disappointment and the mortification brought on a severe fit of illness, a circumstance which called forth a remarkable and unprecedented action on the part of the violinist Paganini. He communicated his sympathy in the form of a present of twenty thousand francs, and his admiration by a bold statement that the erratic French composer was the equal of Beethoven. Although unfortunate with his opera, Berlioz enjoyed a certain success, about this period, with one or two symphonies. "Harold" and "Romeo et Juliette," both, we believe, inspired by Paganini, were readily accepted and applauded. His Requiem Mass, the most remarkable, in respect of instrumentation at least, of all his works, was performed, in 1837, at the obsequies of General Damremont, and, if not enthusiastically welcomed, was not condemned. The year 1843 he devoted to a series of concerts in Belgium and Germany, for which he composed the lively overture, "Le Carnaval Romain," and by means of which he laid the foundation of his fortune. At the Industrial Exhibition of 1844 he enjoyed, for the first time, the opportunity of presenting one of his works on a scale of magnitude commensurate with his designs. This was the "Hymne à la France," which was executed by an orchestra and chorus of one thousand musicians. In 1846 he produced, at the Opéra Comique, a "legend in four parts," entitled "La Damnation de Faust," which met with a most flattering reception. "L'Enfance du Christ," a "sacred trilogy," soon followed, and was well received, though not so heartily as its immediate predecessor. Between 1855 and 1863 he brought out a number of symphonies, all avowedly intended to exemplify and elucidate his special theories and convictions, and all exhibiting his talents in their worthiest aspect. His last composition of importance was a heroic opera, "Les Troyens," performed at the Théâtre Lyrique in 1863, a work regarded by critics with great interest. While denied the public acknowledgments which he craved, Berlioz was not left wholly without personal marks of recognition. In 1839 he received the decoration of the Legion of Honor, and the office of librarian of the *Conservatoire;* and in 1856 he was appointed to the seat in the Institute left vacant by the death of Adolphe Adam. He was also an active member of the juries on Musical Instruments, at the International Exhibitions of London and Paris. By his literary works he acquired hosts of friends and admirers in quarters where his musical achievements would never have given him a footing; and even the hostility of those who were opposed to his æsthetic theories was disarmed by his masterly "Treatise upon Modern Instrumentation, etc.," a work the value of which to students, and to practising musicians

as well, cannot be too highly rated. His orchestral compositions far excel those of any other writer, and, in his development of the resources of instrumentation, he was thoroughly original. The last years of his life were passed in comparative retirement, although he came indirectly before the public ten years ago, when "Alceste" was revived at the Grand Opera. The managers of that institution fixed upon him as the man most capable of any in France to restore the traditions and recall the exact spirit of Gluck's noble work. "Alceste" was superbly produced, under his exclusive direction. Aside from the Treatise on Instrumentation, already mentioned, M. Berlioz's principal literary works were: "A Musical Tour in Germany and Italy: Studies of Beethoven, Gluck, and Weber," 2 vols., 8vo, 1845; "Orchestral Soirées," 18mo, 1854; and "Musical Comicalities," 18mo, 1859.

BOLIVIA, a republic in South America. President, in consequence of the successful revolution of December, 1864, Mariano Melgarejo dictator, after the abolition of the constitution in February, 1869. The ministry, in September, 1869, was composed as follows: M. D. Muñoz, head of the Cabinet, Minister of State and of External Affairs; M. de la Lastra, Minister of Finances; M. J. Ribera, Minister of Justice and Public Instruction; General G. Lanza, Minister of War; M. Montero, Minister of Worship and Industry. The area of the republic is estimated at from 22,500 to 30,000 geographical square miles (1 geographical square mile=21.26 English square miles). The republic is divided into eleven departments, which had, in 1858, 1,742,352 inhabitants, to which must be added about 245,000 Indians, giving a total population of 1,987,352. Later statements give the population, exclusive of Indians, as 1,811,368. In point of ecclesiastical jurisdiction the republic is divided into the archdiocese La Plata or Charcas (embracing the departments of Chuquisaca, Potosi, Oruro, Tarija, Atacama), and the dioceses La Paz (departments of La Paz, Megillones), Santa Cruz (departments of Santa Cruz, Beni), and Cochabamba (departments of Cochabamba, Melgarija). The standing army, consisting of 31 generals, 359 officers of higher grade, 654 subaltern officers, and 3,034 men, annually costs the republic two million pesos.

Bolivia is, on the west, almost cut off from the Pacific, while on the east Brazil interposes a vast territory between her and the Atlantic. The great chain of the Andes here branches out into mighty parallel ridges. A great elevated table-land, about 13,000 feet high, and held between the two grand ridges of the Andes, extends almost from the northern confine of the Argentine Republic northwest to the frontier of Peru. All the water-courses to the east of this table-land flow into the Atlantic. The three larger streams are affluents of the river Madeira; their names are the Beni, Mamore, and Guapore. The Mamore, nearly 900 miles long, flows through the very heart of Bolivia. The Guapore, forming the boundary-line between Brazil and Bolivia, has its head-waters almost in sight of the head-waters of the Rio de la Plata. The aggregate length of the affluents of the Madeira with their tributaries cannot fall short of 5,000 miles, for at least 4,000 of which it is suited to steamboat navigation. The banks of these rivers afford excellent natural landing-places. All travellers attest to the climate being one of the healthiest in the world.

The population is in great part upon the Amazon slope. Many populous centres are found upon the banks of the rivers far in the east and northeast. Among these towns are Santa Cruz, containing some 12,000 inhabitants, and Trinidad, capital of the great Beni province, having 6,000. Cochabamba is a city of 35,000 inhabitants; it is already the trade centre of 500,000 people, and will eventually become the great commercial emporium of Bolivia, furnishing La Paz, with its 83,000 inhabitants, Chuquisaca, with its 36,000, and Potosi, with its 40,000, the luxuries of other nations. The canoe-trade, which has sprung up since Brazil opened the Amazon, is astonishing. The Indian canoemen are tough, docile, and of great endurance.

The people may be divided into two great sections—mining and agricultural. One-half of the people are of the Quichua and Aymara Indian races. The latter have their centre of population at La Paz. The Spanish is the dominant race, and is gradually gaining ground over the Indian. The Bolivian people are among the most hardy, energetic, and industrious, of Spanish South America.

The most valuable products are the potato, banana, Indian corn, wheat, barley, and rice, and almost every variety of fruit. The finest Peruvian bark is cut in northwest Bolivia, and three-fourths of the entire crop of the world come from this district. Cinnamon of excellent quality grows wild in great abundance. Tobacco is extensively grown. Cocoa or betel is sold in the La Paz market to the amount of about $4,000,000 annually. The chocolate of the Beni has no superior in the world. Coffee is largely cultivated for home use. Sugar is produced and largely manufactured from the cane in the Santa Cruz district; its quality is excellent. Cotton grows wild in great abundance; it is of two kinds—white and yellow—both of a fine, long staple. With the vast wild-indigo fields it covers an immense extent of the Bolivian territory. Dye-woods and dyes are numerous. The cochineal is found in its native state, and abundant. Vanilla, wild sarsaparilla, wild almonds, saffron, laurel, and white wax, yellow and black beeswax, rhubarb, gentian, jalap, aloes, and ipecacuanha, are also abundant. A great variety of balsams are found. Sixty-four different kinds of forest-trees are counted on the banks of the great rivers. Vast herds of cattle and horses roam

in the Beni and Chiquitos provinces. On the higher lands are found the llama, the sheep, goat, and the vicuna. The mineral wealth of Bolivia is fabulous. Besides silver, there are found gold, lead, tin, copper, iron, coal, and fossil salts. The gold washings of the headwaters of the affluents of the Madeira are celebrated, and from the single silver mountain of Potosi nearly enough silver has been taken to pay our national debt.

The foreign trade passes through the Peruvian port of Arica. The foreign European trade in imports amounts to about $8,000,000 annually. This is offset in exports of Peruvian bark, guano, copper, etc. The balance of trade against the country is paid for by a part of her silver product, which is about $2,500,000 annually.

Bolivia made, in March, 1867, a treaty of limits, commerce, and navigation, with Brazil. This was, late in 1868, ratified by both nations, and the party favorable to the treaty hope that it will open the way to steam communication, *via* the Amazon, with the world. On the other hand, discontent with it still prevails.

There is an internal trade in Bolivia amounting to about $50,000,000 annually.

The revolution prevailing in 1867 was ended in the beginning of 1868, by the revolutionary leaders emigrating to the Argentine Republic. President Melgarejo caused his first cousin, Colonel Lozada, one of the bravest officers in the army, to be shot for having attempting to raise a counter-revolution. The despotic act excited great indignation; but Melgarejo had the army perfectly under his control. The general dissatisfaction with President Melgarejo continued, however, and the President proclaimed himself, in February, 1869, again dictator of the republic. His Cabinet approved unanimously of this step. In May he issued a decree restoring the constitution, and ordered elections for Congressmen and Senators. The people received this return of their constitutional rights with enthusiasm. He continued, however, to exercise full control.

The Government recognized, in June, the belligerent rights of Cuba by the following decree:

To His Excellency the Minister of Foreign Affairs of the Provisional Government of Cuba:

SIR: I have the honor to transmit herewith to your Excellency a copy of the decree by which Bolivia recognizes the belligerent rights of the Cuban patriots and the legitimacy of the Provisional Government which they have organized. The cause espoused by General Cespedes is thoroughly American, seeking for independence and the destruction of Spanish despotism. God and right sustain its justice, and the prayers of the Continent are offered for its success. I have the honor, etc.

MARIANO DONATO MUÑOZ.

LA PAZ, *June* 10, 1869.

Mariano Melgarejo, Provisional President of Bolivia, decrees:

1. That the Government of Bolivia recognizes the Cuban patriots as belligerents, and the legitimacy of the government organized by them.

2. Bolivia sends her heart-felt sympathy to the noble upholders of such a sacred cause, and to General Cespedes, as a first homage to his American spirit and heroic efforts for the liberty and independence of his country.

A new revolutionary movement against Melgarejo was begun at the close of October, by General Morales, consul of Bolivia at Callao, who a few years since attempted the overthrow of President Belzu. He appeared upon the frontier of the country with three hundred muskets and rallied a number of adherents to his standard; but the movement was speedily crushed.

The Government continues to make great efforts to develop the resources of the Amazon Valley. On October 1, 1869, it gave to Mr. A. D. Piper, a citizen of California, a concession of a vast tract of land. Mr. Piper, who represents a California company, contracted, on the other hand, to introduce 1,000 families for each five years during twenty-five years. A great impulse to Bolivian commerce is also expected from the new railroads which the Argentine Republic, Brazil, and Peru, expect to build to the Bolivian frontier.

BOTTS, JOHN MINOR, a Virginian politician and statesman, born in Dumfries, Prince William County, Va., September 16, 1802; died at his residence in Culpepper, Va., January 7, 1869. Soon after his birth his parents removed to Fredericksburg, and from thence to Richmond, where they perished in the great theatre fire in 1811. Young Botts received a good school education notwithstanding the loss of his parents during his youth, and so thorough a preparation for the law, which was the profession of his choice, that he was admitted to the bar at the age of eighteen. After he had practised law for about six years, he retired to a farm in Henrico County, and established himself as a Virginia country gentleman. He did not long remain in quiet, however, for, in 1833, he was elected to represent his county in the Legislature of the State. He at once took a prominent position among the leading members of this body, and soon became one of the most active politicians in Virginia, working with the Whig party. He was several times reëlected to the Legislature. In 1839 he was elected to Congress, and there stood earnestly and ably by Henry Clay, zealously advocating most of the points of the great leader's programme—a national bank, a protective tariff, and the distribution among the States of the proceeds of the public lands. After serving two terms he was defeated by Mr. Seddon, but, in 1847, succeeded in gaining a reëlection. In 1839 he was a delegate to the National Whig Convention, which nominated Harrison and Tyler. He had been a warm personal friend of John Tyler, elected Vice-President in November, 1840, and who, by the death of General Harrison, in April, 1841, became President of the United States; but, soon after Mr. Tyler's accession to office, Mr. Botts, in a conversation with him, learned his intention of seceding from the party which had elected him, and he at once denounced him, and pro-

claimed open war with him, which he carried on as long as Mr. Tyler was President. In the presidential campaign of 1844 he labored earnestly and indefatigably for the election of Mr. Clay. In 1852 Mr. Botts resumed the practice of his profession in Richmond, and speedily met with the large success to which his great talents and high legal ability entitled him. On the disruption of the Whig party, he joined the American party, and in 1859 an attempt was made by that political organization to nominate him for the presidency, but it proved a failure. He continued his practice and remained in Richmond till the commencement of the war, but, being devoted to the Union, and having used all his efforts, without avail, to prevent Virginia from taking the suicidal step of secession, he retired to his farm near Culpepper Court-House, where he remained most of the time during the war, hated yet respected by the enemy. He was, however, subjected to a great deal of trial and inconvenience. One night in March, 1862, a squad of a hundred men, under the orders of General Winder, came to his house, took him from his bed, and carried him to prison, where he was held in solitary confinement for eight weeks. His arrest was caused by the well-founded suspicion that he was writing a secret history of the war. Search was made for the manuscript, but nothing was found. After the close of the war, this missing manuscript (of which a portion had been in 1862 confided to the Count de Mercier, French minister at Washington), formed the basis of a volume prepared by Mr. Botts, and published in New York by Messrs. Harper & Brothers, with the title of "The Great Rebellion, its Secret History, Rise, Progress, and Disastrous Failure!" The work was too much of the nature of a personal narrative, and was published in a time too thickly crowded with great events, to have any very considerable sale, and was, perhaps, less important in its revelations than the author deemed it. After his release from prison Mr. Botts returned to his home at Culpepper. Here he was continually persecuted by the enemy. His farm, too, was repeatedly overrun by both armies, and dug over, time and again, for military operations. When the war had closed, Mr. Botts again took a deep interest in political matters. He labored earnestly for the early restoration of his State to the Union, but without success. He was a delegate to the National Convention of Southern Loyalists in Philadelphia in 1866, and in 1867 signed his name on the bail-bonds of Jefferson Davis. From that time his energies steadily declined. He declared his intention to take the stump during the last canvass, for General Grant, but was unable to do so, or take any active part in the contest, on account of his failing health.

BRADY, James Topham, a learned, accomplished, and eloquent advocate and political leader, born in New York City, April 9, 1815; died there, February 9, 1869. His father, Thomas S. Brady, an accomplished scholar, had emigrated with his family from Ireland in 1812, and, after teaching a classical school for some years, entered the legal profession, and died in the prime of life, a Judge of the District Court, leaving eight children to the care of this son. James T. Brady was educated mostly by his father, in his school, and subsequently in his office; and, at the early age of sixteen, such was his thorough mastery of the law, that he acted the part of junior counsel to his father. He was admitted to the bar in 1835, when but twenty years of age, and though "there were giants" among the members of the New York bar "in those days," men like Graham, Sanford, Lord, Blunt, George Wood, and Ogden Hoffman, he, almost at a bound, sprang into the front rank of the profession, and maintained his place there ever after, sustained by his profound knowledge of the law, his ready tact, his extraordinary eloquence, and his genial and courteous manners. He was conspicuous for his ability in all departments of the law, winning verdicts from judges and jurors, alike in great patent cases, like that of Goodyear *vs.* Day; cases involving questions of medical jurisprudence, like the Allaire and Parish will cases, and the moral-insanity plea in the case of the forger Huntington or the homicide Cole; divorce cases, like that of Mrs. Edwin Forrest, and, indeed, in civil cases of all sorts; but his special power was seen to the best advantage in criminal cases, where he usually undertook the defence. At one time he successfully defended four clients, charged with murder, in a single week, and all without fee or reward. His defence of Daniel E. Sickles, at Washington, in 1859, was one of his most splendid achievements as a great criminal lawyer. In most of the remarkable civil or criminal causes of the past thirty years he had been retained on one side or the other. His success as an advocate was not due to any chicanery, not even to any of the generally considered admissible advantages taken by many members of the profession. He was clear, frank, and honest, in the statement of his cases, skilful and almost invariably courteous in his cross-examination of witnesses, but his arguments were put with such tact, his statement of facts was so lucid and candid, and his appeals were so eloquent and impressive, that he almost invariably carried judge and jury with him. It was said of him that he never lost a case in which he was before a jury for more than a week; by that time they saw every thing through his eyes. With his rare gifts of quick insight and brilliant eloquence he was necessarily a political leader; but no man was ever more thoroughly free from personal aspiration for office. He would have nothing to do with any office which was out of the line of his profession. He did not desire any higher honor than that of being a great lawyer; yet, as a Democrat, he was one of the

most thoroughly-trusted and trustworthy members of his party. As a politician, Mr. Brady was of what might be called a conservative turn of mind, but his impulses and his acute sense of justice often overbalanced these tendencies. He never held office except once, when he was Corporation Counsel; he consented to accept this position because it was in the line of his profession, and while occupying the place he made many important improvements in the administration of municipal law. Before the war he was an ultra States-Rights man. In 1860 he had supported Breckinridge, and even carried his support so far as to discourage fusion on the electoral ticket between the two Democratic presidential candidates, while he consented to be a candidate for Governor himself on the Hard ticket, against William Kelly, the Soft candidate, in order to uphold a principle. If there had been any chance of his election, he would not have been a candidate. But, while supporting the war measures of Lincoln's Administration, on one point, and only one, he differed with the Government. He did not believe in the doctrine of military necessity as applied to Northern States or without the hostile lines of the enemy. Politics, however, never entered into his professional life, and one of his greatest cases was his defence of the spy executed at Governor's Island. No man ever adhered to a determination not to accept office outside of the line of his profession more firmly than Mr. Brady. Nearly every place in the gift of the Democracy of New York was offered to him, and declined by him. He was pressed to accept a seat in the Legislature and in Congress, but he steadily refused, and in 1861 he peremptorily declined the Tammany nomination for Mayor. During the period that intervened between this action on his part and the close of the war, he made many speeches on national questions, some of which produced a profound impression upon the country. In October, 1862, he was induced to address the Seymour Association of New York, and in his remarks on that occasion he boldly said, "The South, in leaving us at the particular time she did, did so without the slightest pretext of justification or excuse." These speeches were followed up by other and bolder efforts. In March, 1864, he had the satisfaction of addressing a war-meeting in Tammany Hall. Near the close of the war Mr. Brady was appointed a member of a commission, of which General William F. Smith was chief, to inquire into the administration of the Department of the Gulf under General Butler and General Banks. The commission discharged the duties of their appointment, and made their report to the Secretary of War, but there the matter ended. The report has never been published, notwithstanding the public interest felt in the subject of their inquiry, both at the time and since. Outside of professional and political life Mr. Brady was peculiarly amiable, and he was exceedingly fond of social enjoyments. He idolized the children of his sisters, and was always happy in winning the confidence and esteem of the little ones. But he could readily turn away from social pleasures to the duties of the office and court. To his social accomplishments and legal attainments must be added an excellent literary taste. In the brilliant days of the old *Knickerbocker Magazine* he was a frequent contributor, and he wrote besides for other periodicals. One of the most beautiful of these waifs, "A Christmas Dream," originally contributed by him to Park Benjamin's literary paper, *The New World*, in 1846, was subsequently, by one of his friends, put into a little Christmas volume, exquisitely illustrated, and for years formed one of the most beautiful of the minor holiday books. High-minded, generous, prodigal to a fault, hating meanness in every form, delicate in the matter of fees from his clients, taking whatever was given him oftener than what he might have asked, so averse to even the appearance of evil that he never took a case in the court of which his brother was the Judge, he went down to the grave with a record such as few men leave behind them.

BRAZIL,* an empire in South America. Emperor, Pedro II., born December 2, 1825; succeeded his father April 7, 1831; has two daughters: Isabella, married to the Count d'Eu, son of the Duke de Nemours; and Leopoldina, married to Duke Augustus of Saxe-Coburg Gotha; eldest son of the latter, Pedro, born March 19, 1866. The conservative ministry, appointed July 15, 1868, remained in power throughout the year 1869. Area, 8,231,000 square miles. Strength of the army 78,784; the army of operation in Paraguay was estimated in January, 1868, at 42,817 men. The total population was (1867) estimated at 11,280,000, 1,400,000 of whom are slaves. The wild Indians, not included in the total population, are said to number 500,000.

The number of immigrants landed at Rio Janeiro, during 1868, was 8,355, to which must be added about 3,500 landed in the southern provinces, making the total immigration for the year, throughout the empire, not more than 12,000 at the outside. More than half of the immigrants were Portuguese; the Germans rank second in point of numbers; and the English (with whom are included the Scotch and the Irish) come next. Spaniards are few, but there is a respectable number of French and Italians. Of the French, there were several families from Algiers, hardy, robust farmers, who left their homes on account of a terrible drought which reigned in that country. They settled in the province of Parana, where they have since been joined by nearly a hundred of their countrymen, who sailed directly from Marseilles for Brazil. The

* *See* AMERICAN ANNUAL CYCLOPÆDIA for 1868, for the names of the ministers, a fuller account of the Brazilian army, and commercial and navigation statistics.

number of North Americans is put down at 405. About 250 of these were from the Southern States, of whom more than half went to Brazil at their own expense, and nearly all had friends or relatives already settled in the empire. The German immigration has augmented rapidly in the last few years, owing to the good management of the Brazilian immigration agent in Germany.

A table is given showing the emigration from the port of Rio Janeiro, from which it appears that the immigration exceeded the outgoings by 4,196. No fewer than 338 North Americans left the country during the year—convincing proof of the failure of the scheme for establishing an American colony in Brazil. With 405 arrivals and 338 departures, the remnant is seen to be very small. Of the 338 who left, about 100 were immigrants from the Southern States.

The Brazilian Government, in its anxiety to promote immigration to its shores, has made liberal arrangements to assist in paying the passages of immigrants to Brazil. During the year 1868 the aggregate number of those who received "assisted passages" was 1,286. More than half this number were British subjects; 385 were Germans; 182 North Americans, and only two Portuguese. This is remarkable, considering that more than one-half of the total of immigrants of the year were Portuguese. During the year, 55 vessels, of variou snationalities, arrived at Rio Janeiro with immigrants. Brazil has a Passengers' Act intended to protect immigrants on board the ships which take them to its shores. This law applies to all ships carrying four passengers in the steerage to every hundred tons of burden. Its execution is confided to the Official Agent of Colonization, who visits the ship immediately on its arrival in port, makes minute inquiries with regard to the treatment which the immigrants received on their voyage, proceeds at once to an investigation, if the complaints are sufficient to warrant it, and imposes such a fine on the vessel as he may deem just, if those complaints prove to be well-founded. It is claimed that, owing to these excellent regulations, which are rigidly carried out, emigrants to Rio Janeiro are better protected than even those to New York. The great majority of the emigrants going to Brazil are laborers and agriculturists.

The Brazilian navy now consists of sixteen monitors and casemates, and one building in Rio, forty wooden steamers, eight transport steamers, two auxiliary propeller sailing-corvettes, and eleven sailing-vessels of various kinds. These mount 298 cannon—the heaviest one-hundred-and-fifty-pounder rifles—are manned by 7,353 men, and the sixty-five steamers have engines of 7,299 horse-power; fifteen iron-clads, seventeen steam gunboats, two steam corvettes, and four other vessels, form the squadron in Paraguay, to which are attached two transports and a host of chartered steamers and sailing-craft. The squadron mounts 151 cannon, and is manned by 4,227 men. Other vessels are posted at Montevideo and on the Uruguay. Twelve small iron steamers were being built in Europe for service on the Amazon, and a gunboat was building at Para. An extraordinary credit of over $6,000,000 was opened to the Minister of Marine for extraordinary expenses.

According to the budget brought forward by the Minister of Finance for the year 1870–'71, the revenue was estimated at $28,100,000, and the ordinary expenditure $32,090,500, leaving a deficit of nearly $4,000,000. This deficit the minister proposed to meet by increased import duties, and in accordance with his views the House Committee reported a bill adding 40 per cent. to the present duties on foreign goods entered for consumption (abolishing the collection of 15 per cent. in gold), and raising the duties on free goods to 5 per cent. besides placing 5 per cent. of "additional" duties on the goods not chargeable with such. It was also proposed to levy landing and shipping dues in the custom-house, and to charge for warehouse rent therein from the day of landing the goods. The distressing condition of the Treasury, which was without means to satisfy the exigencies of the war, or meet its obligations with the creditors of the state, compelled the Government, previous to the meeting of the legislature, to resolve on a decree authorizing a fresh issue of paper money.

According to the Treasury return published, the ascertained indebtedness of the nation, exclusive of the foreign debt, which is about £14,000,000, was, on September 30, 1869, as follows:

	Milreis.
Bonds payable in currency.....	180,015,700
Bonds payable in gold.....	30,000,000
Paper-money in circulation.....	181,054,735
Treasury bills bearing interest.....	69,859,900

Of the above, 35,279,700 milreis have been added since the 28th of February, 1869, viz.: Bonds, 24,249,900; paper money, 6,140,000; interest-bearing treasury bills, 4,889,900. Adding the foreign debt to the internal debt, the total of the Brazilian debt becomes, taking the foreign debt at the present rate of exchange, about 643,000,000 milreis, or $321,500,000 currency. Of this total, 181,054,735 milreis bears no interest. The charges of the debt are estimated by the Minister of Finance at 29,000,000 milreis, but it is expected that next year they will be 36,000,000, owing to the further expenses of the war, which will require the borrowing of 60,000,000 to 70,000,000 more milreis.

The exports, during 1868, are valued at $52,376,000. The exports of coffee from Rio Janeiro show a falling off of 337,028 sacks during the first nine months of 1868 as compared with the same period of 1867, when 1,583,163 sacks were exported. The exports to the United States show a decrease this year of

22,000 sacks, having been only 344,154 against 366,192 in the first nine months of 1867. A part of the deficiency is, however, made up by an increased stock on hand, namely, 189,000 sacks against 59,000 sacks October 1, 1867. It is notable that a cycle of about five years appears to obtain in regard to the coffee crop of Brazil, a very large crop being usually followed by crops successively decreasing to the third year, after which it rises gradually to another extraordinary crop about the fifth or sixth year. It is said, however, that, if the coffee plantations be ploughed, the yield is tolerably regular and the average much increased.

The movement of the liberal party toward carrying through much-needed reforms has been gaining ground in the nation. The necessity of depriving the authorities of some part of their excessive power is deeply felt. The great wants of Brazil are independent courts to protect the people from illegal oppression, for at present the judicial power is wholly subordinate to and dependent on the executive. The Emperor is a ruler of enlightened views; but Brazil has a constitutional Government, with ministerial responsibility, and the present conservative ministers are opposed to liberal reforms. The accession of the conservative party to power has given a serious check to the emancipation movement. The liberal part of the press is, however, bold in denunciation of a policy which compromises the nation in the eyes of the whole civilized world. In fact, the day of independence was in general kept in the provinces with a freeing of slave children by societies already formed.

Brazil was, during 1869, still actively engaged in her war with Paraguay. The return of the chief commander of the Brazilian forces, Marshal Caixas, in the beginning of 1869, without asking leave, enraged the people and embarrassed the government. The army had lost within a month one-third to one-half its number, and an extraordinary proportion of its general officers; in fact, the whole army was in need of immediate reorganization. When the marshal's departure became known in the army, it almost produced a disbandment. The command was turned over to Marshal Souza, who knew nothing of the details of his command. In March, Count d'Eu, son-in-law of the Emperor, was appointed commander-in-chief. (*See* PARAGUAY.)

Owing to the demand of the American Government (dating as far back as 1857) for indemnity in the case of the American whaleship Canada, which demand was renewed in November, 1868, a rupture of diplomatic relations between Brazil and the United States took place in May, 1869. General Webb, the United States minister at Rio Janeiro, had been authorized to propose to the Brazilian Government the payment of $70,000 as a full satisfaction for the claim. The Brazilian Government, however, declined this proposition, declaring that, "inasmuch as the minister from Brazil in the United States has not advised this Government that he has been informed by Mr. Seward of his having issued renewed instructions to the United States minister in Brazil, no action can be taken upon such instructions until such advice has been received from our minister, informing this Government that the matter has again been referred to this legation." Against this decision General Webb remonstrated, stating that, if such a course was persisted in, he would resent the offence to his Government and demand his passports. On the 1st of May, General Webb received a dispatch from the Foreign Office, in which he was again officially told that "The American Government not having announced to the Brazilian minister in Washington the result of the promised reconsideration, nor of the issue of renewed and modified instructions to General Webb, keeps this Government in the same state of uncertainty that it was in before; and from which it cannot depart, except in such manner as shall have full consideration for the respect due to our minister, and from one Government to the other."

To this General Webb replied in a note, dated the 3d of May, in which he employed very strong language of indignation and reproof, stating that he did not consider it any honor to be present and flattered at his country's expense, and concluding in the following terms:

> The undersigned, in closing his mission of now nearly eight years' duration, has the satisfaction to reflect that he has on all occasions, under all circumstances, and at no inconsiderable personal sacrifice, proved himself a very sincere friend of Brazil and of the Brazilian people. That friendship will not yield to the injustices so recklessly done him and his Government; attributable, as it is, to a conservatism and a contempt for republics and republican institutions which belong to another age.

This note was returned to General Webb by Baron Cotegipe, with the remark, "it wounded not only General Webb's own dignity, but also that of the Government and the country, and could not be preserved in the archives of the Brazilian ministry." At the same time the passports for which the general had asked were sent him, with the assurance that "not the least obstacle would be placed in the custom-house to the embarkation of his effects."

This rupture produced great excitement and alarm among all classes of the population. Commercial men dreaded the worst consequences, not only to the general trade of the country, but to the credit of Brazil in Europe. Public opinion turned decidedly against the Government, and compelled it to yield. The diplomatic relations were restored, and all was granted that General Webb had demanded.

The opening of the Amazon, in 1867, has proved a great benefit to the bordering Hispano-American republics, and to the maritime nations of the earth. The exports and imports of Para for October and November,

1867, were double those of 1866. This is but the beginning. It already becomes apparent that it is cheaper for all Bolivia, Peru, Ecuador, and Colombia east of the Andes, to receive their goods from and to export their India rubber, cinchona, etc., to the United States and Europe *via* the great water highway which discharges into the Atlantic, than by the long circuitous route of Cape Horn, or the trans-Isthmian route of Panama. The Purus and Madeira are hereafter to be navigated by steamers. The valley of the Amazon in Brazil is as large as the area of the United States east of Colorado, while the whole valley of the Amazon in and out of Brazil is equal to all the United States east of California, Oregon, and Washington Territory, and yet the population is not equal to the single city of Rio de Janeiro, or the combined inhabitants of Boston and Chicago. It is estimated that a larger population can be sustained in the valley of the Amazon than elsewhere on the globe. The total value of exports in 1866 amounted to £799,983 sterling. The imports at Para for the same year were £510,429 sterling. Ten large Brazil steamers are plying on the Amazon proper, while smaller steamboats ascend to Peru and Ecuador. In 1865 the Brazil packets transported, between Para and Manaos, goods to the value of £800,000 sterling, according to their returns made to the Brazilian Government. In fifteen years, counting from 1850, the commerce tripled even under the restrictive rule which characterized it. The city of Para has a population of 36,000. Its imports and exports in 1868 were over £1,500,000 sterling. The opening of the Amazon has given a new impulse to the exploration of its affluents. The little steamer, in which Dr. Conto de Magalhaens set off to attempt the ascent of the Tocantins rapids, had successfully reached the Araguaya, thus proving the practicability of running a steamboat line from the Amazon to within 200 miles of the navigable waters of the Paraguay. A decree was issued, extending to the end of 1869 the permission conceded to foreign vessels to engage in transport between Brazilian ports possessing custom-houses.

The ratifications of the powers accorded in the international telegraph concession made to Ballestrini having been exchanged, Brazil should, by the terms of the concession, be placed in telegraphic communication with Europe and the United States within three years, by laying a cable from Para to one of the French Antilles, to which the European cable will be laid, and from which the communication with the United States will pass by Hayti and St. Thomas. The parties to the convention are Brazil, Denmark, France, Hayti, Italy, and Portugal.

BREMEN,* a republic belonging to the North-German Confederation. Burgomasters, Johann David Meyer (1867–'71), President of the Senate for the year 1870; Arnold Duckwitz (1865–'69), President of the Senate for the year 1869. Area, 74 square miles; population of the republic in 1867, 109,572; of the city of Bremen, 74,945. In the budget for 1869, the revenue is estimated at 2,220,114 thalers; the expenditure at 2,162,406 thalers; surplus, 57,708 thalers. The imports, in 1868, were valued at 52,680,000 thalers (gold); the exports at 69,490,000 thalers. The merchant navy, at the close of the year 1868, consisted of 307 vessels, together of 122,356 lasts (one last 4,000 lbs.). The statistics of emigration from the port of Bremen, in 1867 and 1868, were as follows:

EMIGRANTS FROM	1867.	1868.
North-German Confederation.	38,666	42,370
South Germany	16,199	12,382
Austria	15,303	7,398
Other Countries	3,833	4,263
Total	74,001	66,413
Of whom went to the United States	70,951	64,663

BROUGHTON, Sir John Cam Hobhouse, first Baron, G. C. B., F. R. S., an English liberal statesman and cabinet officer, born near Bristol, Eng., June 27, 1786; died in London, June 3, 1869. He was the eldest son of Sir Benjamin Hobhouse, a wealthy manufacturer of Bristol, and was educated at Westminster, and at Trinity College, Cambridge, taking his degree at Cambridge in 1808. While at the university, he contracted an intimacy with Lord Byron, and in 1809 accompanied the poet in his travels in Turkey and Greece, and other parts of Southern Europe, and subsequently in Switzerland and Italy; and, after his return to England, he published an account of these travels in a book which he called "A Journey through Albania and other Provinces of Turkey, with Lord Byron," London, 1812, which was highly commended. He also appended some notes, over his own signature, to Byron's "Childe Harold," the fourth canto of which the poet dedicated to him. This, however, was not his first work, for in 1809 appeared, with his name, a collection of compositions, under the title of "Imitations and Translations from the Classics, with Original Poems." Four years after the publication of his "Journey," he appeared again before the public with an elaborate work, entitled "The Last Reign of Napoleon." This was in two volumes, and gave a complete and entertaining description of the eventful "hundred days," of which he was an intensely interested eye-witness. He also published "Historical Illustrations of the Fourth Canto of Childe Harold," and was a frequent contributor to *Blackwood*, *Fraser's*, the *Westminster Review*, and other periodicals. He first became conspicuous in political life in 1819, by the publication of his "Letters to an Englishman," which were tinged with strong radical opinions, and contained such a severe attack on the House of Commons, that he was

* For further information, see the article Germany in this volume, and article Bremen in the American Annual Cyclopædia for 1868.

imprisoned in Newgate on a charge of having committed a breach of privilege. These letters and his imprisonment brought him prominently before the public, and, upon his release, he was taken up by the electors of Westminster, who, feeling that he had been unfairly treated, in spite of the strenuous and animated opposition of the Whigs, returned him to Parliament after a memorable contest. In Parliament he showed himself an able speaker and an energetic reformer, but his radical opinions became so far modified that in 1831 he entered the Cabinet of Earl Grey as Secretary of War. In 1833 he was made Secretary of State for Ireland, but was defeated in his canvass for a re-election before the Westminster electors. The next year he was returned from Nottingham, which he represented till 1847; and he sat for Harwich for a few years previous to his elevation to the peerage as Lord Broughton, Baron Broughton of Gyford, in 1851. In the Cabinet of Lord Melbourne he was president of the Board of Control, and Chief Commissioner of Woods and Forests; and in the Russell Administration in 1846–'52 he again held the former position. In 1853 he was for a short time a member of the Coalition Cabinet, but with that exception had taken no active part in public affairs after his elevation to the peerage. He received at that time the grand cross of the Order of the Bath, and was soon after named one of her majesty's Privy Council. Lord Broughton retained his intellectual faculties in great perfection till the close of life.

BRUNSWICK, a duchy belonging to the North-German Confederation. Duke, Wilhelm I., born April 25, 1806; succeeded his brother, Duke Karl, in 1830. (*See* GERMANY.)

C

CALIFORNIA, one of the Pacific States of the American Union, bounded by Oregon on the north, by Nevada and Arizona on the east, Lower California on the south, and the Pacific Ocean on the west. Area, 188,981 square miles. Its population in 1866 was 470,597, and in 1869 was estimated at somewhat more than 600,000. (For the various nationalities of which this population is composed, *see* ANNUAL CYCLOPÆDIA for 1868.) The State is said to contain 120,947,841 acres of land, of which it is estimated that 89,000,000 can be devoted to profitable husbandry. The election which occurred on the 20th of October, 1869, was for eighty members of Assembly; one-half (twenty) members of the State Senate, eight or ten of the fourteen District Judges, and two Associate Judges of the Supreme Court. The term of office of the other State officers does not expire till 1871. The two parties held their conventions in June, and, among other topics, both considered the subject of Chinese immigration.

The Republican Convention nominated Lorenzo Sawyer and O. C. Pratt for Judges of the Supreme Court, and passed resolutions pledging support to the Republican party and indorsing the Administration; asserting that the negro question has ceased to be an element of American politics, and declaring that the ratification of the Fifteenth Amendment should be followed by an act of universal amnesty and enfranchisement to the Southern people; regarding with satisfaction the immigration to the State from the Atlantic States and Europe, but, while giving preference to the people of our own race, holds inoffensive immigrants from China entitled to full protection, but opposing suffrage to the Chinese in any form, and any change in the naturalization laws of the United States; recognizing the power of the General Government to restrict or prevent Chinese immigration by terminating our commercial relations with China, but believing that the closing of our ports at present against the Chinese would be injurious to the national interests and cast reproach upon the intelligence of the American people, as being contrary to the spirit of the age; approving of the eight-hour law; indorsing the action of Congress respecting the Alabama treaty, and considering it the duty of the General Government to demand full reparation for the injury inflicted by the British Government and people upon our commerce during the rebellion; favoring the equalization of taxation of all kinds of property in the States; and approving the grants of State aid to railroads.

The Democratic Convention nominated Joseph B. Crockett and William T. Wallace for Justices of the Supreme Court, and passed resolutions declaring their confidence in the intelligence, patriotism, and ability of the white people of the country to administer and control their government without the aid of either negroes or Chinese; expressing their alarm at the attempts of the unscrupulous majority in Congress to absorb the powers of the Executive and Judicial departments of the Federal Government, and to annihilate the rights of the State governments; declared the subjection of the whites of the South to a mass of ignorant negroes and their disfranchisement, etc., an unparalleled outrage and wrong; opposed the policy of lending the credit of the State to railway and other corporations; advocated the eight-hour law and the rights of the working-men; opposed the adoption of the Fifteenth Constitutional Amendment, for a variety of reasons, among which were the influence it would exert in favor of Chinese immigration, the probability of their being allowed to vote and hold office, and the consequent creation of an aristocratic class, created and maintained by Chinese votes; opposing the admission of

the Chinese into the State, and their competition with white laborers; arraigning the Radical party for its profligacy, tyranny, extortion, disfranchisement, and contempt of constitutional obligations, and for its appointment of healthy and able-bodied negroes to office, while capable white citizens were suffering for the common necessaries of life; and approved of the economy and efficiency of the Democratic State government.

At the election the Democratic candidates were elected; Wallace by a majority of 5,756 votes, and Crockett by a majority of 10,292 votes, and the new Legislature stood as follows: Senate, 26 Democrats, 11 Republicans, and 3 Independents. House of Representatives, 67 Democrats, 10 Republicans, and 3 Independents. Of the District Judges elected, all were Democrats.

The railroad enterprises in California have made great progress during the year 1869. The Central Pacific, which had at the beginning of the year passed her borders, was, in May, united to the Union Pacific at Ogden, and a continuous railway line bound together the Atlantic and Pacific coasts; quickening immensely the commerce and the mechanical, manufacturing, mining, and agricultural interests of the State, and giving it at once a position of equality with the older States of the East. Of this Central Pacific road, 138 miles only are within the bounds of California; but aside from this there are twenty-three other railroads in progress, or completed in the State, with a total finished length on the 1st of November, 1869, of 672 miles, and a projected extent of about 2,500 miles. The roads already completed have cost, in round numbers, $46,650,000, and those in progress will undoubtedly require $80,000,000 for their cost of roadway and equipment.

The amount of gold mined in the State, in 1869, is not accurately known, considerable sums having been sent to San Francisco from adjacent gold-producing territories, while a portion of the State product, since the opening of the Pacific Railway, finds its way eastward without going to San Francisco. From the best data, however, there is reason to believe that it did not vary greatly from the aggregate of the previous year; new processes, and greater care and labor, having made up for the less abundant yield of some of the mines. For the first six months of the year, $21,046,000 in coin and bullion were exported from San Francisco. The exports of merchandise from the same port from September, 1868, to July, 1869, were $21,844,000; one-half of which was of flour and wheat; quicksilver, $921,000; furs, $987,000; wool, $2,378,000; and wine, $800,000.

The time has passed when the products of the gold-mines of the State will constitute her greatest source of wealth or of exports. While the export of gold and silver will probably not vary much from $40,000,000 (not wholly from her own territory), merchandise, including quicksilver, wheat and flour, wines, silk, both in cocoons and manufactured, fruits, in which the traffic since the opening of the Pacific Railroad is large, wool and woollen manufactures, in some of which the State greatly excels, barley, esculent roots, olives and olive-oil, figs, etc., etc., will speedily equal and surpass her exports of treasure. Her manufactures at the beginning of 1869 exceeded $35,000,000, and during the year took a great step forward, especially in wine and silk. The agricultural products of the State at the same time exceeded $36,000,000, and every year is bringing larger quantities of new land into cultivation, and in the districts hitherto affected by drought is accomplishing almost miraculous results by means of irrigation. The swamp or *tule* lands, overflown hitherto by the rivers in the rainy season, have to a considerable extent been drained and diked, and, the *tule* rushes having been burnt, reveal a soil of the most wonderful fertility, yielding in the case of the Suisun Bay Islands 83.5 bushels of wheat to the acre, and 112 bushels of barley to the acre, without ploughing. New articles of cultivation are constantly introduced; during the past year colonies of Japanese have taken up lands in the State, and commenced the culture of tea and the rearing of silk-worms, according to their customs. The orange, fig, pomegranate, and olive, are coming extensively into cultivation in the southern part of the State, and the production of wheat (the Californian wheat being in great demand from its peculiarly nutritious character) increases largely with each year. The culture of the grape in California, both for wine and brandy, and as a table-fruit, has become unprecedented in extent. It is estimated that there are sixty millions of vines now growing in the State, and most of them bearing. Over one hundred and fifty varieties of the grape are cultivated, including the choicest European kinds, which do better in that climate and soil than they ever did in their native region. California wines are now a staple article of commerce, and the demand for them is increasing fully as fast as the supply. It is said that large quantities of spurious wines are manufactured in San Francisco, and shipped to the Eastern States; but the genuine product of the California vineyards in 1869 was over 10,000,000 gallons. The silk culture, it was estimated, would reach a production of sixty million cocoons during 1869, with a very much greater increase in the coming years, the only difficulty now experienced being that of providing sufficient food for the silk-worms. The assessed value of real and personal estate for 1869 (the assessed value never exceeding 50 per cent. of the real value, and often falling below it) was above $250,000,000, to which were to be added about $23,000,000 exempt from taxation. Of this assessed valuation one-half was of property in San Francisco County.

The wool product of California has been

steadily and rapidly increasing for several years. The product of the Pacific coast in 1868 was 16,086,656 lbs., of which 706,800 lbs. were from Oregon, Washington Territory, and British Columbia; in 1869 the product of the coast was a little more than twenty million pounds, of which nineteen million pounds were from California. About three million pounds were consumed by the woollen-mills of the State, and the remainder was shipped to New York and Boston. The refining of sugar and the cultivation of both the sugar-cane and sorghum are making very great progress. The cultivation of the sugar-beet for sugar has not yet, we believe, been attempted to any great extent in the State, but in the deep, rich soil and the long, rainless season of California, it could not fail to be followed with greater success than has attended it elsewhere.

The iron and steel manufactories and the founderies, and machine and locomotive works, the greater part of them located in San Francisco, are constantly increasing and enlarging their facilities for work. The greater part of the locomotives, and most of the cars for supplying the twenty-one railroads finished or in progress in the State, are manufactured in that city; as are also the arastras, quartz-crushers, steam-engines, and other machinery required both in quartz and hydraulic mining in California, Nevada, Montana, Idaho, Oregon, Washington, and Arizona. This business seems to admit of an almost indefinite extension, and the iron and copper of the State furnish supplies of the raw material for a considerable portion of the work. We have alluded to the culture of fruit, as a specialty in which California would undoubtedly excel any other State of the Union. The fruits are generally larger and finer than those of other sections of the country, and the trees commence bearing earlier and yield more profusely. It is said that some of the fruits, and especially apples, plums, and apricots, have not so fine a flavor as those of the Eastern States, but the pear, the peach, and the cherry, are unrivalled both in size and quality. The following table shows the number of fruit-trees and fruit-bearing plants which were reported in the State in 1867. The most intelligent agriculturists of the State say that the number has been more than doubled since that time, and, in the case of the fig, lemon, orange, and olive trees, quadrupled. The quantity of small fruits has also been more than quadrupled:

Fruit-trees, Vines, etc.

Apple-trees	1,217,790
Peach "	969,692
Pear "	802,892
Plum "	195,896
Cherry "	93,998
Nectarine-trees	43,999
Quince "	40,404
Apricot "	52,808
Fig "	33,924
Lemon "	3,712
Orange "	17,281
Olive "	14,833
Prune-trees	6,527
Almond "	25,319
Walnut "	15,614
Gooseberry-bushes	172,783
Raspberry "	1,336,048
Strawberry-vines	9,981,575

The mulberry-trees, reported in 1868 as 1,175,000, had reached over two millions in July of 1869, and were being put out as fast as slips could be obtained. Mr. Prevost, the pioneer of the silk culture, reports, in Los Angeles County, the growth of single shoots, fourteen feet in length in one year, and that cuttings planted in the spring, or, rather, in February, furnished abundant food for the silk-worms of the second crop, in August following.

The cultivation of sumac for tanning purposes has been commenced on a large scale on the foot-hills of the Sierra Nevada and on the sterile plains, which have been hitherto regarded as utterly worthless. It is said to yield from one to two tons to the acre, and to be very easily cultivated. This quality of sumac brings in the New York market from $100 to $120 per ton.

The timber and lumber product of California itself is diminishing; the redwood, their principal and best forest-tree for these purposes, being confined to the fog belt of the Pacific slope of the Sierra Nevada, and being so susceptible of climatic changes, that where it is cut off it does not make a second growth, but is replaced by other hardier, but less valuable woods; but the supply of timber and lumber from Oregon, Washington, and British Columbia, is apparently inexhaustible, and this insures lumber to California at low prices. The Central Pacific Railroad has consumed immense quantities of lumber and timber, not only in the construction of the road, but in the erection of its miles of snow-sheds and its stations.

The immigration to California, since the completion of the Pacific Railroad, has been very large, both by that road and by the steamships. Much of this immigration is from Europe, though the tide is also setting strongly toward its shores from China and Japan, and there is a certainty of the speedy settlement of large colonies of Japanese, to engage in agriculture in the State. The southern portion of the State, which had long been somewhat neglected, has, for two or three years past, attracted the attention of immigrants, and the population of the southern counties has in that time more than doubled. The climate of this part of the State is said to be salubrious and delightful, well adapted to the relief of invalids suffering from pulmonary diseases, and the subtropical fruits, the fig, orange, lemon, pomegranate, banana, and the more delicate varieties of grapes, grow there in great profusion.

Education in California is making excellent progress. The schools of the cities and larger towns are unsurpassed by those of any section of the country, and the academies and schools

for higher education take rank with the best in the country. The University of California has, in the autumn of 1869, opened its doors to all comers who can pass its preliminary examinations, without fee of any kind for tuition, being the first absolutely free college in the world. The advantages it offers, though of course not in all respects equal to those of the older and more amply-endowed universities of the East, are yet of such a character that the student, who is in earnest to acquire an education, will find the facilities for attaining it above the average of our younger colleges.

CANDIA, or CRETE. *See* TURKEY.

CARLETON, WILLIAM, an Irish novelist of remarkable ability, born in Clogher (or, according to Chambers, Prillisk), County Tyrone, Ireland, in 1798; died in Dublin, January 30, 1869. He was the son of a tenant farmer in comfortable circumstances, a man of more than ordinary intelligence, and remarkably familiar with the prejudices, the sympathies, superstitions, and legends of the Irish peasantry. The early education of young Carleton was meagre and desultory, being obtained in part from his father's teachings, and in part from a hedge-school, but his father was desirous to have him educated for the priesthood, and he was accordingly sent at the age of seventeen to a school at Glasslough, kept by a relative who was a priest. Here, while acting as an usher, he picked up a tolerable acquaintance with Latin, and a considerable acquaintance with English literature. At the age of nineteen, he left this school, and after leading a sort of vagabond life for some years, writing occasionally for the papers, and having abandoned all idea of the priesthood, and all regard for Catholicism, he repaired to Dublin with but three shillings in his pocket, and sought to obtain a livelihood by his pen. He wrote first a controversial story, published by a Protestant society, which gained him some fame; but his "Traits and Stories of the Irish Peasantry," the first series of which appeared in 1830, gave him his first considerable reputation. Their freshness of style pleased the public and won the favor of the critics. A second series, equally popular with the first, appeared in 1832, and Carleton became thenceforth for some years a regular contributor to the *Dublin University Magazine*, the *Dublin Penny Journal*, and other periodicals. His "Fardorougha the Miser," one of his most powerful novels, appeared in 1839, and in 1841 he published three volumes of stories, mostly of pathetic interest, but including his fine humorous sketch of "The Misfortunes of Barney Branagan," which was very popular. In 1845 appeared his "Valentine McClutchy," a half-political novel, defending the Irish Catholic clergy, and advocating the repeal of the Union. To this followed "Rody the Rover," 1846; "The Black Prophet," 1847; "The Tithe Proctor," all political and partisan novels, but exhibiting in a marked degree his genius. "Willy Reilly," in three volumes, was published in 1855, and "The Evil Eye" in 1860. While other writers have been more or less successful in depicting many phases of Irish life, William Carleton is the only writer who has presented with exactness, and a thorough insight into its peculiarities, the real character of the Irish peasant, with whom he seemed to be in perfect sympathy. His merits as a writer, notwithstanding his partisanship, were so thoroughly appreciated by the British Government, that he was awarded a literary pension of £200 a year. For some years past he had been unable to write.

CENTRAL AMERICA. There are at present in Central America five independent republics: Costa Rica, Guatemala, San Salvador, Nicaragua, and Honduras.

The area and population of the five republics, in 1869, were as follows:

REPUBLICS.	Area.	Population.	CAPITALS.	Population of Capitals.
Costa Rica,.....	21,400	135,000	San José.....	25,000
Guatemala	44,800	1,180,000	Guatemala....	40,000
San Salvador...	7,300	600,000	San Salvador..	20,000
Nicaragua.....	58,100	400,000	Managua	10,000
Honduras.....	47,100	350,000	Comayagua ...	8,000
Total.....	178,700	2,665,000		

1. *Costa Rica.*—This republic is one of the best governed in Central America. The inhabitants are industrious and prosperous, and internal strife, the curse of Spanish America, is less known than in most of the other States. Its new constitution seems to be quite a liberal one, except in relation to the law on liberty of the press. Jesus Jimenez has been elected to the presidency for the term 1869 to 1872. The Government has entered into a contract with several citizens of the United States for the construction of an interoceanic railroad from Simon Bay to the Gulf of Nicoya. The capital was to be $10,000,000, divided into shares of $100 each. The company was to commence work within three months after the ratification of the contract; the first thirty miles of the road were to be completed eighteen months from the date of the ratification, and the remainder in five years. The Government, in aid of the enterprise, was to issue bonds, payable forty years after the completion of the road, in United States currency, drawing an annual interest of eight per cent.

2. *Guatemala.*—The industrial and agricultural interests of Guatemala are highly prosperous, owing to the peace and tranquillity which this republic has so long enjoyed. The cultivation of indigo and sugar has received the special attention of the Government.

A very large commerce is carried on with San Francisco, and an effort is being made to establish a line of steamers between the ports of Central America and California. The reduction of ten per cent. on the dues on foreign merchandise imported through the ports of Izabal and Santo Thomas will be continued for six years longer.

Peace prevailed throughout the republic, with unimportant exceptions. There was an attempt at revolution on the Mexican frontier, headed by Serapio Cruz, who, for two years past, was constantly trying to disturb the peace. He and his band secreted themselves in the mountains, and made occasional raids in the surrounding country. On the 6th of December, 1869, a severe fight took place between the forces of Serapio Cruz and those of the Government, in the town of Huehuetenango. The Government forces to the number of 200, under the command of Captain Calonge, were intrenched in the plaza, behind barricades, which were defended by two small pieces of artillery. Cruz had 1,000 of all arms, a majority of whom were Indians, under his command. He endeavored to take the place by assailing it simultaneously at all available points, and at the same time setting fire to the houses in different parts. The firing lasted twenty-five hours, at the end of which Cruz retired with the loss of 100 killed and 150 wounded, besides war material lost in the retreat.

President Cerna granted full pardon to all prisoners undergoing punishment for crimes, who rendered useful service during the late epidemic in Escuintla. He was, in 1869, reelected to the presidency, for the period from May 24, 1869, to December 31, 1872.

3. *San Salvador.*—The President Dueñas, who was reëlected to the presidency for the period from 1868 to 1873, draws in his message to Congress, in January, a cheerful picture of the condition of this little republic.

The indigo crop of 1868 was estimated at 14,000 ceroons. Several large sugar-machines were imported, and have given a new impulse to the growth of sugar-cane. Coffee and cotton are the next most important articles of export. The official report of the income and expenses of the Government for 1868 shows a balance in favor of the State of $59,988. The revenue for the same year has been $938,412, being $106,251 over 1867, showing how the country is progressing under the management of the present Government. The reports from Acajutla, the most northern port, show a great increase in the export of coffee and sugar. The value of the exports for the nine months, ending September 30th, amounted to $739,680.

4. *Nicaragua.*—President Guzman enjoys the confidence and esteem of the republic. When an attempt was made by some of his political enemies to poison him and his family, the greatest sympathy was expressed for him throughout the country. Had the attempt succeeded, probably a general revolution would have been the consequence. Some serious charges having been made in and out of Congress against the President, he made known his intention to resign, when Congress passed, on the 19th of March, a resolution approving all his acts and those of his ministers; for all that he sent in his resignation in a message terminating in these words: "I am resolved to retain no longer a position wherein I have only reaped deceptions, bitterness, and miserable disappointment." Congress returned an answer full of praise and satisfaction, refused to accept the resignation, and amid much apparent rejoicing succeeded in prevailing upon him to retain power.

The contract made by Mr. Ayon, minister of Nicaragua at Paris, in October, 1868, with the French Senator, Chevalier, for the opening of a canal across Nicaragua, was ratified by the Senate, and Senator Montealegre was appointed special envoy to the Republic of Costa Rica to enter upon negotiations. Treaties of friendship and commerce with Costa Rica and San Salvador were likewise confirmed by the Senate.

Congress authorized the Government to establish at the most convenient place a hospital for lepers. By another decree, approved by the President, Frederick H. Alberding and his copartners are granted the privilege to introduce Chinese coolies, engaged voluntarily in their own country or elsewhere, and brought directly to Nicaragua. The privilege is for ten years, the coolie contracts to be for eight years, after which they shall be free. Vessels bringing coolies are to be exempt from anchorage and tonnage dues; the said Alberding & Co. to pay fifty cents for each coolie brought to the hospital at Leon.

Nicaragua has not enjoyed peace throughout the year 1869. There was, however, a mutual desire to settle pending questions without shedding much blood. An armistice was agreed to between the Government and the insurgents, which was followed by an agreement signed October 25, 1869. The terms of peace are briefly as follows:

"1. That the Government will in no way persecute those who have taken part in the revolution, who shall have entire liberty to leave or return to the republic. 2. That the Government will nominate General Sebastian Gutierrez as Governor of Leon. 3. That the Government will, within six months, convoke a Constituent Assembly. 4. That this Assembly shall decide in what manner the debt created by the revolution shall be paid. 5. That all arms and munitions of war in the power of the revolutionary forces shall be warehoused in Leon and handed over to a person to be nominated by the commander-in-chief (the United States minister was the person subsequently so nominated); clauses 6 and 7 guarantee liberty in the elections, and arrange for the appointment of civil officers; and, finally, the eighth article stipulates for the punctual observance of the foregoing clauses."

Immediately afterward a general disarmament commenced in Leon, the previous headquarters of the revolutionary party. The President, with his troops, entered Leon on the 30th October. Of the revolutionary leaders, General Martinez went to San Salvador, and General Jerez to Costa Rica. Great credit is due

to the United States ministers of Nicaragua, Costa Rica, and Honduras, for their efforts in restoring peace to Nicaragua. Later, however, hostilities were renewed, and some engagements took place, resulting in favor of the Government party, and in the suppression of the insurrection. In December, 1869, the President issued a decree, appointing January 1st as the day on which martial law should cease, and convoking the Congress of the republic for the same day.

The Government issued a decree exempting from import dues many articles applicable to manufacturing and agricultural purposes, as follows:

The Citizen President of the Republic to its Inhabitants:

Whereas, in the decree of the 31st of March last, setting forth the internal dues to be levied upon the original value of merchandise imported into the republic, nothing is said in relation to articles exempt from duties, in order to avoid embarrassments to the prompt dispatch of business at custom-houses, in the exercise of his powers, he decrees:

ARTICLE 1. No import duty whatever shall accrue at any of the ports of the republic upon the following articles: Quicksilver, ploughs, large hammers, wool-cards, weed-hooks, scythes, grinding and winnowing machines, shovels, yokes, hand-pumps for cisterns, cases of agricultural implements, pruning-shears and tar, empty barrels, hydraulic pumps and pitch; drays, hand-carts, children's carriages, cultivators, geographical charts, crucibles for melting metals, copper nails for vessels, bags or sacks of all kinds, and Roman cement; barrel staves or shooks, surgical and mathematical instruments, and oakum; guano and any other matter for manuring lands, and globes for geographical instruction; flour and grains of all kinds, printing-presses, astronomical, physical, hydraulic, and chemical instruments, not already specified; printed books and printing-type, cotton duck for vessels' sails, and manta drill, when imported by owners of ships or vessels; organs for churches, and gold coined or in bullion, mills for pulverizing coffee or any other grain, machetes, or large knives, and "macanas;" maguey cords for rigging, when imported for their own use by the owners of ships; silver in plate or coined, ruled paper for music, areometers, millstones, pieces of machinery for all industrial purposes; corrosive sublimate, and seeds of all plants, lumber for house-building, poisons prepared for the preservation of skins and hides, and spirits of turpentine.

ART. 2. The invoice value of the principal of the articles expressed will be deducted by the administration of the customs at the time of effecting the liquidations.

ART. 3. The present law will commence to have effect forty days from and after this date.

Given at Managua, the 2d of November, 1869.

PEDRO JOAQUIN CHAMORRO.

RAMON SAENZ, Secretary of the Treasury.

In December, a decree was published with reference to customs regulations, providing that all shippers of goods to Nicaraguan ports should produce to the Nicaraguan Consul, for his signature, in the port from which they are shipped, an invoice in duplicate, expressing the quantity and description of the merchandise, the number, weight, and measurement of the packages, without which goods entering the ports of the republic will be liable to seizure.

CHEMISTRY (*see, also*, HYDROGENIUM).—*A New Fluorescent Substance.*—Mr. John Parnell gives to the *Philosophical Magazine* for August an account of a new fluorescent substance, which he calls Fluoraniline. When aniline is heated with mercuric chloride, this substance is produced in considerable quantities, besides the ordinary formation of aniline red. His mode of obtaining it is as follows: The crude mass resulting from the heating of aniline with mercuric chloride is dissolved in dilute hydrochloric acid; ammonia is then added in excess, and a final washing-out given with ether. The ethereal solution thus obtained must be repeatedly washed with water until the washings cease to acquire a pink color. Thus purified, it has a greenish-yellow color, and exhibits a green fluorescence. When evaporated to dryness spontaneously, the residue consists of two amorphous substances, one red and the other orange, the fluorescence being apparently due to the latter, which exists in the proportion of about 10 per cent. of the amount of aniline red. Fluoraniline is almost insoluble in water when cold, but slightly soluble in hot water, being precipitated as the water cools. It is soluble in dilute hydrochloric, nitric, sulphuric, and acetic acids, giving fluorescent solutions; is not affected by sulphide of ammonium, and but slightly by hypochlorite of calcium. When a beam of sunlight, made conical by a quartz lens, is projected on a concentrated ethereal solution of fluoraniline, all the rays capable of developing fluorescence are absorbed at the surface, so that no cone of light is visible in the solution; but with a dilute solution a brilliant green cone is produced. The colors of the ethereal solution and its fluorescence bear a remarkable resemblance to those of uranium, but with this difference, that when the fluorescent light is examined in the spectroscope, while the fluorescent spectrum of uranium is discontinuous, that of fluoraniline is continuous. The author has also discovered, in the aniline red made from stannic chloride, another fluorescent substance associated with fluoraniline, of which the fluorescent spectrum consists of red, a very bright-green band, and some blue only. To the unassisted eye, the fluorescence has a cold blue tint.

Ammonium Alloys and Nascent-Hydrogen Tests.—In a paper communicated to the *Philosophical Magazine* for July, Albert H. Gallatin, M. D., of New York, throws some light on the vexed question of the existence of the metal ammonium, as determined from its alloys. He starts out with the proposition that if hydrogen escaping from an ammoniacal amalgam can be shown to be in a nascent state, it would be evidence that it had just been in chemical combination with the ammonia—in other words, that metallic ammonium existed in the amalgam. This he claims to have established as follows: Some pellets of sodium were placed in contact with some particles of the transparent variety of phosphorus, wrapped in bibulous paper and

plunged beneath the surface of water. A red glow was seen; and, as the nascent hydrogen came into contact with the phosphorus, bubbles of phosphide of hydrogen were formed. Occasionally one would inflame as it came in contact with the atmosphere, placing the nature of the reaction beyond doubt. As phosphide of hydrogen cannot be formed by direct synthesis if ordinary free hydrogen be employed, this becomes a test for the presence of that gas in a free state. Hydrogen escaping from an ammoniacal amalgam was now tested by this process. A sodium amalgam dipped beneath a solution of chloride of ammonium was employed, and it became necessary to wait until the sodium was exhausted, that the result might not be vitiated by the nascent hydrogen escaping from the water. At the proper time the decomposing amalgam was covered with fragments of transparent phosphorus, when many bubbles of inflammable phosphide of hydrogen were obtained. The hydrogen must therefore have been in the nascent state, and just escaping from the ammonium.

Dr. Gallatin then proceeded to ascertain whether an alloy could be effected between ammonium and bismuth. He melted some bismuth in a porcelain dish and alloyed it with sodium by dropping a piece of that metal on the clear surface of the melted bismuth. Chloride of ammonium was then dusted on the fluid alloy, and water added in a fine, quick stream. The bismuth swelled, appeared pasty and porous, and then congealed, an abundance of hydrogen escaping at the time, and the ammoniacal odor being set free. The remaining substance was then dried. If placed near the ear, a distinct crackling sound was heard—a phenomenon which lasted several days. To ascertain if this was ammonium escaping from the bismuth, the body was placed beneath water, when bubbles of hydrogen escaped, easily collected and recognized. A variety of tests showed this to be nascent hydrogen, thereby demonstrating that there had been a true alloy between the metals ammonium and bismuth. The temperature of the alloy being raised, it rapidly decomposed with a crackling noise—and on one occasion exploded sharply, scattering the metal. Some of the superficial differences between an ammonium amalgam and an alloy of ammonium with bismuth is this: that in the former pores may be seen, produced by the escaping ammonium long after the water has exhausted the sodium, but those pores are evanescent; while in the latter the same pores, produced by the same cause, remain, and may be examined at leisure.

The *American Journal of Science* for May gives the following statement of interesting experiments upon the ammonium-amalgam, made by Landolt, and reported in detail in the *Ann. Chem. Pharm.*:

It (the ammonium-amalgam) was prepared from a solution of ammonic chloride by electrolysis in the ordinary way, the negative electrode being connected with mercury contained in a porous cup filled with the ammoniacal liquid, while the positive electrode dipped into mercury in an outer glass vessel, also filled with the solution of chloride of ammonium. When the current from 6 to 10 Grove's cells was employed, the positive electrode became covered with a layer of calomel, while the mercury in contact with the negative electrode slowly increased in bulk, evolving no gas until the point of saturation was reached. Landolt first determined the ratio of the ammonia gas evolved to the hydrogen, by placing the amalgam in dilute hydrochloric acid of known strength, and measuring the hydrogen evolved. The ammonia was then calculated from the quantity of the acid which it saturated. To free the amalgam from the ammonia contained in the solution, it was washed with water; but, as the decomposition continued and only the hydrogen escaped, it was evident that the ammonia thus retained must give too high a result. The first experiment gave 1 : 2.15 as the ratio between the hydrogen and the ammonia by volume. The second—in which the amalgam was less quickly placed in the acid—gave the ratio 1 : 2.4. These results, which entirely confirm those of Davy, establish, as Landolt believes, the conclusion that the compound NH_4 is taken up as a whole by the mercury. This is proved by the above ratio, because, were the gases separately absorbed, they would be set free again in very different proportions. In the second place, Landolt attempted a determination of the amount of the ammonium thus combined with the mercury. The amalgam was placed in a standard dilute hydrochloric acid as before; the ammonium was calculated from the quantity of acid neutralized, and the mercury was determined by collecting and weighing it. The results varied from .054 to .090 per cent. of NH_4, owing to the rapid decomposition which took place. Evidently the maximum result is nearest the truth; and, if 100 parts of mercury take up 0.09 parts of NH_4, the amalgam in decomposing should yield for each volume of mercury 15.2 volumes ammonia and 7.6 volumes hydrogen; numbers which hold good for the compound prepared at ordinary temperatures. On the metallic nature of ammonium, too, Landolt made some experiments. Starting with the well-known fact that potassium or sodium-amalgam will throw down most metals from solutions of their salts, he argues that the ammonium-amalgam, if analogous, should do the same. Freshly-prepared ammonium-amalgam was placed in the metallic solution, the separated mercury was washed with water, dissolved in nitric acid and examined for the metal whose solution had been used. The result with cupric sulphate, argentic nitrate, and ferric chloride solutions was entirely negative, though at least 100 grammes of the amalgam were employed. While, therefore, NH_4 combines as such with the mercury, its metallic character is doubtful; further researches only can decide its nature.

Jargonium, a new Element.—Mr. H. C. Sorby, in his researches into the constitution of zircons, discovered, in a variety of that mineral known as the Ceylon jargon, evidences of a new substance, which he has called Jargonium. He describes the spectrum of it as most remarkable. He says: "It is quite unlike any thing previously seen. It contains about a dozen absorption bands, which are not mere shades, like what is generally seen in solid bodies, but in narrow, perfectly black lines, like those seen in the spectra of colored gases. It is not due to zirconia, because some zircons show no trace of such a spectrum. As far as I can make out, the lines are not due to any substance known to produce absorption bands. So far, it is a com-

plete puzzle, and I am half inclined to believe that it may turn out to be due to some unknown element. Unfortunately, the amount of material at disposal is far too small to admit of analysis, and, curiously enough, it does not give any bands when melted with borax, but only a colorless bead. I may say that the mineral which gives this wonderful spectrum is nearly colorless, and becomes almost absolutely so when red-heated, and remains colorless, but gives the same wonderful bands, when cold. I have since examined a number of jargons and other zircons. There does not seem to be a trace of the new substance in any except those from Ceylon, and most of these only contain a small quantity, in comparison with the very remarkable specimen which must contain so much."

In a note to the London *Chemical News*, of April 30th, Mr. Sorby gives the following additional information: "In my last note I told you that I had found in zircons what appeared to be another elementary substance. I have, since then, made many experiments, and find that the facts are really far more interesting than if they were the effect of a new element. Judging from analogy with all other known substances, no other conclusion could have been formed; but I now find that jargonia exists in two distinct conditions, which have different specific gravities and optical properties. The flamed borax-beads give two entirely different spectra, according to the temperature to which the enclosed crystals have been exposed; and there is an analogous difference in the silicates. On taking a pale-green jargon, which, naturally, showed a mere faint trace of the absorption bands, and keeping it at a bright-red heat for some time, the specific gravity gradually increased from 4.20 to 4.52, and the spectrum then showed all the narrow black absorption bands in as great perfection as my best specimen. This fact is, of course, very interesting; since we can now artificially alter jargons so as to show the bands in the same splendid manner as a few do naturally, and shall thus be able to obtain them without much difficulty, to use as a most excellent natural standard scale, to measure the position of the absorption bands in other spectra."

It is an interesting fact that, at a meeting of the New York Lyceum of Natural History, prior to the report of the discovery of jargonium by Mr. Sorby in England, Prof. Locer announced his own discovery of the same supposed element. There is no doubt that the two discoveries were made independently of each other—a coincidence which not unfrequently happens in the world of science.

Apomorphia.—Dr. Matthiessen has succeeded in preparing a new base, to which he gives this name. He seals up morphia in a tube with a large excess of hydrochloric acid, and heats it to 140° or 150° C. for two or three hours. The residue in the tube contains the hydrochlorate of a new base, differing considerably in its properties from morphia. It may be obtained in a state of purity by dissolving the contents of the tube in water, adding excess of bicarbonate of soda, and extracting the precipitate with ether or chloroform, in both of which the new base is readily soluble, while morphia is almost insoluble in both menstrua. After being exposed to the air, it turns green, and when dissolved in water gives it a fine emerald color, in alcohol a green tint, in ether a magnificent rose-purple, and in chloroform a fine violet color. Its physiological effects are different from those of morphia. A small dose produces speedy vomiting and considerable depression; but this soon passes off, leaving no after ill effects. One-tenth of a grain subcutaneously injected, or a quarter of a grain taken in the mouth, produces vomiting in from four to ten minutes.

Artificial Production of Alizarin.—Synthetic chemistry, or the chemistry which artificially produces substances formed by natural processes in plants and animals, has achieved another triumph during the year, in the manufacture of alizarin (the principal coloring matter in madder-root). Messrs. Griebe and Liebermann are the discoverers of the process, the details of which are not yet published. They obtain alizarin from anthracene; the latter being a body found in the heavy semi-fluid portions of coal-tar. Anthracene, as separated in an impure state, is a yellow, soft, butter-like substance, but when purified is obtained in colorless plates with a silky lustre, very like naphthaline in appearance. Its relation to natural alizarin is represented in the following formulæ:

$$\underbrace{C_{14}H_{10}}_{\text{Anthracene.}} \qquad \underbrace{C_{14}H_{10}O_4}_{\text{Alizarin.}}$$

But the formula of the artificial alizarin is said to be $C_{14}H_8O_4$, which represents the abstraction of two equivalents of hydrogen and the addition of four equivalents of oxygen to the anthracene. The discovery is chiefly interesting when regarded from a scientific point of view, as it is reported that alizarin can be obtained directly from madder at a far less cost than it can possibly be made from anthracene.

Artificial Production of Ice.—The *Scientific American* has published an article, by P. H. Vander Wyde, M. D., in which is calculated the amount of ice that can be produced from the given quantity of coal in the modern ice-machine. The author remarks that it has been proved that the combustion of one pound of anthracite coal produces, in round numbers, 14,000 units of heat, and that, in order to freeze water of 72 F., it is necessary to abstract, besides 40° of sensible heat, 140° of latent heat—together 180°—which, for one pound of water, is equivalent, of course, to 180 units of heat. This number being (about) the eightieth part of the 14,000 units produced by the combustion of one pound of coal, it is clear that the heat produced by the combustion of one ton of coal is equivalent to the heat abstracted

from 80 tons of water of 72°, in order to change it into ice. But in practice we find here exactly the same state of things as in the operation of the steam-engine. Theoretically a steam-engine ought to produce at least 700 units of force (foot-pounds) for every unit of heat consumed; in practice, good machinery only produces from about 70 to 100 foot-pounds—from about one-tenth to one-seventh part of the theoretical amount. In the best ice-machines thus far constructed, instead of freezing 80 tons of water, for every ton of coal consumed, only from about 8 to 11 tons of ice are produced, also, from one-tenth to one-seventh part of the theoretical amount; proving, thus, the remarkable fact that, in both the steam-engine and the ice-machine, exactly the same relation exists between the theoretically calculated effects and the practical results.

As, however, all the best ice-machines accomplish the conversion of the heat of the fuel into the freezing operation by the intervention of a steam-engine, the fact that they practically produce only from one-tenth to one-seventh of the amount of the cold they theoretically should produce, is solely due to the other fact, that the steam-engine itself practically produces only from one-tenth to one-seventh of the amount of power which would be strictly equivalent to the number of heat-units consumed. It must not be lost sight of that it is only the power of the steam-engine which generates the cold in the freezing-machines, and that, therefore, improvements in the steam-engine, which bring its practical results nearer to the theoretical standard, will at once exert their influence on the amount of ice the ice-machines can produce, and, consequently, also on the cost of the ice manufactured in these machines.

Moreover, it appears that the kind of freezing-machines in question, which convert power into cold, notwithstanding they are yet in their infancy, have already attained such a degree of excellence, that they are ahead of that class of machines which convert heat into power, either by steam, hot air, or any other possible means, as it is proved that they produce the full theoretical equivalent of cold (negative heat) for the number of foot-pounds employed; namely, cooling one pound of water one degree for a power equivalent to 700 pounds descending one foot, which, expressed in the adopted scientific manner, is one unit of negative heat for every 700 foot-pounds consumed.

A New Chrome Green.—M. Casthellaz has discovered a process of making a chrome green, said to be far more beautiful than any now in use. He slowly precipitates chrome salts by treating them with hydrated metallic oxides, insoluble, or but slighly soluble in water, or by hydrated metallic carbonates, or hydrated metallic sulphides, or by salts of weak acids which easily leave their bases. The action is produced progressively, and the oxide of chromium precipitated in the hydrated forms. The color of the compound is a magnificent emerald green. A gelatinous alumina, oxide of zinc, carbonate of zinc, and sulphide of zinc, are among the reagents most economical to be used. The same result may also be obtained by treating chrome salts with non-alkaline metals, such as iron and zinc. M. Casthellaz claims that the superb green color produced by his method possesses properties which will enable manufacturers ultimately to renounce the justly-condemned copper and arsenic greens, and he looks for its adoption in oil-painting, colored paper, and artificial-flower making, printing on stuffs and on paper, lithography, perfumery and soap manufacture, as well as in the making of glass and in the ceramic arts.

New Method of obtaining Oxygen. — MM. Montmagon and Delaire claim to have discovered a new method of obtaining oxygen cheaply and easily. They expose fresh wood charcoal to atmospheric air, when it occludes the oxygen and nitrogen of the air in certain proportions. 100 litres of charcoal will occlude, it is said, 925 litres of oxygen, but only 705 litres of nitrogen. The charcoal holding these amounts of the two gases is then thoroughly saturated with water, when there will be expelled 650 litres of nitrogen, but only 350 litres of oxygen—thus, there will be left in the pores of the charcoal 575 litres of oxygen and only 45 litres of nitrogen; in other words, the oxygen will be practically pure for industrial purposes. To extract these remaining gases, the authors employ a pump. By again allowing the extracted gases to be exposed to fresh charcoal, they obtain the oxygen nearly pure. No cost of the process—the all-important item—is given.

Manufacture of Oxygen on the Large Scale.—The works of the Oxygen Gas Company in West Forty-first Street, New York City, are now in full operation. The process of making oxygen in their establishment is that invented by M. Tessié du Motay, of France. M. du Motay's object was to supply oxygen cheaply, and in sufficient quantity for the practical introduction of the oxyhydrogen-light in place of the common gaslight of Paris. The method of manufacture may be briefly described as follows: A retort, of the kind ordinarily used in gas-works, is partly filled with a manganate of potash or soda, and heated to a cherry red. Atmospheric air is then forced into it, at a considerable pressure. The manganate, in its heated condition, possesses the property of absorbing a large proportion of oxygen from the air, and retaining it like a sponge. After an exposure of about ten minutes to this operation, the air is then cut off, and steam is injected into the retort at a high pressure. Passing through the manganate, the steam takes up the oxygen left by the air, and carries it into a condenser, where the steam is converted to water again, while the oxygen passes off free into a receiver. There are various stages of

purification which it is not necessary to describe. In the Forty-first Street works the process is made continuous by admitting the air to one series of retorts at the same moment that the steam is let into another series, from which the air, deprived of a portion of its oxygen, has already been shut off. The manganates can be used over and over again, and, theoretically, require no renewal. The oxygen thus produced is delivered through pipes, like common street gas, and, when used in connection with the latter on the familiar plan of the oxyhydrogen-light, produces a flame of intense brilliancy and beauty, white, like sunlight, and showing objects in their true colors. After making many experiments to determine the best material for a pencil upon which to impinge the gases at their point of combustion, M. du Motay found that oxide of zirconium offered the best advantages; and that substance is now used with his light in preference to calcium or magnesia. The zirconia pencils are about one-eighth of an inch thick, and require renewal not oftener than once a month when in constant use. This new oxyhydrogen-light is gradually being introduced into large edifices in this city, and gives general satisfaction. The actual cost is the practical point yet to be determined; but the company claim that the use of their gas, with the diminished amount of street gas that will be necessary in connection with it, will result in a great saving of the present expense, and give an infinitely better light. It is proposed to lay pipes through the city for the delivery of this gas to consumers now using the street gas; and unless the company are greatly disappointed in their expectations, this city will soon be the best-lighted one in the world, and the new oxyhydrogen-light will take the place of other existing means of artificial illumination in cities and towns.

Sulphide-of-Carbon Light.—M. de Wistanley has invented an apparatus, consisting of a water-bath, heated by a Bunsen gas-burner, within which bath is placed a vessel to hold bisulphide of carbon, the outer and inner vessels being firmly soldered together, and the outer vessel being provided with a neck to hold a thermometer serving to indicate the temperature at which the bisulphide of carbon in the inner vessel boils.

The inner vessel is provided with a neck, closed by a well-fitting cap when the apparatus is in use, for the introduction of the fluid bisulphide of carbon; besides this, there is soldered to the inner vessel a gas-pipe of small bore, which pipe projects at a convenient height above the outer vessel; to this pipe is soldered and connected at right angles another pipe, provided with a stop-cock, and further connected, by means of elastic tubing, with a gas-holder containing oxygen gas made from chlorate of potash. After the application of gas-flame beneath the water-bath, the thermometer is watched, until it indicates that the vapor of the bisulphide of carbon is issuing from the burner (from the gas-pipe connected with the inner vessel); the heat is allowed to continue beneath the water-bath until the flame reaches the flaring-point, when it is lessened almost to extinction. The oxygen gas is then cautiously introduced, upon which the flame at once diminishes in size and increases greatly in brilliancy. This light is proposed for use in photography on account of its great actinism; as a source of intense heat, it may also perhaps be recommended.—*British Journal of Photography.*

Substitution of Sodium for Phosphorus in Lucifer Matches.—Dr. H. Flack, of Dresden, has made a series of experiments, with a view to obtain a non-poisonous paste for application to lucifer matches. He ascertained that sodium, when minutely divided along with explosive substances, becomes highly inflammable when simply moistened with water. The following mixture fulfilled the desired purpose the best. On being touched with a moistened glass rod, it ignited like gunpowder:

5.0 grammes of sodium,		= 4.65 per cent.	
66.0	"	nitrate of potash	=61.39 "
36.5	"	sulphide of antimony	=33.96 "

Provided that during its manufacture this mixture is kept thoroughly dry, it has been found to answer admirably well. The mode of making it up is briefly as follows: Pure solid paraffin is put into a well-stoppered glass flask, and melted over a sand bath; when fluid, clean pieces of sodium are added, and liquefied under the paraffin. As soon as the metal is thoroughly liquefied, the flask is closed and shaken for about ten minutes, which has the effect of granulating the metal, or rather reducing it to a fine powder. The metal is then poured out of the flask along with the paraffin, and the sodium taken out of the paraffin by means of a clean dry spoon: from 30 to 35 per cent. of paraffin remains adhering to the metal; this, however, does not impair its inflammability, while it tends to preserve the metal. Owing to this increase, instead of 5 grammes, 6.6 grammes of the metallic powder thus obtained must be weighed off. The incorporation with the other ingredients, previously well dried and warm, is effected under petroleum in metallic mortars, but each of the substances is first mixed with some petroleum, and pulverized separately before being triturated with the sodium; instead of gum or glue, caoutchouc, previously soaked in light petroleum-oil at 110° C. for ten or twelve hours, is used as mass to form an adhesive paste with the other materials. According to several accounts from Germany, this plan of substituting sodium for phosphorus has been favorably taken up by some of the largest and leading manufacturers of lucifer and fusee matches. There is said to be not the least danger in the transport.

Ozone and Sea-Phosphorescence.—Dr. J. Moffat has laid before the British Association a theory, establishing a connection between the phosphorescence of the sea and the variation of ozone in the atmosphere. He was led to its adoption by observations, taken between latitudes 58° and 79° N., and longitudes 6° E. and 67° W., as presented in the annexed tables:

TABLE I.

Showing the Amount of Ozone with (at Sea)—

Barometer.		Directions of the Wind.				Phosphorescence.	
Increasing.	Decreasing.	N. to E.	S. E.	S. to W.	N. W.	None.	Brilliant.
2.9	4.7	1.6	2.7	3.7	3.2	2.4	3.0

TABLE II.

Showing the Mean Reading of the Barometer, Mean Temperature, and Daily Mean of Ozone at the Commencement and Termination of Phosphorescence of the Sea, between Latitudes 58° and 73° N., and Longitudes 6° E. and 61° W.

Phosphorescence.	Barometer.	Thermometer.	Ozone.
Commencement of...	29.46	34.8	2.9
Termination of.....	29.65	30.0	1.5

TABLE III.

Showing Mean of the Barometer and Thermometer, and the Daily Mean of Ozone, with Commencement and Termination of Periods of Luminosity of Phosphorus, deduced from the Observations of Six Years (on Land).

Periods of Luminosity of Phosphorus.	Mean of Barometer.	Mean of Thermometer.	Mean of Ozone.
Commencement....	29.640	47.5	5.0
Termination	29.734	43.4	3.0

By these results, it appears that the phosphorescence of the sea and luminosity of phosphorus occur under similar atmospheric conditions.

Amount of ozone the day before phosphorescence 0.8
" " day of " 2.5
" " day after " 1.9

Of auroral displays, one was without ozone, and 50 per cent. were accompanied by phosphorescence.

Absorption of Gases by Charcoal.—In his course of lectures before the Royal Institution on chemical changes of carbon, Mr. William Odling gave the results of experiments, made by him to determine the absorbing power of charcoal upon various gases. He used for the purpose 1 cubic inch of cocoanut-shell charcoal, and found that quantity would absorb gases as follows: oxygen, 18 cubic inches; carbonic gas, 68 do.; sulphuretted hydrogen, 100 do.; ammonia gas, 170 do. The lecturer then went on to say: "Now, you can scarcely form any idea of the amount of force which is required for that absorption. If we were to take 2 cubic inches of oxygen, and endeavor to compress them into the space of one, we should require the pressure of 15 lbs. weight; but to compress 18 cubic inches of oxygen into the space of 1 cubic inch, we should require eighteen times 15 lbs., which would be equivalent to about two hundredweights and a half. Here is a half-hundredweight, and it is almost as much as I can lift. Now, we should require about five such half-hundredweights to compress 18 cubic inches of oxygen into the space of 1 cubic inch; but you must observe that the cubic inch of charcoal which can absorb these 18 cubic inches of oxygen appears to be already full of the substance of the charcoal itself. There seems to be scarcely any space left; and what gas the charcoal will contain must occupy its pores. Now, if we imagine that the pores occupy even as much as a twentieth part of the whole mass, we should then require, not five times, but about one hundred times the pressure of this half-hundredweight, to compress 18 cubic inches of oxygen into a cubic inch of charcoal. Nevertheless, so great is the absorptive power of this kind of charcoal that it gradually exerts upon the oxygen a compressing effect equal to the force of some 50 hundredweights."

New Explosive Powders.—M. Designolle has invented a new system of powders, of which carbozotate or picrate of potash is the base. His researches upon the subject were undertaken with a view to supply the peculiar wants of breechloading arms. The *Bulletin de la Société de Encouragement* gives a description of the powders, of which the following abstract is prepared by the *Chemical News:* "These powders are of four kinds—viz., a musket powder, gunpowder for short-bore cannons, slow gunpowder for cannons with long bores, and an explosive powder for torpedoes and projectiles destined for the undermining of fortifications. The principal advantages of these new powders are the following: Increase of balistic power without increase of explosive power; the base remaining the same, possibility of regulating and varying the effects between the limits of one to ten; also of regulating, at will, the rapidity of combustion of this powder, and of increasing the balistic power without changing the mode of manufacture. Other advantages are—regularity in the manner of action; suppression of sulphur, and consequently of the vapors of sulphide of potassium and sulphuretted hydrogen; absence of action on metals and almost entire suppression of smoke. Into the explosive powders only two components enter—picrate of potash and nitrate of potash; the musket and gun powders contain carbon in addition to the above-named ingredients. To prepare these powders, the ingredients are beaten from three to six hours with a proportion of water varying from 6 to 14 per cent., according to the nature of the mixture; the powder is condensed by means of the hydraulic press, with a pressure of from 80,000 to 100,000 kilos., graining the powder, and pressing and drying it according to the methods employed for the black powder. In order to increase the balistic power, the relative proportion of picrate of potash in the mixture must be increased. For musket-powder it has been proved that not more than 20 per cent. of picrate of potash is required, while for gunpowders its proportion varies from 8 to 15 per cent. This component (picrate of potash) is of a beautiful golden-yellow color, and crystallizes into prismatic needles possessing a brilliant reflection; it is insoluble in alcohol, but soluble in about 260 parts of water at 15° or 14 parts of boiling water. Heated with care, it becomes orange red at a temperature of 300°, but, on cooling, it assumes its original color. Heated to 310°, it detonates with violence. The researches of M. John Casthellaz on the action of nitric acid on phenic acid improved the method of manufacturing picric acid, and produced chemically pure picrate of potash at such a reasonable price that the new powders are not more expensive than ordinary black powder."

An explosion with most disastrous effects occurred in Paris at an establishment where powders were manufactured, into the composition of which picrate of potash entered, along with (as conjectured) the chlorate of potash.

The accounts of the affair at hand do not state whether M. Designolle's process, or some improper modification of it, was employed there.

Prevention of Nitroglycerine Explosions.—A correspondent of the London *Chemical News*, moved by the occurrence of the frightful explosion of three-quarters of a ton of nitroglycerine in Wales, involving a deplorable loss of life, suggests the probable cause, and the easy prevention of such calamities. He says:

"Yet it is stated that nitroglycerine is *safer* than gunpowder. It is certainly less liable to be exploded by fire, and to disrupt the slender link which retains its elements, subject to chemical force, and set its mechanical force at liberty, by concussion, needs that concussion be sudden and forcible. I believe that a bottle full of blasting-oil may be dashed to the ground without much danger, yet a drop of it upon a stone may be exploded by a blow from a hammer. Now, what can be the possible cause of such unexpected explosions as have taken place? I can see only two possible reasons: first, that the oil undergoes decomposition or chemical change under certain at present unknown conditions, of time, temperature, shaking, etc., which predispose it to undergo a complete and sudden decomposition from causes ordinarily inadequate; secondly, that the cases and bottles in which it is contained being air-tight, are liable, from a very trifling escape of gas from the liquid, to arrive at a state of tension in which the passage to a sudden break is easy. But would the mere bursting open of a bottle or tin case produce concussion sufficient to determine an explosion of the oil, unless we suppose the latter to be altered in quality? I think it would. I have known a stout glass bottle, used in an ethyl experiment, to be shattered, by slowly-gathered, internal pressure, into *dust*, with a report like the firing of a pistol. In a close vessel, full or very nearly full of the oil, not much gas relatively to the quantity of liquid need be evolved in order to induce such a degree of pressure as might cause explosive rupture of the vessel. If one vessel burst, the concussion would certainly explode also any that might be near.

"If the true cause of these seemingly anomalous explosions is indicated above, the remedy is both simple and inexpensive. Let every vessel containing the oil have fitted to it a tube, with a capillary bore, such as a piece of thermometer tubing, one end of the tube entering the oil, the other exposed outside.

"If the tube were enlarged below to make room for any expansion of the liquid by elevation of temperature, none could be forced out by that alone, and none could be spilt through the capillary orifice of the tube by inverting the vessel. With a little management in the arrangements, any overflow might be made certainly indicative of the formation of permanent gases, which would be a warning signal. This method might also be applied experimentally to determine the probability or otherwise of the suggestion I have made as to the cause that may have led to these fearful explosions."

The Aniline Colors.—M. Block publishes the following recipe to produce an aniline gray color: 1 kilo of aniline at 190°, and 5 kilos of arsenic acid in a liquid form at 75°, are heated on the open fire in a caldron, care being taken to maintain the heat at the boiling-point, till the substance thickens and rises, when the operation is terminated and the vessel is removed. The substance obtained presents a blackish appearance; it is thick and insoluble in water. In order to purify the product, about 20 litres of water and 1 kilo of muriatic acid are taken and boiled with steam for half an hour; after which the mass is filtered. The matter which is deposited on the filter is collected, washed with boiling water, and operated upon a third time by a small quantity of carbonate of soda in solution, so as completely to neutralize the acid. Finally, the collected matter is dried, and gives a fine black powder. The solution of this product is made by treating it with alcohol, with an addition of 10 per cent. of sulphuric acid. Nothing now remains to be done but to filter it. With this liquor magnificent grays of all shades are dyed, by submitting its mordant to the dyeing-bath. For the dyeing and printing of this gray color, the matter must first be passed through a water-bath, strongly acidulated with sulphuric acid. A skein of silk or wool is dyed by five drops of this liquor.

It is stated that Dr. Hofmann and Mr. Charles Girard, at Berlin, have successfully obtained pure aniline green, which is only distinguished from the aniline violet by the elements of iodide of methyl, so that the violet can be readily converted into the green and the green into the violet.

Artificially-colored Wines.—Dr. T. L. Phipson sends to the London *Chemical News*, of November 12th, a note on varieties of coloring matter, used in certain districts of France, in the treatment of wines. He says that at Fismes and Poitiers, and probably in other parts of France, regular establishments exist where coloring matter for wine is manufactured on a somewhat extensive scale. The material made at Fismes is obtained from elderberry, both from the fruit of *Sambucus niger* and *S. ebulus*. The process is very simple: 250 to 500 parts of this richly-colored fruit, with 30 to 65 parts of alum, and 600 to 800 of water, are the proportions generally employed. It has been stated that beet-root juice, blackberries, Brazil-wood, logwood, etc., are occasionally used, but the author believes by no means so frequently as the substances above named. Many methods have been tried in order to detect the presence of artificial coloring matters in wines, but, it appears, with a very small amount of success. Œnocyanine may be precipitated from the wine, and its properties, studied with care, will show at once the pres-

ence of an adulterating material; but the process is rather long and delicate. Dr. Phipson has shown, in a note on the "Absorption Spectra yielded by Certain Organic Substances," that the pure coloring matter of the grape gives no absorption bands, but only a general absorption, increasing gradually toward the violet; while the coloring matter of the purple holyoak, dissolved in water containing a little alum, gives a distinct and wide absorption band. This allows its presence in wine to be detected without much difficulty; and the same method applies equally well to the coloring matters of logwood and Brazil-wood. He has not yet ascertained how the coloring matter of elderberry-fruit affects the spectrum, but it is not difficult to discover in wine, according to M. Fauré, by means of gelatine. The fact is that œnocyanine is easily precipitated along with the tannin when gelatine is added to red wine, while other coloring matters (and, among them, that of the elderberry) are left in solution. If there happen to be not enough tannin naturally present in the liquid to precipitate all the œnocyanine, a little more must be added. Alum will be often found in wine which is artificially colored; it vivifies the tint, and is supposed to preserve the wine. Its presence is not only highly injurious to the health, but will effectually prevent the ripening of wine and the development of the bouquet. The test to which the author has called attention may be made as follows: Take a specimen of the wine to be examined, and, if its color is too powerful when examined in a thin tube by means of the prism, it must be diluted with distilled water until a proper degree of transparency is obtained. A minute quantity of alum is then added, and the specimen examined in the spectroscope. If an absorption band of any kind shows itself, the wine may be suspected.

Lowering of Temperatures in Saline Solutions.—Experiments, conducted by Rüdorff, yield much valuable information with regard to the lowering of temperature by the solution of salts in water. It is well known that the decrease of temperature will be the greater, the larger the quantity of any salt which water takes up at a certain temperature. Since, however, water at a certain temperature only dissolves a definite quantity of any salt, the maximum decrease will be about that at which, under given circumstances, a fully-saturated solution is produced. To conduct the experiments successfully, the saturated solution should be obtained as rapidly as possible. Rüdorff proceeded in the following manner: The finely-powdered salt and the requisite quantities of water were, previous to the making of the experiments, each put in separate beakers made of very thin glass, and placed for from twelve to eighteen hours in a room wherein the temperature could be kept as nearly as possible constant. In consequence of this, the beakers and contents attained the same temperature throughout. The mixing was effected by pouring the water on to the salt, and stirring up with a very delicate and highly-sensitive thermometer; the maximum decrease of temperature took place within a minute after the mixing of the salt and water was made. The results of the experiments are exhibited in the following tabulated form, recording the average of a series of several experiments with one and the same substance, which were concordant within 0.2°:

SUBSTANCES.	Soluble in 100 parts of water.	Mixed with 100 parts of water.	The temperature falls		Number of Degrees.
			From °C.	To °C.	°C.
Crystallized alum	10.0	14	+10.8	+ 9.4	1.4
Chloride of sodium	35.8	36	12.6	+10.1	2.5
Sulphate of potassa	9.9	12	14.7	+11.7	3.0
Crystallized phosphate of soda	9.0	14	10.8	+ 7.1	3.7
Sulphate of ammonia	72.3	75	13.2	+ 6.8	6.4
Sulphate of soda (crystals)	16.8	20	12.5	+ 5.7	6.8
Sulphate of magnesia (crystals)	30.0	35	11.1	+ 3.1	8.0
Carbonate of soda (crystals)	30.0	40	10.7	+ 1.6	9.1
Nitrate of potassa	15.5	16	13.2	+ 3.0	10.2
Chloride of potassium	28.6	30	13.2	+ 0.6	12.6
Carbonate of ammonia	25.0	30	15.3	+ 3.2	12.1
Acetate of soda (crystals)	30.0	35	10.7	− 4.7	15.4
Chloride of ammonium	28.3	30	13.3	− 5.1	18.4

Chloride of calcium (crystallized)	200.0	250	10.8	−12.4	23.2
Nitrate of ammonia	55.0	60	13.6	−13.6	27.2
Sulphocyanide of ammonium	105.0	133	13.2	−18.0	31.2
Sulphocyanide of potassium	180.0	150	10.8	−23.7	34.5

The quantity of water applied varied between 250 and 500 grammes, and the quantity of salt used corresponded therewith. The decrease of temperature obtainable in this manner can never fall below the freezing-point of the saline solution in question, but can very nearly reach that. The sulphocyanide of potassium is the best salt to be adopted for the artificial production of ice: when 500 grammes of this salt are dissolved in 400 cubic centimetres of water, and the mixture stirred with a test-tube filled with water, the latter will be frozen in from two to three minutes. The degree of solubility of the salts referred to in the first column is made up according to G. J. Mulder's highly-elaborate researches on this subject.

Recovery of Sulphur from Alkali Waste.—Mr. Ludwig Mond read a paper on this subject at a session of the Newcastle Chemical Society, in May. The following is the substance of his statements: He said that in 1860 he commenced, in a chemical manufactory in Germany, a series of experiments on several processes for the recovery of sulphur from waste, and took out a patent in 1861. When he came to England (at the time of the Exhibition) he found, to his surprise, that a process, somewhat resembling his own, had been proposed as early as 1836. At the same time as himself, three different parties—in Glasgow, in Newcastle, and in Bristol—had been work-

ing in the same direction. His process, however, had clearly the merit of being the first that extracted great quantities of sulphur, and did away with the waste nuisance. He found the process a more expensive one in England, where labor was dearer, than in Germany. He found a difference in the English waste and that which he had been formerly accustomed to. In September of 1863 he took out the new patent. He had previously experimented on tank waste, and had obtained as much as 55 per cent. of sulphur. The first to introduce his process on the Tyne was the Tyne Chemical Company, at South Shields. He believed that the waste of that district was more suitable for using his process than that of Lancashire, as being somewhat more porous. Mr. Mond then explained, by means of a diagram, the working of his process, and exhibited specimens of the sulphur obtained from the waste. He calculated that the cost of extracting the sulphur from the waste would be £1 per ton, but the profit to manufacturers would be about £4 per ton (at Messrs. Hutchinson's, it cost £1 5s. 5d. + 15s. for royalty = £2, working on a comparatively small scale). The cost of the apparatus he calculated to be £1,509, or (providing for all contingencies) £1,660. He thought that the alkali manufacturers ought to be satisfied with the process in a mercantile point of view, and, also, as it enabled them to remove a great nuisance. Mr. Mond stated his belief that 40,000 tons of sulphur could be utilized from alkali waste in England, in one year. The reading of the paper gave rise to a discussion in which the merits of Mr. Mond's discovery were fully recognized, and a vote of thanks was tendered to him.

Reduction of Oxides by Hydrogen.—Mr. M. W. Müller has made numerous experiments to determine precisely the temperature at which the oxides of metals begin to be reduced by hydrogen gas, the results of which are presented in Poggendorff's *Annalen*, and may be summed up as follows:

Oxide of iron, prepared by cautiously heating metallic iron in contact with air, was reduced at 285° C.; the same oxide prepared from nitrate of iron at 286°; when rather moist hydrogen was applied and the oxide of iron prepared from oxalate of the protoxide, the temperature of reduction was found to be 278°. Oxide of copper prepared from the sulphate of that metal and precipitated by caustic soda, and previously heated to 300°, was reduced at 185°; strongly ignited oxide of copper, at 142° on an average of five experiments; oxide of cobalt, at about 132°; oxide of zinc could not be reduced at a temperature whereby glass became fused; oxide of tin, about 174°; oxide of lead, at from 310° to 315°; peroxide of mercury, 230°; oxide of silver, at between 73° and 78°. The experiments have been extended to the chlorides and sulphides of some metals. Chloride of gold does not appear to be acted upon below 200°, but at a higher temperature an explosion took place. The action with chloride of platinum was rather strong at 85°, and rather violent at 165°; reduction of the metal took place. The chlorides of silver and lead are not reduced below the boiling-point of mercury, but require a red heat; sulphide of gold is reduced at 200°, while sulphide of platinum is reduced at the ordinary temperature, sulphuretted hydrogen gas being formed in both cases.

New Method of extracting Iodine.—M. Lauroy, of France, has received a patent for a new method of extracting iodine and treating the salts derived from kelp. When the lixivium has been freed from the less soluble salts, and concentrated to a density varying between 45° and 55° Baumé, it may contain free alkali, carbonates, sulphites, sulphides, and hyposulphites of alkalies as well as alkaline iodides and bromides. The treatment varies, according as it is desired to separate the salts contained, or to extract at once the iodine and bromine. When it is desired to extract the iodine and bromine at once, the liquid is saturated with hydrochloric acid; the deposit which forms is separated, and the gaseous mixture which is evolved in the reaction of nitric acid on organic matters (as in the preparation of oxalic acid, picric acid, etc.) introduced. When these gases are principally formed of binoxide of nitrogen, a quantity of air is admixed. The application of the nitrous gases may be made in several ways—sulphuric acid, in which nitrous gases have previously been dissolved, may be added to the liquid, or, when the liquor contains sufficient alkali, nitrous acid may be admitted as long as there is absorption, and any acid whatever added afterward to precipitate the iodine. In whatever way one operates, the precipitation of the iodine is determined by the reaction of the nitrous compounds. The precipitation is complete, and the bromine is not set at liberty. When the iodine has been thus separated, the mother liquor is submitted to treatment, and the bromine extracted by the ordinary method.

Crystallisation of Metallic Oxides.—The *Comptes Rendus* for July 19th contains a contribution by M. Lidot, in which he records a number of experiments made by him in order to obtain artificially-crystallized metallic oxides, starting from the well-known fact that most native oxides and sulphurets exhibit a crystalline form. The author has been occupied in researches with the view to obtain these forms by artificial means, and has succeeded, in many instances, by simply submitting some oxides—for instance, the peroxide of iron—to long-continued and strong heat. By this means, the said peroxide loses a portion of its oxygen, magnetic oxide is formed and simultaneously obtained in a crystalline shape; the sesquioxide of manganese, the oxides of cadmium and zinc, have also been obtained in

distinctly crystalline state, by various manipulations and the application of suitable very high degrees of temperature.

Protection of Woodwork from Fire.—At one of the collieries at Ibbenbüeren, Westphalia, the woodwork is protected from fire by being painted with a mixture consisting of 5 parts of alum, 7 parts of rye-meal paste, and 30 parts of previously-washed, i. e., finely divided clay (this mixture is used for woodwork not exposed to open air); for woodwork so exposed, a mixture is used consisting of 2½ parts of crystallized sal-ammoniac, 1 part of white vitriol (commercial sulphate of zinc), 2 parts of joiners' glue, 20 parts of zinc-white, and 30 parts of water. These mixtures have been found to prevent wood bursting into flame on ignition, and greatly to delay its destruction even when severe fires are raging.

Decomposition by Sunlight.—M. Morren communicates to the *Comptes Rendus* for August 9th some observations on the phenomena of decomposition produced by sunlight. While repeating some of Prof. Tyndall's experiments, but applying, instead of electric light, the bright sunlight of Marseilles's clear sky, he discovered that several inorganic substances are decomposed when a ray of sunlight is made to pass through them; among these sulphurous acid gas is enumerated, this gas being decomposed into oxygen and vapor of sulphur. This phenomenon is caused, according to the author, by a peculiar dissociation called into play by the vibratory motion of the light, which has the effect of breaking up the chemical combination; by means of spectrum analysis the author has discovered that the activity of the light in this aspect depends partly upon its color, and partly upon the refrangence and the nature of the decomposed substance. The author has also found that a thin layer of sulphate of quinine of no more than 4 or 5 mm. thickness entirely arrests the chemical rays, as if it were a thick, yellow-colored piece of glass. The author states that the chemical effects of highly-heated platinum—for instance, the decomposition of water by that metal—are due to the accumulation of more and more refrangent rays.

Hydrofluoric Acid.—Mr. G. Gore read a paper before the Royal Society in January, giving a full description of the leading physical and chemical properties of anhydrous hydrofluoric acid, and of the various properties of pure aqueous hydrofluoric acid. He obtained his anhydrous acid by heating dry double fluoride of hydrogen and potassium to redness in a suitable platinum apparatus. Nearly all the manipulations with the acid were effected while the vessels containing it were immersed in a strong freezing mixture of ice and crystallized chloride of calcium. The author describes the pure anhydrous acid as a highly-dangerous substance; a perfectly colorless and transparent liquid at 60° F., very thin and mobile, extremely volatile, and densely fuming in the air at ordinary temperatures, and absorbs water very greedily from the atmosphere. It was perfectly retained in a platinum bottle, the bottle having a flanged mouth with a platinum plate secured with clamp-screws, and a washer of paraffin:

A number of attempts were made, finally with success, to determine the molecular volume of the pure anhydrous acid in the gaseous state, the acid in these cases being prepared by heating pure anhydrous fluoride of silver with hydrogen in a suitable platinum apparatus over mercury. Particulars are given of the apparatus employed and of the manipulation. The results obtained show that one volume of hydrogen, in uniting with fluorine, produces not simply one volume of gaseous product as it does when uniting with oxygen, but two volumes, as in the case of its union with chlorine. The gaseous acid transferred to glass vessels over mercury did not corrode the glass, or render it dim in the slightest degree during several weeks, provided moisture was entirely absent.

The specific gravity of the anhydrous liquid acid was several times determined, both in a specific-gravity bottle of platinum, and also by means of a platinum float submerged and weighed in the acid. Concordant and reliable results were obtained; the specific gravity found was 0.9879 at 55° Fahr., that of distilled water being =1.000 at the same temperature.

Numerous experiments were made of electrolyzing the anhydrous acid with anodes of gas-carbon, carbon of lignum-vitæ, and of many other kinds of wood, of palladium, platinum, and gold. The gas-carbon disintegrated rapidly; all the kinds of charcoal flew to pieces quickly, and the anodes of palladium, platinum, and gold, were corroded without evolution of gas. The acid with a platinum anode conducted electricity much more readily than pure water; but with one of gold it scarcely conducted at all.

To obtain an idea of the *general* chemical behavior of the pure anhydrous acid, numerous substances (generally anhydrous) were immersed in separate portions of the acid in platinum cups, kept at a low temperature (0° to 20° Fahr.). The acid had scarcely any effect upon any of the metalloids or noble metals, and even the base metals in a state of fine powder did not cause any evolution of hydrogen. Sodium and potassium behaved much the same as with water. Nearly all the salts of the alkali and alkaline earth-metals produced strong chemical action. The anhydrous acid decomposed all carbonates with effervescence, and those of the alkaline earth and alkali-metals with violent action. Borates of the alkalies also produced very strong action. Silico-fluorides of the alkali-metals dissolved with effervescence. All sulphides, except those of the alkaline earth and alkali-metals, exhibited no change; the latter evolved sulphuretted hydrogen violently. Bisulphite of sodium dissolved with effervescence. Sulphates were variously affected. The acid chromates of the alkali-metals dissolved with violent action to blood-red liquids, with evolution of vapor of fluorids of chromium. Cyanide of potassium was violently decomposed, and hydrocyanic acid set free. Numerous organic bodies (specified) were also immersed in the acid; most of the solid ones were quickly disintegrated. The acid mixed with pyroxilic spirit, ether, and alcohol, but not with benzole; with spirit of turpentine it exploded, and produced a blood-red liquid. Gutta-percha, india-rubber, and nearly all the gums and resins, were rapidly disintegrated, and generally dissolved to red liquids. Spermaceti, stearic acid, and myrtle wax, were but little affected, and paraffin not at all. Sponge was but little changed. Gun-cotton, silk, paper, cotton wool, calico, gelatine, and parchment, were instantly converted into glutinous substances, and generally dissolved. The solution of

gun-cotton yielded an inflammable film on evaporation to dryness. Pinewood instantly blackened.

From the various physical and chemical properties of the anhydrous acid, the author concludes that it lies between hydrochloric acid and water, but is much more closely allied to the former than to the latter. It is more readily liquefied than hydrochloric acid, but less readily than steam; like hydrochloric acid, it decomposes all carbonates; like water, it unites powerfully with sulphuric and phosphoric anhydrides with great evolution of heat. The fluorides of the alkali-metals unite violently with hydrofluoric acid, as the oxides of those metals unite with water; the hydrated fluorides of the alkali-metals also, like the hydrated fixed alkalies, have a strongly-alkaline reaction, and are capable of expelling ammonia from its salts. It may be further remarked that the atomic number of fluorine lies between that of oxygen and chlorine; and the atomic number of oxygen, added to that of fluorine, nearly equals that of chlorine.

Analysis of Varieties of Carbon.—Berthelot is the author of an elaborate paper, communicated to the French Academy of Sciences, on the varieties of carbon, showing that the number of modifications of that element is greater than had been supposed. His researches were based upon Brodie's method of oxidizing graphites by means of nitric acid and chlorate of potash. From an abstract of the paper, in the *American Journal of Science* for May, we quote:

By these reagents diamond is not sensibly oxidized; the different varieties of amorphous carbon are changed into humus-like substances of a yellowish-brown color, soluble in water and varying according to the variety of carbon analyzed, while the graphites are converted into graphitic oxides which differ with the nature of the graphites which furnish them. Berthelot gives the name pyrographitic oxides to the black powder which remains when the graphitic oxides are heated. They also contain oxygen and hydrogen as well as carbon. Native plumbago, or, as Berthelot terms it, *plumbagine*, already examined by Brodie, yields a graphitic oxide in pale-yellow micaceous scales, insoluble in all reagents, and not decomposed with deflagration and intumescence by heat. Treated with chlorate of potash and nitric acid it yields graphitic oxide with all its original properties.

Graphitic oxide from electric graphite—carbon points from a large battery—is a maroon-colored powder which does not agglomerate during desiccation. This character is also constant. The hydrographitic oxide does not intumesce when heated, and when oxidized reproduces the original oxide. This form of graphitic oxide is also decomposed by heat with deflagration, but yields a heavy powder which is not flaky. By oxidation the pyrographitic oxide disappears almost wholly, leaving some grains of graphitic oxide with its original properties.

All the pyrographitic oxides, when treated with iodhydric acid in solution at 280° C., yield hydrogen containing about 6 per cent. of marsh-gas, leaving, however, a considerable quantity of a black carbonaceous residue. The author compares the graphites, amorphous carbons, and their derivatives, with the hydrates of carbon and ulmic matters, and believes that the varieties of amorphous carbon represent polymeric states of the true carbon which is not yet known in the free or uncondensed form. In studying the different varieties of carbon, Berthelot has arrived at the following results, in addition to those related above: Coke recently calcined is entirely dissolved, giving a soluble compound of an intense color. Metallic carbon, deposited from hydrocarbon vapors heated in a porcelain tube, is dissolved with very great difficulty but completely. The same is true for gas-retort carbon, and some substances called artificial graphites. Anthracite, animal charcoal, and the carbonaceous matter from the Orgueil meteorite, were also completely oxidized, but lampblack left a trace of graphitic oxide. The intense heat produced by combustion in oxygen converts a small portion of gas-retort carbon into graphite. Berthelot suggests that it is in this manner that natural graphite has been formed, the amorphous carbon, being more oxidizable at a low temperature, having been gradually dissolved. This view derives some support from the presence of a trace of graphite in lampblack. Electricity also converts amorphous carbon into graphite, the carbon carried over to the negative pole being found to contain a considerable quantity of the latter, while the positive pole contained only a trace. The actual transference of the carbon is not, however, necessary for the formation of graphite; carbon from sugar softened by the heat from a battery of 600 pairs being found to contain graphite in large proportion. Carbon separated from hydrocarbons by the agency of heat does not contain a trace of graphite, while that which is separated by heat from the sulphide or chloride of carbon, or by chlorine from boron, contains a considerable quantity.

The Ignition Point of Vapors.—Mr. W. R. Hutton, of Glasgow, has determined the degree of heat at which the vapors of a number of liquids catch fire from a burning candle at a distance of 1.5 inches, or 0.5 inches from the surface of the fluid. Annexed is a tabular statement of the results of his experiments.

ARTICLES.	Specific weight.	Inflaming Point in Deg. of Fahr.	
		At a distance of 1.5 in.	At a distance of 0.5 in.

Nitrification.—Mr. S. W. Johnson furnishes to the *American Journal of Science* for March a paper on the formation of nitrogen compounds artificially and in a state of nature. With respect to the natural process of such formation, he is led to the conclusion that free nitrogen enters into combination in all cases

by oxidation; that the agent of oxidation is ozone; that in the soil this ozone originates for the most part in the slow oxidation of organic matters; and that ammonia and the organic nitrogen of humus, peat, and coal, are the result of the reduction of oxides of nitrogen either in the living organism in the acts of nutrition, or by the organic matters of the dead plant or animal. The union of atmospheric nitrogen and oxygen under the influence of electrical tension has been shown by Meissner to be preceded by the production of ozone. By a long series of critically-conducted observations, Daubeny has made it probable that ozone appears in the vicinity of active foliage exposed to sunlight, and concludes that the oxygen set free from combination in the plant is partly ozonized, as is true of that which separates in the decomposition of permanganates and chromates by oil of vitriol. The plant, then, appears to be an agent of nitrification when living as well as when dead, and ozone is the result of a molecular change which accompanies the decomposition as well as the formation of oxygen compounds.

Unwholesome Food.—Dr. Letheby treated of unwholesome and adulterated food in the Cantor Lectures delivered by him before the British Society of Arts. Some parts of his discourses are particularly interesting to epicures, as, when he says:

> Even game, when only sufficiently tainted to please the palate of the epicure, has caused severe cholera in persons unaccustomed to it; but, as Dr. Christison observes, "the power of habit in reconciling the stomach to the digestion of decayed meat is inconceivable. Some epicures in civilized countries prefer a slight taint even in their beef and mutton; and there are tribes of savages still further advanced in the cultivation of this department of gastronomy, who eat with impunity rancid oil, putrid blubber, and stinking offal." The Zulus of Natal, according to Dr. Colenso, are so fond of putrid meat that they call it *ubomi*, which literally means to be superlatively happy. But, as a rule, there is a natural abhorrence of tainted food, insomuch that, with most persons, the mere commencement of decay is sufficient to excite disgust; and rarely do we find, except among savages, that an entire meal is made of putrid flesh. A little game or venison, or ripe cheese, at the end of a feast, with just a piquant touch of decay, is, perhaps, not objectionable; for it may, as Liebig supposes, promote digestion, by communicating its own quality of transformation to the rest of the food; but it is another thing to fill the stomach with putrid flesh, for, if the corrective power of the gastric juice should fail, the effect of it might be serious. We have, indeed, abundant evidence of the terrible consequences of admitting putrid matter into the circulation, for they were once too common among those engaged in the dissection of the human body. In fact, the mere handling of decomposing animal matter for any time will often produce disease of the hands or other parts of the body with which it comes into contact. Our safety, perhaps, in using such food is in the antiseptic power of good cooking; but this is not always an easy affair; for the tissues are generally so soft from decay that they will hardly bear the common action of heat; so that if they be boiled for any time they will fall to pieces; and, if they be roasted, they will shrink without forming that delicious crust of osmazome which is characteristic of good meat. Let them, however, be cooked as they may, they always require a nice adjustment of rather strong flavors to make them palatable; and those who have dined in the cheap *restaurants* of Paris, or at the still worse table d'hôte of a German watering-place, will have experienced the art of the cook in this respect, in such dishes as *turbot en vol-au-vent*, *Raie au beurre noir*, *sole en matelote Normande*, and in the various forms of fish *au gratin*; or game *en salmis*.
>
> But, bad as this sort of tainted food is, it is nothing in comparison to the sausage poison, which is produced by a sort of modified putrefaction, to which the large sausages of Germany, and especially those of Würtemberg, are occasionally subject. According to an official return, there have been more than four hundred cases of poisoning from these sausages in Würtemberg alone during the last fifty years, and of these about one hundred and fifty were fatal. The effects are generally observed in spring, and mostly in April, when the sausages become musty, and acquire a soft consistence in the interior. They have also a peculiarly nauseous and rather putrid taste, and are very acid to test-paper. If eaten in this condition, they produce dangerous effects in from twelve to twenty-four hours—the first symptoms being pain in the stomach, with vomiting and diarrhœa, and dryness of the nose and mouth: then comes a feeling of profound depression, with coldness of the limbs, weakness and irregularity of the pulse, and frequent fainting. Fatal cases end with convulsions and oppressed breathing between the third and eighth day. The precise cause of these effects is still a mystery; some have thought that rancid fatty acids are produced during the decomposition of the meat; others that in the process of drying and smoking acrid pyrogenous acids have been developed; others that, during the decay of the sausages, a poisonous organic alkaloid is generated. Liebig is of opinion that the effects are due to an animal ferment, which produces in the blood, by catalysis, a state of putridity analogous to its own, and that the molecular movements of the putrefactive change in the decaying meat are thus communicated to the living organism. M. Vanden Corput, who is one of the most recent investigators of the subject, attributes the morbific action of such meat to the presence of a minute fungus, of the nature of a sarcina, which he calls *sarcina botulina*. This view is confirmed by the fact that there is always a peculiar mouldiness of the sausages; and the poisonous property is generally observed in April, when these cryptogamic organisms are most freely developed.
>
> Similar effects have occasionally been produced by other kinds of animal food—as veal, bacon, ham, salt beef, salt fish, cheese, etc., and the food has usually been in a decayed and mouldy condition. It would be tedious if I were to detail, or even to enumerate, the cases recorded by medico-legal writers; but I may, perhaps, refer to a few of them. In 1839, there was a popular fête at Zurich, and about six hundred persons partook of a repast of cold roast veal and ham. In a few hours most of them were suffering from pain, in the stomach, with vomiting and diarrhœa; and, before a week had elapsed, nearly all of them were seriously ill in bed. They complained of shivering, giddiness, headache, and burning fever. In a few cases there was delirium; and, when they terminated fatally, there was extreme prostration of the vital powers. Careful inquiry was instituted into the matter, and the only discoverable cause of the mischief was incipient putrefaction and slight mouldiness of the meat. Dr. Deiseler relates an instance where a family of eight persons were made ill by musty bacon; and M. Ollivier has given an account of six persons who were poisoned by mutton in a state of modified decay—four of whom died from it within eight days. In Russia, where it is the practice to eat largely of salt fish in a raw condition, it is not at all uncommon to witness the dangerous effects of it when it has be-

come mouldy or putrid; and, in fact, it is within the experience of every one who is concerned in medico-legal inquiries, that serious symptoms are frequently traced to the use of food in a modified condition of decay. This is especially so with bad cheese, the effects of which on the constitution have been so severe that official investigations have been called for. These effects have been noticed at Schwerin (1823), at Minden (1825), at Hameln (1826), at Greifswald (1827), Frankfort (1828), and elsewhere; and they have been the subjects of interesting essays by Henneman, Hünefeld, Westrumb, and others. At first the effects were attributed to the copper vessels used in the dairies, and therefore the Austrian, Würtemberg, and Ratzeburg states prohibited the use of that metal for such purposes; but the subsequent inquiries of Hünefeld, Sertürner, and other chemists, established the fact that no metallic poison was discoverable in the cheese. In the police report, which was published in Frankfort, in January, 1828, informing the public of numerous cases of poisoning in that city from spoiled cheese, it was declared that no poisonous principle could be detected by chemical reagents. Professor Hünefeld and, subsequently, Sertürner, were of opinion that the effects were due to certain poisonous fatty acids analogous to, if not identical with, caseic and sebacic acids; and they even describe the way in which they are produced in the cheese during the process of ripening—attributing them to the imperfect removal of the acid liquor from the curd when the cheese was made, or to the putrefaction of the curd before it was salted, or to the mixture of flour with the curd; but it is far more likely that the poisonous effects are due, as Vanden Corput supposes, to the presence of a peculiar mould or fungus.

Purifying Water by Chemical Ingredients.—A scientific commission, appointed in the Netherlands, to investigate the practicability of purifying the turbid water of rivers and lakes, so as to make it fit for drinking, have submitted their report. They ascribe the prevalent turbidity of the Netherland waters to the presence of extremely minutely divided clay, by the aid of which a great deal more of organic matter than could otherwise remain suspended is kept in such an extreme state of division as to pass through filters and deposit, even after many days of rest. The committee availed themselves of the skill and experience of Dr. J. W. Gunning, of Amsterdam. This gentleman had found that the perchloride of iron, added to the turbid water of the river Maas, which is an important source of supply for a considerable population of the Netherlands, has the effect of rendering it perfectly wholesome and even agreeable for use:

To one litre of water, 0.032 grm. of the dry salt just alluded to, and previously dissolved in pure water, are added, and, after well stirring the liquid, it is left quietly standing, to settle, for fully thirty-six hours. A series of very carefully-made experiments has proved that no free hydrochloric acid (the quantity thereof contained in the above-stated weight of perchloride of iron only amounts to 0.021 grm.) was left in the clarified and purified water, but in order to suit the application on the large scale, and to make assurance doubly sure, as regards any acid or perchloride being left undecomposed, or rather uncombined, with the organic and inorganic matter of the water, Dr. Gunning has advised that a small, but equivalent, quantity of crystallized carbonate of soda should be also added some hours previous to beginning to take the purified water for use. At Dr. Gunning's request, a scientific gentleman of high attainments, who happens to have an excellent opportunity, near Rotterdam, to try on the large scale this process, has submitted it to practical test, and a quantity of no less than about two hundred and forty thousand litres of Maas water, taken at all times of the year, has been treated by this process, and thereby rendered perfectly fit for use, and, consumed by various parties, has proved to have been entirely deprived of its property of causing diarrhœa; moreover, the medical officer in charge of the crew of her Majesty's corvette the Lynx, moored off Rotterdam, in the river, has applied this process to the water taken from the river, and found by experience that the thus purified water has even the good effect of restoring to health such of the crew as had been incautiously drinking the not previously purified Maas water. It is, when using this means of purifying bad water, of great importance to let the sediment quietly settle; it occupies about four-tenths of the bulk of the water, which on the large scale will, for security's sake, be submitted to a filtration through fine well-cleansed sea-sand before being sent through the mains of the large waterworks intended to be established near Rotterdam for the supply of that town. The quantity of crystallized carbonate of soda which is equivalent to 0.032 grm. of dry perchloride of iron is 0.085 grm.; both these quantities are the maximum required to render the Maas water perfectly pure, even at the time when it is most turbid; comparative experiments have conclusively proved that the application of this process is very superior to filtration of the water, even through animal charcoal. The result obtained with the Maas water having been so eminently successful, the committee has applied this method to the purifying of water otherwise non-drinkable, such as is met with in many of the smaller canals, brooks, and also pumps yielding surface water of bad quality in many parts of the kingdom, and the results obtained are such as to justify the order that this method of purifying must be applied by authority to a class of waters which, thus treated, become available for use. The precipitate formed by the addition of the perchloride of iron and carbonate of soda, both previously dissolved, has been proved, by accurate analysis, to contain a large quantity of organic matter, which, on being ignited with soda-lime, yielded ammonia very largely; analysis has also proved that, as regards the Maas water, the only addition to its inorganic constituents is that of one part of chloride of sodium, by weight, in forty thousand parts of water by the application of this process. Dr. Gunning has found that the effect of the perchlorides is not so conspicuous with some well waters containing much carbonic acid; while, moreover, there may exist in some of these kinds of waters, either in quantity or quality, inorganic salts which delay or altogether impede the peculiar mode of flocculent precipitation observed with the above-named Maas and other waters to take place after addition of the iron salt.

Phosphates in Wheat.—Mr. F. Crace Calvert, in a paper read before the British Association, gave the result of his inquiries into the amount of soluble and insoluble phosphates in wheat. The following is a tabular statement:

	Corn and bran.	II.	III.	IV.	Flour.
Phosphoric acid combined with sesquioxide of iron,	0.042	0.047	0.037	0.015	0.022
Phosphoric acid combined with magnesia and a small quantity of CaO...	1.485	1.269	0.657	0.289	0.047 0.144
Phosphoric acid combined with potash..	1.071	1.046	0.459	0.280	0.758
Total....	2.598	2.352	1.153	0.694	0.971
Phosphate soluble in water.....	1.942	1.686	0.918	0.529	0.080

These facts, said Mr. Calvert, tend to show that most of the phosphates contained in wheat are not combined with the organic matter, but are in a free condition; also that the greatest part of the phosphates are soluble, and combined with potash and magnesia, while the insoluble phosphates are represented by lime, iron, with a small proportion of magnesia, the latter probably being a neutral phosphate. He also claims that these analyses clearly illustrate that, although habit and pride have gradually led us to prefer white bread to brown, or more so bread made with nearly the whole of the constituents of wheat-grain, still this practice is an error when we consider the nutritious properties of wheat, especially as a food for children, when phosphates are so essential to the formation of bone and blood; and medical men would confer a great boon on society if they were to impress the importance of feeding children with a wheaten preparation in which all the constituents of the grain were preserved. These views are further supported by some very interesting researches published in the *Comptes Rendus* by M. Mège Morries, in which he proved that there was in the inner cortical parts of the wheat a special ferment, which converted most rapidly starch into sugar, and thereby facilitated the conversion of wheaten flour into bread. These observations of M. Morries led him to devise a peculiar mode of grinding wheat, and making bread from the flour thus obtained, and the results were such that, from every hundredweight of wheat, he was enabled to obtain of bread—

Wheat, 100.		
Ordinary process....	70 flour,	93 bread.
M. Morries.....	83 "	110 "

This method was so satisfactorily carried out, that the Emperor of the French adopted it at the military bakery of Paris, in which bread is baked every day for 100,000 men.

CHILI, a republic in South America. President, for the term from 1866 to 1871, José Joaquin Perez. The ministry, in 1869, was composed as follows: Interior and Foreign Affairs, M. L. Amunategui (appointed November 13, 1868); Justice, Worship, and Instruction, J. Blest Gana (1866); Finances, M. Concha y Toro (January 7, 1869); War and Navy, F. Echaurren (November 13, 1868); president of the Supreme Court, M. Montt. Minister of the United States in Chili, Judson Kilpatrick (since November 11, 1865).

The home debt in May, 1868, amounted to 9,515,708 piasters; and the foreign debt to 25,058,926 piasters; total debt, 34,574,634 piasters. The army is composed of troops of the line (3,709 in 1869), and of the national guards, the number of whom, according to an official document, amounted, at the close of 1868, to 50,618 men. The fleet consisted, in 1869, of ten screw-steamers.

The area of Chili, according to the census of 1866, is 132,624 square miles; the population (inclusive of Araucania, Patagonia, and Terra del Fuego) is 2,084,945; the foreigners resident in the country numbered 23,220 (among whom were 3,876 Germans, 3,092 Englishmen, 2,483 Frenchmen).

The commerce of Chili during the years 1866 and 1867 was as follows:

	Imports.	Exports.
1866.....	$18,760,000	$26,680,000
1867.....	24,860,000	30,690,000

The number of vessels entering the Chilian ports in 1867 was 3,535, making, together, 1,724,000 tons. The merchant navy in 1865 numbered 257 vessels, together of 67,090 tons.

The state of the public treasury was not at all satisfactory when the present Minister of Finance, Concha y Toro, was appointed. He is a young and inexperienced man, has to combat with all the difficulties bequeathed to him by his predecessor, and has also to struggle with the embarrassments arising from the actual situation. The public debt of thirty-four and a half millions of hard dollars, together with the deficit in the budget recently presented of a million more, rendered the position of a Minister of the Exchequer more of a trouble than an honor. Still great confidence is reposed in Señor Concha, who assumes his office with the reputation of being a highly honorable and able man.

The estimates of 1869, passed by both Houses of Congress, amount to $12,296,876.44, in the following form: Home and Foreign Department, $2,576,799.76; Justice, Religion, and Public Instruction, $1,337,005.03; Finance, $5,896,257.99; War and Navy, $2,486,813.66; total, $12,296,876.44.

The liberal press of Chili made great exertions to secure the right of suffrage to all who could read and write, but the majority in Congress decided that only those who possessed a certain amount of property, or who were in the exercise of some profession, should be allowed the privilege of voting. This conservative tendency appears to be mainly due to the influence of the clergy, who are almost unanimous in the support of the Conservative party. The long-pending question of the impeachment of the Supreme Court, for various alleged high crimes and misdemeanors, has been finally settled, the accusations having been declared unfounded. The people, in general, heartily indorsed this decision.

The desire of extensive reforms in the internal condition of the country gave rise to numerous meetings, attended by the prominent members of the Progressive party, and to the adoption of the following programme:

Individual liberty shall be securely guaranteed, and the right to exercise the privileges attendant on it firmly established.

Local government shall be invested with that complete independence necessary for the thorough execution of its prerogatives.

The different branches of government shall be independent of each other; those invested with power shall be responsible for their actions, and measures in relation to this independence shall be adopted.

All persons shall be equal before the law, and all distinctions and privileges shall be abolished that now exist to the detriment of some and the advantage of others.

The club pledges itself to devote all its energies toward accomplishing these ends in the elections to take place in 1870.

These movements induced the Government to recede somewhat from its conservative policy by removing several prefects and governors of provinces, and naming in their places some of the foremost of the Progressive party. The three parties—the Conservative, National, and Liberal—have, however, so combined, and changed their ideas and principles, that it is extremely difficult to define their particular positions. The object of the present political struggle is to reduce the immense personal patronage in the hands of the President, and to establish a more democratic system. Chili, with a population of nearly two millions, has never polled more than 30,000 votes, whereas the adoption of the principles of the Progressive party would swell the number of persons entitled to suffrage to at least 200,000.

The Government of Chili declared itself ready to put an end to the paper war with Spain. Smarting with the shame of the Valparaiso bombardment, and jealous of the glories acquired by Peru in the repulse of the Spanish fleet, Chili refused all advances made by friendly nations to arrange a final peace, until, urged by Peru, Bolivia, and Ecuador, the Government consented to the plan proposed by the United States, that plenipotentiaries from all the belligerent powers should meet at Washington, and there settle all their differences, the President of the United States assuming the position of mediator in case any difficulty should arise.

The operations against the Indians of Araucania again engaged the serious attention of the Government. The Chilians found the savages fully determined to prevent the occupation of their territory by the white settlers, and to leave no means unemployed to attain this end. These savages never offer or give battle unless their numbers are superior to those of their enemy. In the beginning of 1869 the Government troops acted almost entirely on the defensive, their numbers being small, and the line of frontier to be defended very extensive. Thus the Indians were emboldened to make several desperate and successful inroads on their enemy's country. Unfortunately, the cruelties practised by the Indians seem to have been imitated by their opponents. In one attack, the savages met with complete success. Nearly two thousand of them passed the river Mallico, precipitated themselves upon the undefended villages, and robbed, murdered, and burned all persons and property that they encountered. In fact, their principal warfare seemed to be the increase of their live-stock by means of forced contributions from the herds of their enemies. Soon, however, the national forces adopted the same tactics. A column of about eight hundred men penetrated into the Araucanian country, and succeeded in capturing an enormous number of cattle and sheep. The general commanding communicated this feat in a most glowing report to the Minister of War. Far from being discouraged, the savages showed themselves more determined to carry devastation into the regions held by the settlers. The operations of the Government forces having been temporarily suspended, owing to the almost insuperable difficulties of transportation in that region during winter, the Indians reappeared in force along the frontier.

In the latter part of the year 1869 the efforts to bring about a better understanding between the Chilians and the Araucanians appear to have met with success. Some Araucanian caziques were induced to visit the capital for this purpose. During their stay in Santiago they were the recipients of every mark of attention from the Government and private persons, being decorated with medals, and dressed in military uniform, they comported themselves very much as the red-men of the United States do when they visit the Great Father at Washington, and imbibed astonishing quantities of spirituous liquor on all available occasions. They returned to their own country with the avowed intention of leading peaceable and industrious lives, and, in proof of their sincerity, left their eldest male children in Santiago to be educated at the national expense.

In the parting address to the President of the republic, all sorts of fine promises were made by the chiefs; but the President, well acquainted with their character, assured them, very emphatically, that the least deviation from the path of duty would be followed by their complete extermination—a threat which, after having seen the strength of the Government, evidently impressed them. One was presented a huge oaken bludgeon, ornamented with silver and tassels, and was informed that the Government regarded him as the chief of the tribes, and that with his insignia of office he was expected to preserve order among his hitherto unruly brethren. This he promised faithfully to do. A sum of $250,000 has been voted by Congress to establish permanent military posts among these savages.

Chili is progressing favorably in industrial pursuits. Many efforts were made to render the great Agricultural Exhibition a fine success, and liberal premiums were offered to foreign manufacturers for the best classes of agricultural implements. The Exhibition was formally opened at Santiago on the 5th of May, in the presence of the President and Cabinet, the diplomatic and consular corps, and the most distinguished inhabitants of the capital. The different South American republics were well represented. Chili was foremost with her wheat and copper-ores; Peru sent a superb collection of sugar samples, together with the famed alpaca-wool, quinine, and silver-ore;

Bolivia contributed ores, principally silver and tin; Ecuador cocoa; while the Central American States displayed dyewoods, coffee, and drugs. As to machinery, England took the lead, then came France, and finally the United States. There were nearly three hundred machines for agricultural and mining purposes. The Exhibition was successful. Almost all the machines were sold to farmers and miners in the republic. To promote industry and commerce, Congress passed a bill proroguing for one year the powers conferred upon the President of the republic by the law of the 18th of December, 1862, for the construction of the Chilian, Concepcion, and Talcahuano Railway; and further, to submit to arbitration, by and with the consent of the Council of State, all questions arising out of the contract that may be entered into for the construction of the said railway; also a bill empowering the President of the republic to call for tenders, and enter into contracts for the construction of a branch line of railway from Llaillai to San Felipe, according to the estimates, plans, and specifications formed by William Barré, C. E. The cost of the construction of the line is to be paid for in government bonds, the rate of interest upon which is not to exceed six per cent. per annum, payable half-yearly, and redeemable in thirty or more years, at not exceeding par, the right of increasing the redemption fund being reserved to the state. The same bill empowers the President of the republic, as soon as the before-mentioned line is concluded, to order its prolongation as far as Santa Rosa, in the manner and form already described. The Government declared also all materials to be used in the construction and repair of vessels free of import duty, which measure will add considerably to the prosperity and importance of Valparaiso. The works on the railway between Chillan and Talcahuano were commenced, and were expected to be finished in two years.

Considerable discoveries of copper were reported to have taken place at Mejillones.

Rather an important society has been recently formed in Chili, with the object of exporting the valuable animals found in the country, and importing those from foreign countries not yet known. The association numbers among its members several of the most influential men in the country, and will doubtless be productive of great good.

The following data will give some idea of the importance of the movement of Chilian commerce during the year 1868: In 1867 47,755 custom-house policies were issued, against 59,244 in 1868, leaving in favor of the last year a balance of nearly 11,500; 1,278 ships have entered the Chilian ports, against 1,100 in 1867. The receipts of the custom-house in Valparaiso amounted to the considerable sum of $5,500,000, nearly $1,000,000 more than in the preceding year.

In Chili business is but little affected by the political events which may transpire. The commercial interests of the country being almost entirely in the hands of foreigners, who never mix in political matters, their course is not changed by the action of Congress or of the Executive, the business community having sufficient influence to prevent the passage of any measures that would prove hurtful to them; and, as the large transactions in copper produce, which, with grain, constitute the great exports of the republic, are also controlled, in the main, by foreigners, no injury is received from executive proceedings.

CHINA,* an empire in Eastern Asia. Emperor, T'ung-Che † (before his accession to the throne, Tsai-Sung), born April 21, 1856; succeeded his father, Hieng-Fund, August 22, 1861. The estimates of the area of China Proper vary from 1,294,000 to 1,548,000 English square miles; and of the area of the dependencies of China, from 3,012,000 to 3,118,000 English square miles. The total area of China and dependencies is given by Behm (*Geograph. Jahrbuch*, vol. ii.) as 4,695,334 square miles. The population of China Proper is estimated at 450,000,000; of Mantchooria, 3,000,000; Mongolia, 3,000,000; Thian-Shan-nanlu and Thian-Shan-pelu, together, 1,000,000; Thibet, 11,000,000; Corea, 9,000,000; the Loo-Choo Islands, 500,000. The total population of China and dependencies would therefore be about 477,500,000. At the head of the department of Foreign Affairs is Prince Kung, an uncle of the Emperor. The empire is divided into eighteen provinces, each of which has a particular administration, army and finances.

Envoys Extraordinary and Ministers Plenipotentiary to the Treaty Powers, Hon. Anson Burlingame, Chih-Kang, and Sun-Chia-Ku. Envoy Extraordinary and Minister Plenipotentiary of the United States in Peking, Hon. F. W. Low, appointed in 1869.

Notwithstanding the endeavor of the Chinese Government to enter into more satisfactory relations with foreign powers, the last year has exhibited a continuance of hostile actions and feelings between the Chinese and foreign residents, in particular the English. The difficulty which in 1868 ‡ had occurred at Yang-Chow was settled by the dismissal of the local officers at Yang-Chow, and damages for destruction of property of the missionary, assessed at 1,826 taels, were promptly paid. The missionary and his family were formally invited to return to Yang-Chow, and a tablet of stone has been erected at the front door of the mission with the following inscription:

THE PREFECT OF YANG-CHOW.—*Whereas*, this house has been rented by the British subject Taylor,

* See AMERICAN ANNUAL CYCLOPÆDIA for 1868, for an account of the army, of commercial statistics, and the movement of shipping.

† At first (1861) the name Ki-Tsiang was selected for the new government (*see* the preceding volumes of the AMERICAN ANNUAL CYCLOPÆDIA), but it has subsequently been changed into T'ung-Che, which signifies "United Order."

‡ See AMERICAN ANNUAL CYCLOPÆDIA for 1868.

under the sanction of his consul and the local authorities, no idle or improper persons are allowed to enter or create a disturbance. Offenders will be arrested and punished. Obey with trembling!

A proclamation was issued by the highest officials of the province, which has been printed and widely circulated, a translation of which is as follows:

Ma, Governor-General of the two Kiang Provinces, imperial commissioner, etc.; Tseng-quo-fan, late Governor-General of the two Kiang Provinces, imperial commissioner, etc.; Ting, Governor of Kiang Su, hereby issue a proclamation for general information: *Whereas*, the preaching of religion is sanctioned by treaty, and all persons are at liberty to become proselytes thereto as it suits their convenience, without compulsion either for or against; we therefore issue this proclamation to give the population, civil and military, of these districts to know that it is required of them that they carefully observe the treaty which has been concluded by our most gracious sovereign the Emperor, and that they must not annoy religious establishments, nor raise pretexts; nor must they treat foreign travelers with wanton disrespect. Every wilful offender will certainly be visited with heavy punishment, without hope of pardon. Obey with trembling! A special proclamation, 27th day, 9th month, 7th year of the Emperor T'ung-Chc.

Earl Clarendon took occasion to define the views of the English Government concerning its relation to China, in a letter to Mr. Burlingame, in which it is declared that—

Her Majesty's Government fully admitted that the Chinese Government were entitled to count upon the forbearance of foreign nations, and I assured you that, as far as their country was concerned, there was neither a desire nor intention to apply unfriendly pressure to China to induce her Government to advance more rapidly in her intercourse with foreign nations than was consistent with safety, and with due and reasonable regard for the feelings of her subjects. But her Majesty's Government expected from China a faithful observance of the stipulations of existing treaties, and reserved to themselves the right of employing friendly representations to induce the Chinese Government to advance in the course opened up by those treaties, and to afford greater facilities, and encouragement, and protection, to the subjects of foreign powers seeking to extend commercial intercourse with the Chinese people. Her Majesty's Government feel that they may fairly appeal to the Chinese Government, though always in terms of friendship, to act in this spirit toward themselves and other foreign nations; and they would do so with the more confidence because they may be excused for believing that the interests of China will be advanced in a far greater degree than those of foreign nations, by steadily availing herself of the opportunities within her reach for applying to her empire the skill and experience of the nations of Europe. But her Majesty's Government are, moreover, entitled to expect from China as an indispensable condition of their good-will, the fullest amount of protection to British subjects resorting to her dominions. They are aware that the provincial governors are too often in the habit of disregarding the rights of foreigners, trusting to impunity as regards the Central Government of Peking, and to the unwillingness of foreign powers to assert the rights of their subjects by local pressure. Her Majesty's Government feel that they are acting in the interest of the Chinese Empire, when they announce their preference for an appeal rather to the Central Government than to local authorities for the redress of wrongs done to British subjects. It is with the Central Government and not with the provincial authorities that foreign powers have entered into treaties, and it is for the interest of the Central Government that foreign powers should recognize its supreme authority over its provincial governors, and that the Central Government should assume, and, on all occasions when appealed to for the redress of local wrongs, be prepared to exercise that authority. These observations will, I trust, enable you to reassure the Government of Peking as to the friendly feelings entertained toward it by the British Government. It rests with the Central Government so to order its intercourse with Great Britain and the Queen's subjects as to avoid cause of difference, and to preserve unimpaired the friendship of this country. I have only to add, that all her Majesty's agents in China have been instructed to act in the spirit and with the objects which I have thus explained to you; and generally to caution British subjects to pay due respect not only to the laws of the empire, but, as far as may be, to the usages and feelings of the Chinese people.

Lord Stanley also declared, in January, 1869, to the English ambassador, Alcock, in still more emphatic terms, the desire of the Government for fair dealing with the Chinese, and censured the arbitrary measures taken by the English officers in China, saying:

I have to instruct you to explain to her Majesty's consuls that the special purposes for which her Majesty's ships-of-war are stationed in the ports of China, and employed on the coasts, are to protect the floating commerce of British subjects against piratical attacks in Chinese waters, to support her Majesty's consuls in maintaining order and discipline among the crews of British vessels, in the respective ports, and, in cases of great emergency, to protect the lives and properties of British subjects, if placed in peril by wanton attacks directed against them either on the part of local authorities or by an uncontrolled popular movement. As regards this last point, her Majesty's consuls must constantly bear in mind that the interference of naval force, either on their representation, or on the part of naval officers acting on their own estimation of facts before them, will alone receive the subsequent approval of her Majesty's Government, when it is clearly shown that without such interference the lives and properties of British subjects would, in all probability, have been sacrificed; and, even in such a case, her Majesty's Government will expect to learn that the alternative of receiving them on board ship, and so extricating them from threatened danger, was not available. Beyond this, the circumstances of the case must be of a very peculiar nature which would be held by her Majesty's Government to justify a recourse to force. Her Majesty's Government cannot leave with her Majesty's consuls or naval officers to determine for themselves what redress or reparation for wrong done to British subjects is due, or by what means it should be enforced. They cannot allow them to determine whether coercion is to be applied by blockade, by reprisals, by landing armed parties, or by acts of even a more hostile character. All such proceedings bear more or less the character of acts of war, and her Majesty's Government cannot delegate to her Majesty's servants in foreign countries the power of involving their own country in war. My dispatches to which I have referred will have enabled you to point out in unmistakable terms to her Majesty's consuls the course they are to pursue when an emergency calling for immediate action as the sole means of protecting British life and property has passed away. They must appeal to her Majesty's minister at Peking, to obtain redress through the action of the Central Government; and he, on his part, if he fails to obtain it, will submit the case for the judgment of her Majesty's Government, with whom alone it rests to decide as to the course to be thereupon pursued. I shall furnish the Board of Admiralty with a copy of this dispatch, in order that they may send corre-

sponding instructions to the admiral in the China Seas.

The overbearing and insulting policy pursued by some English officials and navy commanders in China met with an emphatic rebuke not only on the part of the Government, but also of the English people. The *Times* said:

It is the duty, recognized not merely in theory but in practice, of our minister at Peking to be the medium for the assertion of the rights of British subjects in China. A British commander would be bound to protect his countrymen against actual or threatened violence, just as it is the duty of individuals in this country, though they be not police constables, to prevent murder. But he has no more title to set on foot an armed negotiation with Chinese officials on his countrymen's behalf than an individual at home has, after witnessing a murder, to put the murderer to death. If he would have had those functions formerly, the appointment by his Government of a resident plenipotentiary to the court of Pekin must be taken to have amounted to an abdication by his Government of such a right for the future. It cannot be disguised, too, that conduct like that referred to might, in times of international agitation, lead to grave embarrassments in the relations also between Great Britain and the other nations interested in China. France, the United States, and Russia, we are told, would claim it as a fair inference from English acts and declarations of the past few years, that this country had given up the system of isolated interference in the affairs of China. It may be doubted how far, if at all, we can be considered to have pledged ourselves to any such policy of "co-operation;" but it is, at all events, inexpedient to countenance a course or action on the part of our naval officers which, imitated as it would be by those of our allies, might put the peace, not of China alone, but of Europe and America, at the mercy of the discretion of any two captains who might find their theories at variance as to the right and duty of punishing some offending Chinese mandarin for his conduct to the countrymen of one of them.

Another serious collision took place in January, very soon after the Yang-Chow difficulty, at Swatow, between the Chinese inhabitants and the crew of the British gunboat Grasshopper. The fight appears to have been obstinate and bloody. The sailors fought desperately, but were overwhelmed by the natives, whose numbers constantly increased, and they were compelled to retire to their ship with eleven of their number wounded. Many Chinese were killed and wounded in the affray. The Chinese, immediately on the boats retiring, assisted by the inhabitants of the surrounding villages, began to build substantial mud forts and armed to the number of six thousand men. Placards were posted all through the city of Swatow offering a reward of fifty dollars for every European head. Lieutenant Kerr immediately sent notice of these proceedings to the admiral at Hong-Kong, and the British ships-of-war Rinaldo, Perseus, Leven, and Bouncer, were sent up to the scene of the trouble. On the morning of the 29th, at four o'clock, a force of four hundred and fifty men, consisting of the Rodney's marines and blue-jackets from all the other vessels, started, under the command of Commodore Jones, and landed at daylight near Swatow. They then marched into the country and burned three villages, one of them being the place where the men of the Cockchafer were fired upon. The natives offered a bold resistance, and the work of firing and destroying the villages was not accomplished without some considerable loss on the part of the natives and two casualties on the English side.

There was another though less serious trouble at Foo-Chow, originating, according to some accounts, in an indiscreet zeal of the missionaries. Another very serious difficulty occurred between the English subjects on the island of Formosa and the Chinese residents there. There is considerable trade between the island and the main-land in camphor, one of the products of the island, and principally collected in that portion of the island occupied by the aborigines. Some English traders purchased a quantity of camphor in the interior, which was seized, by order of the mandarins, *in transitu* to the port of shipment, under some flimsy pretext. In addition to this, some English missionaries were insulted and improperly treated. A demand was made by the English consul for redress and the immediate delivery of the camphor, which was refused. Some English ships-of-war went there, and landed troops in the face of a large Chinese force, and killed a number of them, when the Chinese came to terms, paid damages, and apologized.

The hostility of the Chinese to the missionaries seems to be on the increase. A placard, extensively posted up throughout the empire, denounced the missionaries in violent terms.

The people of the United States have increasing interests in China. The establishment of direct steamship lines connecting the western coasts of the United States with China, and the completion of the Pacific Railroad, have contributed largely to extend all the ramifications of trade with Eastern Asia. The increase of this international trade, which promises for the future grand results, imparts a special importance to the treaty ports, and we therefore subjoin a brief geographical and statistical statement * of their condition in 1869:

1. *Foo-Chow* is the capital of the province of Fo-Kien, and situated on the left bank of the river Min, quite a distance inland from its mouth. The population of the province of Fo-Kien is estimated at twenty million. It is one of the most important sections of China, and is politically united with the province of Tse-Kiang, under a governor whose official residence is at Foo-Chow. Fo-Kien has an extent of coast-line of one hundred and thirty geographical miles, and includes, besides the principal port named, the following other treaty-ports: Amoy, Ningpo, Tamsin, and Tai-Wan-Foo. The last two are on the island of Formosa, which forms a part of the province of Fo-Kien, and extends along the coast, from which it is separated by the Formosa Channel. The inhabitants of Fo-Kien and

* Condensed from a very full account in the *New York Herald*.

Formosa are very industrious and much more energetic than those of any other Chinese province, excepting, perhaps, Tartary. The country is mountainous but fertile, and the chief products are sugar and tea. The river Min, with its many navigable tributaries, furnishes an easy and cheap means of transportation to and from the interior. Foreign vessels anchor in the river a distance of over ten miles below the city of Foo-Chow, opposite Pagoda Island, and goods are exchanged on lighters between the vessels and the city. Like all Chinese cities, the principal part of the town is surrounded by a wall, and, including the suburbs and the literally "floating population" living in boats on the river, it numbers about eight hundred thousand inhabitants. Foreigners occupy the right bank of the Min, and have extended over the adjoining hills and into the principal suburb. A large bridge, built of solid masonry, connects the two river-banks, and the foreign with the native population. This foreign colony, though spread over a proportionately vast area of ground, is but small, consisting of but about two hundred persons, half of whom are English, the rest composed of Americans, Germans, Portuguese, and Parsees. The climate is considered healthy, but all foreigners need careful protection from the intense heat of summer, which ranges from 78° to 105° Fahrenheit, and is never below ten degrees above zero in winter.

2. *Han-Kow.*—This city is in the centre of the province Hu-Peh, on the Yang-tse-Kiang, or Blue River, the most important river of the empire. It is situated about 600 miles from the mouth of the Yang-tse-Kiang, and splendid steamers ply on its waters from this city to the coast. The distance from Shanghai to the three open ports on the Yang-tse-Kiang is as follows: Tsin-Kiang, 150½ miles; Kin-Kiang, 445 miles, and Han-Kow, 582 miles. Steamboats of the first class make the trip from Shanghai to Han-Kow generally in three days, and remain for about six hours at each of the ports between Tsin-Kiang and Kin-Kiang. Slower boats take five days for the trip. The downward trips are generally made in forty-eight hours. The fares for passage are as follows: to Tsin-Kiang, twenty-five taels; to Kin-Kiang, fifty taels; to Han-Kow, sixty taels; for the trip to Han-Kow and return, 100 taels—a tael being about equal to $1.48, gold, of American money. These three cities, of which the two largest have each 600,000 inhabitants, compose one centre of population. A very large number of Chinese boats are always on the river Yang-tse-Kiang and on the Han, and keep up constant communication with the various points. The very favorable location of Han-Kow, almost in the centre of China Proper, and its facilities of communication with the surrounding populous and very productive districts, by means of an extended net of lakes, rivers, and canals, have given its commerce great activity and importance. The customs return for the last year reports the trade of Han-Kow as follows:

	Taels.
Foreign goods imported.....	10,294,656
Chinese " "	7,836,038
Exports, ...	12,406,332
Total.....	30,537,026

3. *Canton.*—This port lies on the left bank of Pearl River, about sixty miles from the coast, in the province of Kwang-Tong, of which it is the capital. The mouths of the Pearl River, at the eastern end of which is situated Hong-Kong, and on the west Macao, are the grandest, on account of their extent and of the numerous islands. The steamers from Hong-Kong and Macao pass here daily, and so also do innumerable Chinese junks. By the Pearl River, its tributaries and over the many canals with which this portion of China is richly intersected, Canton has constant communication with the surrounding tea and silk districts, and with other fertile provinces near Twang-Tong, such as Kwang-Si, Hun-Nan, and Kiang-Si. Since Nanking has been destroyed by the Taepings, and Peking has entered a downward course, Canton is assuming the proportions of the first city of the empire. Its population is estimated at 1,000,000 inhabitants, and it is the residence of the governor of the two provinces Kwang-Tong and Kwang-Si. It has fully recovered from the devastations caused by the hostile incursions of "outside barbarians." Though the first port opened to foreign trade, it has preserved its Chinese character. The foreign merchants own nearly the entire river-shore at Ho-Nam, but they also have acquired land on the right bank, where they have erected large and splendid stone quays. The permanent foreign colony of Canton numbered, in 1869, about 100 persons, and among the mercantile firms were five American, nine English, and four German. Steamers only are permitted to land opposite the city; foreign sailing vessels must anchor at Wampoa, twelve miles below Canton. The opening of other more northern ports, principally of that of Han-Kow, has considerably reduced the commerce of Canton, since the products of the central provinces, which formerly passed through the latter city, now find their way in a large proportion through Han-Kow and similarly situated ports.

4. *Kin-Kiang.*—Next to Han-Kow, in point of importance among the ports open to the foreign trade on the Yang-tse-Kiang, stands undoubtedly Kin-Kiang, 445 miles from Shanghai and 137 from Han-Kow, on the northern point of the province of Kiang-Si. From here a continuous exchange of products is carried on with the interior over the lake Pa-Jang to the south and over the many rivers and canals which are such great aids to the interior commerce of China throughout the empire. The chief products of this province are tea, tobacco, hemp, paper, porcelain, grass-cloth (made of cotton and flax), paints, wax, etc. Up to with-

in a short time Kin-Kiang had 500,000 inhabitants and was considered very wealthy. But its occupation by the rebels and the war between them and the imperialists have almost ruined the city. Since its opening to foreign trade, in 1861, numbers of the former inhabitants have returned, and the part which extends from the foreign establishments on the western bank of the river to the old city has been rebuilt. The present Chinese population is estimated at 50,000, and is rapidly on the increase. There are not over fifty foreigners permanently located here, including the customs officers and the British consulate. The customs returns for last year give:

	Taels.
Foreign goods imported.....	2,636,381
Chinese " "	865,468
Exports, ...	4,358,760
Total.....	7,860,609

5. *Amoy.*—This city is located on the island of Hia-Mun, near the southeastern coast of the province Fo-Kien, and opposite the mouth of the Lung-Kiang, or Dragon River. The population of Amoy is estimated at 800,000, and that of the whole island Hia-Mun, with a circumference of thirty-six miles, at 400,000 souls. It is separated from the main-land by a channel about two miles in width. The harbor of Amoy is one of easiest access in all China, and has been preferred by foreigners for centuries. The security of the harbor has contributed much to the development of its trade. The environs of the city are thickly settled, and the people are industrious, active, and enterprising. The population increases rapidly, and Chinese emigration draws from here its heaviest percentage. The cities of Amoy and Chin-Chow—the latter the seat of the departmental government—are celebrated for centuries for sending out mercantile expeditions to the Indian archipelago, to Hindostan, and even to Persia. Tea and sugar are the staple products of these districts. The dressing of cotton goods has reached to a high perfection, and this branch of industry has kept pace with the imports from Manchester. The foreign establishments are partly in the Chinese city, partly on the small islet of Kon-Lang-Foo, southeast of Hia-Mun, and separated from the latter by a channel only 675 yards wide.

6. *Ning-Po.*—This is one of the five ports opened to foreigners by the treaty of Nanking in 1842. It lies in the province Che-Kiang, at the confluence of two streams, which form the river Jong. It has now a population of 500,000, and is rated as one of the best-built cities in China. The European establishment, where all foreign vessels cast anchor, is on the left bank of the Jong, opposite Ning-Po, and connected with it by a wooden bridge. This foreign settlement has greatly increased since 1861, when Taepings took possession of Ning-Po, and many Chinese moved among the foreigners for better security, and who have since remained there. In the year 1865 there were fifty-one foreign mercantile firms at Ning-Po, of whom two were American, forty-three English, five German, and one French. The climate is considered much more healthy than that of Shanghai.

7. *Swatow.*—This port is situated at the mouth of the river Han, in the northeastern part of the province of Kwang-Tong, and it is the harbor of two large inland cities—Cho-Chow-Foo, thirty-five miles up the river, and San-Ho-Pa, forty miles farther.

Foreigners first formed a settlement near Swatow in 1851, and, though tolerated by the mandarins, were not recognized. This settlement was on Double Island, four miles from Swatow. The port was formerly opened in 1858 by the treaty of Tien-Tsin, but advantage was taken of this by the establishment of a permanent colony only in 1862. Commerce is rapidly developing and increasing. Unfortunately, however, this portion of China is possessed with a thorough hatred of Europeans, which was stimulated by the tricks and practices of those engaged in the coolie trade. Lately a better disposition has been manifested by the natives, particularly toward Americans, and the opening of a steamboat line from Swatow to Cho-Chow-Foo and other interior cities along the Han, under the auspices of American enterprise and capital, will be of great benefit for the further development of this port and its commerce.

8. *Tien-Tsin.*—This city and harbor were opened to foreign commercial enterprise and navigation by the October treaties in 1860. Tien-Tsin is situated in the province of Pe-chi-li, at the junction of the Grand Canal with the river Pei-ho, twenty-eight miles, in a direct line from Ta-Ku, the mouth of the river, and sixty miles from Peking.

The products of the provinces of Pe-chi-li and Chan-Si, which pass through Tien-Tsin for exchange, are cotton, beans, dates, horns, dried lily-leaves, hides, furs, soap, gensing, wax, wool, camel-hair, etc. Mineral ore is abundant, and coal beds of great richness and extent. Since the opening of this port to foreign trade it has rapidly developed and increased. The foreign establishments are located mostly on the left bank of the Pei-ho. The settlement of foreigners or of foreign firms was not as extensive as might have been, since the major part of the trade of Tien-Tsin is carried on through the old-established houses at Shanghai. At the close of 1866 only sixteen foreign firms had established themselves—one American, nine English, four Russian, one German, and one Italian.

9. *Che-Foo.*—This harbor is easily accessible and very safe. It lies north of Cape Chantung, and in the entrance to the Gulf of Pechee-le. In the treaty of 1860, Fung-Chow, the capital of the department, was designated as an open port, but, as it had no harbor and only an open road, Che-Foo, thirty miles to the east, was substituted, though the proper name of

the place where the foreign establishments have made their settlement is Jen-Hai, where there is a small town of about 10,000 inhabitants. The province of Chan-Tung is the most fertile of the northern provinces of China. From the south to the north it is bisected by the Great Canal. Its products are cereals, tobacco, beans, peas, oil, cotton, drugs, raw silk, etc., minerals of various kinds, and lead and coal in great quantities, the latter especially, near the city of Che-Foo. This is the only harbor on the gulf of Pe-chee-lee which remains open throughout the winter. The chief means of transport on this road are mules and camels, but a large part of the trade is also carried on by the way of the river Ta-Tsing, which empties into the gulf of Pe-chee-lee at Che-Foo. Foreign trade is rapidly increasing, and it appears that here, more than in many other places in the empire, a neighborly intercourse between the resident foreigners and the Chinese exists, since the latter are building their houses and magazines without reserve among and around the residences and warerooms of the Europeans.

10. *Nin-Chang.* — This is the only open port, included in the treaty of Tien-Tsin of 1860, which is situated beyond the limits of China Proper. It is located on the coast of Mantchooria, in the province of Tung-Tien. The foreign colonists have settled not at Nin-Chang, but at the mouth of the river Lian, on the gulf of Lian-Tung, which is connected by a channel with the gulf of Pe-chee-lee. The city of Nin-Chang is thirty miles from this foreign settlement. Farther in the interior is the capital of the province, the city Muk-Den, the chief centre of the trade of Mantchooria with China. The colony of foreigners is yet but small, as, at the close of 1866, there were but one American, two English, and one German firm established. The country around Nin-Chang is low and open, but well tilled and dotted with villages and dwellings. The chief products are hemp, corn, cotton, beans, peas, ginseng, drugs, horns, camel-hair, etc. In the winter, when field-work is impossible, the people form into large caravans and transport the fruit of their summer's toil on carts farther south.

11. *Ta-Kow and Tai-Wan-Foo.*—These places are situated on the island of Formosa, and, though at a distance of twenty-five miles, they are in fact but one port. Tai-Wan-Foo is the principal city of the department of Formosa, on the western coast of the island, and contains 100,000 inhabitants. It maintains a very extensive trade in junks, but, as its open roads protect the shipping only from northern winds, foreign vessels come to anchor at Ta-Kow, farther south, which was opened in 1864. The harbor is a good one, but small, and at its entrance is a bar with but seventeen feet of water at ebb tide. Ta-Kow is but an insignificant place, and the foreign settlement is also very small, but the Roman Catholics have a mission there, consisting of monks of the Dominican order. Sugar, rice, oil, hemp, salt, etc., constitute the principal products of the island. The climate is very warm, but healthy.

12. *Nanking and Kiung-Chow.*—According to the treaties, the cities of Nanking, on the river Yang-tse-Kiang, and of Kiung-Chow, on the island of Hai-Nan, were also to be opened to foreign commerce; but the very limited commercial importance of these places has decided differently. Nanking, the former capital of China, was for over ten years (1853–1864) in the possession of the Taepings. Since the recapture of this city, in 1864, the Imperial Government made Nankin the capital of the province of Kiang-Nin and the residence of the viceroy of both the Kiangs. Every effort was made to induce the former inhabitants to return, but the progress is so slow that many years will pass before this city, once the chief of all the cities of China, can again be said to be on the road to future prosperity and greatness.

13. *Hong-Kong.*—The island which bears this name has a circuit of from twenty-six to twenty-seven miles, is very mountainous, and contained, in 1842, when it was ceded to England, only a few villages of Chinese fishermen. To-day the beautiful city of Victoria, on the northern shore, opposite the bay of Hong-Kong, rises amphitheatrically along the mountains, into the rocks of which the streets have been hewn. Indeed, the building of the city is in itself one of the wonders of the age. There are steam lines connecting with New York by way of San Francisco, and also by Panama; with Europe, by way of the Red Sea and the Isthmus of Suez; with Australia, by Japan; with Canton, Macao, Swatow, Amoy, Foo-Chow, Shanghai, Manila, and with Singapore, Calcutta, and Bombay.

The people of China are becoming alive to the advantages of steam, and the steamboats of the Yang-tse are freighted by native merchants and loaded with native passengers, and will soon be owned and managed by native owners. The building of junks has nearly ceased, and, as the steamboat comes along, the junks will disappear. The Yangtse is equal to the Mississippi in extent, in climate, in resources, and has the immeasurable advantage of having over 150,000,000 of industrious and productive people near its navigable waters. The Upper Yang-tse is in the same condition that the Upper Mississippi and the Upper Missouri were before steamboats had penetrated their waters, except that this region has the advantage of a redundant population.

The transportation by steam upon the Yang-tse is exclusively in the hands of a company organized in China as the "Shanghai Steam Navigation Company." The service is performed at present by six large river steamers, and the trade must be very lucrative, as they have been able in a very few years to pay for the steamers, declare a stock-dividend of fifty per cent., and earn annually about

$1,000,000 on a capital of little over that sum invested in steamboats, wharf property, etc.

The supply of coal has been ascertained by geological examinations to be abundant in the provinces bordering on the Yang-tse-Kiang. The coal-fields of China are estimated as equal in extent to those of the United States.

The commercial intercourse between China and the foreign countries is growing so important that many consider the opening of more ports advisable. The Hong-Kong Chamber of Commerce has, however, advised against it, for the following reasons:

With regard to the question of opening more ports on the coast, this Chamber, while desirous of encouraging in every way possible commercial intercourse between foreigners and Chinese, hesitates, while the system of transit dues continues upon its present unsatisfactory footing, to recommend such a step, and would record as its opinion that greater benefits would accrue to foreign trade by the greater freedom of transit of goods into the interior, such as would be obtained by the introduction of railways and permission to navigate the inland waters of China by steamers. The inlets now afforded by the ports at present open to trade are, in the opinion of this Chamber, quite sufficient, with the present deficient state of the transit system. The first step should, the Chamber thinks, be directed toward the improvement of that system and the development of inland communication, before further expenses are entailed in establishing consula restablishments upon the seaboard of China.

While a large emigration of Chinese is moving eastward to the gold and grain regions of California, and the Pacific slope generally, the Mantchoo race is being rapidly replaced in Central and Northern Mantchooria by Chinese immigration, favored by the Peking Government, which makes grants of land at almost nominal prices. The Chinese race develop in Mantchooria, under a more hardy climate, into a healthier and stronger race. Many Mussulmans have also been attracted thither, between whom and the Chinese no fellowship exists. Kirin, the capital of Central Mantchooria, is navigable for junks to a considerable distance above the city. This district of country is bounded on the south by the Yellow Sea, the Chih-le Gulf, and the Great Wall; on the east by the Yaluh, which separates it from Corea, and by the Usuri, which separates it from the portion of the Russian seaboard territory that lies south of the Amoor; on the north by the Amoor, and on the west by the Kingan mountain-range. The race connected with this great district and neighboring countries, the East Asian race, have for two thousand years recognized one suzerain, the Hwang-te, called by Western foreigners the Emperor of China, but he is not merely sovereign of the Chinese nation. He is supreme also in religious or sacerdotal affairs, so far as Confucianism deals with these; and his supremacy is acknowledged even in the prevalent idolatries of Taouism and Buddhism, on whose idols and temples he confers highly-prized honorary distinctions. He is "the Son of Heaven," the divinely commissioned representative on earth of the supreme heavenly power. The Hwang-te has the right of nominating his successor, but the nominee is bound to secure peace and plenty to the people by good government, in accordance with the principles laid down in the sacred books; and, should he fail to do so, that fact is regarded as a proof that Heaven has withdrawn the divine commission from him. The political significance of the Mantchoos, a numerically small nation, inhabiting a region bound up by severe frosts for four or five months of the year, rests in the fact that for the last two centuries the Hwang-te has been, as he is now, a member of one and the same Mantchoo family, and that no dynasty of Hwang-tes has had more complete possession of the actual governing power. The family has a legendary origin in an immaculate-conceived personage, the son of a "heavenly virgin," who appeared at Ningkoota, on the north of the Long White Mountains, before the time of Ghengis Khan. The subjugation of China Proper to Mantchoo sway has reacted on that people. The bulk of the Mantchoo nation migrated into China, and the Chinese natives of Shan-tung and Chih-le proceeded into the western parts of Mantchooria and eastern Mongolia, and settled there as traders, artificers, and agriculturists. A sort of finishing blow has been given to the Mantchoos as a distinct nation by recent large draftings of troops to oppose the Taepings, and later rebel bodies in China Proper. The wonderful success of the Mantchoo nation two hundred years ago has, in short, led to their being nearly merged in the Chinese. With regard to Eastern Mongolia, the people, though still only pastoral, have ceased to be nomads, and the residences of the dukes and princes of Eastern Mongolia are spacious stone and brick mansions, some of them surpassing the country-seats of wealthy Chinese landed proprietors, and the yamuns of mandarins in Chinese cities. The residence of the duke of the Northern Korlos, near the left bank of the Nouni, occupies (buildings and courts) some five or six acres of ground. The "Palisade" boundary, one line of which separates Mantchooria from Eastern Mongolia, no longer exists.

The imperial maritime customs of China is a branch of service entirely under the admintration of foreigners, assisted by native officials, and is acquiring great efficiency and system. The annual revenue derived from this source does not exceed 15,000,000 taels per annum.

China imports from Great Britain and her dependencies, under the British flag, merchandise per annum as follows:

	Taels.
Opium from British India	31,990,919
Merchandise	34,463,734
Total Imports	66,454,653
China exports to Great Britain and her dependencies per annum, to the value of	44,611,585
Leaving a balance of	21,843,068

—which is liquidated by shipments of syceesilver to British India, balance due upon the value of opium imported.

	Taels.
The United States import from China productions, principally tea and silk, to the amount annually of	7,493,318
And find a market in China for merchandise annually to the value of	702,603
Leaving a balance of	6,790,715

—which is liquidated by shipments of gold and silver, or sterling bills.

The United States, therefore, furnish a large proportion of the bullion which the Chinese pay the British for opium. The bullion is not absorbed in China; it goes on to India, and thence to England.

Education and knowledge have received a powerful impulse by the contact with foreigners, as may be seen in the schools and arsenals established at various points. The arsenal at Shanghai, under the superintendence of Mr. Hall (an American), is intended for the building of steamers and gunboats, and the manufacture of all kinds of munitions of war after the most approved foreign models. The premises cover nearly half a square mile of land. There are thirteen foreigners employed as superintendents of the various departments, and some 1,300 native workmen. In the year 1868 they launched their first vessel, a paddle-wheel steamer, 185 feet long, carrying six 24-pounders, brass naval howitzers; two 12-pounders, and one 20-pounder iron rifle gun upon the forecastle, with the launches, boats, and every foreign appliance, complete. Upon the 12th of April, 1869, they launched a screw gunboat 163½ feet long, of American white oak keel, copper fastened throughout, and fitted up in every respect with all the modern improvements. She was to be armed with four brass 24-pounder howitzers, two iron 20-pounder Blakeley rifles, one steel 20-pounder Blakeley rifle on the forecastle, and one iron 68-pounder and two brass 12-pounder howitzers. There was another on the stocks similar to the last mentioned, but 200 feet long, which would be ready to be launched in a couple of months. The keel of a transport 200 feet long was being laid, and the plans of a corvette 240 feet long were being prepared. Two other vessels, one 260 feet long and the other 280 feet long, were under contemplation. Tramways were being laid down, and a large dock constructed. Connected with this establishment is to be a large scientific school. Already some sinologues are employed in translating various works for text-books and reference. The work turned out seems of the best quality, and the native managers are importing valuable libraries of scientific books, and all necessary philosophical and chemical apparatus. They seem thoroughly alive to the importance of all these branches of foreign science, and determined to make themselves masters of them.

A curious specimen of Chinese schools may be found in the examination of candidates in Nanking. The number in attendance at an examination held in 1869 was 16,000, and the examinations were conducted by a literary chancellor and vice-chancellor. There was an old man aged 103 years, accompanied by his son, aged 80, his grandson of 50, and great grandson of 20 years—the two former of whom, according to Chinese precedent, will attain at least to an honorary degree.

The treaty concluded in 1868 between the United States and China received in 1869 the imperial sanction. The reports from China, which had repeatedly announced a desire of the Chinese Government to evade or reject the treaty, thus proved groundless.

In November, 1869, the revised treaty between England and China was signed. The following are the important changes: A modification of the transit dues; the opening of two new ports to trade and commerce; the working of coal-mines by foreign appliances, as an experiment, in two places yet to be selected; a reduction of the duty on native coal, and other articles; the establishment of bonded warehouses; the navigation of the inland waters by vessels not steamers, and a temporary residence in any part of the empire by foreigners. The ports to be opened by the treaty are Wachau, on the Lower Yang-tse, and Wanchau, on the coast, between Ning-Po and Foo-Chow, both of which ports had been strongly recommended in all the memorials on the subject. The Chinese Government had also agreed to employ an English barrister to frame a code of mercantile laws, in conjunction with the judge appointed by her Majesty the Queen of England. The Supreme Court will govern all international civil suits. The advantages to be gained by the treaty are pronounced substantial, and equally beneficial to the Chinese as to foreigners.

On September 2, 1869, a new commercial treaty was concluded between China and Austria, conceding to the latter power the same rights which the other treaty powers enjoy. The desire of Austria, to obtain new stipulations in favor of the Roman Catholic missions, was not acceded to by China.

The printing establishments connected with the Protestant missions were: *Shanghai*—American Presbyterian Mission, 8 presses, 25,000,000 pages printed; American Southern Baptist Mission, 19,000 pages printed. *Ningpo*—American Baptist Mission, 594,500 pages printed; Independent Baptist Mission, 160,000 pages printed. *Foo-Chow*—American M. E. Mission, 2 presses; 7,000,000 pages printed. *Amoy*—American Reformed Mission, one small press for printing colloquial Chinese. *Hong-Kong*—London Mission, 4 presses; no returns of printing; China Inland Mission, 2 presses; no returns of printing.

The *Chinese Recorder*, published at Foo-Chow, gives the following statistics of the Protestant missions in China in 1869:

STATIONS AND MISSIONS.	Ordained Missionaries.	Missionary Ladies.	Native Assistants.	Scholars.	Stations and Out-stations.	Chapels.	Communicants.	Catechumens.	Benevolent Contributions.

CLEVELAND, CHARLES DEXTER, LL. D., an American scholar, professor, and author, born in Salem, Mass., December 3, 1802; died in Philadelphia, August 18, 1869. He was intended at first for the mercantile profession, and from his sixteenth to his twenty-first year was in a business-house. In 1823 he entered Dartmouth College, and graduated with distinguished honors in 1827. In 1830 he was elected Professor of the Latin and Greek Languages and Literature in Dickinson College, Carlisle, Pa.; in 1832 he was called to the professorship of Latin Language and Literature in the University of New York; and in 1834 established a school for young ladies in Philadelphia, over which he presided with great success for nearly thirty years, and which he only relinquished in consequence of failing health. In the autumn of 1861 he received the unsolicited and unexpected appointment of United States consul for Cardiff, Wales, and remained there until 1867. After his resignation of his post, he returned to Philadelphia, but his health requiring a change of climate he returned to Europe, and, after spending some time on the Continent, was domiciled for a year at Ilfracombe, Devonshire. He returned, in midsummer of 1869, to Philadelphia, where his death was very sudden, and the result of an affection of the heart. He had received the honorary degree of LL. D. from Ingham University, in 1861, and from the University of New York in 1866. Professor Cleveland had, early in his career, been impressed with the lack of good and convenient text-books of English literature, and the desirableness of familiarizing our youth, and especially our young women, more thoroughly with the best works in our language, that they might acquire a knowledge of "the wells of English undefiled," which should influence and control their subsequent use of the language as a medium of thought. It was for this purpose that he prepared his Compendiums of English, American, and Classical Literature which have been so well and favorably known. His other works have, with a single exception, had reference to instruction, and most of them to literary criticism and culture. The following is a list of his publications: In 1826, while a junior in college, "The Moral Character of Theophrastus, with a Translation and Critical Notes;" in 1827, while a senior, "An Epitome of Grecian Antiquities;" in 1828, "First Lessons in Latin, upon a New Plan," and, in the same year, "The National Orator;" in 1830, "Xenophon's Anabasis, with English Notes;" in 1831, "A Compendium of Grecian Antiquities," being the Epitome rewritten and greatly enlarged, with maps and illustrations; in 1832, "First Lessons in Greek;" in 1834, "A Sequel to First Lessons in Latin;" in 1836, an edition of "Adams's Latin Grammar, with numerous Additions and Improvements;" in 1844, "An Address of the Liberty Party of Pennsylvania to the People of the State;" in 1845, "First Latin Book," and in the same year "Second Latin Book;" in 1846, "Third Latin Book;" in 1848, "A Compendium of English Literature, from Sir John Mandeville to William Cowper;" in 1850, "Hymns for Schools, with Appropriate Selections from the Scriptures;" in 1851, "English Literature of the Nineteenth Century;" in 1853, an edition of "Milton's Poetical Works, with Life, Dissertations on each Poem, Notes, an Index to Subjects of 'Paradise Lost,' and a Verbal Index to all the Poems;" in 1858, "A Compendium of American Literature on the plan of the Compendium of English Literature;" and, subsequently, "A Compendium of Classical Literature," of which a new edition was published in 1865.

COLOMBIA,* UNITED STATES OF, a republic in South America. President for the term of 1868 to 1870, Santos Gutierrez; minister of the United States in Colombia, P. J. Sullivan, appointed in 1867. Area, variously estimated at from 357,000 to 513,000 English square miles;

* For latest financial and commercial statistics, *see* AMERICAN ANNUAL CYCLOPÆDIA for 1868.

population, 2,794,473, not including the uncivilized Indians, whose number is estimated at 126,000. The republic consists of the nine States of Antioquia, Bolivar, Boyaca, Cauca, Cundinamarca, Magdalena, Panama, Santander, and Tolima.

The relations of the Federal Government and the governments of the several States were, apparently, disturbed during 1869. The Colombian Senate annulled, in March, a law of the State of Panama for the confiscation of the property of political offenders.

A report was brought before Congress on March 31st, recommending the indictment of the President of the republic, Santos Gutierrez, before the Senate of plenipotentiaries of the nation, together with the Ministers Santiago Perez, Miguel Samper, Narciso Gonzales Lineros, and Serjio Camargo, upon charges arising out of the President's action in deposing the President of the State of Cundinamarca. Congress, however, acquitted the President.

The proposition for an amnesty, allowing General Mosquera to return to the country, was rejected in the Senate by fourteen votes against thirteen. It had previously passed the House of Representatives by thirty-two votes against twelve. The Senate refused to reconsider the proposition, though urged to do so by the lower House.

The most important subject in the history of Colombia, during the year 1869, is the negotiations concerning the construction of the Darien Canal. In January, 1869, a treaty for the building of a ship-canal across the Isthmus of Panama was concluded between General C. Cushing and the Colombian plenipotentiaries. The negotiation had been lingering for several months in the hands of Mr. Sullivan, the American minister, and was finally brought to an end about the middle of December, 1868, when the Colombian Commissioners, satisfied that they could not conclude any thing, resigned their commission, and the whole subject was decided to be laid before the Senate in consultation. It seems that the most important point of difference arose from the neutrality of the canal in time of war, Mr. Sullivan maintaining that the right should be stipulated for Colombia and the United States to close it to the vessels of a nation with whom either of them was at war; while the Colombian commissioners strenuously advocated a permanent neutrality of the canal.

Mr. Cushing arrived in January. An agreement was finally obtained, and a treaty submitted to the President's approval, which was readily granted. The stipulations of this important document were as follows:

ARTICLE 1. Grants to the United States of America the right to effect the necessary surveys and explorations on the isthmus, after which, if the project is found to be feasible, to draw the proper maps, etc., employing therefor the requisite civil and military superintendents, engineers, accountants, and paymasters, and other agents and laborers, and the war and transport vessels that may be required. The military force not to exceed at any one time five hundred men, officers included, without first obtaining the express consent of the United States of Colombia, and all persons so employed, both civil and military, shall pay due respect and obedience to the civil authorities of Colombia. And, when the explorations and drawings shall be completed, the President of the United States of America shall certify the fact to the other high contracting party, accompanying the maps and specifications; such explorations, maps, and descriptions, to be filed in the archives of both governments. The route and projects thus fixed upon may subsequently be altered by the Government of the United States of America giving due notice to the Republic of Colombia. But the canal shall not be constructed on the route of the Panama Railroad, unless the consent of the company owning the same has been obtained.

ART. 2. Colombia agrees to grant, detach, and apply for the works of the canal all the territory, including sea and tributary waters, that may be pointed out for that purpose and be necessary, and besides, ten miles of public lands, uncultivated and without population, on each side of the canal, through all its length, and all the materials for construction found within such grants, private parties to be paid for such materials as they supply—the Colombian Government will establish the requisite *expropriations* in conformity to her laws. The ten miles of land given on each side of the canal are to be measured and divided into equal lots; their front upon the canal or its annexes not to exceed three thousand three hundred yards; said lots to be equally distributed between the two governments in such a manner that to neither of them shall belong two adjoining lots, nor the two first lots of either of the extremities of the canal; and both governments may dispose at will of their own lots, but with the condition attached that they are to be applied to the uses of transit by the canal and for its annexes. The Government of the United States of America will choose the first lot to commence the distribution, and will return to that of Colombia such lots or portions thereof as they may not have transferred to private parties at the end of the term of this contract, without claiming any sum for improvements or any other cause.

ART. 3. The United States of Colombia binds herself not to open nor permit to be opened any other interoceanic canal, or railroad, through her territory from the Atlantic Ocean to the Pacific, without having first obtained the consent of the Government of the United States of America.

ART. 4. The disbursement, cost, and expenses of the explorations, drawings, construction, and arrangement of said canal and its ports, way stations, depots, and bays, including the indemnities paid for private property, and the proper indemnity to the Panama Railroad Company, should the case arrive, in accordance with the contract made by the Government of Colombia and approved by the Congress on the 15th of August, 1867, will be at the expense of the United States of America, but exclusively with reference to the objects of this convention. The materials furnished by the United States of Colombia for the works of the canal will remain in charge of the United States of America, but exclusively for the objects of this convention.

ART. 5. The United States of America will construct the said canal and its dependencies in such a manner that it will be capable of being adapted for all kinds of vessels to cross the same, and will employ the necessary number of workmen, artisans, and laborers to that end. The said government may also maintain the necessary naval and military force, which at no time is to exceed one thousand men, without first obtaining the consent of the United States of Colombia. Said force to be removed as soon as the canal shall be in operation, should the latter-named government so ask it. The United States of America binds herself to see that the em-

ployés, workmen, artisans, and laborers, as well as the military and naval forces destined to the canal works shall be amenable to the laws and Government of the United States of Colombia.

ART. 6. As soon as the canal, together with its dependencies and appurtenances, shall be constructed, the inspection, possession, direction, and government of it will belong to the United States of America, and will be exercised by that government; that of the United States of Colombia having the power, after the exchange of this convention, of keeping a permanent commission of agents, with the right to inspect the respective operations, to ascertain the tonnage of vessels, to examine the accounts, and to report thereupon to the Government of the United States of Colombia; but not to interfere in the supervision, government, management, direction, and administration of the canal.

ART. 7. The Government of the United States of America will establish the tariff of rates of passage and transportation through the canal upon the basis of perfect equality for all nations in time both of peace and war. The yield of the canal will be applied in preference to the reimbursement of the expenses, management, service, and government of the canal, and of the capital invested in the explorations, drawings, and construction thereof, including in the cost of construction the indemnities that may have to be paid for the property of private individuals, and to the Panama Railroad Company, should the case arrive, conformable to the contract between the Government of Colombia and said Company. Twelve years after the canal shall have been in service, the Government of Colombia will have the right to ten per cent. of the net proceeds of the enterprise, and to twenty-five per cent. from the moment in which the Government of the United States of America shall have reimbursed herself the capital invested in the work of the act of placing the same in operation, even if the reimbursement shall have been effected within the first twelve years. The payment of the share accruing and *due* to Colombia is to be made in the city of New York at the expiration of every six months. For the effects of this article it is established: 1. That the annual expenses of the undertaking shall in no event exceed thirty per cent. of the gross annual proceeds, without the express consent of the two contracting parties; 2. That the net proceeds of the enterprise accruing to the Government of the United States of America shall be preferably applied, from the first year of the canal being in service, to the reimbursement of the capital; and, 3. That, to liquidate the net proceeds of the enterprise, no deduction is to be made for interest upon the capital expended on the works, nor for the sums that may be set aside to make a reserve or sinking fund.

ART. 8. The United States of Colombia will preserve her political sovereignty and jurisdiction over the canal and adjacent territory; she will, however, not only permit, but guarantee to the United States of America, agreeably to the constitution and existing laws of Colombia, the peaceable employment, government, direction, and management of the canal, as hereinbefore specified.

ART. 9. The United States of America will have the right to use the canal for the transportation of troops, munitions of war, and ships-of-war, in time of peace. The entrance to the canal will be rigorously closed to the troops, vessels, and munitions of war, of nations that may be at war with another or with others.

ART. 10. Colombia shall not exact toll, or any dues whatsoever, upon the vessels, passengers, money, merchandise, and other effects passing through the canal from one ocean to the other; but such effects as may be intended for sale or consumption in the interior of the republic will be subject to the duties and taxes already established or that may be established.

ART. 11. Should a military or naval force ever be needed for the protection or defence of the canal, and the Government of the United States of America agree to furnish it, said force will operate with that end for the necessary time, under the orders, in accord, of both governments, and will be paid out of the proceeds of the canal.

ART. 12. The rights and privileges herein specified will last for the term of one hundred years, to be reckoned from the time that the canal shall be opened to the public service; and at the expiration of this term the Government of Colombia will enter into the possession, property, and enjoyment of the canal, and accessory lands, wharves, warehouses, and other appurtenances of the enterprise, constructed at the extremities or on the route, without having to pay therefor, or to grant any indemnity whatever. The United States of America will reserve the benefits that she may have derived during the said one hundred years.

ART. 13. The United States of America may transfer by law all her rights, privileges, duties, property, and obligations in reference to the exploration, mapping, construction, and preservation of the said canal to any private citizen, or association of citizens of the United States of America; and in that event such citizen or association will enjoy all the rights, property, and privileges, and be subjected to all the obligations and binding clauses agreed upon in this treaty by the United States of America. The differences that might occur between such citizen, or association, and the United States of Colombia, upon the meaning or the fulfilment of the clauses of this treaty, will be adjusted by a tribunal composed thus: each one of the parties will name one commissioner, and these judges will appoint an umpire to give his decision upon such cases wherein there may be disagreement between them. The court will reside at Bogota, and no appeal against its decisions is left to either of the parties. If, after one of the two parties shall have been required to make appointment of a judge commissioner, said party shall fail to do it, or appoint some person unable or unwilling to accept the appointment, then, and in that case, it is to be made by the Government of the United States of America. The expenses incurred by the tribunal will be taken from the gross proceeds of the canal, if this be already in operation; otherwise, the said expenses will be paid share and share alike by the parties, with the right to reimburse themselves out of the first proceeds of the canal. Should the judge commissioners disagree upon the appointment of the umpire, the two contracting governments will submit the decision of the questions at issue to the arbitration of another friendly government in the form stipulated in Article 17.

The political obligations contracted in this agreement by the United States of America and those of Colombia are permanent and irrevocable.

ART. 14. Such citizen or association will hold his or their property, rights, immunities, and privileges in the said canal and its vicinity, likewise subject to the reservations herein contained in favor of the United States of Colombia.

ART. 15. In the event of the Government of the United States of America making the transfer mentioned in Article 23, the privilege will cease, and the Government of Colombia enter upon possession and enjoyment, free of cost, of the canal and the appurtenances thereof in the following cases: *First.* If the citizen or association of citizens in whose favor the transfer has been effected should sell or lease the enterprise to any foreign government. *Second.* If said citizen or association of citizens coöperate in any act of rebellion against the Government of the United States of Colombia, having for its object to withdraw from her dominion the territory upon which the canal may be. *Third.* If, after the canal shall have been constructed and put into operation, the transit through it should be stopped for more than three years, excepting in fortuitous cases, or such as may be beyond the

population, 2,794,473, not including the uncivilized Indians, whose number is estimated at 126,000. The republic consists of the nine States of Antioquia, Bolivar, Boyaca, Cauca, Cundinamarca, Magdalena, Panama, Santander, and Tolima.

The relations of the Federal Government and the governments of the several States were, apparently, disturbed during 1869. The Colombian Senate annulled, in March, a law of the State of Panama for the confiscation of the property of political offenders.

A report was brought before Congress on March 31st, recommending the indictment of the President of the republic, Santos Gutierrez, before the Senate of plenipotentiaries of the nation, together with the Ministers Santiago Perez, Miguel Samper, Narciso Gonzales Lineros, and Serjio Camargo, upon charges arising out of the President's action in deposing the President of the State of Cundinamarca. Congress, however, acquitted the President.

The proposition for an amnesty, allowing ing General Mosquera to return to the country, was rejected in the Senate by fourteen votes against thirteen. It had previously passed the House of Representatives by thirty-two votes against twelve. The Senate refused to reconsider the proposition, though urged to do so by the lower House.

The most important subject in the history of Colombia, during the year 1869, is the negotiations concerning the construction of the Darien Canal. In January, 1869, a treaty for the building of a ship-canal across the Isthmus of Panama was concluded between General C. Cushing and the Colombian plenipotentiaries. The negotiation had been lingering for several months in the hands of Mr. Sullivan, the American minister, and was finally brought to an end about the middle of December, 1868, when the Colombian Commissioners, satisfied that they could not conclude any thing, resigned their commission, and the whole subject was decided to be laid before the Senate in consultation. It seems that the most important point of difference arose from the neutrality of the canal in time of war, Mr. Sullivan maintaining that the right should be stipulated for Colombia and the United States to close it to the vessels of a nation with whom either of them was at war; while the Colombian commissioners strenuously advocated a permanent neutrality of the canal.

Mr. Cushing arrived in January. An agreement was finally obtained, and a treaty submitted to the President's approval, which was readily granted. The stipulations of this important document were as follows:

ARTICLE 1. Grants to the United States of America the right to effect the necessary surveys and explorations on the isthmus, after which, if the project is found to be feasible, to draw the proper maps, etc., employing therefor the requisite civil and military superintendents, engineers, accountants, and paymasters, and other agents and laborers, and the war and transport vessels that may be required. The military force not to exceed at any one time five hundred men, officers included, without first obtaining the express consent of the United States of Colombia, and all persons so employed, both civil and military, shall pay due respect and obedience to the civil authorities of Colombia. And, when the explorations and drawings shall be completed, the President of the United States of America shall certify the fact to the other high contracting party, accompanying the maps and specifications; such explorations, maps, and descriptions, to be filed in the archives of both governments. The route and projects thus fixed upon may subsequently be altered by the Government of the United States of America giving due notice to the Republic of Colombia. But the canal shall not be constructed on the route of the Panama Railroad, unless the consent of the company owning the same has been obtained.

ART. 2. Colombia agrees to grant, detach, and apply for the works of the canal all the territory, including sea and tributary waters, that may be pointed out for that purpose and be necessary, and besides, ten miles of public lands, uncultivated and without population, on each side of the canal, through all its length, and all the materials for construction found within such grants, private parties to be paid for such materials as they supply—the Colombian Government will establish the requisite *expropriations* in conformity to her laws. The ten miles of land given on each side of the canal are to be measured and divided into equal lots; their front upon the canal or its annexes not to exceed three thousand three hundred yards; said lots to be equally distributed between the two governments in such a manner that to neither of them shall belong two adjoining lots, nor the two first lots of either of the extremities of the canal; and both governments may dispose at will of their own lots, but with the condition attached that they are to be applied to the uses of transit by the canal and for its annexes. The Government of the United States of America will choose the first lot to commence the distribution, and will return to that of Colombia such lots or portions thereof as they may not have transferred to private parties at the end of the term of this contract, without claiming any sum for improvements or any other cause.

ART. 3. The United States of Colombia binds herself not to open nor permit to be opened any other interoceanic canal, or railroad, through her territory from the Atlantic Ocean to the Pacific, without having first obtained the consent of the Government of the United States of America.

ART. 4. The disbursement, cost, and expenses of the explorations, drawings, construction, and arrangement of said canal and its ports, way stations, depots, and bays, including the indemnities paid for private property, and the proper indemnity to the Panama Railroad Company, should the case arrive, in accordance with the contract made by the Government of Colombia and approved by the Congress on the 15th of August, 1867, will be at the expense of the United States of America, but exclusively with reference to the objects of this convention. The materials furnished by the United States of Colombia for the works of the canal will remain in charge of the United States of America, but exclusively for the objects of this convention.

ART. 5. The United States of America will construct the said canal and its dependencies in such a manner that it will be capable of being adapted for all kinds of vessels to cross the same, and will employ the necessary number of workmen, artisans, and laborers to that end. The said government may also maintain the necessary naval and military force, which at no time is to exceed one thousand men, without first obtaining the consent of the United States of Colombia. Said force to be removed as soon as the canal shall be in operation, should the latter-named government so ask it. The United States of America binds herself to see that the em-

ployés, workmen, artisans, and laborers, as well as the military and naval forces destined to the canal works shall be amenable to the laws and Government of the United States of Colombia.

ART. 6. As soon as the canal, together with its dependencies and appurtenances, shall be constructed, the inspection, possession, direction, and government of it will belong to the United States of America, and will be exercised by that government; that of the United States of Colombia having the power, after the exchange of this convention, of keeping a permanent commission of agents, with the right to inspect the respective operations, to ascertain the tonnage of vessels, to examine the accounts, and to report thereupon to the Government of the United States of Colombia; but not to interfere in the supervision, government, management, direction, and administration of the canal.

ART. 7. The Government of the United States of America will establish the tariff of rates of passage and transportation through the canal upon the basis of perfect equality for all nations in time both of peace and war. The yield of the canal will be applied in preference to the reimbursement of the expenses, management, service, and government of the canal, and of the capital invested in the explorations, drawings, and construction thereof, including in the cost of construction the indemnities that may have to be paid for the property of private individuals, and to the Panama Railroad Company, should the case arrive, conformable to the contract between the Government of Colombia and said Company. Twelve years after the canal shall have been in service, the Government of Colombia will have the right to ten per cent. of the net proceeds of the enterprise, and to twenty-five per cent. from the moment in which the Government of the United States of America shall have reimbursed herself the capital invested in the work of the act of placing the same in operation, even if the reimbursement shall have been effected within the first twelve years. The payment of the share accruing and *due* to Colombia is to be made in the city of New York at the expiration of every six months. For the effects of this article it is established: 1. That the annual expenses of the undertaking shall in no event exceed thirty per cent. of the gross annual proceeds, without the express consent of the two contracting parties; 2. That the net proceeds of the enterprise accruing to the Government of the United States of America shall be preferably applied, from the first year of the canal being in service, to the reimbursement of the capital; and, 3. That, to liquidate the net proceeds of the enterprise, no deduction is to be made for interest upon the capital expended on the works, nor for the sums that may be set aside to make a reserve or sinking fund.

ART. 8. The United States of Colombia will preserve her political sovereignty and jurisdiction over the canal and adjacent territory; she will, however, not only permit, but guarantee to the United States of America, agreeably to the constitution and existing laws of Colombia, the peaceable employment, government, direction, and management of the canal, as hereinbefore specified.

ART. 9. The United States of America will have the right to use the canal for the transportation of troops, munitions of war, and ships-of-war, in time of peace. The entrance to the canal will be rigorously closed to the troops, vessels, and munitions of war, of nations that may be at war with another or with others.

ART. 10. Colombia shall not exact toll, or any dues whatsoever, upon the vessels, passengers, money, merchandise, and other effects passing through the canal from one ocean to the other; but such effects as may be intended for sale or consumption in the interior of the republic will be subject to the duties and taxes already established or that may be established.

ART. 11. Should a military or naval force ever be needed for the protection or defence of the canal, and the Government of the United States of America agree to furnish it, said force will operate with that end for the necessary time, under the orders, in accord, of both governments, and will be paid out of the proceeds of the canal.

ART. 12. The rights and privileges herein specified will last for the term of one hundred years, to be reckoned from the time that the canal shall be opened to the public service; and at the expiration of this term the Government of Colombia will enter into the possession, property, and enjoyment of the canal, and accessory lands, wharves, warehouses, and other appurtenances of the enterprise, constructed at the extremities or on the route, without having to pay therefor, or to grant any indemnity whatever. The United States of America will reserve the benefits that she may have derived during the said one hundred years.

ART. 13. The United States of America may transfer by law all her rights, privileges, duties, property, and obligations in reference to the exploration, mapping, construction, and preservation of the said canal to any private citizen, or association of citizens of the United States of America; and in that event such citizen or association will enjoy all the rights, property, and privileges, and be subjected to all the obligations and binding clauses agreed upon in this treaty by the United States of America. The differences that might occur between such citizen, or association, and the United States of Colombia, upon the meaning or the fulfilment of the clauses of this treaty, will be adjusted by a tribunal composed thus: each one of the parties will name one commissioner, and these judges will appoint an umpire to give his decision upon such cases wherein there may be disagreement between them. The court will reside at Bogota, and no appeal against its decisions is left to either of the parties. If, after one of the two parties shall have been required to make appointment of a judge commissioner, said party shall fail to do it, or appoint some person unable or unwilling to accept the appointment, then, and in that case, it is to be made by the Government of the United States of America. The expenses incurred by the tribunal will be taken from the gross proceeds of the canal, if this be already in operation; otherwise, the said expenses will be paid share and share alike by the parties, with the right to reimburse themselves out of the first proceeds of the canal. Should the judge commissioners disagree upon the appointment of the umpire, the two contracting governments will submit the decision of the questions at issue to the arbitration of another friendly government in the form stipulated in Article 17.

The political obligations contracted in this agreement by the United States of America and those of Colombia are permanent and irrevocable.

ART. 14. Such citizen or association will hold his or their property, rights, immunities, and privileges in the said canal and its vicinity, likewise subject to the reservations herein contained in favor of the United States of Colombia.

ART. 15. In the event of the Government of the United States of America making the transfer mentioned in Article 23, the privilege will cease, and the Government of Colombia enter upon possession and enjoyment, free of cost, of the canal and the appurtenances thereof in the following cases: *First.* If the citizen or association of citizens in whose favor the transfer has been effected should sell or lease the enterprise to any foreign government. *Second.* If said citizen or association of citizens coöperate in any act of rebellion against the Government of the United States of Colombia, having for its object to withdraw from her dominion the territory upon which the canal may be. *Third.* If, after the canal shall have been constructed and put into operation, the transit through it should be stopped for more than three years, excepting in fortuitous cases, or such as may be beyond the

control of such citizen or association of citizens. It is well understood that the cases enumerated in regard to cessation are also included in those to be decided upon by the court established according to Article 13: said court will decide upon the fact and the law.

ART. 16. This treaty will cease and determine if the United States of America does not execute or cause to be executed the explorations and maps of the canal herein referred to, within three years from and after the ratification and exchange of this convention; or does not commence or cause to be commenced the construction of the canal within five years after the said ratification, or if she fails to have the same finished within fifteen years from said ratification.

ART. 17. Should any differences unfortunately occur between the United States of America and the United States of Colombia, in reference to this convention, said differences shall be submitted to the arbitration of some impartial government, and the decision thereof carried out and respected in all cases.

ART. 18. The United States of Colombia and the United States of America mutually agree to second their efforts in soliciting the friendship and guarantee of the other nations in favor of the stipulations of neutrality mentioned in Articles 7 and 9, as well as of the sovereignty of the United States of Colombia over the territory of the Isthmus of Panama and of Darien.

ART. 19. The present treaty is to be approved and ratified by the President of the United States of Colombia, by and with the advice and consent of the Congress thereof; and by the President of the United States of America, by and with the advice and consent of the Senate thereof; and the ratifications shall be exchanged in the city of Bogota within twenty months, to be reckoned from the day of the signing of this convention.

In testimony whereof, we, the plenipotentiaries of the United States of Colombia, and of the United States of America, have signed and sealed these presents in the city of Bogota, on the 14th day of January, 1869.

[L. S.] MIGUEL SAMPER,
TOMAS CUENCA,
Plenipotentiaries of the United States of Colombia.

[L. S.] PETER J. SULLIVAN,
Minister Resident and Plenipotentiary of the United States of America.

Executive Power of the Union, Bogota, January 16, 1869.—The foregoing treaty is approved. Pass the same to the Congress for the exercise respecting it of the 12th of the attributes conferred upon that body by the 49th Art. of the National Constitution.

[L. S.] SANTOS GUTIERREZ.

The Secretary of the Interior and of Foreign Relations: S. PEREZ.

The preamble of the above treaty declares the opening of the canal between the two oceans across the continental isthmus to be essential to the prosperity of the two contracting countries and to the world at large, both in the interest of commerce and of civilization. A number of the leading journals in Bogota strongly opposed the confirmation of this treaty, their main object being, it was thought, to get as much money from the United States as possible. This opposition of the press, together with French and English influences, induced the Federal Senate to reject the treaty. In the State of Panama public opinion began, however, to appreciate the necessity of having the canal, and on October 16, 1869, the Legislative Assembly passed, unanimously, the following resolution:

Resolved, That Congress be solicited to reconsider the treaty for the excavation of a canal uniting the Atlantic and Pacific Oceans by way of the Isthmus of Panama and Darien, which was celebrated in Bogota on the 14th of January of the present year, between the Government of Colombia and that of the United States of America.

The representatives from the State of Panama to the national Congress were consequently instructed to use every endeavor to secure the passage of the canal project. So anxious are the people that the matter shall be carried through, and so convinced of the great benefits which would accrue to them and to the commerce of the world by the opening of a canal through their State, that they would be perfectly willing, were the coming Congress to take unfavorable action upon it, to sever themselves from the Colombian Confederation altogether, and claim protection from the Governments of the United States and Great Britain.

The United States Senate took no action on the treaty during the year 1869; but General Grant, who has always taken a profound interest in this question, which has increased with his elevation to the presidency, obtained permission from the Colombian Government to send a force to the isthmus to examine and locate a survey for the most practicable route for a canal. President Grant accordingly directed the Secretary of the Navy to detail a sufficient force to make the necessary surveys and select the best route. For this work the Secretary of the Navy detailed the Nipsic, Commander Selfridge, and the Guard. These vessels were to take out several officers belonging to the Coast Survey to assist in the work. The whole matter was placed under the superintendence of Rear-Admiral Davis, who is familiar with the isthmus and with the several routes heretofore proposed for a ship-canal. For when, in March, 1866, the Senate passed the following resolution—

Resolved, That the Secretary of the Navy furnish, through a report of the Superintendent of the Naval Observatory, the summit-level, and distance by survey of the various proposed lines for interoceanic canals and railroads between the waters of the Atlantic and Pacific Oceans; as also their relative merits as practicable lines for the construction of a ship-canal, and especially as relates to Honduras, Tehuantepec, Nicaragua, Panama, and Atrato lines, and also whether, in the opinion of the Superintendent, the Isthmus of Darien has been satisfactorily explored; and if so, furnish in detail charts, plans, lines of levels and all information connected therewith, and upon what authority they are based—

Admiral Davis, in reply to this resolution, on the 12th of July, 1866, submitted a report, through the Secretary of the Navy, which exhausted the whole subject and contained all the information then known relative to a ship-canal across the isthmus. The facts and conclusions set forth in this report will be of great service to the surveying party which at the close of the year 1869 was to leave for the isthmus. In concluding his report, Admiral Davis says:

It is to the Isthmus of Darien that we are first to

look for the solution of the great problem of an interoceanic canal. We know enough of the interior topography to adopt the view of Dr. Cullen, that, if we leave the Indian trail, which always passes over the highest ground, and explore the country beyond the ordinary line of travel, we shall probably find a valley transversely dividing the Cordilleras, or at least a lower ridge than any yet surveyed. Our most trustworthy engineers in these regions, Trautwine, Michler, Prevost, McDougall, and others, tell us that it is impossible, from the very limited inspection of the country taken on the Indian line of travel, to form any conception of the nature of the ground, even in the immediate vicinity.

The surveying party going out on the Nipsic and Guard are instructed to make a thorough exploration of all this region of country, with the view of actually constructing the ship-canal, while the surveying parties who have visited the isthmus heretofore were either sent out by private parties or by the Government for the purpose of obtaining information.

The new United States minister, General Hurlbut, presented his credentials to the President, at the capital, on November 13th. After exchanging the usual diplomatic formalities, the general referred to the all-important canal question, saying:

"I have received instructions to call your Excellency's attention to the fact that the barrier formed by the Isthmus of Suez has now ceased to exist, and that the commerce of the nations of Europe now flows eastward without impediment; while, up to the present time, nothing has been definitely arranged by the nations of America in order to procure the removal of the obstacle presented by the isthmus which lies within the territory of this republic. I shall have the honor to present to your Excellency, on behalf of my Government, the important and matured opinion of the President of the United States upon this question—one of vital transcendency to the true prosperity of both nations, and of so great importance to the commerce of the world." The President, in replying to General Hurlbut's allusion to the canal, said: "You have manifested the necessity which is experienced by all nations that the barrier which the Isthmus of Panama presents to general interoceanic communication should be destroyed as quickly as possible. Colombia is also fully aware of this necessity, and is disposed to do all that lies within the power of the republic to further this great undertaking; and my Government, understanding the great influence which this work is certain to exercise upon the destinies of the world, and of America in particular, will examine with the greatest attention the ideas which the President of the United States has charged you to transmit to us, and no effort shall be spared to secure the fulfilment of so great an aspiration." From the foregoing, it is very evident that the Colombian Government is now most favorably disposed to entertain proposals from the United States for the construction of the canal.

The General as well as the State government of Colombia is in a sad financial condition. The State government of Panama has found it impossible to collect the heavy commercial taxes laid illegally upon the merchants, and President Correoso has been compelled to propose a compromise with them. A tax was sought to be imposed by the same State government upon live-stock (bullocks and hogs) sent off to the steamers of the Pacific Mail Steamship Company, against which imposition the United States consul at Panama, Thos. K. Smith, entered an energetic protest, as being nothing more nor less than an export duty, which the State had no right to levy. The foreign merchants petitioned the Legislature for a reduction of the commercial contributions, but the Legislative Assembly adjourned (end of October) without taking any further action on this question, leaving the merchants the disagreeable alternative of paying the commercial tax under protest or giving up business.

According to the message of the President of Colombia, the receipts of the Government for 1868 from the Panama Railroad were $418,198. The calculations of income and expenses of the Government for the present year show a deficit of $385,000. The review of the financial condition of the country is very gloomy and discouraging, nor is there much hope to be gained for its future peace and prosperity from the remarks of the President. He says: "In all the States the necessity of bettering their condition is felt, and it is understood that this must be commenced by making roads. In the midst of backwardness, general poverty, and the state of bankruptcy in which nearly all the sectional governments are at present, attention is turned to that of the Union for help, but it cannot answer them in an honorable way even with promises. The country, on the other hand, has reached such a point of decline, the result of the disturbances more or less absolute during the past years, that it is necessary to commence the great work of its regeneration at the foundation by reëstablishing security."

The Legislative Assembly of Panama decided, previous to adjourning in October, that the renewal of the charter and the sale of the "reserves" by the General Government, two years ago, were strictly legal and constitutional, and a vote was passed declaring null and void the action of the Assembly of 1867 in protesting against the same. Of the nine States forming the republic, there are now only three which exhibit any opposition to the railroad.

A bill, sanctioning the importation of coolies into the State of Panama, has been passed by the Assembly and approved by the President. The laws of this State have not hitherto permitted the introduction of laborers under contracts for a longer period than two years. This bill provides that contracts (which may be transferred) for a term of four years may be entered into, but with Chinese only, as some of the representatives expressed their fears that any other class of immigrants might be a dangerous element in times of revolution. This is regarded an important fact, considered in connection with the proposed canal. Contractors can supply their own laborers, and the history of the construction of the Central Pacific Railroad furnishes ample proof of what Chinese laborers can do.

COLORADO. (*See* TERRITORIES.)

COMMERCE OF THE UNITED STATES FOR 1869. The general commerce of the country, for the year ending June 30, 1869, shows the enormous sum of $437,000,000 in foreign imports (all gold value); while the total exports were $428,000,000, mainly in paper values ranging from 70 to 80 cents per dollar. This is an excess of about $200,000,000 of imports over the value of the exports. The foreign commerce of the port of New York—which comprises a very large amount of the foreign commerce of the whole country—for the calendar years 1866 to 1869, is represented in the following tables:

The first table shows the dutiable goods entered each month directly for consumption; the second the monthly entries for warehousing; the third the free goods which are thrown directly on the market; the fourth the specie, and the fifth the total monthly entries of all kinds.

Entered for Consumption.

1869.....	275,779,976	14,789,235	15,788,462	306,357,673

In the above table are included, under the head of dutiable, the duty-paying goods entered directly for consumption, as well as those entered for warehousing; these, with the free goods and specie, make the total entered at the port. The free list was greatly curtailed by Congress seven years ago, especially by the transfer of tea and coffee to the list of dutiable articles. The specie imports include considerable sums brought here to be reshipped to foreign ports, and they will be found again among the reëxports of foreign articles.

The following table shows the value of dry goods imported during the three calendar years distinguished from the general merchandise and specie:

Classification of Imports at New York.

	1867.	1868.	1869.
Dry goods	$86,353,643	$80,905,834	$94,726,417
Gen'l merchandise	163,078,496	163,202,611	195,842,794
Specie	3,306,339	7,085,389	15,788,463
Total imports	$252,648,475	$251,193,884	$306,357,673

During the year 1869, out of over three hundred millions in foreign products landed at New York, less than ninety-five millions came under the head of dry goods, or about thirty-one per cent. of the whole.

The total exports of the United States to foreign countries, in the last fiscal year, were $428,000,000; of which nearly one-half were from New York alone. The following represents the exports from New York to foreign ports, exclusive of specie, for four calendar years, ending December 31, 1869:

Quarter.	1866.	1867.	1868.	1869.
First	$60,972,581	$49,876,879	$42,093,366	$36,566,734
Second	46,766,396	46,270,261	41,331,668	43,705,409
Third	38,361,203	36,998,664	36,549,086	54,933,449
Fourth	46,209,435	52,214,732	44,101,189	55,021,194
Total	$192,289,554	$186,790,025	$164,066,109	$195,226,706

The monthly movement for four years is annexed:

Exports of Domestic Goods and Produce from New York to Foreign Ports for the Years 1866 to 1869.

Including the shipments of specie, the total for last year has fallen behind that of either the previous three years, but the exports of domestic merchandise show a slight gain.

The shipments of gold are counted at their tale value; but all others, with unimportant exceptions, are given at their market value in paper money at the time of shipment.

These figures refer only to the foreign commerce of the port of New York and not to the foreign trade of the whole United States. About two-thirds of the entire imports of the whole country are landed here, and nearly fifty per cent. of the entire exports shipped hence.

The cash duties are not collected on the goods as landed, the bonded goods paying only as they are entered for consumption. The following is a comparison of the monthly receipts at New York:

Receipts of Customs at New York.

MONTHS.	1867.	1868.	1869.
January...	$9,472,948 48	$7,133,428 43	$9,615,894 43

Total...	$114,085,990 34	$113,296,713 62	$125,019,718 69

The foregoing figures represent coin. The imports are entered at their foreign cost in gold, freight and duty not included; so that the actual cost in currency here, of the last year's imports, without profit, would be about $600,000,000.

The results are not favorable to ourselves. When we compare the specie value of the exports with the aggregate values of the foreign imports, the balance of trade is decidedly against us, and has to be met by an export of Government bonds and other securities, which eventually must be paid in gold.

The following table shows the aggregate annual foreign imports and exports of the United States, ending June 30, 1857–'69:

FOREIGN IMPORTS AND EXPORTS OF THE UNITED STATES, ETC.

	Total Imports.	Total Domestic Exports.	Foreign Exports.	Total Exports.	Immigrants. Aliens.	Premium on Gold. Average yearly.
1857.....	$360,890,141	$338,985,065	$23,975,617	$362,960,682	251,306	.....

COMMERCIAL CONVENTIONS. During the past year five National Commercial Conventions have been held, of which four occurred in the Mississippi Valley, and were composed largely of delegates from the Southern and Western States. Many important commercial questions were discussed, with a view of effecting great changes in certain branches of trade. In all the conventions the subjects of a Southern Pacific Railway, immigration to the South and West, and the improvement of navigation in the Mississippi Valley, held a marked prominence; the last having in view an entire change of the freight transportation system between the West and the East by opening an advantageous outlet, *via* the Mississippi River, for the vast produce of the West, destined to Eastern markets.

The first of the conventions was held in the latter part of May, at Memphis, Tenn., and was very largely attended; the delegates, mostly from the South and Southwest, numbered upward of eleven hundred, and represented twenty-two States. The subject of a Southern Pacific Railway received an extended and thorough discussion. The committee, to whom it was referred, reported the following resolutions, which were unanimously adopted:

Resolved, That, in the opinion of this convention, the interests of the whole country, and especially the Southern States, could be served by a main trunk railway line from San Diego, Cal., through Junction River, Colorado, and the Gila, and along the valley of the Gila south of that river to El Paso, on the Rio Grande, and thence to a convenient central point near the thirty-second parallel of latitude east of Brazos River, in the State of Texas; from which main trunk feeder-roads should lead from St. Louis, Cairo, Memphis, Vicksburg, New Orleans, and other points, all of which feeder-roads having equal right of connection with their main trunk; while similar feeder-roads from San Francisco and other points on the Pacific coast should have similar equal rights of connection.

Resolved, That the president of the convention be requested to forward a copy of this resolution to the President and Vice-President of the United States, and Speaker of the House of Representatives, and request them to present the same to the respective Houses of Congress.

The committee also stated the following reasons for selecting this route:

1. It is the shortest line connecting the Gulf of Mexico and Valley of the Mississippi with the Pacific; and,
2. It is the line, of all those now unoccupied, of most easy grades and cheapest constructed on permit.
3. It passes through less inhospitable and barren country, and over more fertile and hospitable lands, than any other unoccupied route proposed.
4. The line is touched by water transportation at three points, affording the greatest facilities for construction, and consequently hastening and cheapening such construction.
5. The line will open to the world the great mineral resources of Arizona and Sonora, and render more

valuable the stock-raising districts of Texas, New Mexico, and Northern Mexico, and thus enjoy unrivalled traffic.

6. It will inevitably attract numerous feeders from the neighboring Republic of Mexico, and thus not only stimulate enterprise there, but secure to our shipping-ports a greater portion of the bullion which now seeks Europe by hazardous conductas and smuggling vessels.

7. It will open the new cotton-growing area in Texas, New Mexico, and Arizona, the lands for cotton-growing being now useless on account of the lack of facilities for transportation.

8. It is well known that some roads, which would be among the feeder-roads referred to in the resolution, have not only been projected, but are already in active course of construction, without waiting for Government subsidy or encouragement.

9. The last, though not least—the construction of this route, more than all else besides, encourages what we feel to be the great necessity of the hour—immigration and direct trade with Europe.

A report of the Committee on Rivers and Navigation was adopted. After rehearsing the vast importance of a safe, speedy, and cheap system of transportation on Western waters as necessary to the settlement and cultivation of the extensive fertile regions of the South and Southwest, it indorses the efforts of the Mississippi Valley Navigation Company for the improvement of the system of Western navigation.

The sense of the convention on the question of Chinese labor was expressed in the following resolution, which was adopted, with a preamble, stating the cheapness of this class of labor, and the lack of means on the part of individual planters to import foreign laborers:

Resolved, That all the railroads in the South be requested to employ upon these roads as many as possible of the Chinamen recently discharged on the Pacific Railroad, and that all companies engaged in building new railroads be especially requested to employ as many of these laborers as they possibly can.

Resolutions were passed approving of the scheme of direct trade between Norfolk and Liverpool, as well as between other prominent Southern ports and Europe; advocating cheap freights on railroads for fertilizers, building-materials, farm-implements, etc., and low rates of fare for the immigrant, as a means of promoting the agricultural interests of the South and West; in favor of requesting Congress to cause the collection and publication of full reports concerning cotton; showing the cost and material advantages, and the most efficient process of manufacture at home and abroad; the best routes to foreign markets, and the cost of transportation; and in favor of improving the levees of the Mississippi River, so as to secure the vast alluvial low lands of the valley from overflow. A committee was appointed to memorialize Congress upon this subject, and the following resolution was adopted:

That we earnestly invoke the early attention of Congress to such legislation as may be necessary to extend the aid of the Government of the United States to the States of Missouri, Mississippi, Louisiana, and Arkansas, by the indorsement of the United States of the bonds of these States in such sums as may be necessary to rebuild, in a thorough and permanent manner, the levees of the Mississippi River when these States, by satisfactory legislation, shall have provided for the interest on the bonds, and for their redemption at maturity.

The subject of immigration held a prominent place in the deliberations of the convention. The committee made a long report, setting forth the superior advantages of the South for the investment of capital and labor; recommending to European immigrants, destined to the Northwestern States, the route *via* the Mississippi River in preference to New York; and promising to extend to all immigrants coming to the South friendly sympathy and full protection in the rights of person and property. After the appointment of a committee to report a plan for the permanent organization of the Southern Commercial Convention, this body adjourned, to meet at Louisville, Ky., on the 12th of the following October.

The second convention of the year was held at New Orleans, on the 25th of May and the three following days. It was made up chiefly of delegates from the cities of the Mississippi Valley and the lake region. One of the most important subjects under consideration was that relating to the removal of obstructions at the mouth of the Mississippi and elsewhere on its tributaries, which led to a thorough review of the different systems of transporting freight to Eastern cities. It was stated that, of the gross value of exports of the United States for the year ending June, 1868, amounting to $476,348,029, ninety-five per cent. was the domestic produce chiefly of the Mississippi Valley; that from one-third to one-half of all the wheat, corn, oats, and pork, annually produced in the United States came from five Northwestern States; and that the produce of this section finds its way to Eastern markets by cross-routes, chiefly because of the obstructed navigation of the Mississippi and its tributaries. It was stated that the cost of transporting a bushel of wheat from St. Paul to New York *via* Chicago was seventy cents; and that with the necessary improvements in navigation in the Mississippi Valley wheat could be carried from St. Paul to New York, by river and sea, at a cost not exceeding twenty-five cents per bushel. After an animated discussion of this subject, resolutions were adopted in favor of memoralizing the Government to adopt measures for the removal of obstructions at the mouth of the Mississippi, and in the upper Mississippi, and the completion of improvements at the falls of the Ohio; and recommending that the municipal authorities of the river cities should reduce their rates of pilotage, towage, and wharfage, and extend every facility for the advantageous transportation of grain in bulk and of other freight; and that the national Government should create ports of entry and delivery at all the principal cities of the Mississippi and its tributaries.

There was much discussion as to the most de-

sirable route for the Southern Pacific Railway. A report in favor of a longitudinal route from the centre of the Mississippi Valley to Mazatlan or San Blas, in Mexico, was presented but did not receive the approval of the convention. The route finally indorsed was substantially the same as that recommended by the Memphis Convention. A report was adopted requesting the people of the Southern and Western States to afford all possible facilities to immigrants, and urging the several Legislatures of those States to appoint commissioners of immigration, whose duty it should be to invite immigration from all sections by means of agents, and by reliable publications, setting forth the resources of this section, and the advantages offered to immigrants. That portion of the report recommending the importation of Chinese laborers met with opposition, and was stricken out. The convention was in favor of memoralizing Congress to adopt measures for the protection of the low lands of the Mississippi Valley from inundation, for the adoption of a uniform three-cent postage-stamp, and for a ship-canal across Florida.

This convention adjourned, to meet at Keokuk, Iowa, on the 7th of September.

At the adjourned convention, William Vandervere was chosen president. Estimates were presented, showing the cost of completing the improvements already begun at Des Moines Rapids, Rock Island Rapids, the falls of the Ohio, and the mouth of the Mississippi, to be $9,487,213. The Committee on the Mississippi River and its Tributaries reported the following preamble and resolutions, which were adopted:

Whereas, cheap transportation is the great want of the West and the entire nation—thereby meeting the first great principles of the wealth of nations, cheap food for the masses, better remuneration for the producer, and an increase of the exports of the nation; and

Whereas, the relative cost of transportation per mile by water and by rail is as one to eight; and

Whereas, the Mississippi River and its tributaries afford 20,000 miles of connected navigation, and are the cheapest natural highways for the commerce of the valley in which are produced annually two-thirds of the breadstuffs and provisions and four-fifths of all the exports of the entire country; and

Whereas, the rate of transportation on said river and its tributaries is much increased on account of the interruption, danger, and delay, caused by certain obstructions: therefore,

Resolved, That the people in the Mississippi Valley now in convention assembled do hereby respectfully and earnestly petition the Honorable Senators and Representatives of the Forty-first Congress to appropriate, at their next session, so much as shall be necessary to complete the improvements of the Mississippi River at the Des Moines and Rock Island Rapids, and the completion of the Louisville and Portland Canal at the falls of the Ohio.

Resolved, That, in view of the injustice of discrimination on any railroads against local traffic to and from river stations, we recommend to Congress and to State Legislatures the passage of a general enactment, requiring that all railroads shall grant to local traffic rates of freight proportioned to the lowest through-rate of freight granted on the same roads.

In regard to immigration the convention voted that an increased supply of skilled and intelligent labor was necessary for the development of the resources of the Mississippi Valley, and that every effort should be made to encourage free immigration from every quarter.

A resolution was adopted in favor of petitioning Congress to make an appropriation for holding a World's Fair in the Valley of the Mississippi in the year 1871. No place was designated; but on behalf of St. Louis a proposition was made, that, if Congress would appropriate the amount of the premiums, that city would furnish the grounds and the buildings.

This committee also reported the draft of a bill, to be submitted to the Forty-first Congress, which proposes that any bridge hereafter to be built across the Ohio River, shall be made with continuous or unbroken spans, and that the span across the main low-water channel shall be not less than forty feet above extreme high-water mark, and shall be of such length as to leave not less than four hundred feet of unobstructed passage-way at all stages for navigation. There were other provisions respecting the construction of bridges so as to obviate all difficulties in the passage of steamers, and requiring the submission of all plans, for bridges to be built across the Ohio, to the Secretary of War; the main span of bridges to be built over the Mississippi to be not less than five hundred feet in the clear. This bill was approved in the convention by a vote of 78 to 9.

The committee on Foreign Commerce, having under consideration the two great modes of transportation between the West and the East, reported the following resolutions, which were adopted:

Resolved, That the Federal Senators representing the constituency of this convention are respectfully requested:

1. To examine the treaty relations between the United States and foreign powers with a view to obtaining such modifications or amendments thereof as will remove all obstacles to a free or reciprocal trade between the Mississippi River and such foreign nations.

2. To exercise their influence with the appointing power to secure for the Valley of the Mississippi a fair share of the diplomatic and consular appointments to foreign countries.

Resolved, That the river and port cities of the Mississippi Valley be requested to extend all the municipal facilities and commercial economies indicated in this report as a means of counteracting the rivalry of the cross-routes, and of regaining and increasing the domestic and foreign commerce of the Mississippi Valley.

Resolved, That the several States of the Mississippi Valley are requested to aid in establishing and sustaining an immigrant agency and depot at the city of New Orleans, on such terms as will secure to those States a fair share of the foreign immigration.

Resolved, That the representatives of the Valley of the Mississippi in Congress be requested to introduce bills for the increase and equalization of postal steam service, by additional subsidies to lines of steamers between the port of New Orleans and the principal ports of Europe, America, and Asia.

The subject of the removal of the national capital came before the convention, and it was

resolved that the interests of the people of the whole country require the removal of the capital from its present location to some point in the Mississippi Valley. After a session of three days, the convention adjourned.

The fourth great Commercial Convention of the year assembled at Louisville, Ky., on the 13th of October, and chose ex-President Fillmore as its presiding officer. The delegates numbered upward of five hundred and twenty, comprising prominent merchants and business men from twenty-nine States, of whom two hundred and seventy-seven were from the Southern States, one hundred and seven from the Western, and thirty-two from the Eastern and Middle States. The subject of the Southern Pacific Railway was prominent in the discussions. Full statistics were given and the entire subject reviewed at great length. The minority report favored the route from St. Louis on the thirty-fifth parallel, *via* Albuquerque to San Francisco; the majority report, which was adopted, recommended substantially the route approved by the Memphis Convention, with feeder-roads from Leavenworth, St. Louis, Kansas City, Cairo, Vicksburg, Memphis, New Orleans, and Galveston, on the East; and Guaymas, Mazatlan, and San Francisco, on the West.

On the subject of railroads in general, the convention recommended coöperation in railroad management, the connection of tracks, and uniform gauges, in order to perfect the system of great through-lines; and urged the building of railroads to the Gulf ports as the proper outlet for produce destined for the markets of the West Indies, Mexico, or South America.

A report from the Committee on Direct Trade with Europe recommended the organization of steamship lines between Southern ports and Europe; such lines to be subsidized by Congress; a modification of the navigation laws, so as to enable Americans to purchase foreign ships; the abolition of the tariff on ship-building materials; and that Congress open ports of entry at all cities in the West and South which have a population of one hundred thousand or more.

A spirited discussion arose on the general subject of immigration; especially was there a marked difference of opinion as to the introduction of Chinese labor, a matter which the convention finally decided to leave to the States and to private interests. The convention approved of the introduction of a million Europeans, and appointed M. F. Maury as a general agent to disseminate information in relation to the advantages of the South for immigration.

On the subject of banking and finance, a repeal was recommended of the law providing for a direct land-tax as being unnecessarily burdensome to the South; and that, in the system of revenue taxation, the vices of the people rather than the honest industry of the country should be taxed. The following resolutions were adopted:

Resolved, That Congress be requested to enact at once:

1. A free banking law, with efficient and certain measures for prompt redemption of currency, with a proviso that currency is to be issued only as fast as legal-tender notes are redeemed and destroyed, until specie payments are resumed.

2. Direct the Secretary of the Treasury to cancel and destroy all legal-tender notes that come in his possession as fast as the net income of the Government will allow. In case national-bank currency is applied for faster than it can be furnished under the conditions here stated, preference to be given, first to the South and second to the West, until the whole currency in circulation be equalized upon the basis of population.

3. Direct the Secretary of the Treasury to regulate all his actions by the wants and necessities of the Government, and leave the people to manage their money markets and their business in their own way.

After a thorough discussion of the several topics, the convention adopted resolutions in favor of the improvement of the Mississippi levees; the removal of obstruction to navigation on the Mississippi and its tributaries; the adoption by Congress of regulations concerning the construction of bridges over Western and Southern rivers, as proposed at the Keokuk Convention; and of memorializing Congress to aid a proposed line of steamers from New Orleans to Rio Janeiro, and to protect and improve the bars and harbors of the Atlantic coast and Gulf of Mexico. Resolutions were also adopted, appointing a delegation, of which ex-President Fillmore was made chairman, to attend the Universal Exposition, to be held at St. Petersburg in 1870; and also a committee to memorialize Congress to designate the point for holding the World's Fair in 1871. The convention adjourned, to meet at Cincinnati, on the first Tuesday of October, 1870.

The National Board of Trade held its second annual meeting at Richmond, Va., commencing on the 1st of December. The delegates present represented the principal cities of the United States. This Board now represents thirty-seven constituent bodies, of which more than 16,000 merchants of the United States are members. Frederick Fraley, of Philadelphia, was elected president of the Board for the ensuing year. The report of the Executive Council recommended a full collection of statistics and reports concerning trade, and their publication in a tabulated form, by the secretary of the Board; and that some plan be adopted for the daily interchange of market reports; also that the number of pounds requisite to constitute a bushel should be uniform in all the States.

Resolutions were passed recommending local boards to adopt a rule that tare shall be the actual weight of the package at the time of sale in all transactions, and to insist on full weights and measures in articles purporting to be of a certain fixed standard, but which are

sold by parcel or package; recommending uniformity in the instruments used in conveyances of land, and the appointment of a committee to prepare and recommend to the several State Legislatures a bill securing such change; also the passage of a law securing uniformity in the practice of District Courts of the United States in relation to the collection of debts. An animated discussion arose on the resolution to memorialize the different State Legislatures to repeal all laws discriminating against non-resident traders. On one side it was held that it was an effort on the part of the large Eastern cities to extend their trade into the smaller cities of the West and South, without paying any tax thereon, and that the removal of all restrictions would be a discrimination against the home-trader; on the other hand it was contended that the spirit of the age demanded a domestic free trade, and an enlightened commercial sentiment—to which such restrictions were hostile. The resolution was adopted, by a vote of 41 to 12.

The diversity of views in the convention on the question of national finances caused a general discussion of this subject. The majority report of the Committee on the Resumption of Specie Payments recommended to Congress the issue of four per cent. bonds, payable in thirty years, principal and interest in gold, which may be exchanged for greenbacks at par, the greenbacks to be thus withdrawn, until the amount outstanding does not exceed $300,000,000, and all thus withdrawn to be cancelled; also that national banks be required by law to retain the coin received for interest on bonds deposited to secure their circulation, until specie payments be resumed. After an extended debate this portion of the majority report was rejected, and the Board adopted only the first resolution, which declares a belief in the imperative necessity of the resumption of specie payments. Resolutions were adopted, asking Congress to establish a new department of the Government, known as the Department of Commerce, to which shall be referred all questions connected with the foreign and domestic trade and transportation of the country; requesting Congress to adopt measures for the construction of a ship-canal around the falls of Niagara, connecting Lake Erie and Lake Ontario; to make appropriation for the removal of obstacles to navigation on the Mississippi River and its tributaries; to prescribe such regulations for the construction of bridges over these rivers as will best promote the interests of their nagivation, and to recommend a uniform coinage among the commercial nations of the world.

The subject of the transportation of freight between the West and the East was prominent in the discussions of the Board. A proposition was made, that Congress be requested to charter a double-track railroad between the centre of the Western grain-producing country and the Atlantic seaboard, to be used exclusively for carrying freight, and to fix the rates of freight thereon. The superior advantages of water-lines were also strongly advocated, and it was argued that the canals necessary for a water-line between the West and the East should be enlarged and steam introduced, which would lead to a great reduction in the rates of freight.

The next meeting of the National Board of Trade will be held at Buffalo, N. Y., on the 1st of December, 1870.

At all of these conventions the attendance was large, good feeling and harmony pervaded the discussions, and measures having an important bearing upon the commercial interests of the country were adopted with unanimity.

CONGREGATIONALISTS. The principal object of the American Congregational Union, though not so contemplated directly in the first place, "is now," it is stated in the report for 1868, "and is likely to be for many years to come," to aid new and feeble Congregational Churches in their efforts to build themselves houses of worship. It has begun to give especial attention to points on the railroads across the continent, and to those on other important routes through newly-opened regions. It will also extend its field so as to aid in building parsonages. The sixteenth anniversary was held in Brooklyn, N. Y., on the 18th of May. The receipts for the year had been $58,629.71. There had been paid, in appropriations to 67 churches, $28,690.35. Appropriations were pledged to 81 churches, amounting to $18,200. Of the rest, $9,721.46 had been spent for salaries, and there was an unexpended balance of $2,017. Sixty-five churches had been completed during the year, with the aid of the Association. The average amount of funds furnished to each church was $412. The Union hopes to consolidate all the contributions of the congregations in aid of feeble churches, and to arrive at the means of making a fair and equitable division among all applicants, so that none shall be preferred at the expense of another, and the congregations may not be annoyed by special appeals or the solicitations of travelling agents.

The purpose of the "American Congregational Association" is to establish in Boston, "near the old and first home of the Puritans," a "home" for the 3,000 ministers and 300,000 members of the Congregational churches, where may be gathered all the books, pamphlets, engravings, prints, manuscripts, and other mementos of the Puritan fathers, to form the nucleus of a great Congregational Library, where may be provided "a place for consultation, for mutual intercourse, for greetings," and to provide in the building "a symbol, a centre of Congregationalism," a location for its societies, and centres of correspondence. At the last annual meeting (the sixteenth), which was held in Boston, on the 25th of May, the association resolved "that no time ought to be

lost in securing the proposed Congregational house in Boston, either by separate and independent erection at the expense of the Association, or by coöperation with kindred societies." The receipts of the Association for the year closing with the anniversary were $33,780.11. The additions to the library during the year numbered 2,680. The total number of bound volumes is 10,739, relating chiefly to Congregational, early New England, and ecclesiastical history.

The Congregational Publication Society was formed in 1868, and is designed to become the organ of publication for the Congregationalists of the United States. It will undertake the publication of works of early and late New England divines, and the reprint of such foreign books as seem adapted to its objects.

The American Home Missionary Society, its auxiliaries and agencies, employed, during the year ending with the meeting in May, 972 ministers of the Gospel. They were distributed in 28 different States and Territories: New England had 327; the Middle States, 73; the Southern States, 8; the Western States, including 30 ministers laboring on the Pacific coast, 564. The number of congregations and missionary districts fully or partially supplied was 1,956. Four missionaries were commissioned as pastors over colored people; one preached to Indians; and 35 preached in foreign languages. The number of Sunday-school and Bible-class scholars under the care of the missionaries was about 75,300; the number of conversions reported by 411 missionaries was 2,959; the additions to the churches, as nearly as could be ascertained, was 6,470; the contributions to benevolent objects, reported by 567 ministers, amounted to $38,040.93. Seventy-four churches were organized during the year, sixty became self-supporting, fifty-eight church buildings were completed, and thirty-two others were commenced, and 88 young men in connection with missionary churches were preparing for the ministry. The receipts, including the balance in the treasury, were $282,858.23, or $23,199.11 greater than those of any former year of the society. The expenditures likewise exceeded those of any year by $20,263.90, and the number of ministers and amount of service performed were greater than ever before. The total receipts, during the forty-three years the society has been in operation, were $5,455,213.64; the total number of additions to the churches during the same period was 205,165.

At the anniversary of the Congregational Union of England and Wales, which was held on the 11th of May, the society was reported in a condition of great prosperity. There was a balance in the treasury of £3,758 4s. 2d. The sales of publications had been large. Grants had been made to the Congregational churches in connection with the French Canadian Mission, and to the Union of Evangelical Churches in France, and to various home and colonial enterprises in which the Union had a more particular interest; and there had been a small balance to the American freedmen.

The *Congregational Quarterly*, for January, 1870, reports the statistics of Congregationalism in the United States and British colonies for the year 1869, as follows:

STATES, Etc.	Ministers.	Members.	In Sunday-schools.
Alabama	1	37	230
Arkansas	2	71	.....
California	48	2,121	5,178
Colorado	5	105	174

CONGRESS, UNITED STATES. The third session of the Fortieth Congress * commenced on December 7, 1868. (For the President's Message, *see* PUBLIC DOCUMENTS, ANNUAL CYCLOPÆDIA, 1868.)

Benjamin Wade, of Ohio, was President *pro tem.* of the Senate, and Schuyler Colfax, of Indiana, Speaker of the House.

In the Senate, on December 7th, Mr. Cragin, of New Hampshire, offered the following as an amendment to the Constitution:

ARTICLE —. No State shall deny the right of suffrage or abridge the same to any male citizen of the United States twenty-one years of age and upward, except for participation in rebellion or other crime, and excepting also Indians not taxed; but any State may exact of such citizen a specific term of residence

* The following is a list of the members of Congress:

SENATE.

Alabama—Willard Warner, George E. Spencer.
Arkansas—Alexander McDonald, Benjamin F. Rice.
California—Cornelius Cole, John Conness.
Connecticut—James Dixon, Orrin S. Ferry.
Delaware—James A. Bayard, Willard Saulsbury.
Florida—Adonijah S. Welch, Thomas W. Osborn.
Georgia—Not admitted.
Illinois—Lyman Trumbull, Richard Yates.
Indiana—Oliver P. Morton, Thomas A. Hendricks.
Iowa—James W. Grimes, James Harlan.
Kansas—Samuel C. Pomeroy, Edmund C. Ross.
Kentucky—Garret Davis, Thomas C. McCreery.
Louisiana—John S. Harris, William P. Kellogg.
Maine—Lot M. Morrill, William Pitt Fessenden.
Maryland—William Pinkney Whyte, George Vickers.
Massachusetts—Charles Sumner, Henry Wilson.
Michigan—Zachariah Chandler, Jacob M. Howard.
Minnesota—Alexander Ramsey, Daniel S. Norton.
Missouri—Charles D. Drake, John B. Henderson.
Nebraska—John M. Thayer, Thomas W. Tipton.
Nevada—William M. Stewart, James W. Nye.
New Hampshire—James W. Patterson, Aaron H. Cragin.
New Jersey—Alexander G. Cattell, Frederick T. Frelinghuysen.
New York—Roscoe Conkling, Edwin D. Morgan.
North Carolina—Joseph C. Abbott, John Poor.
Ohio—John Sherman, Benjamin F. Wade.
Oregon—Henry W. Corbett, George H. Williams.
Pennsylvania—Simeon Cameron, Charles R. Buckalew.
Rhode Island—William Sprague, Henry B. Anthony.
South Carolina—Thomas J. Robertson, Frederick A. Sawyer.
Tennessee—David D. Patterson, J. S. Fowler.
Vermont—Justin S. Morrill, George F. Edmunds.
West Virginia—Peter G. Van Winkle, Waitman T. Willey.
Wisconsin—Timothy O. Howe, James R. Doolittle.

Not admitted at this session.

Mississippi—William L. Sharkey, J. L. Alcorn.
Virginia—John C. Underwood, Joseph Segar.
Texas—David G. Burnett, O. M. Roberts.

HOUSE.

Alabama—Francis W. Kellogg, Charles W. Buckley, Benjamin W. Norris, Charles W. Pierce, John B. Callis, Thomas Haughey.
Arkansas—Logan W. Roots, J. F. Elliott, Thomas Boles.
California—Samuel B. Axtell, William Higby, James A. Johnson.
Connecticut—Richard D. Hubbard, Julius Hotchkiss, Henry H. Starkweather, William H. Barnum.
Delaware—John A. Nicholson.
Florida—Charles M. Hamilton.
Georgia—J. W. Clift, Nelson Tift, William P. Edwards, Samuel F. Gove, Charles H. Prince, John H. Christy, P. M. B. Young.
Illinois—Norman B. Judd, John F. Farnsworth, Elihu B. Washburne, Abner C. Harding, Ebon C. Ingersoll, Burton C. Cook, Henry P. H. Bromwell, Shelby M. Cullom, Lewis W. Ross, Albert G. Burr, Samuel S. Marshall, Jehu Baker, Green B. Raum; at large, John A. Logan.
Indiana—William D. Niblack, Michael C. Kerr, Morton C. Hunter, William S. Holman, George W. Julian, John Coburn, Henry D. Washburn, Godlove S. Orth, Schuyler Colfax, William Williams, John P. C. Shanks.
Iowa—James F. Wilson, Hiram Price, William B. Allison, William Loughridge, Granville M. Dodge, Asahel W. Hubbard.
Kansas—Sidney Clarke.
Kentucky—Lawrence S. Trimble (vacancy), Jacob S. Golladay, J. Proctor Knott, Asa P. Grover, Thomas L. Jones, James B. Beck, George M. Adams, Samuel McKee.
Louisiana—J. Hale Sypher (vacancy), Joseph P. Newsham, Michael Vidal, W. Jasper Blackburn.
Maine—John Lynch, Sidney Perham, James G. Blaine, John A. Peters, Frederick A. Pike.
Maryland—Hiram McCullough, Stevenson Archer, Charles E. Phelps, Francis Thomas, Frederick Stone.
Massachusetts—Thomas D. Eliot, Oakes Ames, Ginery Twichell, Samuel Hooper, Benjamin F. Butler, Nathaniel P. Banks, George S. Boutwell, John D. Baldwin, William B. Washburn, Henry L. Dawes.
Michigan—Fernando C. Beaman, Charles Upson, Austin Blair, Thomas W. Ferry, Rowland E. Trowbridge, John F. Driggs.
Minnesota—William Windom, Ignatius Donnelly.
Missouri—William A. Pile, Carman A. Newcomb, James R. McCormick, Joseph J. Gravelly, John H. Stover, Robert T. Van Horn, Benjamin F. Loan, John F. Benjamin, George W. Anderson.
Nebraska—John Taffe.
Nevada—Delos R. Ashley.
New Hampshire—Jacob H. Ela, Aaron F. Stevens, Jacob Benton.
New Jersey—William Moore, Charles Haight, Charles Sitgreaves, John Hill, George A. Halsey.
New York—Stephen Taber, Demas Barnes, William E. Robinson, John Fox, John Morrissey, Thomas E. Stewart, John W. Chanler, James Brooks, Fernando Wood, William H. Robertson, Charles H. Van Wyck, John H. Ketcham, Thomas Cornell, John V. L. Pruyn, John A. Griswold, Orange Ferris, Calvin T. Hulburd, James M. Marvin, William C. Fields, Addison H. Laflin, Alexander H. Bailey, John C. Churchill, Dennis McCarthy, Theodore M. Pomeroy, William H. Kelsey, William S. Lincoln, Hamilton Ward, Lewis Selye, Burt Van Horn, James M. Humphrey, Henry Van Aernam.
North Carolina—J. R. French, David Heaton, O. H. Dockery, J. T. Dewees, Israel G. Lash, Nathaniel Boyden, A. H. Jones.
Ohio—Benjamin Eggleston, Samuel F. Carey, Robert C. Schenck, William Lawrence, William Mungen, Reader W. Clarke, Samuel Shellabarger, John Beatty, Ralph P. Buckland, James M. Ashley, John T. Wilson, Philadelph Van Trump, Columbus Delano, Martin Welker, Tobias A. Plants, John A. Bingham, Ephraim R. Eckley, Rufus P. Spalding, James A. Garfield.
Oregon—Rufus Mallory.
Pennsylvania—Samuel J. Randall, Charles O'Neill, Leonard Myers, William D. Kelley, Caleb N. Taylor, Benjamin M. Boyer, John M. Broomall, J. Lawrence Getz, O. J. Dickey, Henry L. Cake, Daniel M. Van Auken, George W. Woodward, Ulysses Mercur, George F. Miller, Adam J. Glossbrenner, William H. Koontz, Daniel J. Morrell, Stephen F. Wilson, Glenni W. Scofield, S. Newton Pettis, John Covode, James K. Moorhead, Thomas Williams, George V. Lawrence.
Rhode Island—Thomas A. Jenckes, Nathan F. Dixon.
South Carolina—B. F. Whittemore, C. C. Bowen, Simon Corley, James H. Goss, J. P. M. Epping, E. H. Dickson.
Tennessee—Robert R. Butler, Horace Maynard, William B. Stokes, James Mullins, John Trimble, Samuel M. Arnell, Isaac R. Hawkins, David A. Nunn.
Vermont—Frederick E. Woodbridge, Luke P. Poland, Worthington C. Smith.
West Virginia—Chester D. Hubbard, Bethuel M. Kitchen, Daniel Polsley.
Wisconsin—Halbert E. Paine, Benjamin F. Hopkins, Amasa Cobb, Charles A. Eldridge, Philetus Sawyer, Cadwalader C. Washburn.

Not admitted at this session.

Mississippi—
Texas—
Virginia—

Delegates from the Territories.

Arizona—Coles Bashford.
Colorado—George M. Chilcott.
Dakota—Walter A. Burleigh.
Idaho—E. D. Holbrook.
Montana—James M. Cavanagh.
New Mexico—Charles P. Clever.
Utah—William H. Hooper.
Washington—Alvan Flanders.

is a condition of voting therein, the condition being the same for all classes.

Mr. Pomeroy, of Kansas, offered the following:

ART. XV. The basis of suffrage in the United States shall be that of citizenship, and all native or naturalized citizens shall enjoy the same rights and privileges of the elective franchise; but each State shall determine by law the age of the citizen and the time of residence required for the exercise of the right of suffrage, which shall apply equally to all citizens, and also shall make all laws concerning the time, places, and manner of holding elections.

In the House, on the same day, Mr. Kelley, of Pennsylvania, offered the following:

ART. —. No State shall deny to or exclude from the exercise of any of the rights or privileges of an elector any citizen of the United States by reason of race or color.

Mr. Eldridge, of Wisconsin, offered the following:

ART. XV. Neither Congress nor any State by its constitution or laws shall deny or restrict the right of suffrage to citizens of the United States on account of race or parentage of such citizens; and all qualifications or limitations of the right of suffrage in the constitution or laws of any State, based upon race or parentage, are, and are hereby, declared to be void.

Mr. Stokes, of Tennessee, offered the following:

ART. XV. No State shall make or enforce any law which shall deprive any citizen of the right of the elective franchise on account of race or color.

In the House, on January 11th, Mr. Boutwell, of Massachusetts, reported from the Committee on the Judiciary a joint resolution proposing an amendment to the Constitution, and moved that it be printed and referred to the same committee. The resolution was as follows:

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be held as part of said Constitution, namely:

ART. —. *Section* 1. The right of any citizen of the United States to vote shall not be denied or abridged by the United States or any State by reason of the race, color, or previous condition of slavery of any citizen or class of citizens of the United States.

Sec. 2. The Congress shall have power to enforce, by proper legislation, the provisions of this article.

In the Senate, on January 23d, Mr. Stewart, of Nevada, moved to proceed to the consideration of a joint resolution of the Senate proposing an amendment to the Constitution. The vote, on the motion to take up the resolution, was as follows:

YEAS—Messrs. Abbott, Cameron, Cattell, Chandler, Cole, Conkling, Corbett, Drake, Edmunds, Fessenden, Frelinghuysen, Grimes, Harlan, Harris, McDonald, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Pool, Ross, Sawyer, Sherman, Spencer, Stewart, Sumner, Thayer, Trumbull, Wade, Williams, and Wilson—33.

NAYS—Messrs. Bayard, Davis, Dixon, Doolittle, Fowler, Hendricks, McCreery, Norton, and Vickers—9.

ABSENT—Messrs. Anthony, Buckalew, Conness, Cragin, Ferry, Henderson, Howard, Howe, Kellogg, Patterson of New Hampshire, Patterson of Tennessee, Pomeroy, Ramsey, Rice, Robertson, Saulsbury, Sprague, Tipton, Van Winkle, Warner, Welch, Whyte, Willey, and Yates—24.

The joint resolution, as originally introduced by Mr. Henderson, of Missouri, was as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid as part of the Constitution, namely:

ART. XV. No State shall deny or abridge the right of its citizens to vote and hold office on account of race, color, or previous condition.

The Committee on the Judiciary proposed to strike out the words of the article, and insert as follows:

The right of citizens of the United States to vote and hold office shall not be denied or abridged by the United States or any State on account of race, color, or previous condition of servitude.

The Congress, by appropriate legislation, may enforce the provisions of this article.

Mr. Stewart moved to postpone the subject until Thursday ensuing.

Mr. Sumner, of Massachusetts, said: "It is understood that they are this very day acting on a similar proposition in the other House, and under their rules, with the previous question, it is supposed that within one or two days they will arrive at a result. Now, the question which I have to submit to my friend is, whether it would not be better for us to act on the proposition that shall come to us from the House of Representatives? That, of course, will be advanced one stage further to the result which we are all trying to reach."

Mr. Stewart said: "If that proposition should be passed in the other House to-day, our committee will have time to look at it and have it before the Senate on Thursday, if this resolution be postponed until that day; and we can then act upon the House resolution, making this an amendment to it, or making such other amendments as the committee may suggest or the Senate may decide upon."

Mr. Dixon, of Connecticut, said: "Before the vote is taken on the motion to postpone, perhaps this is a proper time to give notice of an amendment which I propose to offer when the subject shall be before the Senate, so that the Senate may have time to consider it. Article five of the Constitution, which relates to the proposition of amendments by Congress, provides that:

The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the Legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which in either case shall be valid to all intents and purposes as part of this Constitution, when ratified by the Legislatures of three-fourths of the several States or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress.

"Now, sir, this proposal of an amendment

to the Constitution of the United States provides for its ratification by the Legislatures of the States, instead of by conventions; and that has been the usual mode, and I am not sure but that it has been the uniform mode of proposing amendments to the Constitution when they have been proposed by Congress. At any rate, it has been the mode in recent times. Now, sir, there are reasons, and it seems to me very strong reasons, existing at this time why this proposition, if submitted, should be submitted to conventions and ratified by conventions of the States, instead of by the Legislatures. I propose, therefore, when the matter shall come before the Senate for its consideration, to move to strike out the word 'Legislatures' and insert 'conventions,' so as to provide that the proposed amendment shall not be valid until ratified by conventions of three-fourths of the States.

"The reasons for this I will not give now at any length; but I will barely state that it seems to me so important a proposition as this should be ratified by bodies selected for that very purpose. In my own State it is peculiarly important, because, in the first place, the Legislature in that as in other States is not chosen for that purpose; and then again, as is well known, the Legislature of the State of Connecticut does not represent the people, in consequence of the peculiar mode of our representation. It may be said that the same remark may apply to a convention; but I take it if Congress order the ratification to be made, if at all, by a convention, it would be in the power of Congress to say that the convention should be chosen in such a manner that it should represent the people; that it should be chosen in some mode, distributing its members in some way, so that the convention would represent the people of the State.

"If it is proposed by the sovereign power of Congress to the people of the whole country to change the suffrage laws of the State of Connecticut, it does seem to me that Connecticut, as a component part of the whole country, should have the power of expressing its opinion on that subject aside from all other questions, and that the question should be presented to the people of the State of Connecticut for their consideration; and the only mode of doing it is, as it seems to me, to submit it to a convention of the people chosen for that purpose. Then the voice of the people will be expressed. But it will be very difficult to secure an expression of the voice of the people by the Legislature, especially if that Legislature were chosen before the subject was submitted to them."

Mr. Pomeroy, of Kansas, said: "I am for the enfranchisement of every human being in this country who is an American citizen. But, if we are going to change the fundamental law, I do not propose to allow the States to make any inequalities among their citizens unless they have committed crime. The equality of the citizen is the doctrine which, so far as I am concerned, I shall insist upon putting into the Constitution of the United States as a part of the fundamental law."

Mr. Grimes, of Iowa, said: "Without regard to sex or color?"

Mr. Pomeroy: "Yes, sir; without regard to sex or color. If the resolution is to be postponed, as I suppose it is to be, I shall prepare an amendment looking in that direction."

The resolution was set down for Thursday—yeas 37, nays 11.

In the House, on the same day, Mr. Boutwell, of Massachusetts, moved to reconsider the vote by which the bill to secure equal privileges and immunities to citizens of the United States and to enforce the provisions of article fourteen of the Constitution, and the joint resolution proposing an amendment to the Constitution, were recommitted to the Committee on the Judiciary. He said: "This measure is the last, as far as I can foresee, of a series of great measures growing out of the rebellion, and necessary for the reorganization and pacification of the country, with which the Republican party to a large extent, through their Representatives and Senators in the Thirty-eighth, Thirty-ninth, and Fortieth Congresses, has been charged. I say that this measure, as far as I can foresee, is the last of those great measures, and for this reason: if we secure to all the people of the country, without distinction of race or color, the privilege of the elective franchise, we have then established upon the broadest possible basis of republican equality the institutions of the country, both state and national.

"As I proceed I shall state the reasons why I am not willing to rely exclusively upon a law of Congress, and also the reasons why I think it not wise to submit a constitutional amendment without the aid of legislation. The first section of the bill is in these words:

> That no State shall abridge or deny the right of any citizen of the United States to vote for electors of President and Vice-President of the United States or for Representatives in Congress, or for members of the Legislature of the State in which he may reside, by reason of race, color, or previous condition of slavery; and any provisions in the laws or constitution of any State inconsistent with this section are hereby declared to be null and void.

"It will be seen that the first section of this bill, which contains all the essential provisions with reference to the right of suffrage, limits the operation of the law to elections for President and Vice-President, Representatives in Congress, and to members of the State Legislatures. It will also be seen, by the argument which I shall submit, based upon the Constitution of the United States, that the powers of Congress are probably broader than those set forth and asserted in the section of the bill which I have just read; but, inasmuch as I believe all the objects which we are now seeking can be accomplished by the legisla-

tion here proposed, and the right of every citizen, whether black or white, native-born or naturalized, can be secured within a reasonable period of time, I am in favor of legislating so far only as may be necessary to secure those objects, not waiving, however, or in any way qualifying the assertion of the constitutional right in Congress to legislate upon the subject of the franchise, even in reference to the election of officers not named in this section of the bill. Those who are familiar with the debates which took place in the convention that framed the Constitution of the United States, and especially those who have read the debates that took place in the several State conventions upon the subject of ratifying the Constitution of the United States, must have been struck with the circumstance that all the friends of the Constitution asserted that there was power in the Constitution over the elective franchise to an extent which would enable the national Government to preserve its own existence independently of any action on the part of the States. If this Government be not a mere confederacy, held together by the merest thread, this must be true in the nature of the case. If the declaration in the preamble, that we are a people, has any meaning; if the Constitution, which the people of the United States as one people established, has any virtue or any force, any power to accomplish the purposes of a government, then in this Government there must be constitutional means by which those charged with the administration can provide for its preservation and continuance.

"I am now dealing with general principles, and not with the text of the Constitution, to which I shall come ere long. Upon general principles there must be power in the national Government to provide whatever is necessary for its own preservation. But, if the doctrine of those who maintain that the whole question of suffrage is vested in the States be true, then the States may refuse to choose electors; they may refuse to send members to this House; they may refuse to choose Senators by their Legislatures, and thus the Government of the United States would come to an end. There would be no President; there would be no Senate; there would be no House of Representatives, and the Government would consequently cease to exist.

"Sir, I know not in the darkest days of the republic, when State rights were triumphant, I know not of any theory more destructive to national existence and public liberty, more directly opposed to the nature of our Government, than that which is now avowed. It is a remnant of ancient and false traditions not supported by the Constitution. I shall ask the House to consider what the Constitution does declare upon the subject of suffrage. It will be found that there is no word or phrase in the instrument which tolerates the idea that the existence of this great Government, continental in its dimensions, is at the mercy of the States through defects in our fundamental law. I come now to the provisions of the Constitution of the United States bearing upon the question of suffrage. I read first that provision on which I suppose much reliance is placed to sustain the doctrine that the power over the question of suffrage is, to a certain extent, vested absolutely in the States. The second section of the first article of the Constitution is in these words:

> The House of Representatives shall be composed of members chosen every second year by the people of the several States; and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

"It has been assumed, upon this section of the Constitution, that each State has the power absolutely to fix the qualifications of electors of the most numerous branch of the Legislature, and that therefore the power of Congress, if it existed at all in reference to the election of Representatives to Congress, was controlled by what the State might have done in reference to electors for members of the most numerous branch of its Legislature. But, if gentlemen will look at the phraseology of this section as it stands, they will see that it does give power to the United States in reference to the qualifications of voters; that it does not take power from the States, nor does it take power from the United States. It merely declares the fact that the voters for Representatives in Congress shall possess the qualifications of voters for members of the most numerous branch of the State Legislature. It is an injunction to the States, if they have the power to prescribe the qualifications of voters; it is an injunction to the national Government, if the national Government has that power. But there is no declaration in this section that either has the power, and certainly not that either has the power to the exclusion of the other. But the fourth section of the same article of the Constitution further provides that:

> The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof.

"If the provision ended here, the theory which is maintained by gentlemen who deny the propositions contained in this bill would be well supported by the Constitution. The word 'manner,' in this connection of course becomes important. All writers upon words have considered the power and scope of three words which have a great similarity of meaning, 'mode,' 'method,' and 'manner;' and it is uniformly agreed that 'manner' is the largest and most comprehensive of the three in its scope. Patrick Henry, of Virginia—and I shall read his declarations to the House—gave his view of the meaning of the word 'manner,' which coincides with the view that I now take. It includes, as I maintain, every thing relating to an election, from the qualification of the elector to the deposit of his ballot in the box.

Here is set forth the power of the State. By the Constitution a State has original jurisdiction of the 'times, places, and manner of holding elections for Senators and Representatives;' and it is from this provision of the Constitution that the State gets its power over the subject, so far as the Constitution of the United States is concerned.

"Either one or the other of two things is true: either these words, as herein employed, in their scope and meaning cover the entire subject of elections, from the qualifications of the voter to the deposit of his ballot in the box, or else, by necessary legal inference, the States have not the power which they have been in the habit of exercising; for if this be a qualified and limited grant or recognition of authority, then what is not granted or recognized they do not possess. But the history of the facts from the first, and the recognition by Congress of the powers of the States, go to the extent of conceding to them entire scope and original control of the whole matter of voting, including the qualifications of the voter, his registration, and the deposit of his ballot in the box.

"Let me read what remains of this provision:

But the Congress may at any time by law make—

"Very broad language—

or alter such regulations, except as to the place of choosing Senators.

"Now, sir, taking the language of the Constitution itself, divested of all theories and traditions concerning the meaning put upon it by State-rights men, can any thing be more clear than that the Congress of the United States has all the power which the States could exercise, except merely as to declaring where the Senators shall be chosen? Can there be any doubt that the powers granted to or recognized as existing in the States, whatever the extent of those powers may be, are the measure of the powers which Congress may exercise? And therefore, when a State-rights man proves that by the Constitution of the United States a State has a right to decide who shall exercise the elective franchise, he has proved also that Congress may do the same thing under this provision of the Constitution which says that Congress may make any regulations it chooses relating to the subject, or may alter such regulations as have been made by the States.

"This is no new doctrine. It was asserted, as I have already stated, in most of the conventions which ratified the Constitution of the United States. It was declared again and again in the Convention which framed the Constitution of the United States.

"What is the conclusion, then, of the whole matter, upon the text of the original Constitution, in reference to the question of suffrage? Why, first, that the power to make regulations concerning elections is vested in the States; and, secondly, that the power of the General Government upon the subject of the franchise is just as comprehensive as the power of the States, and that we may make regulations, and that we may alter such regulations as the States have made. This view is supported, first, by the necessary theory of the Government that it cannot exist independently of the States if this power in the General Government is denied. It is also supported by the debates in the Convention that framed the Constitution itself. It is supported by the debates in the State conventions which ratified the Constitution, where the issue was distinctly made upon that question between the friends of the Constitution and its opponents. The opponents of the Constitution charged that it contemplated precisely what we now say it means; the supporters of the Constitution did deny that it contemplated precisely what we say it means, and upon that ground they advocated the provision. The opponents of the provision in four of the States sought the submission of an amendment to the people giving a different and more limited construction to the article. The Congress of the United States refused to submit such an amendment. This is conclusive evidence that all the men who participated in framing this Government were of opinion that the power to regulate elections was in the States, subject to the supreme control of the General Government; and this without any inquiry into other provisions of the Constitution, which give us ample basis for all the legislation we now propose.

"I come next to the consideration of a provision of the Constitution on which I might safely rest for the exercise of this power, certainly as far as several States are concerned, even if all that is granted to Congress in the provisions relating to representation were wanting. I refer now to the provision of the Constitution by which the United States are to guarantee to each State a republican form of government.

"What is the nature of the difficulty with which we are now dealing? Is it a difficulty in harmony with republican institutions and a republican form of government, or is it a difficulty which is antagonistic to republican institutions? What is the essence of an aristocracy? How is it distinguished from a republic? The essence of an aristocracy is in this, that the government is in certain families made hereditary to the exclusion of others. That is all there is of it. You may limit this aristocracy to twelve men, you may enlarge it to a hundred, to a thousand, or to ten thousand; but, if limited, if certain persons are included and certain others are excluded, not for themselves merely, but for all their posterity, you have an aristocracy. There is, I submit to this House, no other possible definition of an aristocracy; there is no other possible honest distinction between an aristocratic and a republican form of government.

"I say without hesitation that none of those

States in which men are denied the elective franchise for themselves and for all their posterity are republican. They are aristocracies more or less offensive to republican institutions and to republican government; and inasmuch as by the Constitution the United States has power, and it is made its duty, to guarantee a republican form of government to each State, if upon observation we find, as I think we do find in Delaware, in Kentucky, in Maryland, in Ohio, and in Pennsylvania, that the governments are not republican, it becomes our duty to exercise the power vested in us by the Constitution and make those governments republican by law."

Mr. Jones, of Kentucky, said: "I would like to ask the gentleman a question just here. I would ask if he holds that the Constitution of the United States prohibits any State from regulating the right of suffrage? And if so, I ask the gentleman how he construes the tenth amendment to the Constitution of the United States, which, I believe, was suggested by his own State of Massachusetts? I think, when Massachusetts met in State convention to ratify the Constitution of the United States, she instructed her delegates not to cease their efforts in the Federal Convention until they had obtained that amendment, which I will read:

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people.

"My question is, does the Constitution prohibit the States from regulating the matter of suffrage?"

Mr. Boutwell: "There is a power recognized in the States by the fourth section of the first article, and there is a power in the same section granted to the General Government, concerning the matter of elections; and the tenth amendment to the Constitution, to which the gentleman refers, does not touch this case at all. The power given to the States to regulate the time, places, and manner of holding elections is a specified and distinct power, and it is not disturbed by the tenth amendment. The power given to Congress in the same article to alter those State regulations is a specific power also, and that is not touched by the tenth amendment to the Constitution.

"I leave now that portion of my argument based upon the guarantee clause, and proceed to the consideration of the fourteenth amendment to the Constitution of the United States. If there were any doubt remaining in the mind of any person as to the power of Congress over this whole subject, as derived from the three provisions of the original text of the Constitution to which I have referred, I believe that every doubt must disappear upon an analysis of the fourteenth amendment. The first clause of the first section is in these words:

All persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the States wherein they reside.

"Mark the words! Then comes the inhibition on the States:

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.

"By the first clause citizens of the United States are citizens of the States in which they reside. One of the immunities, then, and privileges of a citizen of the United States is that he shall be a citizen of the State where he resides, and the inhibition applies as well to the deprivation of rights derived directly from the States as to those rights derived directly from the United States Government. It is a comprehensive inhibition upon the States. They cannot deprive a citizen of the United States of any privilege or immunity which he may enjoy as a citizen of the United States; they cannot deprive him of any privilege or immunity which he may enjoy, or which any other citizen may enjoy, as a citizen of the State in which he resides. This declaration in reference to the rights of citizens is for all or it is for nobody. We have certain privileges in this House, the two chief of which are, first, privilege from arrest in certain cases during the sessions and while travelling to and from our respective residences; and the other is, that we are not held answerable elsewhere for any thing that we may say here.

"Mr. Speaker, consider what is covered by the word 'privileged,' as used in the Constitution, not interpolated by me for the purpose of this debate. The rights to which I have referred are declared to be the privileges of members of the Senate and of the House of Representatives. They are distinctions by which, under the Constitution, we are recognized and set apart from other men. They are privileges, in the language of the lexicographers, 'peculiar benefits, advantages, immunities.' They are for all of us equally. We are characterized in the Constitution as 'members.' We are as members endowed with certain privileges, and under that provision of the Constitution we are peers. What are the privileges under the Constitution of one member are the privileges of every other member. When you have established the right of one member here to the benefit of these privileges, you have established the right of all the members of the House to the same privileges.

"Now, what is the language of the section which I am considering?

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.

"I inquire how are you to distinguish between the various classes of persons in the several States? By the first clause of this section 'all persons born or naturalized in the United States are citizens of the United States.' They may have been born in Africa, in Denmark, in Ireland; they may be white, they may be black; but by the Constitution they are citizens of the United States, and by that

same Constitution it is declared that the privileges and immunities of citizens of the United States shall not be abridged by any State of this Union.

"I say again, therefore, that that provision of the Constitution is for all the people or it is for none of them. Under that Constitution we cannot select and say that a man born in this country shall be entitled to certain privileges as a citizen to which a man born elsewhere and naturalized shall not be entitled. We cannot say that a white citizen shall enjoy privileges which are denied to a black citizen or to a naturalized citizen, white or black.

"I come now to the second section, upon which I know reliance will be placed by the opponents of the bill. It is there provided:

Sec. 2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age and citizens of the United States, or in any way abridged, except for participation in rebellion or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

"If gentlemen will consider these two sections together, they will see how entirely in harmony they are with each other, and how wholly unsupported is the doctrine that there is in this second section any concession to a State to abridge or deny to a citizen the right to vote. By the second section there is a political penalty for doing that which in the first section it is declared the State has no right to do. I read the first section:

Sec. 1. All persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

"It is here provided that there shall be no abridgment of the privileges and immunities of citizens; and in the second section there is a penalty provided for a State that disregards the inhibition. We were then acting in the presence of the fact that many States of the Union were doing that which the first section declared they had no right to do. It was uncertain when Congress would exercise the power conferred by the fifth section of the fourteenth amendment, and, in order that the States should not take advantage of their own wrong during the period while Congress might be inactive, a penalty was provided. We knew that Kentucky, Maryland, and Delaware, were doing what they were inhibited from doing by the first section of the article, and we said that they should suffer in representation for so doing. Power was given to Congress to remedy this evil, and that power Congress is now called upon to exercise.

"But, sir, consider the anomalous feature in our Government, if the doctrine be successfully maintained that we cannot legislate on this subject. There are citizens in Kentucky and Maryland who, if the doctrine set forth by the opponents of this bill be a sound constitutional doctrine, are eligible to the office of President or Vice-President of the United States, and yet who cannot vote for Representatives in Congress or even for a State, county, or town official. What is the qualification for the office of President? He must be a native citizen of the United States and thirty-five years of age. Nothing more. These are the only qualifications for the office of President. By the fourteenth amendment to the Constitution we have declared that all the black men in Maryland and other States shall be citizens of the United States. Certain State governments have for the present denied those people the right to vote, and yet one of them may be elected President of the United States and another Vice-President. Is there such an anomaly in our Government? Are we prepared to admit its existence unless the Constitution imperatively requires it? The Constitution provides that any one twenty-five years of age, who has been a citizen for seven years, may be elected a Representative upon this floor, and colored men, although denied the right of suffrage in their own States, may be elected to legislate for the whole country. Thus is the General Government put in an anomalous and inconsistent position.

"This bill, then, is defensible, first on the original text of the Constitution, in which the subject of suffrage is considered; it is defensible upon the guarantee clause of the Constitution; it is defensible upon the fourteenth article of amendment to the Constitution; and it is defensible as the exercise of a necessary power in the Government. The power is essential to the existence and preservation of the Government itself, and was so regarded by the men who framed the Constitution of 1787."

Mr. Eldridge, of Wisconsin, said: "I shall not attempt to analyze this bill, or to examine its provisions in detail. The main feature and purpose of the bill are to take from the States the right to determine the qualification of voters. It provides:

That no State shall abridge or deny the right of any citizen of the United States to vote for electors of President and Vice-President of the United States, or for Representatives in Congress, or for members of the Legislature of the State in which he may reside, by reason of race, color, or previous condition of slavery; and any provisions in the laws or constitution of any State inconsistent with this section are hereby declared null and void.

"Thus it is proposed by this bill to invade the jurisdiction of State authority and subject all the States of the Union to Federal control.

This long-conceded right of the States to determine for themselves who of their citizens shall exercise the right of suffrage within their respective jurisdictions is now for the first time to be taken away by act of Congress from all the States of this Union. It would seem that the exercise of this power by the States, almost unquestioned ever since and before the adoption of the Constitution, for more than eighty years, would cause gentlemen to hesitate before taking such a step. Is not the argument, that the Federal Government, the people, and all the States, have acquiesced so long in the exercise of this power by the several States, almost conclusive? No two of the States have adopted provisions by which the same and all the same class or classes of their citizens vote. Some even have not confined the right to citizens at all. Aliens having declared their intentions only are in several of the States permitted to exercise the right of suffrage. There can scarcely be said to be any uniformity. The laws on the subject are as variant and diversified as the climate and the productions of the States themselves. And yet the right and power of the several States to determine this question of the qualification of voters can hardly be said to have been doubted. I do not ignore the fact that some one or more honorable gentlemen on this floor and in the other branch of Congress, together with some pseudo-commentators upon the Constitution, blinded, as I think, by the heated passions of fanaticism and war, have professed to believe and have declared that Congress has the constitutional power necessary to pass this bill. But the conclusions of these gentlemen are, I apprehend, more from the desire that a Congress composed of their friends should intervene and control the suffrage of the States in the interest of the party to which they are attached than from any settled conviction of constitutional warrant. Their views and opinions are confused, and they seem uncertain upon what provision of the Constitution to rest them. They base them more upon what they consider the necessity of the times, the wants of the nation, and the will of the people, as expressed through the party to which they adhere, than upon any express or implied grant of power to the Federal Government in and by the Constitution itself. The Constitution declares that:

The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature. —*Constitution*, art. 1, sec. 2, clause 1.

"This, as I believe, is the only provision of the Constitution in any manner dictating or prescribing the qualifications of electors. 'And the electors of each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.' Can any candid, fair-minded man pretend that this provision is a grant of power to Congress to intervene and prescribe the qualification of electors of the most numerous branch of the State Legislature? Is it not all that Congress can do, to insist or require that the same body, or class, or classes of persons who are allowed to vote or qualified as electors of the most numerous branch of the State Legislature shall be the electors of members of the House of Representatives? And are they not to be the same persons who are by the State laws declared qualified electors of the most numerous branch of the Legislature of the State? It seems to me nothing can be clearer. No language can make it more explicit. All is left to the State, except only that the persons the State designates as its electors of the most numerous branch of its Legislature shall be the constitutional electors of the House of Representatives. The Constitution provides that the State may determine the persons who shall be electors of members of the House of Representatives by its act of determining who shall be the electors of its most numerous legislative branch. This right of the State to determine the qualification of the electors of the members of its Legislature is older than the Constitution. The State derived the power from the people of the State before the Constitution was adopted. The power, therefore, remains in the State until it is taken away. There is nothing in the Constitution, nothing in the provision quoted, certainly, granting the power to the Federal Government, or prohibiting it to the State.

"In this view all the commentators, that I have been able to consult, agree. It was a reference of the whole question to the domestic law—to the law of the State. The House of Representatives was to be composed of members chosen every two years by the people of the several States, the requisite qualifications of the electors of whom were expressly referred to the law established by the State itself. And this provision was sustained by a large majority of the Convention. The advocates of this bill must therefore look to some other provision of the Constitution for the power to pass it. There is no grant here to the Federal Government. It only authorizes the same electors to elect members of the House of Representatives who by the laws of the State are qualified electors of the most numerous branch of the State Legislature. This is what was intended, and all that can be claimed for it.

"Can authority for this bill be found under article one, section four, clause one, of the Constitution?

The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

"The times, places, and manner of holding the elections for Senators and Representatives shall be prescribed in each State by the Legis-

lature thereof. The times, places, and manner; 'but the Congress may at any time make or alter such regulations.' What regulations may Congress make or alter? Clearly, the times, places, and manner, and nothing else: the times when and the places where the elections shall take place. This is clear and unmistakable. And is there any more room for doubt as to the import of the term 'manner?' It seems to me not. It cannot relate to the qualification of the electors. This is left where it was at the adoption of the Constitution—with the States themselves. Manner must relate to the manner of conducting the election, whether by ballot or *viva voce*, to the mode or manner in which the elector shall signify his choice, shall express his will. This was the opinion of Mr. Justice Story, in his able and most exhaustive commentary on the Constitution, where we should almost suppose he had these bills under consideration. He says:

> What would be said of a clause introduced into the national Constitution to regulate the State elections of the members of the State Legislatures? It would be deemed a most unwarrantable transfer of power, indicating a premeditated design to destroy the State governments. It would be deemed so flagrant a violation of principle as to require no comment.—*Story on the Constitution*, sec. 819.

"This bill proposes to regulate the State elections of members of the State Legislature; precisely what Story says would indicate an unmistakable design to destroy the State governments. Again Justice Story says:

> Nor can it be said with correctness that Congress can in any way alter the rights or qualifications of voters.—*Ibid.*, sec. 820.

"Mr. Story seems to have adopted very nearly the language of Hamilton on the same subject in No. 59 of the *Federalist*, where he most emphatically condemns the idea even of introducing such an article into the Constitution. He says:

> Suppose an article had been introduced into the Constitution empowering the United States to regulate the elections for the particular States, would any man have hesitated to condemn it, both as an unwarrantable transposition of power and as a premeditated engine for the destruction of the State governments?

"In those days no man would have hesitated to condemn it. The Constitution could never have been adopted if it had contained the grant of power to Congress to determine the qualification of voters for officers of the States. Such a work is left for these days of revolution and usurpation—to the mad fanatics who for partisan ends would destroy our republic of States. These authorities not only show that the power to regulate the qualification of electors is not granted to the Federal Government, but that it ought not to be possessed by it. Mr. Story says:

> It would be a most unwarrantable transfer of power, indicating a premeditated design to destroy the State governments.

"Mr. Hamilton calls it—

> An unwarrantable transposition of power, * * * a premeditated engine for the destruction of the State governments.

"Sir, for myself I most heartily indorse and believe this. This measure originated in hostility to the States, and most certainly menaces their existence. Every step in the direction of this bill and joint resolution is a step toward centralization and consolidation. It evinces a premeditated design upon the life of the States—a design to concentrate all the powers of government in the Federal head. And with this scheme consummated, and the others contemplated by the party in power, there will be very little left of the States; the rights, powers, and all the vast interests confided to them by the people, will be crushed and destroyed under the advancing foot of empire. The States cannot long stand against the grasping and growing power of the Federal Government.

"Mr. Speaker, after the most careful examination and inquiry, I venture the assertion that no friend or advocate of the Constitution at the time of its adoption by the Convention, and ratification by the States, can be found to have claimed even that the power to prescribe the qualification of voters in the States was conferred upon the Federal Government. It is true that the opponents of the Constitution argued against it on the ground that it might be so construed; that Congress—some future Congress—might undertake to exercise the power of determining what persons should exercise the right of suffrage. The gentleman from Massachusetts (Mr. Boutwell) admits, as I understood him, that this was the charge made against the Constitution by its opponents. Patrick Henry was one of them. He made every argument which his great genius could suggest to stir up hostility to it. But who but the gentleman from Massachusetts would argue a constitutional grant of power, against the plain letter of the instrument, on the suggestions of those opposed to it and seeking to defeat its adoption, merely because those suggestions were undenied by its friends? The gentleman, however, is mistaken when he says that the friends of the Constitution did not deny that this power was conferred upon the United States Government, or that the friends did not deny this construction of those who were opposed to it. It was not only denied in the discussions in the Convention, but it was deliberately denied by Hamilton and Madison in the passage already quoted from the *Federalist*. In my judgment, the evidence that the power to regulate the qualification of voters was left with the States, and that the Convention so intended from its language, from the declaration of the members, from the concurrent history, from all respectable commentators, is conclusive and overwhelming. Any other conclusion will do violence to the plain letter of the Constitution, and be a falsification of the history and debates upon it.

"The argument, that, if this power is with the States, and not subject to the ultimate control and regulation of the national Government, the States have it in their power to refuse to act upon the question, and thereby fail or neglect to send Representatives to Congress and thus destroy the Government, has very little force. Congress having the power to regulate the time, place, and manner of holding the elections, has all the power that was thought necessary, all that is necessary. This being done, the persons qualified to vote for members of the most numerous branch of the State Legislature can and will meet and elect Representatives. It can make no difference that the electors are determined by the State. Electors qualified to elect and having the right to vote for members of the State Legislature exist, and must always exist so long as the State itself, as such, exists; and Congress can require them to meet at the time and place and cast their ballots in the manner it may see fit to designate.

"But the gentleman from Massachusetts, my colleague on the committee, made one other argument which I cannot fail to notice. He claimed, as I understood him, that the power of Congress to make or alter such regulations as the State might prescribe was coextensive with the power granted to the State, and that, if the Congress could not regulate the qualifications of electors, the States did not possess the power to prescribe them. This is a fundamental error—I had almost said blunder. It is basing the argument upon the most fatal heresy of these times—the heresy out of which the evils have grown that threaten the very life of the republic of States. It reverses the entire order and system of our Government. The gentleman must have forgotten that the Federal Government is a Government of delegated powers:

> That the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people.—*Tenth Amendment of Constitution.*

"The power to determine the qualifications of electors was, in the States, conferred, as we have before stated, by the people of the States, in most if not all of them embedded in their constitutions when the Federal Constitution was formed and adopted. And that power has never been delegated to the General Government, and has not been prohibited to the States. It rests, therefore, where the people of the States placed it—in the States themselves. Sir, the powers and rights and liberties of the States and people do not come down from Congress or the Federal Government. There are some powers with which Congress has not been intrusted. Congress cannot determine just how much of liberty the people shall enjoy, just how they shall speak and move and breathe. All the powers of the Federal Government come up from the States and people, and it never had and never can have the rightful authority to exercise any power not granted in and by the Constitution. The exercise of any other is rank usurpation.

"I do not suppose it is seriously believed, or will be seriously contended, that the passage of this bill is warranted under the clause of the Constitution: 'The United States shall guarantee to every State in this Union a republican form of government.' For Congress to intervene, under the pretence that the States to which the bill is to apply have not now a republican form of government, is to decide that there are no States now in the Union that have a republican form; for the bill applies alike to all the States. It is to decide that there never have been any States of this Union that have had a republican form. If there be any State that has a republican form, that State ought to be excepted from its operation. I am not aware of any one who has the hardihood to claim that the original States were not republican in form, and, if they were, that settles the question of the power of Congress to interfere with them under this provision.

"The United States is not to guarantee any particular form of republican government. The States certainly have the right to select or choose for themselves the form, only so that it is republican. All are not by the Constitution required to be Massachusetts. Ohio's form may at least suit her people better, and the United States has no power to dictate or guarantee the one or the other as a choice of particular republican forms.

"If it were claimed that no State is republican in form that does not allow all its citizens to vote, then we should have no republican States, because no one of the States does allow all its citizens to exercise this privilege. It will not be claimed, I suppose, that the State has not a republican form of government for the reason only that it denies to its negro citizens what it also denies to our citizens' wives and daughters. And if citizenship alone confers the right to vote, and a State is not republican that denies the right to an uneducated, half-civilized colored man, how much more is the State not republican in form that denies the educated, cultivated, and refined woman the right. But, sir, citizenship does not necessarily carry with it the right to vote or hold office under our system. Nor can the denial to a citizen of the right to vote by a State destroy the republican form of its government. It was not so understood at the adoption of the Constitution, and has never been so claimed by any sane man. That the question of who shall exercise the right of suffrage is a delicate and most important question, I admit. That the power of determining it ought to be dispassionately and wisely exercised is equally true. On its being so used depend greatly the welfare and happiness of the body-politic and the permanence and endurance of our republican Government and institutions. But, that this power rests in the States, and ought to rest

there, I have no doubt. That the rights and liberties of the people are safer with this power in the control of the States than in the control of the Federal Government, I certainly believe.

"And, sir, without meaning any disrespect to the gentleman from Massachusetts (Mr. Boutwell), I must say that it seems to me that his bill and resolution for the amendment of the Constitution, and his 'cumulative remedies,' as he styled them, for the evils which exist, in his judgment, with reference to the persons who ought to exercise the right of suffrage, are a *felo de se*. If the power exists in the Federal Government to pass this bill, whether under any one or all the provisions referred to, then I admit that Congress has the right to control the whole question of suffrage and the qualification of electors for all officers, State and national. There can be no reason for its entering the State and determining the qualification of those who are to elect the officers named in the bill, that will not apply to every officer of the State, so far as the question of power is concerned. The electors of President and Vice-President are not named in section four of the first article. The power claimed, therefore, under the word 'manner' in this section can no more apply to them than to the Governor of the State or any other State officer. So that if it covers electors it may as well cover, and does as necessarily cover, all that is contemplated by the amendment proposed by the joint resolution. The amendment is, then, worse than useless. If it be necessary for the purpose it contemplates, it must be a most pregnant admission that the bill is unconstitutional."

Mr. Beck, of Kentucky, said: "This singular anomaly is presented for the first time in the history of this, or, I suppose, of any other country. The States are asked to so enlarge the grant of powers in the Constitution as to enable Congress, by appropriate legislation, to enforce the right of any citizen of the United States to vote in any State, regardless of race, color, or previous condition of slavery, the constitution and laws of the State to the contrary notwithstanding. The proposition asking for the grant of power from the States, by whom alone, when thus proposed, it can be granted through their Legislatures, admits upon its face that the power to grant or refuse to grant the proposition or request of Congress is lodged in the States, and that, if they refuse to transfer it, Congress has no right to exercise it; and yet, before the proposition has received the sanction of a single State, Congress proposes, by the bill now under consideration, to exercise all the power which the proposed amendment would give it, and which, for aught we know, every State may refuse to surrender when the proposition is submitted to them. The reputation of the majority of the Judiciary Committee of this House will not be promoted in the eyes of the civilized world by the serious presentation of such anomalous and inconsistent propositions. To ask States to grant powers, and at the same time to exercise them in spite of the constitutions and laws of the States who are asked to make the grant, is, it seems to me, too absurd for grown men seriously to consider. If we have the power now, the proposed amendment to the Constitution is folly. If such an amendment is required to confer the power upon us, the proposed law is the grossest and most shameless usurpation and oppression.

"When the distinguished gentleman was goading his party on with the lash of necessity, and telling them it was too late to look back—that their only safety lay in consummating the revolution they had inaugurated—I could understand him; but when he urged that both the amendment and the law were indispensable, because the party was divided in opinion as to where the power now was, I hardly think he was intelligible to himself.

"The idea that this is a nation—that the national Congress is vested with all power necessary to preserve whatever a majority of Congress may consider the life of the nation, which, properly speaking, now means the life of the radical party, was urged with a vehemence only equalled by the contempt with which the idea that this is a Union of coequal, confederated States was scouted and sneered at.

"Whatever stress may be laid on the language of the preamble, the fact remains that we are living under a Constitution framed by States, ratified by States, and which has been and can be only amended or altered—which is the better word when applied to the present and the last so-called amendment—by States. We are in no sense a nation, and whenever we become so we will be a centralized despotism in some form. The United States of America will have ceased to exist; anarchy or empire will have come. Nothing short of separate, independent State governments can manage and control the great, diversified, widely-separated, and often conflicting interests of this people. Perhaps the best way to determine who framed the Constitution is to ascertain who has the power to alter and amend it, as it can hardly be supposed that its framers would transfer to a power other than its maker the power under the guise of amendments to alter and destroy it. How can it be amended? The Constitution says:

> Only by the Legislatures of three-fourths of the several States, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress.

"This Congress, of course, prefers and proposes the former, for the very obvious reason that it does not desire nor intend that the people of the States shall have any right to deliberate or decide on the propositions, choosing rather to trust their partisans in the State Legislatures, all of whom have been elected already, without reference to and without any

knowledge on the part of the people who elected them that they would be called upon to consider so grave a proposition as the annulling of their own State constitutions on the question of suffrage."

The motion of Mr. Boutwell to reconsider was agreed to, when a motion was made to recommit the joint resolution to the Judiciary Committee. This motion was afterward withdrawn, and the joint resolution came before the House as follows:

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be held as part of said Constitution, namely:

ARTICLE —, *Sec.* 1. The right of any citizen of the United States to vote shall not be denied or abridged by the United States or any State by reason of the race, color, or previous condition of slavery of any citizen or class of citizens of the United States.

Sec. 2. The Congress shall have power to enforce, by proper legislation, the provisions of this article.

Mr. Boutwell: "I move to amend section one by striking out the word 'the' before 'race.'"

The amendment was agreed to.

Mr. Boutwell then said: "Mr. Speaker, I am of opinion, upon the whole, that the amendment, as it came from the committee, which says that 'the right of any citizen of the United States to vote shall not be denied or abridged,' is a comprehensive and explicit declaration. I thought so when it was drawn, and on the whole I think it best for the amendment that I should not undertake to incorporate into it the language used by the gentleman from Ohio (Mr. Shellabarger); but, in order that the sense of the House may be tested upon the question—not that I am myself of the opinion that it will add any thing substantial to the value of the amendment—I will propose to add to section one the words 'nor shall educational attainments or the possession or ownership of property ever be made a test of the right of any citizen to vote,' and on that amendment I will ask the previous question."

Mr. Bingham, of Ohio, said: "It must occur to the gentleman from Massachusetts, on a moment's reflection, that the designation of property and educational qualifications recognizes the right in every State of establishing a religious test; and I ask the gentleman why he will insist on the previous question upon a proposition which, as it stands by a well-known rule of construction, commits this House to the monstrous proposition that every State in the Union may establish a religious test as a qualification of the elective franchise. The exceptions made by the gentlemen are, I believe, a property qualification and an educational qualification, and the result is, in the words of one of the foremost jurists of America, that every other thing not included in this exception may be made a test, and that is the reason I object to it."

Mr. Eldridge: "I ask the gentleman if, in the view he has taken of the proposed amendment to the Constitution, there may not be established by the States any and every other test but the two only that are excepted?"

Mr. Bingham: "That is exactly what I have said touching the proposition of the gentleman from Massachusetts (Mr. Boutwell)."

Mr. Eldridge: "Not only a religious test, but every test that the mind of man can conceive, that does not come under the head of property or of education?"

Mr. Bingham: "Certainly."

Mr. Maynard, of Tennessee: "I would ask the gentleman if his objection will not apply equally to every form of amendment we may adopt, unless we undertake to declare affirmatively what shall be the qualifications of a voter? This proposed amendment speaks only negatively when it speaks of the qualifications of a voter, stating that certain matters shall not be a test against a voter, leaving every thing else open."

Mr. Bingham: "I am glad to have an opportunity to answer the question of the gentleman from Tennessee (Mr. Maynard). If there were nothing at all here except the first section, I might see a great deal of weight in the gentleman's suggestion. But there happens to be added to that a second section, giving to Congress the express power to enforce the prohibition. The result of the whole matter is, that, if we amend this first section, as suggested by my honorable colleague as well as by myself, by the second section Congress is invested with express authority to enforce the limitation."

Mr. Jenckes, of Rhode Island, said: "Does the gentleman understand that this second section gives to Congress the power to prescribe affirmatively the qualifications of electors in these elections; or does it simply give the power to enforce the prohibition upon the States; in other words, can that power be exercised by Congress so as to secure uniformity of qualification of electors in all the States of the Union?"

Mr. Bingham: "I answer the gentleman that I have not the least doubt on the question as a question of law. There are other negative provisions in the Constitution of the United States; for example, the express negative provision that 'no State shall pass any law impairing the obligation of contracts.' By virtue of your judiciary act, as it has been in force from the foundation of the Government to this day, that limitation upon the power of the States is uniform, and, whenever or wherever any State has undertaken by legislative enactment, or by constitutional provision, if you please—I care not which—to impair the obligation of contracts, that wrong has, by the operation of your law, been righted; so that the provision of the Constitution has operated

uniformly. Whenever Congress has the power under the Constitution to enforce the limitations of that instrument, even upon States, the exercise of the power will be as uniform as the exercise of any affirmative power can possibly be. It must be so; it cannot be otherwise."

Mr. Boutwell: "Mr. Speaker, I do not see that the argument made by the gentleman from Ohio (Mr. Bingham) changes the condition of the question at all. If it be true, as he argues, that under this amendment the States would have the right to impose a religious test, it is equally true that they can do so now. What he has said only adds force to the suggestion I made, that the amendment proposed by the gentleman from Ohio, if referred to the State Legislatures, will be met by all these difficulties; and, although I should be willing to strike down all educational or property tests, and all possibility of their being established anywhere, the probability is that the amendment which we are discussing, if submitted substantially as it came from the committee, will be stronger before the people, and that if we should attempt to grasp at too much we shall lose the whole. I believe that, if we adhere to the proposition to protect the people of this country against distinction on account of race, color, or previous condition of slavery, we undertake all that it is probably safe for us to undertake now."

The question was then put on Mr. Boutwell's amendment; and there were—yeas 45, nays 95.

So the amendment was disagreed to.

Mr. Bingham, of Ohio, now moved an amendment, in lieu of the first section, to which Mr. Shellabarger offered an amendment, as follows:

Strike out in the amendment of Mr. Bingham the provision proposed to be inserted in lieu of section one of the proposed new article of the Constitution, and insert in lieu thereof the following:

No State shall make or enforce any law which shall deny or abridge to any male citizen of the United States of the age of twenty-one years or over, and who is of sound mind, an equal vote at all elections in the State in which he shall have such actual residence as shall be prescribed by law, except to such as have engaged or may hereafter engage in insurrection or rebellion against the United States, and to such as shall be duly convicted of treason, felony, or other infamous crime.

The question was taken; and it was decided in the negative—yeas 61, nays 126, not voting 35; as follows:

YEAS—Messrs. Delos R. Ashley, Baldwin, Beaman, Beatty, Benton, Boles, Bowen, Broomall, Buckland, Cake, Clift, Cobb, Coburn, Cullom, Dawes, Delano, Eckley, Eggleston, Ela, James T. Elliott, French, Gravely, Hamilton, Hawkins, Hooper, Chester D. Hubbard, Judd, Julian, Kelley, Kelsey, George V. Lawrence, William Lawrence, Loan, Logan, Maynard, Mullins, Newsham, Norris, Orth, Paine, Plants, Polsley, Price, Prince, Sawyer, Schenck, Scofield, Shanks, Shellabarger, Starkweather, Stokes, Sypher, Twichell, Robert T. Van Horn, Ward, Cadwalader C. Washburn, Henry D. Washburn, William B. Washburn, Welker, Whittemore, and William Williams—61.

NAYS—Messrs. Allison, Archer, Arnell, James M. Ashley, Axtell, Bailey, Baker, Banks, Barnum, Beck, Benjamin, Bingham, Blaine, Blair, Boutwell, Boyden, Boyer, Bromwell, Brooks, Burr, Benjamin F. Butler, Callis, Cary, Chanler, Churchill, Sidney Clarke, Cook, Corley, Covode, Deweese, Dockery, Dodge, Donnelly, Driggs, Edwards, Eldridge, Thomas D. Eliot, Ferriss, Ferry, Fields, Fox, Garfield, Getz, Golladay, Goss, Gove, Griswold, Grover, Haight, Halsey, Harding, Haughey, Heaton, Higby, Hopkins, Hotchkiss, Hulburd, Humphrey, Hunter, Jenckes, Johnson, Alexander H. Jones, Thomas L. Jones, Kerr, Ketcham, Knott, Koontz, Laflin, Lash, Lincoln, Loughridge, Marshall, Marvin, McCormick, McCullough, McKee, Mercur, Miller, Moore, Morrell, Mungen, Myers, Newcomb, Niblack, Nicholson, Nunn, O'Neill, Perham, Peters, Phelps, Pierce, Pike, Pile, Poland, Pruyn, Randall, Raum, Robertson, Robinson, Roots, Ross, Sitgreaves, Smith, Spalding, Stewart, Stone, Stover, Taber, Taffe, Taylor, Thomas, Tift, John Trimble, Trowbridge, Upson, Van Aernam, Van Auken, Burt Van Horn, Van Trump, Van Wyck, John T. Wilson, Stephen F. Wilson, Windom, Woodbridge, Woodward, and Young—126.

NOT VOTING—Messrs. Adams, Ames, Anderson, Barnes, Blackburn, Buckley, Roderick R. Butler, Reader W. Clarke, Cornell, Dickey, Dixon, Farnsworth, Glossbrenner, Hill, Holman, Asahel W. Hubbard, Richard D. Hubbard, Ingersoll, Kellogg, Kitchen, Lynch, Mallory, McCarthy, Moorhead, Morrissey, Pettis, Pomeroy, Selye, Stevens, Lawrence S. Trimble, Vidal, Elihu B. Washburne, Thomas Williams, James F. Wilson, and Wood—35.

So Mr. Shellabarger's amendment to the amendment of Mr. Bingham was not agreed to.

The question then recurred on Mr. Bingham's amendment, as follows:

Strike out all of article one and insert as follows:

Section 1. No State shall make or enforce any law which shall deny or abridge to any male citizen of the United States of sound mind and twenty-one years of age or upward the equal exercise of the elective franchise at all elections in the State wherein he shall have actually resided for a period of one year next preceding such election, subject to such registration laws and laws prescribing local residence as the State may enact, except such of said citizens as shall engage in rebellion or insurrection, or who may have been, or shall be, duly convicted of treason or other infamous crime.

The question was taken; and it was decided in the negative—yeas 24, nays 160, not voting 38; as follows:

YEAS—Messrs. Axtell, Baker, Bingham, Brooks, Deweese, Dockery, Eldridge, Garfield, Haight, Heaton, Hotchkiss, Alexander H. Jones, McCullough, Phelps, Plants, Robinson, Ross, Spalding, Stewart, Stone, Tift, John T. Wilson, Woodward, and Young—24.

NAYS—Messrs. Allison, Arnell, Delos R. Ashley, James M. Ashley, Bailey, Banks, Beaman, Beatty, Beck, Benjamin, Benton, Blaine, Blair, Boles, Boutwell, Bowen, Boyden, Boyer, Bromwell, Broomall, Buckland, Buckley, Burr, Benjamin F. Butler, Cake, Callis, Cary, Chanler, Churchill, Sidney Clarke, Clift, Cobb, Coburn, Cook, Corley, Covode, Cullom, Dawes, Delano, Donnelly, Driggs, Eckley, Eggleston, Ela, Thomas D. Eliot, James T. Elliott, Ferriss, Ferry, Fields, Fox, French, Getz, Golladay, Goss, Gove, Gravely, Griswold, Grover, Halsey, Hamilton, Harding, Hawkins, Higby, Hooper, Hopkins, Chester D. Hubbard, Hulburd, Humphrey, Hunter, Jenckes, Johnson, Thomas L. Jones, Judd, Julian, Kelley, Kellogg, Kelsey, Kerr, Ketcham, Koontz, Laflin, Lash, George V. Lawrence, William Lawrence, Lin

colm, Loan, Logan, Loughridge, Lynch, Mallory, Marshall, Marvin, Maynard, McCormick, McKee, Mercur, Miller, Moore, Moorhead, Morrell, Mullins, Mungen, Myers, Newcomb, Newsham, Niblack, Norris, Nunn, O'Neill, Orth, Paine, Perham, Peters, Pierce, Pike, Poland, Polsley, Price, Prince, Pruyn, Randall, Raum, Robertson, Roots, Sawyer, Schenck, Scofield, Selye, Shanks, Shellabarger, Sitgreaves, Smith, Starkweather, Stokes, Stover, Sypher, Taber, Taffe, Taylor, Thomas, Trowbridge, Twichell, Upson, Van Aernam, Van Auken, Burt Van Horn, Robert T. Van Horn, Van Trump, Van Wyck, Ward, Cadwalader C. Washburn, Henry D. Washburn, William B. Washburn, Welker, Whittemore, Thomas Williams, William Williams, Stephen F. Wilson, Windom, and Woodbridge—160.

NOT VOTING—Messrs. Adams, Ames, Anderson, Archer, Baldwin, Barnes, Barnum, Blackburn, Roderick R. Butler, Reader W. Clarke, Cornell, Dickey, Dixon, Dodge, Edwards, Farnsworth, Glossbrenner, Haughey, Hill, Holman, Asahel W. Hubbard, Richard D. Hubbard, Ingersoll, Kitchen, Knott, McCarthy, Morrissey, Nicholson, Pettis, Pile, Pomeroy, Stevens, John Trimble, Lawrence S. Trimble, Vidal, Elihu B. Washburne, James F. Wilson, and Wood—53.

So the amendment was rejected.

The joint resolution was then ordered to be engrossed and read a third time.

The result having been announced as above, the joint resolution, being engrossed, was read the third time.

Mr. Boutwell: "I move the previous question on the passage, and demand the yeas and nays."

The previous question was seconded, and the main question ordered.

The question was then taken on its passage, and it was decided in the affirmative, as follows:

YEAS—Messrs. Allison, Arnell, Delos R. Ashley, James M. Ashley, Bailey, Baldwin, Banks, Beaman, Beatty, Benjamin, Benton, Blackburn, Blaine, Blair, Boles, Boutwell, Bowen, Boyden, Bromwell, Broomall, Buckland, Buckley, Benjamin F. Butler, Cake, Callis, Churchill, Sidney Clarke, Clift, Cobb, Coburn, Cook, Corley, Covode, Cullom, Dawes, Delano, Deweese, Dockery, Dodge, Donnelly, Driggs, Eckley, Edwards, Eggleston, Ela, Thomas D. Eliot, James T. Elliott, Farnsworth, Ferriss, Ferry, Fields, French, Garfield, Goss, Gove, Gravely, Griswold, Halsey, Hamilton, Harding, Haughey, Heaton, Higby, Hooper, Hopkins, Chester D. Hubbard, Hulburd, Hunter, Jenckes, Alexander H. Jones, Judd, Julian, Kelley, Kellogg, Kelsey, Ketcham, Koontz, Laflin, Lash, George V. Lawrence, William Lawrence, Lincoln, Loan, Logan, Loughridge, Lynch, Marvin, Maynard, McKee, Mercur, Miller, Moore, Moorhead, Morrell, Mullins, Myers, Newcomb, Newsham, Norris, Nunn, O'Neill, Orth, Paine, Perham, Peters, Pierce, Pike, Pile, Plants, Poland, Price, Prince, Raum, Robertson, Roots, Sawyer, Scofield, Selye, Shanks, Shellabarger, Smith, Spalding, Starkweather, Stewart, Stokes, Stover, Taffe, Taylor, Thomas, John Trimble, Trowbridge, Twichell, Upson, Van Aernam, Burt Van Horn, Robert T. Van Horn, Van Wyck, Ward, Cadwalader C. Washburn, Henry D. Washburn, William B. Washburn, Welker, Whittemore, Thomas Williams, William Williams, James F. Wilson, John T. Wilson, Stephen F. Wilson, Windom, and the Speaker—150.

NAYS—Messrs. Archer, Axtell, Baker, Barnum, Beck, Bingham, Boyer, Brooks, Burr, Cary, Chanler, Fox, Getz, Golladay, Grover, Haight, Hawkins, Hotchkiss, Humphrey, Johnson, Thomas L. Jones, Kerr, Knott Marshall, McCormick, Mungen, Niblack, Nicholson, Phelps, Polsley, Pruyn, Randall, Robinson, Ross, Sitgreaves, Stone, Taber, Tift, Van Auken, Van Trump, Woodward, and Young—42.

NOT VOTING—Messrs. Adams, Ames, Anderson, Barnes, Roderick R. Butler, Reader W. Clarke, Cornell, Dickey, Dixon, Eldridge, Glossbrenner, Hill, Holman, Asahel W. Hubbard, Richard D. Hubbard, Ingersoll, Kitchen, Mallory, McCarthy, McCullough, Morrissey, Pettis, Pomeroy, Schenck, Stevens, Sypher, Lawrence S. Trimble, Vidal, Elihu B. Washburne, Wood, and Woodbridge—31.

So (two-thirds having voted in favor thereof) the joint resolution was passed.

In the Senate, on January 28th, the joint resolution of the Senate, proposing an amendment to the Constitution, was considered in Committee of the Whole. The question was on the amendment reported by the Committee on the Judiciary.

Mr. Stewart, of Nevada, said: "This amendment is a declaration to make all men, without regard to race or color, equal before the law. The arguments in favor of it are so numerous, so convincing, that they carry conviction to every mind. The proposition itself has been recognized by the good men of this nation; and it is important, as the new administration enters upon the charge of the affairs of this country, that it should start on this high and noble principle that all men are free and equal, that they are really equal before the law. We cannot stop short of this.

"It must be done. It is the only measure that will really abolish slavery. It is the only guarantee against peon laws and against oppression. It is that guarantee which was put in the Constitution of the United States originally, the guarantee that each man shall have a right to protect his own liberty. It repudiates that arrogant, self-righteous assumption, that one man can be charged with the liberties and destinies of another. You may put this in the form of legislative enactment; you may empower Congress to legislate; you may empower the States to legislate, and they will agitate the question. Let it be made the immutable law of the land; let it be fixed; and then we shall have peace. Until then there is no peace. I cannot add to the many eloquent speeches that have been made on this great question in this House."

The presiding officer (Mr. Ferry in the chair): "The question is on the amendment reported by the Committee on the Judiciary, to strike out:

No State shall deny or abridge the right of its citizens to vote and hold office on account of race, color, or previous condition.

"And in lieu thereof to insert:

The right of citizens of the United States to vote and hold office shall not be denied or abridged by the United States or any State on account of race, color, or previous condition of service."

The amendment was agreed to.

Mr. Davis, of Kentucky, said: "I move to amend the resolution by adding:

And this and all future proposed amendments to

the Constitution, whether proposed by the Congress or a convention called by Congress on the application of the Legislatures of two-thirds of the several States, instead of being submitted to the Legislatures or to conventions of the several States, shall be submitted to the vote of the people of each State; and, if a majority of the people entitled to vote on the proposed amendment in three-fourths of the several States shall vote in favor of the proposed amendment, it shall, to all intents and purposes, be a part of the Constitution.

"Mr. President, the party in power professes to be very democratic. I believe it makes louder pretensions to democracy than the Democratic party ever did or now do. But what is its practice? The honorable Senator from Nevada, who has charge of this measure, wants to submit his proposed constitutional amendment to Legislatures already elected. He wants to attach the amendment to the Constitution by the first heat. How do he and his friends carry out their professions of democracy? The Legislatures already chosen are to act upon this amendment, although they were elected by the people in advance of it and without regard to it. Now, my proposition is, that neither the Legislatures already chosen, nor those which may hereafter be chosen, nor any convention chosen in the several States, shall be called upon to act on the ratification of this proposed amendment to the Constitution, but that that question shall be submitted directly to the people of the various States.

"Now, sir, what necessity is there for having a proposition to amend the Constitution submitted either to a Legislature or a convention, in a State, called for the purpose of acting on the proposition? They cannot add to the proposition; they cannot subtract from it; they cannot modify it. The proposition is to be voted for or against as a totality, as an entirety, as a matter beyond the control of the body to which it is submitted either for acceptance or rejection."

Mr. Wilson, of Massachusetts, said: "Mr. President, the Senator from Kentucky tells us that in proposing this amendment we are seeking to perpetuate our power. A word to the Senator on that point. He knows and I know that this whole struggle in this country to give equal rights and equal privileges to all citizens of the United States has been an unpopular one; that we have been forced to struggle against passions and prejudices engendered by generations of wrong and oppression; that we have been compelled to struggle against great interests and powerful political organizations. I say to the Senator that the struggle of the last eight years to give freedom to four and a half millions of men who were held in slavery, to make them citizens of the United States, to clothe them with the right of suffrage, to give them the privilege to be voted for, to make them in all respects equal to the white citizens of the United States, has cost the party with which I act a quarter of a million of votes. There is not to-day a square mile in the United States where the advocacy of the equal rights and privileges of those colored men has not been in the past and is not now unpopular. Yes, sir, the cause of the poor, wronged, oppressed negroes has been, now is, and for some years will continue to be, an unpopular cause. The public man or the political party that honestly and zealously espouses their cause will continue to be misunderstood, misrepresented, and maligned. In the past the true and tried friend of the black man has been made to feel the hatred and power of the enemies of the black race. It is too much so now, and I fear it will be so in some portions of the country for years to come."

Mr. Hendricks, of Indiana, said: "The question which I wish to discuss just now is that of the proper submission of this amendment to the people or to the States. I am not able to concur in all of the proposition of the Senator from Kentucky. One of the features of his proposition is, that the amendment may be submitted to the people of the States to be voted upon in the popular way by the people. I am not aware of any provision of the Constitution of the United States authorizing the ratification of an amendment in that mode. So far as the future is concerned, I have no doubt that we may so amend the Constitution. The question which I wish to speak of now is, how shall this amendment be considered by the people? It is radical and important, and it should be decided in the country according to the will and the pleasure of the people. How can that be done? In the absence of a constitutional provision authorizing it, I cannot see how it can be submitted to a popular vote in the States.

"There are only two modes of ratification: one is by the Legislatures of the States, and the other by conventions called in the States; and it seems to be competent for Congress to decide upon the mode of ratification as between these two modes. The Senator from Connecticut (Mr. Dixon) has proposed a submission to conventions in the States, as I understand it. That is the nearest possible approach that we can now make to the people with this amendment. I wish we could provide, but I am not clear that it is practicable, that this amendment shall not be considered by any Legislature already selected. If it could be submitted to Legislatures, the members of which are hereafter to be elected, that would answer every purpose, as I think, desired by the Senator from Connecticut; but I suppose it is not practicable or possible for Congress to say to the States what particular Legislature shall consider the amendment. I am not sure upon that question. I wish I could feel sure that we might say that the Legislatures now elected shall not consider it. I want, in some mode or other, the people to pass upon this measure. If they decide that suffrage in this country shall be without limit, then, of course, it becomes their voice; it be-

comes right so far as Government is concerned: but, until that is done, no submission will be altogether satisfactory. So that I know of no mode by which we can secure the voice and judgment of the people except that suggested by the Senator from Connecticut; and what I wish to say now to the Senate is in favor of that proposition.

"I submit to honorable Senators on all sides that none of us to-day politically stand in a position to deny this proposition. It is proposed by the Senator from Connecticut that the people, in the selection of delegates to the State Convention, shall have a voice upon this matter. It is their matter. It is ours no further than we constitute a part of the body of the people. The Senator from Connecticut proposes that the people shall speak upon the great question of changing the Constitution of the United States in regard to the exercise of political power. Is that unreasonable? Is it not right? Did not this Government come from the people through State conventions? Is it not right that when we change it we shall come as near to the people as is possible?

"Who says that a member of a Legislature elected last summer or fall ought to act upon a question that was not considered by the people when they elected him? Did I understand some Senator to say that this question was considered in the election? I think some Senator interrupted the distinguished Senator from Kentucky and called his attention to the election of last fall. I call your attention to the election of last fall, honorable Senators, and I ask you now to stand upon the pledge of honor that your party made to the people in the election last fall.

"The position of the Democratic party last summer, I presume, is not a question of doubt or of uncertainty. That the Democratic party, in casting its vote for Seymour and Blair, did not vote for negro suffrage, is plain enough. That the Republican party last fall, in voting for Grant and Colfax, cast a vote against universal suffrage is as plain. You took the question away from the people. You said that they need not consider it. You said that they should not consider it last summer; and now I understand it to be proposed to submit it to Legislatures that are not again responsible to the people, but that were elected before this question is submitted. The second section of the Chicago platform, not yet a year old, declared the doctrine of the Republican party, and I simply ask honorable Senators now to make the pledged and plighted faith of their party to the country good and true, and not in the face of the nation and humanity to give it the lie:

> The guarantee by Congress of equal suffrage to all loyal men at the South was demanded by every consideration of public safety, of gratitude, and of justice, and must be maintained.

"That is plain enough. In that you say that the guarantee of suffrage to all the loyal men in the South was called for by high considerations and must be maintained. Your party took plain ground upon that question; but in the Northern States, in the State that I have the honor to represent in this body, what position did you take? You go on to say:

> While the question of suffrage in all the loyal States properly belongs to the people of those States.

"Not yet a year old is this political faith, declared by the grand council of your party, upon which Grant and Colfax stood before the people; and now you propose, without giving the people a voice or a hearing upon the question, to say that the right to control suffrage in the Northern States does not belong to the people of those States.

"I ask honorable Senators, upon this question of submission for ratification, what that plighted faith of a great party to the people did mean? Was it an evasion? If so, your party is unworthy of a nation's support. Was it a trick and a fraud? Then you are not only unworthy of a nation's support, but worthy only of the condemnation of virtuous manhood everywhere and in all ages. To the people you submitted the question last fall, did you? You interrupt the Senator from Kentucky and say that the election last fall meant something! If so, what did it mean? You said to the party when they cast ballots for Grant and Colfax: 'Your ballot, if it means any thing on this subject, means just two propositions: first, that in the Southern States Congress shall maintain equal suffrage to loyal men; but in the other States, in the Northern States, the right to control suffrage belongs to the people of those States.' Did it belong to them? Then give them a voice upon it and make this declaration of your party true, and not stand before the nation and before the world as declaring a falsehood in a national platform."

Mr. Davis: "With permission, I will withdraw the amendment which I proposed."

The President *pro tempore:* "The amendment is withdrawn."

Mr. Dixon, of Connecticut, said: "What is the question? It is not merely a question of suffrage. That of itself is a subject of vast importance, and is now agitating the public mind of this country to a very great extent. The question whether the female sex should be permitted to participate in the privilege of suffrage, whether other restrictions should be removed, the question of age, the question of property, a multitude of questions are or may be raised which are vastly important and interesting in connection with the right of suffrage. But, sir, we are not now dealing merely with the qualification of voters. The question is not what shall be the qualifications of the voter, but who shall create, establish, and prescribe those qualifications; not who shall be the voter, but who shall make the voter.

"In considering that question, we ought to

remember that it is utterly impossible that any State should be an independent republic which does not entirely control its own laws with regard to the right of suffrage. Nor does it make the slightest difference with regard to this that any abdication or abnegation of its power is voluntary. It may be said that it is proposed that the States shall voluntarily relinquish their power to control the subject of suffrage within their respective limits. Sir, suppose a State should voluntarily assume upon itself a foreign yoke, or declare by a majority of its own people, or even by a unanimous vote, that it would prefer a monarchy, would the fact of its being voluntary at all affect the question whether it was still an independent republic?

"Now, sir, it may be that the people of this country in their present condition of mind are ready to relinquish the power in the States of regulating their own laws with regard to suffrage; and if it should so prove, and the result should show that your own State (Ohio) and my State (Connecticut), having once or twice voted against extending the right of suffrage to the negro race, should now consent that a central power should regulate that question, and should do this voluntarily and freely, nevertheless they would by that action lose their character as republican governments. And, sir, that is the reason why it was that in the formation of the Constitution of the United States there was an entire neglect to interfere in the slightest degree with the question of suffrage in the several States. Look through the Constitution as it was formed, and you find no allusion whatever to the question of suffrage, except by reference to existing laws and qualifications in the then existing States.

"It was the principle that an independent republic must necessarily control the question of suffrage in its own elections. This lies at the very foundation of all government, and it is therefore wholly impossible for any State to be an independent republic or an independent government in which the right of suffrage is controlled by an external power, whether by the consent of that State or against its consent. For that reason, when it is proposed to amend the Constitution of the United States in this respect, it is very questionable whether it is not an amendment which subverts the whole foundation and principle of the Government. Suppose an amendment were offered here to-day proposing that this Government, instead of being a republic, should be a monarchy; suppose it were proposed to strike out the clause of the Constitution guaranteeing a republican form of government to each State, and instead of that to insert a guarantee of a monarchy to each State. I do not know that this amendment would not be within the power of Congress to propose. The Constitution provides that Congress may propose such amendments as in its own judgment it shall think best and proper. If a proposition of that kind were made, it is very true it might be objected, 'This goes to the foundation of your Government; this is not amendment; it is revolution, it is subversion.' Can that not be said in this instance? Is the proposed amendment any more a fair carrying out of the intention of the Constitution when it provides for its own amendment than it would be if it proposed directly to subvert the form of government, if it be true that the right of exercising and controlling the power of suffrage must necessarily exist in a State or it ceases to be a republic?"

Mr. Ferry: "I move to amend the recital in the proposed amendment by striking out the words 'the Legislatures of' and inserting the words 'conventions in,' and also where the word 'Legislatures' occurs in the second place to insert the word 'conventions' in lieu of it. I find that the Constitution merely refers to 'conventions.'"

The President *pro tempore:* "The amendment will be read."

That the following article be proposed to conventions in the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said conventions, shall be valid as part of the Constitution, etc.

Mr. Davis, of Kentucky, said: "I will state what I understand to be the principle of the Constitution in relation to amendment, and I ask the attention of the honorable Senator from Kansas for one moment to the proposition. The great leading idea of the amendment which he proposes is, that no citizen of the United States should have any right whatever that every other citizen is not entitled to share. Do I understand the honorable gentleman's idea?"

Mr. Pomeroy: "My idea is that civil and political rights belong to all citizens alike; I do not mean the rights of private property."

Mr. Davis: "We understand each other. Now, I lay down the proposition with more distinctness, with more truth and philosophy than the honorable Senator's proposition, that each State in the Union is entitled under our Constitution to all the rights and privileges that any or every other State is entitled to. Here is the State of Virginia, with all her illustrious history and with all of her Revolutionary reminiscences, excluded by force and violence from her just representation in the Senate of the United States. Here is the State of Mississippi in the same predicament. Here is the State of Texas in a like predicament. Here is the State of Georgia in a sort of hybrid condition, neither flesh nor fowl, neither fish nor bird, fully represented, I believe, in the other branch of Congress, and without a voice in this assembly of the conscript fathers of the nation; and in this condition of things the Senate of the United States undertakes the burlesque of gravely amending the Constitution of the United States!

"Sir, I say it is not competent for the Senate of the United States to act, in this state of its

organization, upon a proposed amendment to the Constitution. It is a mockery. If there was communication between the other world and this, or with the ashes of the illustrious dead who have been so long since borne to their graves, the enormity of such a proposition would be enough to reanimate their ashes and to make their illustrious persons turn over in their tombs. Is the extravagance of this day and generation of ours to have no bounds? I ask you, Mr. President (Mr. Frelinghuysen in the chair), an advocate of all these anomalous and revolutionary movements, by what authority can the Senate of the United States proceed to propose amendments to the Constitution, excluding the State of Georgia from her representation in the Senate? I put it stronger than that: what right has this Senate or this Congress to exclude the other three States that I have named from their representation in the two Houses of Congress, and to undertake the most important function of Government in the United States; and that is, to alter the fundamental law in their absence?

"Sir, your amendments to the Constitution are all void; they are of no effect. They were proposed by a mutilated Congress; they were proposed by a mutilated House of Representatives and Senate. That mutilation at one time was voluntary, but now, since it has been healed by the submission and obedience of the insurgents to the Constitution and laws of the United States, you have proceeded to continue it, to enlarge it, to protect it indefinitely; and with all this violence done by you to the Constitution, and to the rights of the people and the sovereign States of the United States to take part in this important business of amending the Constitution, you still continue the mockery of your amendments. How ridiculous! How absurd!"

On February 3d, the Senate, on motion of Mr. Stewart, of Nevada, proceeded to the consideration of the House resolution above-mentioned for an amendment of the Constitution, as in Committee of the Whole. He moved to amend the resolution by striking out the whole of section one, and inserting, in lieu thereof, the following:

The right of citizens of the United States to vote and hold office shall not be denied or abridged by the United States, or any State, for any reason not equally applicable to all citizens.

A debate subsequently ensued, during which Mr. Morton, of Indiana, said: "Mr. President, yesterday my colleague (Mr. Hendricks) addressed the Senate at some length, and was followed in the same strain of remark by the Senator from Connecticut (Mr. Dixon), to show that the Republican party was committed by the platform adopted at Chicago from taking any action upon this subject. Very much stress was placed upon it by my colleague, as well as the Senator from Connecticut, who, I believe, repeated his argument this afternoon in several forms. It is insisted that the Republican party committed itself to the doctrine that, so far as suffrage in the loyal States was concerned, it should be left entirely to the States. That resolution, perhaps, went no further, and was intended to go no further, than to define the constitutional position of the party—that, as the Constitution now is, the regulation of suffrage belongs to the several States; but it certainly was not intended to commit the party to the doctrine that it would not at any time thereafter propose to change the Constitution upon that subject.

"Now, Mr. President, I propose to speak for a few minutes in regard to the language of this amendment. I will vote for the amendment as it came from the House of Representatives, or I will vote for the clause as reported by the Judiciary Committee in the Senate if I can get no better form; but I desire to say that it comes far short of what should now be the action of Congress on this subject, in my opinion. The resolution as it came from the House and the amendment reported by the Committee on the Judiciary are in substance the same, differing somewhat in phraseology. The amendment of our committee is:

The right of citizens of the United States to vote and hold office shall not be denied or abridged by the United States, or any State, on account of race, color, or previous condition of servitude.

"It will be observed that this language admits or recognizes that the whole power over the question of suffrage is vested in the several States, except as it shall be limited by this amendment. It tacitly concedes that the States may disfranchise the colored people or any other class of people for other reasons save and except those mentioned in the amendment. They cannot be disfranchised by reason of race, color, or previous condition of servitude. In other words, it leaves all the existing irregularities and incongruities in suffrage. I have entertained the idea that, when we came to amend the Constitution upon this subject, we ought to make suffrage uniform throughout the United States; that the same class of men should be allowed in every State to vote for President and Vice-President, and members of Congress, and members of the State Legislatures, that elect Senators; that the same class of men excluded in one State ought to be excluded in every other State. In other words, I think suffrage ought to be uniform.

"In the State of Indiana a man of foreign birth, who has been in the United States one year and in the State of Indiana six months, and who has declared his intention to become a citizen of the United States, is allowed to vote for President, Vice-President, members of Congress, and State officers. Just over the line, in the State of Ohio, the same man would not be allowed to vote unless he had been in the country five years and had become fully naturalized. Here is a class of men taking part in the government of the country in one

State who are excluded in the next State. I am not discussing the propriety or impropriety of these regulations, but I am speaking of their inconsistencies. In the State of Massachusetts, for instance, they have an educational test; in the State of Rhode Island, if I am correctly informed, there is a property qualification. The population of that State is so numerous that the voting ratio must be reduced by requiring a property qualification. In some States a residence of six months is required; in other States a residence of twelve months is required, and perhaps there may be some other conditions of suffrage prescribed. In the State of New York I believe that colored men are allowed to vote if they are worth $250 in real estate.

"Now, sir, when we come to amend the Constitution of the United States on this subject, would it not be proper to make suffrage uniform? And it is as easy to amend it in the one way, I believe, as it is in the other. This amendment leaves the whole power in the States just as it exists now, except that colored men shall not be disfranchised for the three reasons of race, color, or previous condition of slavery. They may be disfranchised for want of education or for want of intelligence. The States of Louisiana and Georgia may establish regulations upon the subject of suffrage that will cut out forty-nine out of every fifty colored men in those States from voting, and what may be done in one of these States may perhaps be done in others. They may, perhaps, require property or educational tests, and that would cut off the great majority of the colored men from voting in those States, and thus this amendment would be practically defeated, in all those States where the great body of the colored people live. Sir, if the power should pass into the hands of the rebel population of those States—perhaps I should beg pardon now, I should rather call it the Conservative or Democratic population—if they could not debar the colored people of the right of suffrage in any other way, they would do it by an educational or a property qualification.

"Mr. President, I am not sure, on looking further at this amendment, but that the language itself can be dodged without establishing either a property qualification or an educational test. Take the State of Kentucky, Maryland, or any of these States choosing to do so; may they not dodge it? It says the right of citizens of the United States to vote and hold office shall not be denied or abridged by any State or by the United States 'on account of'—'by reason of' is the language of the amendment of the House—'race, color, or previous condition of servitude.' I should suppose that the words 'race or color' would be sufficient. I am somewhat averse to putting the word 'color' into the Constitution. I am somewhat averse to making any reference to slavery in the Constitution.

"Now, Mr. President, why is it necessary to insert these words, 'or previous condition of servitude' or 'slavery?' It says they shall not be debarred of the right of suffrage on account of race or color or previous condition of servitude. It is because some of these States might say, 'We will debar these men from voting, not on account of their race, not on account of their color, but because they have once been slaves.' Suppose that one of these States should say, 'We will debar these men from voting, not by reason of color or race or previous condition of slavery, but because they are deficient in natural intelligence, incapable of improvement, and incompetent to take a part in the administration of the Government.' If they put it upon that reason, it might be perhaps a strained construction amendment; but we ought not now to be providing an amendment that is susceptible of a double construction. They say they do not disfranchise these men on account of their color, race, or having been slaves, but because they are naturally inferior in point of intellect, and unqualified to take part in the administration of the Government. I am not sure but that in that way the whole provision may be dodged. That is just the position taken by the great body of the Southern people. If you will ask them their opinion of the colored race, they will tell you that they are an inferior race, and hardly human beings, and disqualified from taking part in the administration of the Government; and if they put that in their constitutions, and give that as a reason, it becomes a question whether they have not dodged the whole provision. We would deny the truth or soundness of their reason; but they would insist on it, and claim that it is not provided against in the amendment.

"Now, Mr. President, I would prefer an affirmative amendment, an amendment declaring who shall have the right to vote, not a negation but an affirmation, and one that defines the right of suffrage, and does not leave it open for the construction of different States; and I think that, if we are not to have an affirmative definition of suffrage, the amendment offered by the Senator from Michigan (Mr. Howard) is perhaps as good a one as has been presented, and certainly better than the one that came here from the House; and I will ask the Secretary to read it."

The Chief Clerk: "The amendment of Mr. Howard proposes to strike out section one of the House article, and insert:

Citizens of the United States of African descent shall have the same right to vote and hold office as other citizens."

Mr. Morton: "That pertains simply to citizens of African descent. This amendment refers also only to citizens of African descent; but that gives them an affirmative right, says they shall have the same right to vote that other citizens have. It therefore cuts off every possible construction of the amendment as it

came from the House of Representatives, or the one offered by the committee, by which they could be debarred from the right of suffrage. It places these men precisely upon the same ground with all others; but it still leaves the States the power of establishing an educational or property test by which they would cut off the great mass of colored men. I think this is the best of the three, but that it would be still better to adopt an amendment declaring who shall have the right to vote, making it uniform throughout the United States, and leaving no question of construction for the States."

Mr. Williams, of Oregon, said: "Mr. President, I send to the chair an amendment which I shall propose to the report of the Committee on the Judiciary in due time."

The Chief Clerk: "The amendment now submitted proposes to strike out all after the words 'article fifteen' and insert:

Congress shall have power to abolish or modify any restrictions upon the right to vote or hold office prescribed by the constitution or laws of any State."

Mr. Sumner, of Massachusetts, said: "I am now brought directly to the proposed amendment of the Constitution. Of course, the question stares us in the face, why amend what is already sufficient? Why erect a supernumerary column?

"So far as I know, two reasons are assigned. The first is that the power of Congress is doubtful. It is natural that those who do not sympathize strongly with the equal rights of all should doubt. Men ordinarily find in the Constitution what is in themselves, so that the Constitution in its meaning is little more than a reflection of their own inner nature. As I am unable to find any ground of doubt, in substance or even in shadow, I shrink from a proposition which assumes that there is a doubt. To my mind, the power is too clear for question. As well question the obligation of Congress to guarantee a republican form of government; or the abolition of slavery; or the prohibition upon the States to interfere with the rights and privileges of citizenship, each of which is beyond question.

"Another reason, assigned for a constitutional amendment is, its permanent character in comparison with an act of Congress which may be repealed. On this head I have no anxiety. Let this beneficent prohibition once find a place in our statute-book, and it will be as lasting as the national Constitution itself, to which it will be only a legitimate corollary. In harmony with the Declaration of Independence and in harmony with the national Constitution, it will become of equal significance, and no profane hand will touch its sacred text. It will never be repealed. The elective franchise once recognized, can never be denied; once conferred, can never be resumed. The rule of equal rights once applied by Congress under the national Constitution will be a permanent institution as long as the republic endures; for it will be a vital part of that republican government to which the nation is pledged.

"Dismissing the reasons for the amendment, I turn to those which make us hesitate to present it for ratification. There are two. The amendment admits that, under the national Constitution, as it is, with its recent additions, a caste and an oligarchy of the skin may be set up by a State without any check from Congress; that these ignoble forms of inequality are consistent with republican government; and that the right to vote is not an existing privilege and immunity of citizenship. All this is plainly admitted by the proposed amendment, thus despoiling Congress of beneficent powers and emasculating the national Constitution itself. It is only with infinite reluctance that I can consent to any such admission, which, in the endeavor to satisfy ungenerous scruples, weakens all those texts, which are so important for human rights.

"The hesitation to present the amendment is increased, when we consider the difficulties in the way of its ratification. I am no arithmetician; but I understand that nobody has yet been able to enumerate the States whose votes can be counted on to assure its ratification within any reasonable time. Meanwhile, this great question, which cannot brook delay —which, for the sake of peace and to complete reconstruction, should be settled at once—is handed over to prolonged controversy in the States. I need not depict the evils which must ensue. A State will become for the time a political caldron, into which will be dropped all the poisoned ingredients of prejudice and hate, while a powerful political party, chanting like the witches of Macbeth—

'Double, double, toil and trouble,
Fire, burn; and caldron, bubble'—

will use this very amendment as the pudding-stick with which to stir the bubbling mass. Such a controversy should be avoided, if possible; nor should an agitation, so unwelcome and so sterile, be needlessly invited. 'Let us have peace.'

"Of course, if there were no other way of accomplishing the great result, the amendment should be presented, even with all its delays, uncertainties, and provocations to local strife. But happily all these are unnecessary. The same thing may be accomplished by act of Congress without any delay, without any uncertainty, and without any provocation to local strife. The same vote of two-thirds, required for the presentation of the amendment, will pass the act over the veto of the President. Once adopted, it will go into instant operation, without waiting for the uncertain concurrence of State Legislatures, and without provoking local strife so wearisome to the country. The States will not be turned into political caldrons, and the Democratic party will have no pudding-stick with which to stir the bubbling mass.

"I do not depart from the proprieties of this

occasion when I show how completely the course I now propose harmonizes with the requirements of the political party to which I belong. Believing most sincerely that the Republican party, in its objects, is identical with country and with mankind, so that in sustaining it I sustain these comprehensive charities, I cannot willingly see this agency lose the opportunity of confirming its supremacy. You need votes in Connecticut, do you not? There are three thousand fellow-citizens in that State ready at the call of Congress to take their place at the ballot-box. You need them also in Pennsylvania, do you not? There are at least fifteen thousand in that great State waiting for your summons. Wherever you most need them, there they are; and be assured they will all vote for those who stand by them in the assertion of equal rights. But in standing by them you stand by all which is most dear in the republic.

"Pardon me; but if you are not moved by considerations of justice under the Constitution, then I appeal to that humbler motive which is found in the desire for success. Do this, and you will assure the triumph of all that you can most desire. Party, country, mankind, will be elevated, while the equal rights of all will be fixed on a foundation not less enduring than the Rock of Ages."

Mr. Vickers, of Maryland, said: "Mr. President, I will advert to one or two of the positions assumed by the Senator from Massachusetts (Mr. Sumner) in his speech to-day. I understood him to contend that, from the clause of the Constitution which he read, power was given to Congress to regulate elections in the States. If I am mistaken, he will correct me. I do not so read the Constitution. The second section of the first article provides that:

> The House of Representatives shall be composed of members chosen every second year by the people of the several States; and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

"That section recognizes the absolute right of the States to regulate the qualifications of electors for Representatives, because the States have the exclusive right to regulate the qualifications of electors for members of their Legislatures, and the same qualifications which the States prescribe for the exercise of the right of suffrage for members of the most numerous branch of the Legislature are to be the qualifications of electors for Representatives to the Congress of the United States. There is no power given to Congress to regulate those qualifications; but it belongs exclusively to the States."

Mr. Sumner: "If my friend will allow me, I desire to ask him a question just there, which I have no doubt he will answer very easily; but I should like to have his answer, and should value it very much indeed. I ask the Senator from Maryland whether in his opinion color can be a qualification of a voter? I should like an answer to that specific question, can color be a qualification of a voter?"

Mr. Vickers: "Well, sir, if the power is given exclusively to the States, if the States have the absolute and uncontrollable power to regulate the qualification of voters, it is not for me to say whether their regulations shall have reference simply to color, or to a property qualification which they have in Massachusetts, or to intelligence, or to any thing else. The States may prescribe, I suppose, that an individual shall be able to read the Constitution of the country. That, I presume, would be a qualification which the States would have the right to impose. It is impossible for me to limit the extent of the power of the States in regard to this subject, because it is one of their reserved powers, and is unlimited. The General Government has no right to regulate this question of suffrage."

Mr. Sumner: "Then, to come back to my original question, I understand that the learned Senator does say that color may be a qualification for a voter. On that point I should like to have his answer distinctly, because it is the pivot or one of the pivots of this question. I understand him to say that color may be. Now, I do not wish to intrude upon his speech, but I should like to ask him whether he supposes a State Legislature could select among the qualifications the color of the hair or the color of the eye? Would the Senator say that that could be a qualification under the Constitution of the United States? I put to him that question; I should like an answer to that."

Mr. Vickers: "Well, sir, that, of course, is an extreme case."

Mr. Sumner: "Not at all. It is the very case before the Senate."

Mr. Vickers: "It is not for me to say what it would be expedient for a State Legislature to do. It is not always expedient to exercise the full extent of the power which is conferred upon legislative bodies. But I would ask the Senator from Massachusetts if the color of the hair, added to the disqualification of the voter intellectually, is not a power in the Legislature? I would ask the honorable Senator if public virtue and public intelligence are not the very foundations of our republic? Why, sir, how can we exist as a republic without intelligence and public virtue?"

Mr. Sumner: "Yes, but the point to which I wish to call the attention of my friend is not whether public intelligence and public virtue are essential to a republic, for there we are agreed; not whether they may not be recognized as qualifications, but the point is whether any inherent quality under Providence planted in the human form by God can be made by any vote of man a qualification for an elector? That is the practical question which I put to the Senator."

Mr. Vickers: "Well, sir, as I stated to-day, there are five races of men. These are the red man, the yellow man, the white man, the

black man, and the brown man. Now, I ask if it is not competent for a Legislature to disfranchise or to withhold the elective franchise from any one of these races? Is not color the distinctive mark of the race? And because here is a distinct race, an inferior race, and because this race has color, the race is disqualified. It is not altogether on account of the color of the skin. That is only one of the indications and marks by which you distinguish the race. Have we not a right to withhold the elective franchise from the Chinese, who are of a different color from us and from the negro? Would the Senator say that, because the Chinese have a certain complexion, therefore we have no right to disfranchise them because of that complexion? If they are a different race, if they are pagans, according to the speech of the Senator from Oregon (Mr. Williams), have we not a right to disqualify them and withhold from them the elective franchise?"

Mr. Sumner: "That is not the question. I do not say that they may not be disqualified for their paganism. That is another question. That is a question of character. A man may cease to be a pagan; he may change; he may become a Christian; but a man cannot cease to be a colored man if he is so made by Providence. The Ethiopian cannot change his skin. The point that I put to the Senator, and on which I want his frank, explicit answer, is, whether the mere color of the skin, or the color of the hair, or the color of the eyes, can be made, under the Constitution, a qualification for a voter? That is the point."

Mr. Vickers: "If the color of the skin, the color of the hair, or the color of the eye, distinguishes one race from another, then I say the color of the skin, of the hair, or of the eye, can make the disqualification, and the Legislature has a right to make it. It matters not whether it be of the skin, the hair, or the eye; if it be the distinguishing mark of that race, and distinguishes it from our race, then we have a right to do it. Why, sir, the Senator from Nevada (Mr. Stewart), in his speech here in 1865, said that this was a white man's Government; that we were of a different race; and the honorable Senator from Ohio, now occupying the chair, said that two races, being different, could not exist prosperously and happily together, and that it would be better that this black race should be sent to the tropics, where he understood they would thrive and develop all their faculties, and that in the same region a white man would depreciate. It matters not whether it be the color of the hair, or of the eye, or of the skin, if that distinguishes one race from another."

Mr. Sumner: "I see my honorable friend does not flinch from the conclusion."

Mr. Vickers: "But, sir, I was going to say that the qualifications which the Constitution speaks of are the qualifications of voters for Representatives to Congress, for they are to have the same qualifications that voters for members of the Legislature are to possess. Then, to show that this is the true meaning of the Constitution, let me refer to the clause as to presidential electors:

> The Congress may determine the time of choosing the electors, and the day on which they shall give their votes, which day shall be the same throughout the United States.

"That is all the power which Congress has in reference to the subject. They may determine the time for the choosing of the electors, and the day on which they shall cast their ballots; and when that is exercised the power of Congress over the subject is exhausted. But in the second section of the second article of the Constitution it is provided that—

> Each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress.

"The State Legislature may appoint the electors to vote for President and Vice-President of the United States. They may elect them or may direct them to be elected by the people of the State if they see fit. The whole power is in the Legislature, and it was designed to be placed there. They are the best judges of the mode and manner in which the elections should be held, and they are the best judges of the qualifications of the voters.

"Mr. President, I had never heard, until the honorable Senator from Massachusetts asserted it to-day, that when human rights and the Constitution came into conflict, the Constitution was to yield to human rights. That is the broad doctrine which he laid down. Why, sir, if that doctrine is to prevail, how many differences of opinion are there in reference to human rights? We should have no Constitution; it would be undefined, and there would be nothing tangible in reference to the fundamental law. But if the doctrine of the Senator from Massachusetts prevails, if human rights are to override the Constitution of the country, then does not the doctrine of human rights asserted by the Senator apply as well to females as to males? The Senator from Kansas would say it did; and I ask if human rights are not as applicable to woman as to man? And if the doctrine of human rights is to be the rule by which the Constitution is to be construed, then it must be so construed as to admit female suffrage; and yet I suppose the Senator from Massachusetts would not support a measure of this kind. It is not unusual for Senators to lay down a general principle and argue upon that principle, and then in the practical application of it to come short of its results. This general doctrine comprehends woman as well as man, and shall our sympathies be limited to the latter? Shall our affections go out only for the black race? Shall we not rather include the women and give them the same privileges and rights which

it is attempted to confer upon the negro? It has been beautifully said that 'we go to man for philosophy and to woman for consolation;' and, although I am no advocate for woman suffrage, I believe that, if the Congress of the United States had been composed exclusively of women, we should have had no civil war. We might have had a war of words, but that would have been all.

"The Senator from Massachusetts seems to think that, if he can accomplish this result and extend the right of suffrage to the negro, we shall have peace. Sir, he may call it peace, but such a peace will be at the price of constitutional liberty, at the price of the destruction of the landmarks of your Constitution. What sort of peace is that which is achieved by aggression upon and destruction of the very Constitution under which we live? It is but the beginning of strife. The Senator thinks it would produce peace, but I say it would not produce peace. He assimilates the conduct of the Democratic party, in case this question is not settled in the way he proposes, to the witches in Macbeth. But, is it not known to the Senator that he who sought the bubbling caldron was destroyed? And if this bubbling of the political caldron is to be assimilated to that described in Shakespeare, I should think the honorable Senator would be willing to see it come to pass, because it would be but the forerunner of the destruction of that party which he denominates the advocates of slavery.

"I could not but contrast in my own mind the sentiments and constitutional positions assumed by the Senator from Massachusetts today with the principles and the doctrines of constitutional law which were promulgated by his illustrious predecessor who had secured to himself the appellation of the expounder and defender of the Constitution. There is not a word in any thing he ever wrote, in his orations or in his arguments, which can sustain the views of the honorable Senator from Massachusetts, the latitudinarian views which he expressed to-day upon the subject of the construction of the Constitution of the United States. Nor did I see any thing in the authorities which were produced by that Senator from Hamilton and Madison. What he read from these great men related to the enumeration of inhabitants of the country in reference to fixing the proportion of Representatives, and had nothing to do with suffrage.

"If we introduce these votes which are to be cast, not with an intelligent understanding of the purpose and object for which they are placed in the ballot-box, if we are to receive them from a class of persons who are uneducated, illiterate, who cannot read your Constitution, who know nothing about its checks and its balances, about its relations to the State governments, it is an injury, a positive injury, to those who have the right to vote. Why is it that we punish illegal voting severely? It is because illegal voting is a fraud upon legal voters; it impairs and weakens the weight and force of the legal votes which are cast; and if we introduce these unmeaning votes, which are not cast with an intelligent reference to the purposes and objects for which the right of suffrage is given, shall we not thus weaken and impair the rights which those have who are entitled to vote?"

Mr. Buckalew, of Pennsylvania, said: "Mr. President, I have proposed for submission an amendment to this resolution. It is very brief, and relates to the manner of submitting this proposition of amendment to the Legislatures of the States, viz.:

That the foregoing amendment shall be submitted for ratification to the Legislatures of the several States, the most numerous branches of which shall be chosen next after the passage of this resolution.

"My amendment proposes to submit the constitutional amendment covered by this joint resolution for ratification to the Legislatures of the several States, the most numerous branches of which shall be chosen next after the adoption of this resolution by Congress, and to confine its consideration to those Legislatures of the respective States who shall be so elected immediately or next after we adopt the resolution, and in view of it, and who shall assemble in pursuance of their several local constitutions for a performance of their general duties, among others this duty of passing upon amendments to the Constitution which Congress may submit to them.

"Now, sir, what are the facts in regard to the last amendment which was submitted by Congress to the several States? Two or more States proceeded by formal act of their Legislatures to ratify the amendment, and afterward, at succeeding sessions, proceeded to withdraw that ratification, to withdraw the assent which they, in the first instance, had given. In the case of one, and perhaps more—I recollect distinctly in the case of one State—the constitutional amendment was rejected by the Legislature, and at the next session, opinion having changed in that State, the Legislature proceeded to ratify it. You see what confusion may arise in the action of the States upon an amendment submitted by Congress, in case we do not decide, when we submit such amendment, what authority shall act upon it.

"I am not in favor of submitting this amendment, or any other amendment, under ordinary circumstances, to conventions in the several States, not so much for the reasons which were stated by the Senator from Connecticut (Mr. Ferry) as because of the inconvenience and expense which are entailed upon the people of the States by that mode. That is a reason which has always operated upon Congress since the Government was founded, along with other considerations, to prevent the submission of any amendment to conventions of the people in the several States—a form of submission which it is competent for Congress to adopt.

I take it for granted that the practice of the Government always will be, unless under very extraordinary circumstances, to submit amendments to the action of the Legislatures of the several States.

"But, sir, it will be wise and becoming also for Congress to adopt some rule with regard to the submitting of amendments to the Legislatures; and what better rule can be adopted by it than to submit them to the Legislatures of the several States who shall be chosen next after the amendment is submitted, the legislators who are chosen when the people understand that the amendment is to be submitted to them, and who act in selecting those legislators in full view of that consideration? It is true that in most, if not all of the States, one branch of the Legislature has a more permanent tenure of office than the other.

"We know it is now disputed whether the fourteenth constitutional amendment, as it is called, has been adopted or not by the Legislatures of New Jersey, Oregon, and Ohio; and a similar question arises as to another State which rejected it originally and afterward ratified it. There must be some principle of law applicable to this subject of ratification. Is it possible that any gentleman can pretend that ratifications are in order in the States at all times until the subject of constitutional amendment is disposed of, and that, on the other hand, rejections are of no account? Take the case of the Legislature which rejected the amendment. Was its subsequent ratification legal? Assume that; and then attempt to assume the other doctrine, and see what inconsistency you have assumed.

"If this reasoning be true, in what condition are we? Why, sir, we are in this condition: that you cannot have a constitutional amendment rejected finally at all in the United States; rejections amount to nothing, because ratifications at some future time, ten, twenty, fifty, or one hundred years hence, may give it validity; and, on the other hand, you insist that a ratification, however obtained, under whatever circumstances of misapprehension or of haste or of trick, or of fraud even, can never be withdrawn by a State; it is to be forever bound by it. You avoid all this field of debate by designating now, when you submit the amendment, the Legislatures who are to pass upon your amendment, who are to ratify or reject it.

"This comprises what I desired to say upon this point, with a single exception; and that is, to express my own opinion upon this question which has been debated. My idea is this: that an amendment proposed to Legislatures or to conventions for ratification, until the time when it has been ratified by three-fourths of the States, is, of necessity, in its very nature, a simple proposition, and nothing more; that it becomes a contract or compact between the States at the moment when the last Legislature or convention necessary to make up three-fourths of the States has ratified and approved it. Until that time it is upon the same footing as a proposition for a contract or agreement between individuals which has not been accepted by both or by all the parties to be bound by it, which is therefore binding upon none, and assent to which may be withdrawn at pleasure by any of the parties who are to be bound by it after it shall have been duly adopted or agreed upon. The States, so long as a constitutional amendment is pending before them, unratified by the requisite number of States, are in the same condition in which individuals would be where a proposition of contract or of agreement between them was pending and under consideration. No State, up to that point of time when the amendment becomes binding upon the State, becomes a contract or a compact between it and the other States, can possibly in law or in good faith or in good conscience be bound by it. Its freedom of action and its freedom of will remain to it, and it can exercise that freedom of action and of will by recalling its assent. And who can complain? What State is injured? No one can cry out upon the State that it has violated good faith. After three-fourths of the States have ratified the amendment, it becomes a part of the Constitution, and every State is bound by it. Of course, no State can repeal the Constitution of the United States, and its day of choice and of volition has passed, and passed forever."

Mr. Howard, of Michigan, said: "Mr. President, It will not escape the attention of any man that there is an anomaly in the Constitution of the United States. While to all other governments that I know of in the world, properly called governments, pertains the faculty of regulating and prescribing the qualifications of voters, it is a very singular fact that no such faculty belongs to the Government of the United States. The first clause of the Constitution, although it does not impart any power to the States in reference to the qualification of electors, recognizes the undoubted fact that the States then possessed the right to prescribe qualifications for the electors within their own limits, and authorizes those same electors to be the electors of the Representatives in Congress, and of the electors of President and Vice-President, so that it has always been out of the power of Congress, under the Constitution, to prescribe who shall and who shall not vote for Representatives in Congress or for electors of President and Vice-President.

"In this respect the Government of the United States is subject entirely to the action of the State governments; and herein consists this strange anomaly. Certainly, ordinarily speaking, the power of regulating suffrage ought to pertain to the Government which is to be affected by it. Our fathers, however, did not see fit to grant to the Federal Government any such authority; and I believe the present is the only attempt which has been made, since the foundation of the Government,

to interfere with this right of the States to prescribe the qualifications of voters not only within their own limits, but as to the Federal Government.

"Now, sir, on looking over the amendment which has been proposed to us by the Committee on the Judiciary, although I am in favor of conferring the right of suffrage on the colored man as such, I do not find the provision expressed so clearly in that amendment as I wish it were. Indeed, sir, the frame of the amendment, its form, its legal intendment, interpretation, and effect, are to me all very objectionable. It declares that 'the right of citizens of the United States to vote and hold office shall not be denied or abridged by the United States, or by any State, on account of race, color, or previous condition of servitude.' Observe, sir, and I call the attention of Senators to the clause, 'shall not be denied or abridged by the United States.' Sir, the United States have never granted to any citizen of the United States in the States, nor abridged to him, the right to vote. The Government of the United States has not intermeddled, nor has it the right to intermeddle, with the right of voting; and it is hardly proper language, therefore, to say that this right, with which the Government of the United States cannot intermeddle, shall not be denied or abridged by the United States. It is hardly intelligible language to me, as a lawyer.

"Again, there arises from that peculiar form of expression, 'shall not be denied or abridged by the United States,' what, to my mind, is a very plain implication that in respect to other matters except race, color, or previous condition of servitude, the United States may, through its proper organs, if the Government shall see fit, abridge, or deny to citizens of the United States in a State, the right to vote or to hold office. For instance, the implication arises that for any other cause, whether it be religious belief, or a want of moral training, or defect of education, or whatever other test Congress may see fit to prescribe, the right to vote may be taken away from the citizen of the United States by act of Congress. Certainly I do not apprehend that the Committee on the Judiciary intended any such thing; but so plain to me is this implication that under such a clause Congress would have the right to deny or abridge the right of voting for some other causes than those mentioned in the article, that I certainly can never give that amendment my vote, for I will never agree, here or elsewhere, that the Congress of the United States or any State government shall have it in its power to say to a citizen of the United States, 'You shall not vote or hold office because your religious creed is not so and so, or because you do not belong to and commune with this, that, or the other religious denomination.' I prefer to adhere to the present provisions of the Constitution of the United States in all these respects—the Constitution which prohibits utterly and forever the setting up of any religious test.

"I am willing, as I have already remarked, to extend to the colored man, who is a citizen of the United States, the right to vote and to hold office, like any other citizen; but I prefer to do it in direct and plain terms, so that he who runs may read, without circumlocution, without indirection, but plainly, in terms that are intelligible to the lowest capacity. I shall, therefore, at the proper time, propose an amendment to the amendment now before us, which will be in the following words:

Citizens of the United States, of African descent, shall have the same right to vote and hold office in States and Territories, as other citizens, electors of the most numerous branch of their respective Legislatures.

"Thus adopting the constitutional language of electors having the qualifications of electors of the most numerous branch of the State Legislatures. It seems to me that this expression meets exactly the case which is before us. Why not come out plainly, manfully, and frankly to the world and say what we mean, and not endeavor to darken counsel with words without knowledge, by circumlocution, by concealing, or endeavoring to conceal, the real thing which we aim at? Give us, then, the colored man, for that and that only is the object that is now before us. The sole object of this whole proceeding is to impart, by a constitutional amendment, to the colored man who has become free in the United States, the ordinary right of citizens of the United States, and that is the whole of it. I do not wish by any form of words to conceal the fact or to blur the fact that I am in favor of extending to this class of men the right to vote and to hold office in the United States.

"Sir, it is impossible, in the very nature of things, that so large a portion of citizens of the United States as the black portion now are can for any considerable length of time remain in our midst without enjoying the right of suffrage. That would be a great anomaly in our condition. It would be a state of things entirely inconsistent with the genius and mild, beneficent, democratic spirit of our Government. Sir, if they are to remain citizens of the United States, to have the right of eating the bread which they earn, of having a title to the clothes which they earn; if they are to be permitted to purchase houses and lands, to become fathers and mothers, with all the domestic rights which pertain to that condition belonging to them, we must sooner or later see to it that they are citizens possessed of the right to vote and to be represented in the legislative bodies who have control of their persons and their property. Upon the principle of republican government they are entitled thus to be represented; and it will be impossible for the American people, however strong may be the spirit of caste, however odious the black man may be in the eyes of some of our fellow-citi-

zens—it will be utterly impossible to continue this black race in a state of pupilage, of inferiority in respect to political rights, for any considerable length of time; and I think, therefore, for their security, for our own security, as an act of justice to them and of security and strength to the Union itself, and the glory of the American people, this thing ought to be done, and I am prepared to vote for it."

Mr. Norton, of Minnesota, said: "I desire to ask the Senator from Michigan if the intention, the meaning of the Chicago platform was, that suffrage in the loyal States was merely a question of propriety or of right; whether it properly as a matter of propriety belonged to them or belonged to them as a matter of right?"

Mr. Howard: "Well, Mr. President, the honorable Senator has got a little ahead of the game, and if he had not been so impatient, and allowed me to proceed with my remarks, I possibly might have given him an answer. I will endeavor to do so now:

While the question of suffrage in the loyal States properly belongs to the people of those States.

"Does anybody doubt it? Did anybody ever doubt it? It properly belonged to those States because the Constitution of the United States, which was in full force as to the loyal States, recognized it as one of the reserved rights of the States at that time. And it not only properly belonged to the people of the loyal States at that time, but constitutionally belonged to them. There is no doubt about that. Why, then, do we hear so much said about the perfidy of the Republican party in now seeking to make an amendment by which suffrage shall be regulated in the various States? The quibble turns upon the little word 'properly,' which was plainly, taken in connection with its context, used in the sense of 'constitutionally.' That was all."

Mr. Hendricks, of Indiana, said: "The Senator has just now said that no one ever questioned that that was the proper construction of it, and that of right under the Constitution, as it then was and still is, the right to regulate suffrage exclusively belongs to the States. I think the Senator is mistaken in saying that no one doubted that. I think one of the most distinguished of his party, the Senator from Massachusetts, does hold that Congress, for the Northern as well as the Southern States, can regulate suffrage."

Mr. Sumner: "Does the Senator refer to me?"

Mr. Hendricks: "I do, sir."

Mr. Sumner: "If he will read the bills—I have introduced a great many—they have always gone to the single point that under the Constitution of the United States no State had a power to deny suffrage on account of color. There is where I stand. I raise no question of the power of the States to regulate suffrage; I go into the question of the meaning of the Constitution of the United States, and I insist that under that you cannot, without falsifying every rule of interpretation which will be found in any book of jurisprudence, without falsifying every sentiment of the heart, say that under the power to regulate you can disfranchise a race. Every presumption is to be in favor of human rights. Some of the bravest sentiments of English jurisprudence have all gone in that direction, even to the extent of saying that that man is impious and cruel who does not favor human rights. There I stand. In every interpretation of the Constitution, in the construction of every word and phrase in it, I give to it a meaning in favor of human rights; and when I am asked what is meant by the term 'to regulate,' I say to determine the manner of elections, not to disfranchise a race. When I am asked what may be qualifications, I say clearly those things which may be acquired, those things which are attainable to human effort, not those things that by the providence of God are unattainable. Sir, it is an insult to God and to humanity to say that such a thing can be a qualification. There I stand. Therefore, let the Senator understand me. I have been very clear and explicit from the beginning. I never have claimed for Congress under the existing Constitution the power to regulate. I never have ventured to deny it, because much can be said even in favor of the power to regulate. But I do insist that under the power of making regulations you cannot disfranchise a race, you cannot degrade the country, you cannot degrade the age."

Mr. Hendricks: "I do not think I understand the Senator from Massachusetts now, though he is the master of language. That I may understand him, I will ask him one further question. Has he not claimed that, where the States have denied the suffrage to the negro people, Congress may interfere and give in those States the suffrage to the colored people?"

Mr. Sumner: "Of course I have."

Mr. Hendricks: "Under the existing Constitution?"

Mr. Sumner: "Of course I have. To me it is as plain as the sun."

Mr. Norton: "Mr. President—"

Mr. Howard continued: "I have thus, Mr. President, as briefly as possible, expressed my objections to the form which this amendment has received at the hands of the Committee on the Judiciary. I think it contains within itself a grant of power to the Congress of the United States to set up other tests for voting and holding office; any other tests, if you please, but those specifically mentioned in the clause. I am quite sure that neither the Senate nor the House of Representatives, if they look upon this matter in that light, will ever agree to any such proposition; and I am entirely certain that the Legislatures of the several States to whom this amendment may be transmitted will entirely dissent from it; while I have no doubt that, if the proposition is plainly submitted of giving to the citizens of African descent the

right to vote and hold office like other citizens of the United States, the amendment will be carried by a handsome majority."

Mr. Hendricks: "Mr. President, I did not expect to add any thing to the remarks I made upon the platform adopted by the Republican party last year; but I feel it proper to call the attention of the Senator from Michigan to a view that I take of that platform. It is very clear that he and the distinguished Senator from Massachusetts do not agree. They did not agree last year, and when they stood side by side upon the platform they could not have agreed. There is in this platform a distinction taken between the Northern and the Southern States. There is in this platform claimed for Congress the right to control suffrage in the Southern States, the right to extend it to the colored people there. That is what is claimed in the first part of the resolution, that Congress has the right to extend suffrage to the colored people in the Southern States. As an opposite idea to that, the last clause of the resolution declares that the control of that subject properly belongs to the people of the States in the Northern States."

Mr. Howard: "The loyal States."

Mr. Hendricks: "That is the same thing, I suppose. By loyal States you mean the States that did not go into the rebellion—States that, in the language of the Senator from Michigan, 'did not forfeit by rebellion their control of the subject.' Then in the Southern States this platform claims a right for Congress to confer suffrage upon the colored people; in the Northern States it claims for the people of the States the right to control that question 'properly,' not constitutionally."

Mr. Howard: "Yes, constitutionally."

Mr. Hendricks: "No, sir; the language is, it belongs to the Northern States 'properly.'"

Mr. Howard: "It belongs to them from ancient usage—by prescription, if you please. It was one of the original State rights. It was not granted to the people of any of the States by the Constitution. The Constitution found it existing and recognized that right as existing in the States."

Mr. Hendricks: "Here is the language:

> While the question of suffrage in all the loyal States properly belongs to the people of those States.

"Now, if it properly belongs to the people of the States to regulate suffrage, is it proper for Congress to take it away? If it belongs to the people of the State of Indiana, how can all the rest of the States united take it away from them?"

Mr. Howard: "If the Senator will excuse me, he asked whether it would be proper for Congress to take it away. Sir, Congress is not going to take it away. Congress cannot take it away. What we are doing does not take away the right of the States in this regard. If that right is taken away, it must be taken away by the American people represented in their various Legislatures, and in the form prescribed by the fundamental law of the republic—the Constitution—to which every citizen is subject and a party."

Mr. Hendricks: "If it properly belongs to a State, can twenty-seven States take it away from that one State?"

Mr. Howard: "Yes."

Mr. Hendricks: "Then it does not properly belong to it; it belongs to twenty-seven States. It cannot properly belong to one State, because of its State sovereignty, and at the same time properly belong to twenty-seven States. The one State is regulated by law, and the twenty-seven States by constitutional amendment."

Mr. Howard: "Will the honorable Senator allow me to call his attention to the very language of the article?"

Mr. Hendricks: "Certainly."

Mr. Howard: "'While the question of suffrage in all the loyal States properly belongs to the people of those States;' not to each one."

Mr. Hendricks: "Well, I will ask, can each one of the loyal States control it by a constitutional amendment?"

Mr. Howard: "Undoubtedly."

Mr. Hendricks; "Without a constitutional amendment? By a constitutional amendment? Which does the Senator claim? I ask his attention. Does he claim that the Southern States have no control over it any more, but that the loyal States, in the form of a constitutional amendment, may take the control of the suffrage away from any one State? Is that the position of the Senator?"

Mr. Howard: "My position—I now repeat it—is, that while the rebel States were, so to speak, *de facto* out of the Union, after they had forfeited their political rights under the Constitution, they were at the mercy and subject to the action of the Congress of the United States; while they were in that condition they could not, as against the will of Congress, regulate suffrage or do any thing else within the limits of their own States as independent sovereign States, as they are called; but, after they shall be remitted to their original condition as States of the Union in pursuance of the regulations and laws of Congress, and become represented in the two Houses of Congress, and thus become reinstated as sister States of the Union, they would, of course, have the same right as the original loyal States, not only in that respect, but in all others."

Mr. Hendricks: "Mr. President, in the course of this short debate the Senator from Michigan has put two constructions upon this last clause of his platform. In the first place, he said that it meant that constitutionally it belonged to each State. Now I understand him to say that it belongs to all the loyal States in the aggregate; that the people of all the loyal States rightfully control it."

Mr. Howard: "Three-fourths."

Mr. Hendricks: "These two positions he has occupied in the last twenty minutes. When

the Senator wishes to get away from the force of the plain language of his party, understood by everybody, and wants now to do that which a year ago was declared to be by the platform improper to do, of course he has to resort to criticism upon his own platform."

Mr. Sumner: "May I remind the Senator that a conspicuous leader of the party, who is now dead, made haste, when that improvident resolution was put before the public, to denounce it as foolish and utterly untenable? I refer to Thaddeus Stevens. He said that that position taken at Chicago was foolish and untenable. He wrote a letter within a week after that was published."

Mr. Hendricks: "Was that letter published?"

Mr. Sumner: "It was published and extensively circulated. I never had any hesitation in saying the same thing."

Mr. Hendricks: "Then I understand that Mr. Stevens, to whom the Senator refers, and the Senator from Massachusetts himself, put this construction upon this clause, that it declares the control of suffrage properly as a political question, independently of constitutional provisions, to belong to the States; and if that be the proper construction, then I say to the distinguished Senator from Massachusetts that his party now proposes to do that which it pledged to the people a year ago that it would not do."

Mr. Warner, of Alabama, said: "I should like to ask the Senator from Indiana a question. What limit is there to the power of the people of this country to change the Constitution or the system of government?"

Mr. Hendricks: "Mr. President, that is a very grave question that is asked. I intended to ask some Senators that question in a very few minutes. There is a particular provision in the Constitution of the United States that it may be amended. Where, Mr. President, does the power of amendment stop? I say the power of amendment is limited to the correction of defects that might appear in the practical operations of the Government; but the power of amendment does not carry with it the power to destroy one form of government and establish another. I will ask the distinguished Senator who has just propounded the question to me, whether, under the form and pretext of an amendment, you can change the office of the Chief Executive of this nation, and make him cease to be a President, and make him a king?"

Mr. Warner: "I will answer the question. I think it is in the power of the people of this country to establish any system of government they see fit, to abolish the office of President, and abolish Congress, and the Supreme Court, and the whole form of government. I think the whole matter is in the hands of the people, and that they are sovereign."

Mr. Hendricks: "Then I understand that answer given by the Senator to be, that, under the constitutional provision for amendment, under the proceeding for amendments, the Congress of the United States by a two-thirds vote of each body, three-fourths of the States ratifying it, may change this Government from a republic and make it a monarchy.

"We have now a distinct proposition before us. I am not going to talk in this general way about what the people of the United States may do. They may revolutionize, perhaps; there may be a revolution, and the present Government may go down under that revolution, and a monarchy may be its result. Perhaps we are in the midst of such a revolution as that now. Perhaps we have gone very rapidly and far in that direction of revolution; but I am speaking of the power of Congress and of three-fourths of the States to amend the Constitution of the United States; and now I understand it to be averred as a doctrine of the party that the President may be displaced and a king established in his stead."

Mr. Drake, of Missouri, said: "I should like to inquire of the honorable Senator whether he considers that the statement of a position of that kind on the part of one Senator on this floor makes it the doctrine of the party?"

Mr. Hendricks: "Mr. President, it is an answer to a question that is propounded in the Senate; and now, if the Senator from Missouri is not satisfied with the answer that has been given by the distinguished Senator, I shall be very much obliged to him if he—and I know he is a gentleman who expresses himself exactly—will tell the Senate just where the power of amendment stops under the provisions of the Constitution of the United States."

Mr. Drake: "I would state that, if the honorable Senator from Indiana would be so good as to enlighten my dull comprehension as to the importance of that question in this discussion, I will answer him with a great deal of pleasure; but now for my part I really do not see it. I do not see whether it amounts to one thing or another where the limit of constitutional amendment may be. We are discussing a question now of amending the Constitution in a particular which unquestionably is not subversive of the Constitution; not the case that the Senator suggested a while ago."

Mr. Warner: "I answered the question of the Senator from Indiana very squarely, and I would ask him to answer my question as frankly. Where does the power of the people of this country to amend or to change their Constitution and system of government end?"

Mr. Hendricks: "Mr. President, I believe that there is a limit to the power of two-thirds of Congress and of three-fourths of the States to amend the Constitution of the United States. I believe that they have a right to amend the Constitution in those respects wherever defects appear in the practical operations of the Government, to make it more complete and satisfactory; but they have no power, in my judgment, so to amend the Constitution as to change

the character and the nature of the Government. This is, as was well expressed by the Senator from Tennessee this evening, not purely a confederacy, nor is it altogether a popular government. It is a government of the people, and at the same time a confederacy. The States, before the formation of the Federal Government, were independent States. They had the right to go into the confederacy, or not to go into it, as they pleased. It was not obligatory upon Pennsylvania to become a party to the confederacy; and, if the other States had agreed to the Constitution, and Pennsylvania had not agreed to it, Pennsylvania would not have been a part of the Government; and that was provided for in the Constitution itself, for the very last provision of the Constitution is that—

> The ratification of the conventions of nine States shall be sufficient for the establishment of this Constitution between the States so ratifying the same.

"The States, as States thus coming into the Union, came in upon the basis of the Constitution itself. They surrendered up a portion of their State authority and power, and they retained a portion. I say that a government thus formed cannot, by the authority of amendment of the Constitution, be so changed as entirely to depart from the spirit and the purpose of the confederation."

Mr. Howe, of Wisconsin, said: "I understood the Senator to say that we could not, by an amendment of the Constitution, change the nature or character of the Government."

Mr. Hendricks: "Yes, the nature of the Government itself."

Mr. Howe: "I wish to ask the Senator from Indiana what amendment can be made to the Constitution that will not change the nature or character of the Government?"

Mr. Hendricks: "Why, sir, I can conceive of very many amendments. I think, if the Senator will turn to the book, he will find about twelve amendments that did not change the character of the Government. One of these amendments, to which I will refer by way of illustration in answer to the Senator, was that for the election of President and Vice-President: the mode of electing the President and Vice-President is different from what it was originally.

"Mr. President, my objection, which I now choose to state to the amendment proposed and pending before the Senate, is that it does change the nature of the Government; it does take away from the States a power which they retained, and which is necessary to that independence and sovereignty of the States which the original compact contemplated they should enjoy.

"Now, Mr. President, in using the term 'sovereignty of the States,' I do not mean that the States have control of every subject. In that sense the States are not sovereign; in that sense the Federal Government is not sovereign; but in the language of the courts the States are sovereign within the sphere of their jurisdiction or reserved powers, while the General Government is sovereign within the sphere of its jurisdiction. I think that the right to control the suffrage for the election of State officers is essential to the independence of the States, is essential to the very nature of the Government itself.

"In further illustration of the question asked by the Senator from Wisconsin, I may say that the Constitution might be so amended as to regulate the suffrage in the election of Federal officers. I think that, for the purpose of electing members of Congress, by an amendment of the Constitution the qualifications of the voters might be defined, and that would not change the nature of the Government; it would change, to some extent, the mode of selecting Federal officers. But when the Constitution of the United States comes to regulate the mode of selecting State officers, and takes away from the States the control of that question, you materially change the framework of the Government itself. I can conceive of no power so important to a State as to decide who shall be her officers and in what mode these officers shall be selected, whether by all the people or by a portion of the people. It is for her to select her own officers, to define who shall be her officers and how they shall be chosen; and, if you take that power away from a government and confer it upon another government, you have materially and very essentially changed the nature of the relations between the two."

Mr. Davis, of Kentucky, said: "Will the honorable Senator permit me to read from Marshall's opinion in the case of McCulloch *vs.* State of Maryland?"

Mr. Hendricks: "With great pleasure."

Mr. Davis: "'A power to create implies a power to preserve. A power to destroy, if wielded by a different hand, is hostile to and incompatible with these powers to create and preserve.' 'The sovereignty of a State extends to every thing which exists by its own authority, or is introduced by its permission.' 'That the power to destroy may defeat and render useless the power to create; that there is plain repugnance in conferring on one government a power to control the constitutions and measures of another.'"

Mr. Hendricks: "That is much more satisfactorily expressed than I was able to express it. When this Government was established, there were certain powers retained by the States, and there were certain defined powers conferred upon the Government of the United States. In the exercise of the powers conferred upon the Government of the United States, that Government is sovereign. In the exercise of the powers retained by the States those governments are sovereign. Where a State has the power to regulate a subject and the General Government has no control over its action in that regulation, the State is completely sov-

ereign in that regard, because she is entirely master of the subject; and where the government of the United States regulates a subject without State interference at all, that Government is entirely sovereign over that subject; as sovereign as any Government can be over any subject whatever.

"Now, sir, it is of the very essence of the relations between the States and the General Government that the States shall retain the control of a large class of subjects. All questions of a domestic sort, the regulation of property, the descent of estates, the courts that regulate such questions—these are exclusively within the control of the States; their regulation requires that the State shall have a Legislature, that it shall make laws; and, if it make laws as an independent and sovereign State over these subjects, it must have the control and selection of the law-makers. And, if you take away from the State the power to select the law-makers, you take away from the State the control of the subjects that the laws may operate upon. So, when the Constitution of the United States takes away from the State the control over the subject of suffrage, it takes away from the State the control of her own laws upon a subject that the Constitution of the United States intended she should be sovereign upon. But I have said more upon this question than I intended to do.

"Now, Mr. President, if it were the pleasure of Congress to change the Constitution upon a subject so important as this, ought it not to be clear and beyond all doubt that it would result in public good? I know there are very many distinguished men in the Republican party who have recently expressed the opinion that universal suffrage would be an evil; that these colored people, just come out of a condition of slavery, were not qualified to exercise the suffrage for the good of the public.

"I have not been satisfied, as many gentlemen of the Republican party recently were not satisfied, that it is wise to extend the suffrage to the colored people. If any State chooses to do it under the existing Constitution, it is her own right to do so. I make no war upon that. That is right, because it is in the sense of the Constitution right, the State having the power to do so. But I am not satisfied, I never have been satisfied, that it is wise to make suffrage universal so as to include that race; and I think upon this subject there are some Senators in this Hall who are going to vote for this amendment who will agree with me. I will come to that directly.

"Some Senator this evening said that intelligence and virtue were essential to the safe exercise of the suffrage. I think that race does not now bring to the mass of the intelligence of this country an addition. I do not think it ever will. That race in its whole history has furnished no evidence of its capacity to lift itself up. It has never laid the foundation for its own civilization. Any elevation that we find in that race is when we find it coming in contact with the white race. The influence of the white race upon the colored man has carried him up somewhat in the scale of civilization, but when dependent upon himself he has never gone upward. I am willing that that shall be tested by the history and experience of two thousand years back. While the tendency of the white race is upward, the tendency of the colored race is downward; and I have always supposed it is because in that race the physical predominates over the moral and intellectual qualities. I may be mistaken in that; I will not undertake to say that that is certainly so. But I believe that the tendency of that race is downward when not supported by the intelligence of the white race.

"There are some Senators here who do not want the Chinese to vote. The Senators from Oregon and California, I think, are all opposed to the Chinese voting; and I think the Senator from Nevada (Mr. Stewart) is; and why? I believe they said they were pagans; but they are not such pagans as we find in Africa. China is the original home of a civilization that the world honors to this day. Why, sir, in China they had many of the rare and useful inventions long before they were known in Europe. It is said that gunpowder was known in China before it was in Europe."

Mr. Edmunds: "And printing."

Mr. Hendricks: "Yes; it is said that printing in a rude form was known there; and the compass was in use there; and one of their great writers is as immortal as the classics of Athens, with a morality that comes nearer the morality of Jesus Christ than that of any ancient writer. But these Chinese, who are capable of a very high civilization, who have sustained their own civilization, to some extent at least, if they come to our country are not to be voters. They are in the way, I suppose, of the State of Nevada and of party hopes in California; I do not know why. Are they not prepared to give as intelligent a vote as the negro? Do they not understand our form of government as well as the negro? Are they not likely to become as well informed?

"But the Senator from New Jersey (Mr. Frelinghuysen) puts their exclusion upon the ground of their religion, that they are pagans. Is it the business of this Government to prescribe what God or in what form men shall worship? He says that we are a Christian people. Not altogether, sir. We have no such test as that. It is not a test that obtains in any of the States now that a man shall be a Christian in order to be a voter. In the Senator's own State the Jew, a man who is not a Christian, is a voter. The Jew, who does not believe in the Saviour that the Senator and I believe in, is a voter still. You do not exclude him because he is not a Christian; you do not exclude the infidel, who recognizes no God at all."

Mr. Frelinghuysen: "May I ask the Senator

from Indiana whether he intends to class the intelligent, respectable Israelites of this country who believe in one superintending God, with the pagans and heathens of Asia, for that is the argument?"

Mr. Hendricks: "No, sir; I am not making any such argument as that. That was the Senator's argument, and I was trying to combat it. The Senator insisted that a man must be a Christian to be a voter in this country."

Mr. Frelinghuysen: "No."

Mr. Hendricks: "Because we were a Christian people, he said."

Mr. Frelinghuysen: "My insistment was this: not that a man must be a Christian to be a voter, but that it was not our duty to extend the rights of naturalization and citizenship to a pagan and heathenish class."

Mr. Hendricks; "The Senator added, 'Because we are a Christian as well as a free people.' I think that was the Senator's expression. So that the argument was that none but Christians ought to vote, and I was carrying out the Senator's own argument. Sir, I am in favor of men voting in this country who belong to the white race, and conduct themselves properly."

Mr. Stewart: "I should like to ask the Senator if he is in favor of naturalizing Chinese and pagans who acknowledge no allegiance to the Government of the United States."

Mr. Hendricks: "That is a very remarkable question. Of course I am in favor of naturalizing no such man as that; and anybody who is naturalized under our law must abjure all allegiance to any other Government, and in the most formal manner possible recognize the authority of our Government. The Senator is not in favor, I believe, of allowing the Chinese to vote, while he is in favor of allowing the negro to vote; and I am speaking of the position occupied by the Senators from the Pacific coast upon this particular question. It does not suit them to have the Chinese vote, for some reason or other. I guess it is not popular out there to have the Chinese vote, and they are opposed to it. I would not wish to force the Chinese vote upon the people of the Pacific coast unless they wanted it themselves; and if I desired to amend the Constitution so as to force the Chinaman to vote in California, I would say, 'Let the people of California have a chance to express their wish on that subject;' and, if they voted it down, I would not attempt to force it upon them. They are the best judges of the interests of their society, and that which will contribute to the strength and purity of their State government. And the same is true in Indiana. But Nevada, with her twenty-five thousand people, has just as large a vote upon the adoption of this constitutional amendment as Indiana with her fifteen hundred thousand. But Nevada does not want the Chinaman, and she does want the colored man to vote. She has no colored people, but she has Chinamen. That is the style of this controversy. It suits certain purposes that the suffrage should be extended to the negro; it does not suit for other purposes that it should be extended to other races."

Mr. Morton, of Indiana, said: "Sir, I wish to call the attention of the Senate for one moment to the character of the whole train of argument that has been offered against this amendment. Take that of the Senator from Kentucky, the Senator from Delaware, and other Senators that I might refer to. I say that the whole train of argument is based upon those broad doctrines and those old theories upon which the right of secession rested. We were not told by the Senator from Kentucky and the Senator from Delaware that they believed in the right of secession, but they advocated the same theories, urged the same arguments, and cited the same history upon which the right of secession has been based for the last twenty years."

Mr. Saulsbury, of Delaware, said: "Will the honorable Senator allow me to ask him a question? I ask whether the historical references that I made were not true references; and whether the facts in relation to the formation of the Federal Constitution are not evidenced by the records of the convention which framed it?"

Mr. Morton: "Mr. President, I might admit the Senator's references, but I should deny his deductions. The Senator told us to-day frankly that we were not one people. He said in the Senate of the United States, after the culmination of a war that cost this nation six hundred thousand lives, that we were not a nation. He gave us to understand that we were as many separate nationalities as we have States; that one State is different from another as one nation in Europe is different from another. He denied expressly that we were a nation. He gave us to understand that he belonged to the tribe of the Delawares, an independent and sovereign tribe living on a reservation up here near the city of Philadelphia, but he denied his American nationality. The whole argument from first to last has proceeded upon that idea, that this is a mere confederacy of States; to use the language of the Senator to-day, a partnership of States. What is the deduction? If that is true, there was the right of secession; the South was right, and we were wrong. He did not draw that deduction, but it is one that springs inevitably from his premises.

"Sir, the heresy of secession is not dead; it lives. It lives after this war, although it ought to have been settled by the war. It exists even as snow sometimes exists in the lap of summer, when it is concealed behind the cliffs and the hedges and in the clefts of the rocks. It has come forth during this debate. We have heard the very premises, the very arguments, the very historical references upon which the right of secession was urged for thirty years. The whole fallacy lies in denying our nationality.

I assert that we are one people and not thirty-seven different peoples; that we are one nation, and as such we have provided for ourselves a national Constitution, and that Constitution has provided the way by which it may be amended.

"Now, sir, what shall be the extent of that amendment? Does the Constitution say how far or to what extent you shall amend it? Not a word of it; but it provides for its amendment, and that amendment may be as radical and as far-going as any part of the original instrument. Can that be denied? The States gave up, it is said, the right to coin money, the right to make war, the right to regulate commerce; and if they gave up those powers, they have a right to give up, according to the mode prescribed by the Constitution, the power to regulate suffrage.

"It may be said that, under this form of amendment, we would not have the right to change the character of our Government from a republic to a monarchy. That is an extreme case. But, sir, we are not changing the character of our republican government. It is still the same in form, though modified, when we say that the States shall be limited in their power to regulate the suffrage.

"One word, sir, in regard to what has been said about the sentiment of Republicans in reference to admitting colored men to the elective franchise. There were doubts in the minds of many of us about admitting six hundred thousand men, fresh from slavery, to the exercise of suffrage. There were many of us who doubted the effect of that, and would have avoided it if it could have been done, and given these men a short time to prepare themselves for the exercise of that right. But, as circumstances progressed, as history moved on, we could not give them that time; we were compelled to try the experiment immediately; and thus far it has worked well. But, sir, the great body of the men upon whom the right of suffrage is to be conferred by this amendment are men who have long been free, who live in the Northern States—not men just emerged from slavery, but a comparatively educated class living throughout the entire North. The argument that might be made against enfranchising men just emerging from slavery cannot be made against the colored men of Indiana, of New York, and of the entire North."

Mr. Doolittle, of Wisconsin, said: "Mr. President, the Senator from Indiana seems to think that no statesman can bear in mind two ideas at the same time; that there can be no such thing as State rights maintained by anybody under the Constitution unless that person is a secessionist; and that, on the other hand, no man can maintain that there is any such thing as rights in the Federal Government under the Constitution without being in favor of an absolute concentrated Government at Washington. Sir, these two ideas must go together in our system of government, and the time is coming when they must be discussed, when the rights of the States under the Constitution must be acknowledged. It is just as much a war on the Constitution to deny the States the rights which belong to them as it is a war on the Constitution to maintain the doctrine of secession."

Mr. Morton: "I have never denied the doctrine of State rights—never."

Mr. Doolittle: "The honorable Senator then admits that the States have rights under the Constitution?"

Mr. Morton: "I have always denied State sovereignty; and I do now. I deny the doctrine that the States are separate and independent nations. We are one people. But, sir, the States have certain rights, rights that are guaranteed to them by the Constitution of the United States, just as we have rights secured to us both by the Federal and State constitutions. We have State rights, but have no State sovereignty, and never had."

Mr. Doolittle: "Mr. President, the honorable Senator says there is no State sovereignty. I contend that by every decision of the Supreme Court of the United States, by every declaration made by every writer upon our system of government in the beginning, whether a Federalist or a Republican, it was always maintained that the States had an attribute of sovereignty, not absolute, but under the Constitution, because under the Constitution they have parted with their absolute sovereignty; nor has the United States Government any sovereignty under the Constitution which is absolute. All the power which the United States Government has under the Constitution is limited. Sovereignty is limited by the Constitution. State sovereignty is limited by the Constitution; the United States sovereignty is limited by the Constitution; and the great difficulty of our times is that men cannot think or will not think that the two sovereignties exist at the same time under our Government, the one limited by the other.

"Why, Mr. President, from earliest childhood every man in this body has been taught that we live in the solar system where the planets that revolve around the sun are controlled by two forces; one a force tending toward the centre by the force of gravitation, the centripetal force; and the other is the centrifugal force, by which they are driven in their orbits around the centre. Mr. President, if either one of these forces were taken away, it would absolutely destroy the system. In our solar system, if the centrifugal force were taken away, and nothing but the centripetal force left to act, every planet would be drawn to the centre of the sun. On the other hand, if the centripetal force were destroyed in our solar system, and no force permitted to operate but the centrifugal force, all the planets would be driven in a tangent away from our system into illimitable space. Sir, it is the

operation of these two forces, the one which tends to the centre, the other which tends to the circumference, which keeps these planets moving in their orbits, which maintains our system, which keeps it from destruction; and the destruction of either of these forces is the destruction of the solar system.

"Now, sir, come to our system of government: these two forces are planted in it of necessity. These two ideas have been here from the beginning. There have been men who represented the one and represented the other from the beginning. There have been men who have contended always for the absolute sovereignty of this central Government, and other men who have contended always for the absolute sovereignty of the States; and both of them have contended for a falsehood from the beginning. There is no absolute sovereignty in this Government, nor is there any absolute sovereignty in the States; but, under the operation of our system devised by our fathers, wise as if it had been inspired from on high, and as if they had wisdom almost like Him who created the solar system under which we live, these two grand ideas, two great forces in government, were put in operation at one and the same time, each limiting the other, each operating upon the other, both working together, and working out that harmonious system in which alone we live and move and have our being; and that man or statesman, call himself what he may, whether a fire-eating secessionist of the South who comes into this body or elsewhere and maintains the absolute sovereignty of the State, with its right to withdraw from the Union, to retire from the system, to overturn the Government; or that other statesman, Republican though he may call himself, who comes into this body or elsewhere and maintains that this Government only has absolute sovereignty, and that it has the power to seize to itself all the powers of the Government—whichever one of these men undertakes to do this, is making war on the Government and war on the system under which we live.

"Mr. President, it is in these two ideas, limited by each other, controlled by each other, that we alone can maintain our system of government. We must maintain the rights of the States under the Constitution. We must love to maintain the rights of the States. We must maintain the rights of the Federal Government. And, while we put down rebellion, put down secession when it undertakes, under the doctrine of State rights run mad, to destroy the Government, to break up the system, if the time ever comes that in this body, from any quarter, East or West, or North or South, any party stands forward to determine that this is the Government and here is all power, and that in Congress are to be vested all the powers of government, that party will be equally at war with the system. Both must be resisted; the doctrine must be overcome; and I tell the Senator from Indiana that the doctrine of unqualified centralization of power in this Government is just as dangerous as the doctrine of secession. Both of them are at war with the Constitution.

"Mr. President, I should not have been drawn into any remarks on this occasion, had it not been for the speech of the honorable Senator from Indiana (Mr. Morton), and particularly that portion of his speech where he seems to claim that every man who maintains that the States have rights under the Constitution, and ought to have rights under the Constitution, is only repeating the arguments of secessionists. Sir, what I claim is the rights of the States under the Constitution, not outside of the Constitution. I claim their rights under the Constitution which it guarantees to those States, not a right to secede, not a right to nullify, not a right to break up the Government, but a right to live in the Government and enjoy under the Constitution the rights which its secures.

"Mr. President, I maintain that it is just as necessary for us to insist upon the rights of the States as upon the rights of the Federal Government. The time is coming, in my judgment, when the people of the States will be aroused to this question. The danger is that, while we have been exerting all the powers of this Government, great and gigantic as they are, to put down the secession of States, not in the exercise of rights, but in the exercise of wrongs — attempting to exercise powers which they have not, and cannot have, under the Constitution—our people are becoming accustomed to look upon the exercise of these great powers by this Government with indifference."

Mr. Drake, of Missouri, said: "Now, sir, the honorable Senator from Indiana (Mr. Hendricks) seemed to be concerned this evening as to the limit of the power of amendment of the Constitution, without drawing a distinction between that which is an amendment of the Constitution and that which is a revolution to overthrow it. I have simply to say that, so far as amendment is concerned, there is no limit. You cannot find a word in the Constitution which makes a limit upon the right of the people to amend it, except in that article which declared that 'no amendment which may be made prior to 1808 shall in any manner affect the first and fourth clauses of the ninth section of the first article.'"

Mr. Edmunds: "And the equal representation of States in the Senate."

Mr. Drake: "No, sir; excuse me. The language does not apply there at all, as I have had occasion to show here before. But there was the only limitation on the power of amendment contained in the Constitution, and it was a limitation in favor of the importation of slaves from the coast of Africa to this continent."

Mr. Buckalew: "May I ask the Senator whether by an amendment submitted by Congress you could take away the senatorial representation of any State?"

Mr. Drake: "Not without its consent. The Constitution expressly forbids it. It does not say that you shall not take it away by an amendment, but simply sets out the broad, distinct proposition that 'no State shall without its consent be deprived of its equal suffrage in the Senate.' Now, sir, the only shackle that the people of the United States put upon the power of amendment was that which was to go to perpetuate slavery in this country and to keep up the African slave-trade; and so now, after the lapse of eighty years, comes up the response from the same spirit, that there is no power in the Constitution to make an amendment which shall give the right of suffrage to that long-enslaved race. The spirit in the two cases is the same, that which would have consigned them to eternal slavery and that which would now prevent their being lifted into the condition of enfranchised citizens.

"Mr. President, gentlemen here talk about the rights of the States. What right has any State in this Union but that which it gets from the Constitution? Go over it, examine it from the beginning to the end, examine it in the light of history, examine it with the severest logic. I say to these gentlemen who talk so about the rights of States, that there is not a State in this Union that has one single right but that which it derives from the Constitution. Every single right that the States may have had before, they threw into the great mass which went to make up the powers of this Union, and just so much as the nation saw fit to give them they have, and not an atom more. And when you talk about the rights of States, it matters not what the extent of them is, how great or how little, certain it is that in that instrument they all lie and are all there granted or conceded; and there is not one right, except that of equal senatorial representation, which cannot be taken away from any State by a constitutional amendment passed by two-thirds of Congress and ratified by three-fourths of the States.

"But, Mr. President, I do not propose to continue this discussion. The few minutes that I have now occupied are sufficient to express what I desired to express, except one other thing drawn out by the remarks of the honorable Senator from Wisconsin; and that is upon the assumed right of the Supreme Court of the United States to declare an act of Congress unconstitutional and void. I take leave to say to that gentleman that whenever the proper time comes I shall take the position here, and maintain it, too, that there does not abide in that court one particle of right to make any such declaration with regard to any act of Congress."

Mr. Edmunds: "Not even involving civil rights?"

Mr. Drake: "Not involving any right. The people of the United States did not establish a Government of three departments which were to cross each other's track in that way and destroy each other. The law of parallelism was laid down to all three of them. They were to run in parallel lines, never to cross each other; but I am not going into that discussion now. I wish to meet right here at the threshold the first declaration that I have heard yet made by a Senator on this floor recognizing the right of the Supreme Court to declare any act of Congress unconstitutional, with a complete denial of that right, and with a challenge to any man to find that right granted in the Constitution to that tribunal."

Mr. Hendricks: "Suppose that between two citizens there is a controversy in regard to property; the claim of the one citizen is based upon a provision of the Constitution of the United States, and the claim of another citizen is based upon a law of Congress. The two are inconsistent. If the law be sustained, the one man gains his case; if the Constitution, on the other hand, be sustained, the other man carries the case, and that cause comes to the Supreme Court of the United States. Which shall govern, the provision of the Constitution or the law? Which party ought to gain the case?"

Mr. Drake: "In the first place, in answer to the honorable Senator, I will say that he supposes an impossible case. The honorable Senator cannot find in the Statutes-at-Large of the United States one single act of this Congress which in its plain and palpable terms enacted a thing which was in violation of the Constitution."

Mr. Hendricks: "That is not the question."

Mr. Drake: "Yes, it is, sir; because, unless you do find that in a law which is in plain and palpable violation of the Constitution, the matter of whether it is a violation of the Constitution is a matter of construction and deduction, and the moment you come to the question of construction and deduction, then I say that a judgment has been entered in the Halls of the Congress of the nation higher than any judgment which any court of the United States or of any State can render."

Mr. Doolittle: "Do I understand the honorable Senator to say that the opinion of Congress is supreme on all these constitutional questions?"

Mr. Drake: "I mean to say, and in due time whenever the opportunity offers I will say it at length and make it good, that there never is passed an act by the two Houses of the Congress of the United States—and it is a position I took here in the first prepared speech I delivered in this Chamber, in December, 1867—that there never is an act passed by the two Houses of Congress that they do not by the act of passing it enter in the records and archives of the nation a solemn judgment that that act is in accordance with the Constitution of the United States."

Mr. Edmunds: "Suppose it is not in point of fact?"

Mr. Drake: "Suppose it is not in point of fact, who is to decide it? Not the courts."

Mr. Edmunds: "Who, then?"

Mr. Drake: "The people, sir, are to decide it."

Mr. Edmunds: "Revolution?"

Mr. Drake: "No, sir. The judicial power does not contain political power, and no power exists to unmake a law by declaring it invalid but the power that made it. These points I touch upon merely."

Mr. Doolittle: "I understand the honorable Senator from Missouri simply to say that Congress can do no wrong."

Mr. Drake: "No, sir. The Senator from Missouri does not say any such thing. But the Senator from Missouri does say that a body containing some three hundred men, many of them the picked men of the nation, illustrious many of them, far better lawyers, many of them, than are on the bench of your Supreme Court, are quite as competent to judge in a matter of construction and deduction of constitutionality as four or five gentlemen sitting in another room in this Capitol who were never set to be guardians over the judgment of Congress."

Mr. Edmunds, of Vermont, said: "I wish to put an inquiry to my friend, with a view to get his idea in all sincerity. Suppose Congress should pass a law which should declare that the Supreme Court of the United States and the circuit and district courts of the United States should have no jurisdiction of controversies arising between citizens of different States, and, in spite of that law, a citizen of the State of Missouri should sue a citizen of the State of Vermont in the circuit court of the United States for the district of Vermont, would my friend maintain that it would be the duty of the judge presiding in that circuit to dismiss that suit in spite of the Constitution?"

Mr. Drake: "That is the same description of question put to me by the Senator from Indiana."

Mr. Edmunds: "Very good. Answer mine."

Mr. Drake: "It is supposing an impossibility. I will not answer a question of that kind, Mr. President, for the simple reason that it supposes that which is impossible."

Mr. Whyte, of Maryland, said: "Congress passed an act known as the legal-tender act some years ago, the constitutionality of which is now pending before the Supreme Court of the United States. May I ask the Senator whether the decision of the Supreme Court in that case ought to be respected, if it should decide that law to be unconstitutional?"

Mr. Drake: "I answer, without hesitation, not at all, sir. I stand to my position, and the Senate of the United States and the House of Representatives of the United States have both got to come to it some time or other, or else probably submit to have their powers and energies crippled by the decisions of that court or some other United States court."

Mr. Whyte: "I ask my friend from Missouri how he will explain that section of the Constitution, section two, article three, which says:

> The judicial power shall extend to all cases in law and equity arising under this Constitution, the laws of the United States, and treaties made or which shall be made under their authority."

Mr. Drake: "I have no explanation to give about it now, except simply to deny that the judicial power of that court contains and includes political power. I deny that the right to invalidate a law, to cripple it, to sweep it off the statute-book, is or can be under any circumstances a judicial power. At some future time, if opportunity offer, I will, as I said before, present my views at length on this whole subject."

Mr. Davis, of Kentucky, said: "The honorable Senator having referred to me, will he allow me to read a passage from the opinion of Chief-Justice Marshall in the case of McCulloch *vs.* State of Maryland?"

Mr. Drake: "Sir, I am quite familiar with that, I think."

Mr. Davis: "I should like to put it in the Senator's speech. Mr. President, let me read the passage. I can show the honorable Senator to-morrow four acts of Congress that have been declared by the Supreme Court to be unconstitutional in their judgment. I will read the passage to which I referred my honorable friend in this opinion of Chief-Justice Marshall in the case of McCulloch *vs.* Maryland:

> But, were its necessity less apparent, none can deny its being an appropriate measure,
>
> "That is, the Bank of the United States—
>
> and if, it is, the degree of its necessity, as has been very justly observed, is to be discussed in another place. * * * Should Congress, in the execution of its powers, adopt measures which are prohibited by the Constitution, or should Congress, under the pretext of executing its powers, pass laws for the accomplishment of objects not intrusted to the Government, it would become the painful duty of this tribunal, should a case requiring such a decision come before it, to say that such an act was not the law of the land."

Mr. Drake: "Yes, Mr. President, whenever that court does assume to itself the power to declare any act of Congress unconstitutional and void, then begins the struggle for supremacy in this country."

Mr. Edmunds: "They have done so forty years ago."

Mr. Drake: "They have not done it forty years ago. They have not interfered with the administration of this Government. Whenever they do, then the question will come up whether the two Houses of Congress, in the exercise of their high constitutional functions as the embodiment of the sovereignty of this great nation coming direct from the people,

are to lie at the mercy from day to day of a tribunal created by themselves."

The President *pro tempore:* "The question is on the amendment offered by the Senator from Oregon to the amendment of the committee. The amendment proposes to strike out all of section one of the amendment reported by the Committee on the Judiciary, and to insert in lieu thereof the following:

Congress shall have power to abolish or modify any restrictions upon the right to vote or hold office prescribed by the constitution or laws of any State."

Mr. Davis: "Mr. President, my honorable friend from Indiana (Mr. Morton) referred to myself, in connection with other Senators, as having given some support to the doctrine of nullification. I choose, at this late hour of the evening, to disclaim that that is my position. My position is simply this: according to proper language, there is no sovereignty in the United States or in any of the States; the sovereignty rests with the people. The people divided their sovereignty, and they delegated it to two governments; that is, to two classes of governments. They delegated a portion of it to the Government of the United States by the Constitution. The rest of the sovereignty of the people of the United States is in the people respectively of the States. My position is, that as to the sovereignty and powers delegated by the Constitution of the United States to the Government of the United States, the Government of the United States and the United States are a nationality. Within the scope and operation of all the sovereignty and of all the power delegated by the Constitution to the United States, the United States exercises the full and entire sovereignty delegated to it by the people in the Constitution.

"My other position in relation to that subject is, that as to the sovereignty not delegated by the Constitution to the people, but reserved to the States, the States are sovereign; and the States are as much sovereign, within the scope of their reserved sovereignty and powers, as the Government of the United States; and the United States are sovereign within the sphere of the powers delegated to the United States and to the Government of the United States by the Constitution. I hope that my position is understood. That distinction has been taken repeatedly and sustained by the judgments of the Supreme Court. There is not a commentator upon the Constitution of the United States, from the *Federalist* and Hamilton and Madison down, that does not recognize the same partition of sovereignty and the same exclusive and paramount authority of the States as to all the sovereignty and power reserved by them, and so of the United States in relation to all the sovereignty and powers delegated to the United States by the Constitution."

Mr. Howard, of Michigan, said: "If the honorable Senator from Kentucky will allow me to say a word, I am not entirely certain that I fully comprehend his idea of sovereignty. He speaks of sovereignty as resting in the people. Let me inquire of the honorable Senator what people he refers to—the whole people of the United States, constituting in and of themselves an imperial popular community? Are those the people in whom the ultimate supreme sovereignty rests, or is it in the people of the several States?"

Mr. Davis: "My position is, that, as to powers delegated to the United States and the Government of the United States by the Constitution, that portion of the sovereignty belongs to all the people of the United States; that it is a delegated sovereignty from all the people of the United States to that extent. So far as the sovereignty and powers of government are not delegated by the Constitution to the United States and the Government formed by the Constitution, that sovereignty belongs as exclusively to the people of the States as it did before the formation of the Constitution."

Mr. Howard: "Then I will inquire whence the honorable Senator derives that doctrine? Is it from the history of the American nation, or is it from the Kentucky resolutions of 1798?"

Mr. Davis: "I derive it from the Constitution; I derive it from the treatises upon the Constitution by the men who made it; I derive it from Hamilton and Madison, from Kent and Story and Marshall, and every other great light and luminary of the Constitution. I will read a paragraph from Madison's letters on this subject:

It has been too much the case, in expounding the Constitution of the United States, that its meaning has been sought not in its peculiar and unprecedented modification of power, but by viewing it, some through the medium of a simple government, others through that of a mere league of governments. It is neither the one nor the other, but essentially different from both. It must consequently be its own interpreter. No other government can furnish a key to its true character. Other governments present an individual and indivisible sovereignty. The Constitution of the United States divides the sovereignty; the portions surrendered by the States composing the Federal sovereignty over specific subjects; the portions retained forming the sovereignty of each over the residuary subjects within its sphere.

"In the case of McCulloch *vs.* The State of Maryland, Chief-Justice Marshall decides that all powers of government appertain to sovereignty. He decides explicitly that the charter of a Bank of the United States is an exercise of sovereignty, and he says in the most explicit language that all exercise of political power is an exercise of political sovereignty. Now, my position is simply this: that the portion of it yielded up by the people of all the States, as enumerated in the Constitution, is an emanation from the people of all the States, acting by States, to the United States and to the General Government; that, so far as sovereignty is not delegated by that instrument to the United States and to the Government formed by the Constitution, that sovereignty is retained by the States; and it is as distinctively, as

peculiarly, and as exclusively their right now as it was before the formation of the Constitution, and the Supreme Court have so decided in repeated cases.

"Now, Mr. President, while I am up I will add another word or two. I have taken the position in my argument that Congress has no power to propose an amendment to the Constitution that would revolutionize the essential nature and character of the Government formed by the Constitution. My further position is, that the proposed amendment does revolutionize the distinctive and peculiar character of the Government; that the Government of the United States is not a single Government; that it is a mixed Government of the United States and the people of the States. The honorable Senator from Michigan, I presume, comprehends me, if I have made myself distinct.

"I then say that, as a part and parcel of our system of government, the government of the States is as essential as the Government of the United States; that it can no more be dispensed with without a revolution and an overthrow of our mixed system of State and Federal Government than could the Government formed by the Constitution of the United States be overthrown without a revolution. I say here, and I maintain as a principle asserted by all the men who assisted in forming the Constitution and who have given any exposition on it, and by every able and accepted commentator on the Constitution, that the government of the States is as much a part of our complex and mixed system of government as the Government of the United States; and in conformity to that principle I assert, as a true proposition, that it would no more change or revolutionize our system of government to destroy the Government of the United States than it would to destroy the governments of the States.

"Now, Mr. President, I advance another step in my argument. I say that a proposition made in Congress to amend the Constitution of the United States by abolishing the United States Government would not come within the scope of the power of Congress to propose amendments to that instrument. I say it would be revolutionary and destructive of our system; and that a power to propose amendments to our system does not involve and cannot carry a proposition to destroy the system. I therefore say that if this proposition was to propose an amendment to the Constitution of the United States by which the Government created by that Constitution should be abolished, such a proposition as that would wholly transcend the power of Congress to propose amendments to the Constitution. I assert as the parallel of that position, that the governments of the States being as necessary, as constitutional, and as proper a portion of our system as the Government of the United States, a proposition to abolish, to destroy, to abrogate the governments of the States it is not competent for Congress to make under the guise of executing the power to propose amendments to the Constitution. That is my position. I say that if the proposition was to create a presidency for life, with succession to his son, Congress has no power, under the article that is professed to be pursued now, to make such a proposition."

Mr. Howard: "If the Senator will allow me, would it be revolutionary and destructive of the Constitution to extend the presidential term from four years to six, as the Confederate government did, or to ten, fifteen, or twenty years, in case the people should see fit to do so?"

Mr. Davis: "I say the proposition to amend the Constitution by extending the presidential term would not be a revolution; it would not alter the essential nature of our Government; but I will tell the Senator what proposition would be of that character. If he was to propose now, as an amendment to the existing proposition, that Senators should hold their offices during their lives, and upon the death of each Senator his place should descend to his eldest son, such a proposition as that would be revolutionary, and it is not competent for Congress under its power to propose amendments to offer any such proposition as that.

"It would be no less revolutionary to abolish the State governments than to take either of the steps that I have indicated. It would be a subversion, a revolution, an overthrow of the essential nature and character of our mixed Government, for Congress to destroy the State governments. Congress, therefore, has no power to make such a proposition in the form of an amendment. I object to this so-called amendment, that it does substantially comprehend such a proposition as that. It is substantially a proposition to abolish the State governments. It carries a principle with it which Congress may at any time carry to that extent. If Congress has the power to regulate the whole subject of suffrage, and to regulate the matter of who shall be eligible to office, that is the substance of the aggregation of the State governments when applied to them; and Congress might as well, and with more propriety—it would be a great deal a less stride of power—proceed at once to abolish, absolutely and without qualification, the State governments. I say that Congress has no such power.

"Chief-Justice Marshall, in the opinion in the case of McCulloch *vs.* The State of Maryland, lays it down that what the people of a State have the power to organize and to institute they have the power to maintain. I ask the honorable Senator from Michigan what people have a right to form a State government for that State? What power is there upon this earth that has the rightful authority to form, to change, to abolish, and to introduce another government instead of the present existing government of the State of Michigan? No other power but the people of that State; and

Chief-Justice Marshall, in the case that I have referred to, states several times the proposition that a power to organize, to create, on the part of a State, imparts and carries with it a power to preserve its own organization. Then every State having the exclusive power to organize its own State government, according to the positions taken by Chief-Justice Marshall in that case, each State government has the power to preserve the State government which it has the right to make. I say that for Congress to interfere with the power of the States to make their governments is as much usurpation of power as it would be for a State to attempt to overthrow the Government of the United States."

The amendment to the amendment was rejected; there being, on a division—yeas 6, nays 38.

Mr. Drake: "I move an amendment to the amendment, to strike out all of section one of the proposed article and insert:

No citizen of the United States shall, on account of his race, color, or previous condition of servitude, be by the United States or any State denied the right to vote or to hold office."

Mr. Howard, of Michigan, said: "Mr. President, I think the proposition of the Senator from Missouri is open to the same objection which lies against the amendment of the Committee on the Judiciary. If I understand it rightly, there arises from it the same implication which is derived from the language of the committee, namely, that although the United States, that is, Congress, may not deny or abridge the right to vote and hold office on account of race, or color, or previous condition of slavery, Congress may establish some other test upon the ground that it is fairly implied. Now, sir, I cannot vote myself for any such thing."

Mr. Drake: "I would inquire of the honorable Senator from Michigan if he conceives it to be within the range of possibility in constitutional construction that the express denial to the United States or to any State of the right to do one particular named thing could by implication be held to be an affirmation of its right to do another thing?"

Mr. Howard: "The question is entirely too general in its terms, and does not admit of any definite and exact answer. The clause submitted by the Committee on the Judiciary is this:

The rights of citizens of the United States to vote and hold office shall not be denied or abridged by the United States or any State on account of race, color, or previous condition of servitude.

"As I understand it, the proposition of the Senator from Missouri is tantamount to this. Now, it appears to me very evident that if this clause shall be adopted, there is granted to the United States, by a plain, manifest indication, the power to deny or abridge these rights for some other and any other cause. I cannot give it any other interpretation. I am not perfectly sure, however, that the proposition of the Senator from Missouri is liable to the same objection, because this is the first time I have heard it."

Mr. Drake: "The right to vote is an individual right; it does not belong to masses of people, but it belongs to each individual. When you frame a constitutional provision which is to bear upon the right of the individual and not upon the right of communities, then I take it that almost every gentleman in the Senate will at once recognize the propriety of making the provision apply to the individual directly, and not to masses. Every man who goes to the polls goes upon his own individual right to vote, and his right to vote cannot be affected one way or the other by the right of any mass of people of whom he may be one. Therefore it is that I object so strongly to the language of the House resolution, the putting of these words at the end of the amendment, 'or class of citizens of the United States,' as if my right to vote could by any possibility be affected by the right of any other class of citizens of the United States. It is a great deal better to make it as strictly personal and individual in its bearings as it can be made."

Mr. Edmunds, of Vermont, said: "If I could persuade myself that the amendment reported by the committee does imply, as the Senator from Missouri supposes, that there exists now any citizen of the United States—which is a subject to which the sentence relates—without the right to exercise political privileges, then most certainly I should think that it was a great deal better than any amendment which did not imply such an existing right, because I am one of those, and I may as well say it now as ever, who believe that the fourteenth amendment which we have already adopted has undertaken to secure to citizens of the United States all the privileges and immunities that belong to citizens as such, including, of course, and comprehending all belonging to the class. There is no qualification or limitation, but words the most comprehensive possible in a statute or in a constitution are used. I believe that every citizen of the United States, in respect to whom political rights can be asserted at all, is entitled now to exercise political privileges; and therefore, if there is any man in the United States who was before that amendment entitled to exercise political privileges, that amendment extended to all the citizens similarly situated, without arbitrary and mere fanciful distinctions, such as color, nativity, education, or of religion, an equal right; because if there is any vitality at all in that article, which was so much studied here, and which at last has commanded the assent of three-fourths of the States, it is that it gave the great and comprehensive word 'privileges' to all citizens alike, and that it made secure to them privileges that belonged to the highest class of community.

"What I am calling the attention of the

Senate to is the argument, if I may so speak, of a judge or a lawyer of a construction. Now, if, having last year passed one statute, this year you pass another on the same subject, do you not by a certain implication, at least in the moral sense, raise and put forth the idea that the old statute did not answer the purpose that you are now seeking for? What my friend has said in relation to the inherent and inalienable rights of human nature are not to be prejudiced by any thing in the Constitution. My point is that, by putting something in the Constitution, which we now propose to do, we shall have raised the intellectual question, not the human one, whether we are not concluded by now attempting to make this amendment, that the amendment we made before did not reach the same end. I do not say that that is a sound argument. We may go on making amendment after amendment that have the same legal scope and effect, it is true: but it so happens in the course of human affairs that the world will not accept that idea. The country will believe—and the country in a large degree influences judicial as well as political proceedings—that we are satisfied in both Houses of Congress that the Constitution of the United States as it now stands does not contain any security of political privileges to any man. I do not wish to make that concession."

Mr. Drake: "Will the honorable Senator from Vermont allow me to inquire whether I understand the scope of his argument?"

Mr. Edmunds: "I do not know that you do."

Mr. Drake: "That is exactly what I do not know myself, and I wish to ascertain. The question with me is, on which I wish to get information from the honorable Senator, whether he considers that the first section of the fourteenth article of amendment to the Constitution does now confer upon citizens of the United States the right to vote in the States in which they reside?"

Mr. Edmunds: "Decidedly, Mr. President. I congratulate my friend from Missouri, after this long, sleepless night, on his having understood my proposition perfectly."

Mr. Drake: "Then I must be permitted to say, Mr. President, that I do not think the proposition is a sound one."

Mr. Edmunds: "That, sir, is a question of opinion about which my friend from Missouri will permit me to differ from him, I have no doubt. This fourteenth article, if he will allow me to call his attention to it, was certainly intended to do something. I may make use of the same argument that I was suggesting a moment ago against the wisdom of passing this one. It was intended to make it a subject in addition, was it not, touching the political privileges and rights of citizens of the United States? We have already in the Constitution an express declaration that the privileges and immunities of the citizens of the several States should be guaranteed to them in whatever State they might take up their residence. I am not using the language but the substance of the section, with which my friend is well acquainted. We had that already. We had the article abolishing slavery. What, then, did we lack? What was the fourteenth article designed to secure? What was there left in the range of the rights of citizenship under the Constitution as it stood before the fourteenth article, except exactly that which is covered and comprehended in the broadest of language contained in the fourteenth article, that the privileges and immunities of citizens of the United States shall not be either abridged or denied by the United States or by any State; defining also, what it was possible was open to some question after the Dred Scott decision, who were citizens of the United States."

Mr. Howe: "Will my friend allow me to ask him, if that language secures the right to vote to men, does it not also to women and children?"

Mr. Edmunds: "Not necessarily."

Mr. Howe: "Why not?"

Mr. Edmunds: "For a reason that my friend will find better stated, in a legal point of view, than I can state it, in a decision of the supreme court of the State of Kentucky, pronounced about twenty-five or thirty years ago. He will find it there decided that, in order to be a citizen, in the general and comprehensive sense of the term, such as the fourteenth article defines it to be, a person must have of necessity, as an essential and indispensable ingredient in citizenship, the highest political privileges that belong to any class in society. Then the court proceeded to say that, although that is true, the highest privileges belonging to any class in society are not extended to females, and therefore the qualification as to females is made in this general right upon the same legal principle that it is made as to idiots and insane persons; not that a female is necessarily like either, but, I am speaking in a mere legal sense, as a court would construe it. So, therefore, without at this hour in the day taxing the patience of those who listen to me, by going into the legal and logical argument that can be made and that is made by the courts to deny the right to vote to females, while they assert and maintain that it is an essential and indispensable constituent of the right of manhood citizenship, I refer my friend to those judicial decisions to show that there is comprehended in the very name of citizen in this country, truly and rightly considered and adjudicated, the same great and all-embracing powers that in ancient times applied to a Roman citizen."

Mr. Howe: "But I wish, if my friend will allow me, to ask him if the decision of the supreme court of Kentucky, to which he refers, pronounced twenty-five years ago, is not reversed by this very clause of the Constitution, which says that all persons, born or naturalized in the United States and subject to the juris-

diction thereof, are citizens of the United States and of the States in which they reside."

Mr. Edmunds: "Not reversed at all; for that is exactly what the decision holds. It holds that everybody, subject to the qualification I have named, is a citizen of the country for that purpose; that there belongs to everybody who, as a part of the highest class in community, may exercise political privileges, equal political rights; and therefore, as the case was in Kentucky, a male person cannot be a citizen unless, being a citizen, he has breathed into him, at the same moment with the fact that he is a citizen, the right to vote. That is perhaps a sufficient definition of citizenship in the narrow sense we are now speaking of, as distinguishing between the rights of citizens, rather than defining what they are. A citizen is a person in community who, other things being equal, is invested with all the privileges that belong to the highest class in community, by whatever name you may call them."

Mr. Warner, of Alabama, said: "I will ask the Senator from Vermont how long he thinks it would be before the construction which he gives to the Constitution, namely, that the right to vote and hold office inure to citizenship, would be so far enforced as to practically give to every citizen the right to vote and hold office?"

Mr. Edmunds: "I think that depends upon the courageous fortitude and the vigorous aggressive assertion of that right under the Constitution that the two Houses of Congress may show. I believe if we were to pass a law under the fourteenth article of amendment which should assert and put into practical operation what I believe to be the true spirit and life of it, that it would not be two years, or one year, before in three-fourths of the States—more than you can get in one year or ten years for any new amendment of the Constitution—it would be an accomplished fact."

Mr. Drake: "Mr. President, I would not protract this debate a moment longer, if it were not that the honorable Senator from Vermont, it seems to me, has taken an exceedingly erroneous and detrimental view of the first section of the fourteenth article of amendments to the Constitution. We have arrived at the stage of the debate upon this great question when it is exceedingly important that we should understand precisely what we are about and express our views with the utmost perspicuity that we are capable of, for now is the time when we are to select the language that is to go into this amendment.

"The honorable Senator from Vermont takes the position that the fourteenth article of amendment does in fact now, at this moment of time, confer the right to vote upon all citizens of the United States. I am constrained to differ from the Senator from Vermont in that view; and I think it will be apparent to the Senate, by a very brief examination of the terms of that section, that no such claim can be rightfully based upon it. Let us look at the first sentence of that section:

> All persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the State wherein they reside.

"Does the honorable Senator contend that that sentence is the one which confers upon men the right to vote? If he does, then every State provision with regard to voters is completely overridden and put out of sight. Where they require a man to reside in a State twelve months, that is abrogated and annulled by this sentence, if that be operative to confer the right of suffrage; because the very moment that a man takes up his residence in a State, it may be upon the very morning of the day of election, he can go to the polls and deposit his ballot, notwithstanding the declaration of the constitution of that State that he shall have resided there one year, or two, as is the case in some States.

"I do not think that the honorable Senator from Vermont will claim that that sentence of the first section of the fourteenth article confers upon any man the right of suffrage. It is simply, and never was intended for any thing else than, a definition of what constitutes a citizen of the United States and a citizen of a State—a question that had been debated in this country, about which judicial decisions *pro* and *con.* had been given, and about which the opinions of Attorneys-General of the United States had been given; and yet it was never settled, and probably never would be settled, until settled just in this way.

"Now, sir, let us look at the next portion of that sentence which, from the remarks of the honorable Senator, I take to be the one that he considers to cover the right to vote. It reads thus:

> No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.

"To make the argument of the Senator from Vermont good, it must be that he holds that a privilege of a citizen of the United States is to vote."

Mr. Edmunds: "Is it not one of yours?"

Mr. Drake: "It is; but I am a citizen also of Missouri, and under her constitution entitled to vote. I say a citizen of the United States merely is not entitled to vote anywhere in the United States. There is not a spot of land in the United States where a man is entitled to vote merely because he is a citizen of the United States. He must comply with the terms of the local constitution or the local law."

Mr. Sumner: "Does the Senator take into view the clause of that amendment by which Congress is expressly empowered to enforce the amendment?"

Mr. Drake: "I do."

Mr. Sumner: "Is there not a source of power in that?"

Mr. Drake: "There is a source of power to enforce all that is written in that amendment."

Mr. Sumner: "That is, to enforce the immunities and privileges of citizens. Congress has plenary power to enforce those immunities and privileges. What more can it have? What amendment can you invent now that will give Congress so much as it has there?"

Mr. Drake: "Mr. President, there is the very assumption again that the word 'privileges' embraces the right to vote; and that is the very thing I am disputing. I say again, and I call upon any Senator here who can do it, to show me where in the United States a man can vote merely because he is a citizen of the United States. I say, fearlessly, nowhere within the limits of the territory of the whole United States. There is, wherever he may be, a local constitution or a local law which prescribes something more than to be a citizen of the United States in order that he shall vote. Every Senator here knows that fact as existing in his own State, and therefore it is that it is impossible that the word 'privileges' as contained in this section of the Constitution can embrace the right to vote because a man is a citizen of the United States."

Mr. Patterson, of New Hampshire: "I should like to call the attention of the gentleman to one point, as I do not wish to speak myself on this subject. If the construction which the Senator from Vermont puts upon this first section of the fourteenth amendment is true, will it not abrogate the educational provision with regard to the right of suffrage in Massachusetts? Will it not abrogate the religious test which is in the letter of the constitution of New Hampshire for officeholding, and the requirement of residence also?"

Mr. Drake: "I would say, with regard to that, that there is just one conclusion to which the constitutional lawyer must come if the construction claimed by the Senator from Vermont is correct; and that is, that every single provision contained in every constitution of every State of this Union is wiped out by that single sentence, except the mere requirement that the man shall be a citizen of the United States, and that it imposes that requirement upon every man in every State, notwithstanding the constitution of the State may admit men to vote who are not citizens of the United States. I do not think that that is a correct construction of this sentence. I think we have more to do. I think that sentence referred only to the privileges and immunities which attach to men as citizens of the United States."

Mr. Edmunds: "What are those?"

Mr. Drake: "Personal, sir; the right to life, liberty, property, and the pursuit of happiness."

Mr. Edmunds: "Do you think, then, that a citizen of the United States would have a right to acquire real estate in your State except he took it by or in conformity to your law?"

Mr. Drake: "No, sir; that is a mere matter of local form."

Mr. Edmunds: "A mere regulation."

Mr. Drake: "A mere regulation as matter of local form."

Mr. Edmunds: "So is the residence of the voter."

Mr. Drake: "But this does not have the effect of wiping out that regulation."

Mr. Edmunds: "It does if it is construed in that way."

Mr. Drake: "If it is to be construed as giving the right to vote, then, as I said before, it does wipe out every thing else, and we stand here then before the whole country claiming that a constitutional amendment, which was adopted without any man in the nation ever saying that it meant that thing, does sweep out from the constitutions of all the States all the requirements of age, of residence, of property, of education. Every thing of that kind is swept away by that one clause, and all men who are citizens of the United States are entitled to vote wherever they may happen to be at the time of the election."

Mr. Edmunds: "I hope the Senate will not be frightened out of any fair construction of the fourteenth article, or any other article, by the tremendous consequences which my friend from Missouri has painted. I do not think it would be very frightful if it should happen that the clause in the constitution of New Hampshire which requires a certain religious test—I do not know whether it is Mohammedan or Christian or what it may be—for holding office, or the clause in any other State constitution which limits the right to vote to persons of a particular race, were swept away. The question is, after all, what is the fair, legal construction that can be fairly put upon language which is to be interpreted favorably and beneficially for the enlargement of the rights of men. The argument that the Senator from Missouri has addressed to us is based purely upon consequences that he supposes to be absurd or inconvenient which are to flow from that construction.

"Now, sir, to condense; the key to this whole question between my friend and me is here: if it is one of the essential privileges of citizenship, as my friend knows that it is to him and to me, to vote, to exercise political power, then the Constitution says that the privileges which belong to him and me shall not be denied or abridged by any State.

"The Constitution does not say that the privileges and immunities of a particular class, a chosen few, shall not be denied or abridged. It does not declare that in the State of New Hampshire the privileges and the immunities of Protestants shall not be abridged or denied. It does not say that in Massachusetts the privileges and immunities of those who can read and write and know how to defend themselves shall not be denied; but it is a comprehensive term as well in the objects over which it rests as in the subject of which it speaks; and the difficulty which my friend has suggested, that

it wipes away every regulation of the exercise of rights in the States because it gives those rights, is purely imaginary. Every lawyer knows, every statesman knows, every intelligent man in the country knows that it is one thing to have a right which is absolute and inalienable, and it is another thing for the body of the community to regulate equally and fairly the exercise of that right."

Mr. Drake: "I wish to inquire of the Senator whether, when he votes at the polls in the State of Vermont, he votes there as a citizen of the United States or as a citizen of Vermont?"

Mr. Edmunds: "Both."

Mr. Drake: "Then both being done, one would not suffice. The citizenship of the United States would not suffice."

Mr. Edmunds: "The Constitution answers that question. It declares that because I am a citizen of the United States I am a citizen, for that reason, of the State of Vermont, if I reside there. That is the very language of it."

Mr. Howard: "I wish to say but one word on this subject. I feel it a duty to make a single remark. As many of the Senators well know, I served on the joint Committee on Reconstruction, who reported the fourteenth amendment to the Constitution to the Senate and to the House of Representatives; and I am not unfamiliar with the object of that amendment. It was discussed at great length before the committee, and by the committee, as well as in the Senate; and I feel constrained to say here now that this is the first time it ever occurred to me that the right to vote was to be derived from the fourteenth article. I think such a construction cannot be maintained. No such thing was contemplated on the part of the committee which reported the amendment; and, if I recollect rightly, nothing to that effect was said in debate in the Senate when it was on its passage.

"One word further. The construction which is now sought to be put upon the first section of this fourteenth article, it seems to me, is plainly and flatly contradicted by what follows in the second section of the same article. After declaring in the first section that—

> All persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the State wherein they reside;

"And after declaring that—

> No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States;

"The second section goes on to say:

> But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, etc.

Plainly and in the clearest possible terms recognizing the right of each State to regulate the suffrage and to impart or to declare the necessary qualifications of voters for members of the House of Representatives, electors of President and Vice-President, and members of the State Legislature. Sir, can any thing be clearer?"

Mr. Sumner: "The Senator is aware that that was denied at that time, and it would not have passed the Senate had anybody attributed to it that meaning. That I am able to say. It could not have passed the Senate. The Senator knows very well that there was an amendment, as it came from the House of Representatives, that was susceptible of such an interpretation; and I felt it my duty to oppose it, which I did at great length and most elaborately, precisely on the ground that it did abandon to the States the power to discriminate against colored persons; I refused to support that amendment, and I associated myself with others in that refusal. The Senator from Illinois (Mr. Yates) took part in that discussion, and he was associated with me in consultation to defeat the amendment. We did defeat it, and on that ground, that it conceded to the States the power to discriminate against colored persons. We said we would have nothing to do with any such proposition. Then this article was brought forward, and it was sustained on that avowed ground, that it did no such thing."

Mr. Howard: "I have but another word to say. The occasion of introducing the first section of the fourteenth article of amendment into that amendment grew out of the fact that there was nothing in the whole Constitution to secure absolutely the citizens of the United States in the various States against an infringement of their rights and privileges under the second section of the fourth article of the old Constitution. That section declares that—

> The citizens of each State shall be entitled to all privileges and immunities of citizens of the several States.

"There it was plainly written down. Now, sir, it seems to me, that, unless the Senator from Vermont and the Senator from Massachusetts can derive the right of voting from this ancient second section of the fourth article upon the ground that the citizens of each State are entitled to all the privileges and immunities of citizens of the several States, they must give up the argument; and I assert here with confidence that no such construction was ever given to the second section of the fourth article of the Constitution.

"Now, sir, the first section of the fourteenth article, in the first place, makes the declaration that—

> All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside.

"That had not previously been enacted. Then follows the inhibitory clause, which was deemed so important by the committee, that—

> No State shall make or enforce any law which shall

abridge the privileges or immunities of citizens of the United States.

"The immediate object of this was to prohibit for the future all hostile legislation on the part of the recently rebel States in reference to the colored citizens of the United States who had become emancipated, and who finally were declared to be citizens by the civil rights bill passed by Congress. It was to secure them against any infringement or violation of their rights by those Southern Legislatures. That is the whole history of it."

Mr. Sumner: "The Senate must meet very soon again, and can then come to a vote on all these different propositions and give them the attention they deserve. I therefore move that the Senate adjourn."

The President *pro tempore:* "The question is on the motion of the Senator from Massachusetts, that the Senate adjourn."

Mr. Stewart called for the yeas and nays, and they were ordered; and, being taken, resulted—yeas 11, nays 37; as follows:

YEAS—Messrs. Anthony, Buckalew, Fowler, Hendricks, McCreery, Norton, Ramsey, Saulsbury, Sumner, Vickers, and Yates—11.

NAYS—Messrs. Abbott, Cameron, Cattell, Chandler, Cole, Corbett, Cragin, Drake, Ferry, Frelinghuysen, Harlan, Harris, Howard, Howe, Kellogg, McDonald, Morgan, Morrill of Maine, Morrill of Vermont, Nye, Osborn, Patterson of New Hampshire, Rice, Robertson, Ross, Sawyer, Spencer, Stewart, Thayer, Trumbull, Van Winkle, Wade, Warner, Welch, Willey, Williams, and Wilson—37.

ABSENT—Messrs. Bayard, Conkling, Conness, Davis, Dixon, Doolittle, Edmunds, Fessenden, Grimes, Henderson, Morton, Patterson of Tennessee, Pomeroy, Pool, Sherman, Sprague, Tipton, and Whyte—18.

So the Senate refused to adjourn.

Mr. Cragin, of New Hampshire, said: "Mr. President, I did not think that I could possibly be tempted to say any thing in reference to the question now under consideration; but the position taken by the Senator from Vermont greatly surprises me. When I remember the struggle that we had here in the passage of the fourteenth amendment; when I remember that it was announced upon this floor by more than one gentleman, and contradicted and denied by no one, so far as I recollect, that that amendment did not confer the right of voting upon anybody, I say I am surprised that such a position should be taken at this late hour in the debate. There is no doubt upon the question. It was the understanding of Congress and of the people of this country that that amendment did not confer and did not seek to confer any right to vote upon any citizen of the United States. That amendment was passed after the passage of the civil rights bill. That law had not been carried out. It had not been enforced. It was passed also for the purpose of deciding once and forever that the emancipated slave was a citizen of the United States. There were other reasons which entered into the consideration of that question. But that it conferred the right to vote was distinctly disclaimed on this floor in the caucus which has been alluded to here to-night; and, for one, I am not willing to have it go out from this Senate that we passed that amendment understanding that it conferred any right to vote."

The President *pro tempore:* "The question is on the amendment of the Senator from Missouri to the amendment of the Senator from Nevada."

The amendment to the amendment was rejected.

The President *pro tempore:* "The question now is on the amendment offered by the Senator from Nevada."

Mr. Howard: "I now offer the amendment to which I referred during the discussion as a substitute for the pending amendment. It is as follows:

Citizens of the United States of African descent shall have the same right to vote and hold office in States and Territories as other citizens, electors of the most numerous branch of their respective Legislatures."

Mr. Sumner: "If we are to have a constitutional amendment now, I want to have it as complete as possible, so that it shall provide against any possible necessity of any amendment hereafter. It will be observed that this amendment of my friend from Michigan, like the amendment of the committee, is confined simply to the right to vote and hold office. It seems to me that we ought to make a complete work, and to provide for full equality of rights in all respects. If there be any other particular under the head of right, we ought to secure it to all persons, without distinction of color. I propose, therefore, to add to the amendment of my friend from Michigan these words:

And there shall be no discrimination in rights on account of race or color.

"Of course the object of this is to broaden the proposition, not merely to make it a guarantee of the right to vote and to hold office, but a guarantee of equal rights universally."

Mr. Drake: "I would ask the honorable Senator from Massachusetts what is the necessity for that, in view of the language of the first section of the fourteenth article of the amendment to the Constitution, which says:

Nor shall any State deprive any person of life, liberty, or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws."

Mr. Sumner: "I should answer the Senator's question by putting him another. What is the use of the constitutional amendment on which you are now to vote?"

Mr. Drake: "Just the very use that it expresses on its face, to secure the right of suffrage to these men whose personal and legal rights we had guaranteed in the previous amendment, but had not guaranteed to them the right of suffrage."

Mr. Sumner: "I differ radically and entirely from my friend, and I think there is just the

same necessity for the supplementary provision that I propose as there is for the provision which has his support. If the clause to which he calls attention is inadequate to protect persons in their rights of citizenship, including the right to vote, it is inadequate to protect them in any thing; the clause is so much waste-paper. Now, are we in earnest? Are we disposed to close this question up so that no petitions hereafter shall come to us asking equal rights protected either by Congress or by constitutional amendment? I say I want to make complete work and finish it so that hereafter there shall be no question. It is on that account that I would make the addition to the proposition of my friend from Michigan."

Mr. Edmunds: "I hope the Senate will not agree to that amendment. It does not, as it seems to me, stand on any principle. It limits constitutional privileges to persons of African descent, selecting one particular and peculiar nationality. It does appear to me that there is nothing republican in that. It may do as an expedient for to-day."

Mr. Ferry, of Connecticut, said: "I am in favor of the proposition of the Senator from Michigan, because it meets and remedies the one existing evil with regard to which there is yet an omission in the Constitution of the United States."

Mr. Williams, of Oregon, said: "I hope this amendment will be adopted, because it is explicit and declares just exactly what we mean. We either mean to enfranchise the African or not in this country by means of this amendment. If we mean that, we say it, and it is understood by everybody. If we mean to provide that all foreigners of all races and conditions and classes, whether from Asia or Africa, shall come in here and enjoy the privileges of this amendment, then we ought to adopt some language to accomplish that purpose; but, as suggested by the Senator from Connecticut, the practical evil in this country at this time is that persons of African descent are disfranchised. We propose to provide a remedy, and we do not exclude anybody else by this amendment, but we provide that those persons shall have the right to vote and to hold office, if it becomes necessary, as I have no doubt it will."

Mr. Cole, of California, said: "I am in favor of the amendment of the Senator from Michigan which has just been read. It will effectually leave out of the question the subject of the Chinese immigration which has excited so much feeling on the part of Senators not from the Pacific coast. I am not myself apprehensive of any great difficulty arising from that source. The Chinese, to be sure, in some numbers come to the Pacific coast, but not with the intention of becoming citizens. I presume no application on the part of a single one of them has been made to become a citizen of the United States. So wedded are they to their native country, the Celestial Empire, that even the dead are taken back there. This proposition of the Senator from Michigan goes to the extent of enfranchising native-born Americans. It is entirely different in its scope and extent from one which would include the Chinese."

Mr. Edmunds: "Mr. President, we are now coming to an important practical question, and I shall be excused, for one, I have no doubt, for expressing my views briefly upon it; because I regard this amendment, if adopted, as fatal in its consequences to the very ends that gentlemen wish to attain. I wish gentlemen to bear in mind that all that we propose to do to amend the Constitution is to confer upon citizens, not upon aliens, certain rights that we suppose them now to be deprived of either legally or illegally. It has nothing to do with the question whether the Asiatic race should be received into the family of this nation as citizens. It only speaks as to the political status of citizens of the United States. Now, I should be glad to know what sort of a spectacle we shall make in history, dealing with our male adult citizens, if we declare in the fudamental law which regulates the very substructure of society that the citizens of African descent shall be entitled to certain privileges by name."

Mr. Ferry: "Entitled to the same rights with other citizens."

Mr. Edmunds: "Yes, entitled to the same rights with other citizens; and then the question arises, what are the rights of other citizens? Taking the view that in the present state of constitutional law it belongs to the States and is with them, the rights of some citizens of Connecticut are one thing and of other citizens another thing. Which class of citizens of Connecticut is to furnish the standard of comparison?"

Mr. Warner, of Alabama, said: "I hope this amendment will not be adopted. I hope the Congress of this country will not single out one race for protection; but that we shall go at once to the broad, grand, affirmative proposition which shall secure the object the Senator from Vermont so well states—that of securing to all the citizens of this country their rights. I think this proposition to single out one race is the weakest one that can be put before the country. If we want to strengthen it and give it a chance of adoption, we ought to amend it and insert the Irish and Germans. I think to single out one race is unworthy of the country and unworthy of the great opportunity now presented to us. We ought to go to the root of the matter by putting in the fundamental law a provision which will make the Constitution beyond doubt mean what the Senators from Vermont and Massachusetts now understand it to mean."

Mr. Patterson, of New Hampshire, said: "I hope that this proposition will be adopted; for, of all the amendments which have been offered, I think it is the best. Our object is to meet a

wrong done to a class of black native citizens; to give them the same privileges that other citizens of the United States possess. The Constitution gives to the United States the right to establish a uniform system of naturalization; so that Europeans and Asiatics coming to our coast may be naturalized upon the same conditions in California and in New York. So by the passage of this proposition we shall relieve these black citizens, native to the soil, from the wrong which is done them, without doing any wrong to the Asiatics who may flow in upon our Western shores. I prefer, for one, to leave that question open, so that, if a war springs up in Asia and these increasing tides of immigration from Asia pour upon our Pacific coast in such numbers as to endanger the welfare of those States, they may have it in their power to guard themselves against the threatened evils, and then, if any evil should result, it will be in our power to remedy it. 'Sufficient unto the day is the evil thereof.' Let us meet this evil, and not, in attempting to meet it, provide others that we know not of."

The President *pro tempore:* "The question is on the amendment of the Senator from Michigan to the amendment of the Senator from Nevada."

The question being taken by yeas and nays, resulted—yeas 16, nays 35; as follows:

YEAS—Messrs. Anthony, Chandler, Cole, Corbett, Cragin, Ferry, Harlan, Howard, Norton, Patterson of New Hampshire, Sumner, Thayer, Tipton, Wade, Welch, and Williams—16.

NAYS—Messrs. Abbott, Bayard, Buckalew, Cameron, Cattell, Doolittle, Drake, Edmunds, Frelinghuysen, Harris, Hendricks, Howe, Kellogg, McCreery, McDonald, Morgan, Morrill of Maine, Morrill of Vermont, Nye, Patterson of Tennessee, Ramsey, Rice, Saulsbury, Sawyer, Sherman, Spencer, Stewart, Trumbull, Van Winkle, Vickers, Warner, Whyte, Willey, Wilson, and Yates—35.

ABSENT—Messrs. Conklin, Conness, Davis, Dixon, Fessenden, Fowler, Grimes, Henderson, Morton, Osborn, Pomeroy, Pool, Robertson, Ross, and Sprague—15.

So the amendment to the amendment was rejected.

The President *pro tempore:* "The question is now on the amendment of the Senator from Nevada."

Mr. Warner: "I wish to move a substitute for the whole proposition."

The Chief Clerk: "The proposed amendment is to strike out all after 'section one' and to insert the following:

The right of citizens of the United States to hold office shall not be denied or abridged by the United States or any State on account of property, race, color, or previous condition of servitude; and every male citizen of the United States of the age of twenty-one years, or over, and who is of sound mind, shall have an equal vote at all elections in the State in which he shall have actually resided for a period of one year next preceding such election, except such as may hereafter engage in insurrection or rebellion against the United States, and such as shall be duly convicted of treason, felony, or other infamous crimes."

Mr. Sherman, of Ohio, said: "Mr. President, I thought nothing would tempt me to say one word in this debate on the constitutional amendment, but Senators have already perceived the difficulty we are approaching, and we might as well at once face the issue. There are five different causes of exclusion from the right to vote in this and other countries. The first is race. This cause of exclusion has existed in this country in nearly all the States until recently. The second is property, and that has existed in England since the foundation of their government. The third is religion, which exists in almost all countries except our own. The fourth is nativity, and that exists in nearly all countries. The fifth is education, and that is an experiment of ours, I believe, in Massachusetts.

"Now, Mr. President, if we are endeavoring to settle this question once for all, I think it would be wiser and better to declare that every male citizen of the United States, native or naturalized, above the age of twenty-one years, shall have the right to vote, unless he is excluded for crime; and that no State shall exclude any one from the right to vote because of his race, because of his property or want of property, because of his religion, because of his birthplace, or because of the misfortune of want of education. As this amendment makes the nearest approach to that, I have made up my mind to vote for it, or I shall vote for the amendment of the Senator from Massachusetts (Mr. Wilson). I do not like to apply a rule so narrow and limited as to guarantee rights to the African race which we refuse to the Asiatic race or to other races. I do not wish to include the ignorant masses of our Southern population and exclude the partially-intelligent classes of the State of Massachusetts. I do not want to include the negroes and exclude or allow a State to exclude foreigners who are declared to be citizens of the United States under the laws of the United States.

"Therefore, it does seem to me that, if we intend to now prescribe a rule for suffrage in this country, we ought to make it operate universally and withdraw from the States all power to exclude any portion of the male citizens of the United States, leaving them, if they choose, to regulate the length of residence, whether females shall participate in the elective franchise, at what age males shall vote, etc.; but to exclude from them all power to deprive any portion of our male citizens above the age of twenty-one years of the right to vote, unless where the right has been forfeited by crime. If the amendment of the Senator from Massachusetts is voted down and this amendment is voted down, then the next best proposition, I think, is that report of the Committee on the Judiciary, which I shall then vote for."

Mr. Howard: "I have two objections to this amendment. The first is that it proposes to change the existing Constitution in refer-

ence to qualifications of President of the United States. If this amendment shall be adopted, then that clause of the Constitution which requires that the President of the United States shall be a native-born citizen of the United States is repealed, and any person who has been naturalized and then become a citizen of the United States will be eligible to the office of President; and so of the members of the Senate."

Mr. Bayard, of Delaware, said: "Mr. President, I do not propose to prolong this debate or discuss the merits of the particular amendment now pending. I am satisfied that no argument will avail in this body to prevent the passage of this amendment in some form, or as to effect its particular object, the grant of the franchise of suffrage to the negro race.

"The fiat has gone forth, and the fell spirit of party, the bane of republics, has decreed its passage. I have yet the hope, however, that many of even Republican members of the State Legislatures will have sufficient sense of duty to regard the confidence and good faith which in all free governments should always be maintained between the representative and his constituents, and that they will decline in many of the States to act upon the proposed amendment without first ascertaining the will of their constituents, and if that will is ascertained I have no fears as to the decision of the people.

"Sir, the mode and time at which this amendment has been introduced and the pressure for its passage in the last month of an expiring Congress show conclusively that it is intended to fetter the people—to throw a chain around the limbs of the giant while he slumbers. Whether you succeed or fail in your object, you may yet find that the people have more than the single eye of Polyphemus, and when the giant awakens many of you will seek in vain to escape his just vengeance by creeping under the bellies of sheep, like Ulysses and his companions.

"I shall make no further opposition to the amendment in any form you may please to mould it, beyond my negative vote."

Mr. Willey, of West Virginia, said: "Mr. President, this proposition of the Senator from Alabama is one of universal suffrage and universal amnesty. I confess that I should like to feel myself authorized to extend amnesty and make it universal now, and I shall take pleasure in doing so whenever I can be convinced that the true interests, the welfare, the safety, the public peace of the country will justify it. The time has not yet come when we can venture so far as that. We have not fully justified ourselves yet in imposing this restriction in our previous legislation. I have not yet seen those fruits meet for repentance to justify me in responding to the inclinations of my feelings and my heart. I, therefore, while that feature remains in the proposition of the Senator from Alabama, allowing those who have been so recently engaged in a most terrible effort to overthrow the best of all governments on the face of the earth to be reintroduced into the political control of the government—I say at present I cannot bring myself to allow that to be done if I can prevent it."

The President *pro tempore:* "The question is on the amendment of the Senator from Alabama to the amendment of the Senator from Nevada."

The amendment to the amendment was rejected.

Mr. Wilson, of Massachusetts, said: "I desire to submit an amendment, to strike out section one and insert the following:

There shall be no discrimination in any State among the citizens of the United States in the exercise of the elective franchise in any election therein, or in the qualifications of office in any State, on account of race, color, nativity, property, education, or religious belief."

Mr. Anthony, of Rhode Island, said: "It is now within half an hour of the usual time of meeting for to-morrow, and in order to make the Journal read correctly there should be an adjournment, and I think, Mr. President, something is due to the officers of the Senate."

On motion of Mr. Anthony, at eleven o'clock and thirty-five minutes A. M. (Tuesday, February 9), the Senate adjourned.

In the Senate on February 9th, Mr. Stewart, of Nevada, moved that the consideration of the constitutional amendment be taken up. The question was on the adoption of the amendment offered by Mr. Wilson, of Massachusetts.

The yeas and nays were ordered; and, being taken, resulted—yeas 19, nays 24; as follows:

YEAS—Messrs. Cattell, Conness, Grimes, Harlan, Harris, Howe, McDonald, Morton, Ramsey, Ross, Sawyer, Sherman, Sumner, Van Winkle, Wade, Welch, Williams, Wilson, and Yates—19.

NAYS—Messrs. Abbott, Anthony, Bayard, Cole, Conkling, Corbett, Davis, Dixon, Fessenden, Fowler, Frelinghuysen, Howard, Morgan, Morrill of Vermont, Norton, Nye, Patterson of Tennessee, Rice, Robertson, Spencer, Stewart, Trumbull, Vickers, and Willey—24.

ABSENT—Messrs. Buckalew, Cameron, Chandler, Cragin, Doolittle, Drake, Edmunds, Ferry, Henderson, Hendricks, Kellogg, McCreery, Morrill of Maine, Osborn, Patterson of New Hampshire, Pomeroy, Pool, Saulsbury, Sprague, Thayer, Tipton, Warner, and Whyte—28.

So the amendment to the amendment was rejected.

Mr. Sawyer, of South Carolina, said: "I move to amend the amendment by striking out all of section one of the amendment reported by the committee, and inserting the following:

The right to vote and hold office in the United States and the several States and Territories shall belong to all male citizens of the United States who are twenty-one years old, and who have not been or shall not be duly convicted of treason or other infamous crime: *Provided*, That nothing herein contained shall deprive the several States of the right to make such registration laws as shall be deemed necessary to guard the purity of elections and to fix

the terms of residence which shall precede the exercise of the right to vote: *And provided*, That the United States and the several States shall have the right to fix the age and other qualifications for office under their respective jurisdictions, which said registration laws, terms of residence, age, and other qualifications, shall be uniformly applicable to all male citizens of the United States."

The amendment to the amendment was rejected.

Mr. Fowler, of Tennessee, said: "I now offer my amendment, to strike out all of section one of the amendment reported by the committee, and to insert:

All the male citizens of the United States, residents of the several States now or hereafter comprehended in the Union, of the age of twenty-one years and upward, shall be entitled to an equal vote in all elections in the State wherein they shall reside; the period of such residence as a qualification for voting to be decided by each State, except such citizens as shall engage in rebellion or insurrection, or shall be duly convicted of treason or other infamous crime."

The yeas and nays were ordered; as follows:

YEAS—Messrs. Bayard, Cragin, Dixon, Fowler, Patterson of Tennessee, Ross, Sherman, Van Winkle, and Wilson—9.

NAYS—Messrs. Abbott, Anthony, Cattell, Cole, Conkling, Conness, Corbett, Davis, Drake, Ferry, Frelinghuysen, Harlan, Harris, Howard, McDonald, Morgan, Morrill of Vermont, Morton, Nye, Patterson of New Hampshire, Pool, Ramsey, Rice, Robertson, Sawyer, Spencer, Stewart, Tipton, Trumbull, Vickers, Wade, Welch, Willey, Williams, and Yates—35.

ABSENT—Messrs. Buckalew, Cameron, Chandler, Doolittle, Edmunds, Fessenden, Grimes, Henderson, Hendricks, Howe, Kellogg, McCreery, Morrill of Maine, Norton, Osborn, Pomeroy, Saulsbury, Sprague, Sumner, Thayer, Warner, and Whyte—22.

So the amendment to the amendment was rejected.

Mr. Conness, of California, said: "In the first line of the committee's amendment the word 'or' occurs between the words 'States' and 'by.' I move to insert the word 'nor' instead of 'or;' so that it shall read:

The right of citizens of the United States to vote and hold office shall not be denied or abridged by the United States nor by any State."

The President *pro tempore:* "The question is on the amendment of the Senator from California to the amendment of the committee."

The amendment to the amendment was agreed to.

Mr. Vickers, of Maryland, said: "I desire to offer an amendment to the amendment. It is to insert at the end of the amendment the following:

Nor shall the right to vote be denied or abridged because of participation in the recent rebellion."

The question was taken by yeas and nays, as follows:

YEAS—Messrs. Bayard, Buckalew, Davis, Dixon, Doolittle, Ferry, Fowler, Grimes, Harlan, Hendricks, McCreery, Norton, Patterson of Tennessee, Pool, Ramsey, Robertson, Sawyer, Trumbull, Van Winkle, Vickers, and Wilson—21.

NAYS—Messrs. Abbott, Anthony, Cattell, Cole, Conkling, Conness, Corbett, Cragin, Drake, Fessenden, Frelinghuysen, Harris, Howard, Howe, Morgan, Morrill of Vermont, Morton, Nye, Patterson of New Hampshire, Rice, Ross, Sherman, Spencer, Stewart, Sumner, Thayer, Tipton, Wade, Welch, Willey, Williams, and Yates—32.

ABSENT—Messrs. Cameron, Chandler, Edmunds, Henderson, Kellogg, McDonald, Morrill of Maine, Osborn, Pomeroy, Saulsbury, Sprague, Warner, and Whyte—13.

So the amendment to the amendment was rejected.

Mr. Bayard, of Delaware, said: "I move to amend the amendment by inserting after the word 'vote' in the first line the words 'for electors of President and Vice-President and members of the House of Representatives of the United States;' and by inserting after the word 'office' in the second line the words 'under the United States;' so as to make the clause read:

The right of citizens of the United States to vote for electors of President and Vice-President and members of the House of Representatives of the United States, and hold office under the United States, shall not be denied or abridged by the United States nor by any State on account of race, color, or previous condition of servitude.

The yeas and nays were ordered; and, being taken, resulted as follows:

YEAS—Messrs. Anthony, Bayard, Buckalew, Davis, Dixon, Doolittle, Grimes, Hendricks, McCreery, Norton, Saulsbury, and Van Winkle—12.

NAYS—Messrs. Abbott, Cattell, Cole, Conkling, Conness, Corbett, Cragin, Drake, Ferry, Frelinghuysen, Harlan, Harris, Howard, Howe, McDonald, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Patterson of New Hampshire, Pool, Ramsey, Rice, Robertson, Ross, Sawyer, Sherman, Spencer, Stewart, Sumner, Thayer, Tipton, Trumbull, Vickers, Wade, Warner, Welch, Willey, Williams, Wilson, and Yates—42.

ABSENT—Messrs. Cameron, Chandler, Edmunds, Fessenden, Fowler, Henderson, Kellogg, Osborn, Patterson of Tennessee, Pomeroy, Sprague, and Whyte—12.

So the amendment to the amendment was rejected.

Mr. Corbett, of Oregon, said: "Mr. President, I had the honor to offer an amendment, which I intend to call up at the proper time for consideration, to be added after the amendment of the committee, in these words:

But Chinamen not born in the United States and Indians not taxed shall not be deemed or made citizens."

The amendment was rejected.

The President *pro tempore:* "The question is on the amendment of the Senator from Massachusetts (Mr. Wilson) to the amendment proposed by the Senator from Nevada (Mr. Stewart)."

The yeas and nays were ordered, and resulted as follows:

YEAS—Messrs. Abbott, Cameron, Cattell, Conness, Cragin, Ferry, Grimes, Harlan, Harris, Hendricks, Howe, McDonald, Morton, Osborn, Pool, Rice, Robertson, Ross, Sawyer, Sherman, Sumner, Thayer, Tipton, Van Winkle, Wade, Warner, Welch, Willey, Williams, Wilson, and Yates—31.

NAYS—Messrs. Anthony, Buckalew, Chandler,

Cole, Conkling, Corbett, Dixon, Doolittle, Drake, Edmunds, Fessenden, Frelinghuysen, McCreery, Morgan, Morrill of Maine, Morrill of Vermont, Nye, Patterson of New Hampshire, Patterson of Tennessee, Ramsey, Saulsbury, Spencer, Sprague, Stewart, Trumbull, Vickers, and Whyte—27.

ABSENT—Messrs. Bayard, Davis, Fowler, Henderson, Howard, Kellogg, Norton, and Pomeroy—8.

So the amendment to the amendment was agreed to.

The President *pro tempore:* "The question is on the amendment as amended."

The amendment as amended was agreed to.

Mr. Buckalew: "Now, I offer my amendment, to add:

That the foregoing amendment shall be submitted for ratification to the Legislatures of the several States the most numerous branches of which shall be chosen next after the passage of this resolution."

The yeas and nays were ordered, and resulted as follows:

YEAS—Messrs. Bayard, Buckalew, Davis, Dixon, Doolittle, Fowler, Hendricks, McCreery, Patterson of Tennessee, Saulsbury, Van Winkle, Vickers, and Whyte—13.

NAYS—Messrs. Abbott, Cameron, Cattell, Chandler, Cole, Conkling, Conness, Corbett, Cragin, Drake, Edmunds, Ferry, Fessenden, Frelinghuysen, Harlan, Harris, Howe, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Patterson of New Hampshire, Pool, Ramsey, Rice, Robertson, Ross, Sawyer, Sherman, Spencer, Stewart, Sumner, Thayer, Tipton, Trumbull, Wade, Warner, Welch, Willey, Williams, Wilson, and Yates—43.

ABSENT—Messrs. Anthony, Grimes, Henderson, Howard, Kellogg, McDonald, Norton, Osborn, Pomeroy, and Sprague—10.

So the amendment was rejected.

Mr. Dixon: "I now offer my amendment. It is in the fourth line of the resolution to strike out the words 'the Legislatures of' and insert 'conventions,' and in the sixth line to strike out the word 'Legislatures' and insert 'conventions;' so as to read:

That the following article be proposed to conventions in the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said conventions, shall be held a part of said Constitution.

"I ask that the question may be taken by yeas and nays."

The yeas and nays were ordered, and resulted as follows:

YEAS—Messrs. Bayard, Buckalew, Davis, Dixon, Doolittle, Hendricks, McCreery, Patterson of Tennessee, Saulsbury, Vickers, and Whyte—11.

NAYS—Messrs. Abbott, Cameron, Cattell, Chandler, Cole, Conkling, Conness, Corbett, Cragin, Drake, Edmunds, Ferry, Fessenden, Frelinghuysen, Harlan, Harris, Howe, Kellogg, McDonald, Morgan, Morrill of Maine, Morrill of Vermont, Nye, Patterson of New Hampshire, Pool, Ramsey, Rice, Robertson, Ross, Sawyer, Sherman, Spencer, Stewart, Sumner, Thayer, Tipton, Trumbull, Van Winkle, Wade, Warner, Welch, Willey, Williams, Wilson, and Yates—45.

ABSENT—Messrs. Anthony, Fowler, Grimes, Henderson, Howard, Morton, Norton, Osborn, Pomeroy, and Sprague—10.

So the amendment was rejected.

Mr. Morton: "I offer the following amendment, which is reported unanimously by the Committee on Representative Reform, to come in as an additional article:

ARTICLE —. The second clause, first section, article two of the Constitution of the United States shall be amended to read as follows: each State shall appoint, by a vote of the people thereof qualified to vote for Representatives in Congress, a number of electors equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative, or person holding an office of trust and profit under the United States, shall be appointed an elector; and the Congress shall have power to prescribe the manner in which such electors shall be chosen by the people."

The President *pro tempore:* "The question is on agreeing to this amendment."

The yeas and nays were ordered; and, being taken, resulted—yeas 27, nays 29; as follows:

YEAS—Messrs. Buckalew, Cattell, Dixon, Doolittle, Ferry, Fessenden, Fowler, Grimes, Hendricks, Kellogg, McDonald, Morton, Patterson of New Hampshire, Pool, Rice, Ross, Sawyer, Spencer, Van Winkle, Vickers, Wade, Warner, Welch, Whyte, Willey, Williams, and Wilson—27.

NAYS—Messrs. Abbott, Cameron, Chandler, Cole, Conkling, Conness, Corbett, Cragin, Davis, Drake, Frelinghuysen, Harlan, Harris, Howe, McCreery, Morgan, Morrill of Maine, Morrill of Vermont, Nye, Patterson of Tennessee, Ramsey, Robertson, Sherman, Sprague, Stewart, Sumner, Tipton, Trumbull, and Yates—29.

ABSENT—Messrs. Anthony, Bayard, Edmunds, Henderson, Howard, Norton, Osborn, Pomeroy, Saulsbury, and Thayer—10.

So the amendment was rejected.

Mr. Sumner: "I move an amendment to strike out all after the enacting clause and insert the following:

That the right to vote, to be voted for, and to hold office, shall not be denied or abridged anywhere in the United States under any pretence of race or color; and all provisions in any State constitutions or in any laws, State, Territorial, or municipal, inconsistent herewith are hereby declared null and void.

SEC. 2. That any person who, under any pretence of race or color, wilfully hinders or attempts to hinder any citizen of the United States from being registered, or from voting, or from being voted for, or from holding office, or who attempts by menaces to deter any such citizen from the exercise or enjoyment of the rights of citizenship above mentioned, shall be punished by a fine not less than $100 nor more than $3,000, or by imprisonment in the common jail for not less than thirty days nor more than one year.

SEC. 3. That every person legally engaged in preparing a register of voters, or in holding or conducting an election, who wilfully refuses to register the name or to receive, count, return, or otherwise give the proper legal effect to the vote of any citizen under any pretence of race or color, shall be punished by a fine not less than $500 nor more than $4,000, or by imprisonment in the common jail for not less than three calendar months nor more than two years.

SEC. 4. *And be it further enacted*, That the district courts of the United States shall have exclusive jurisdiction of all offences against this act; and the district attorneys, marshals, and deputy marshals, the commissioners appointed by the circuit and territorial courts of the United States, with powers of arresting, imprisoning, or bailing offenders, and every other officer specially empowered by the President of the United States, shall be, and they are hereby, required, at the expense of the United States, to institute proceedings against any person who violates this act, and cause him to be arrested and imprisoned or bailed, as

the case may be, for trial before such court as by this act has cognizance of the offence.

SEC. 5. *And be it further enacted*, That every citizen, unlawfully deprived of any of the rights of citizenship secured by this act, under any pretence of race or color, may maintain a suit against any person so depriving him, and recover damages in the district court of the United States for the district in which such person may be found."

The question being taken by yeas and nays, resulted—yeas 9, nays 47; as follows:

YEAS—Messrs. Edmunds, McDonald, Nye, Ross, Sumner, Thayer, Wade, Wilson, and Yates—9.

NAYS—Messrs. Abbott, Anthony, Bayard, Buckalew, Cameron, Chandler, Cole, Conkling, Conness, Corbett, Cragin, Davis, Dixon, Doolittle, Drake, Ferry, Fessenden, Fowler, Frelinghuysen, Grimes, Harlan, Harris, Hendricks, Howe, McCreery, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Patterson of New Hampshire, Pool, Ramsey, Rice, Robertson, Saulsbury, Sawyer, Sherman, Spencer, Sprague, Stewart, Trumbull, Van Winkle, Vickers, Warner, White, Willey, and Williams—47.

ABSENT—Messrs. Cattell, Henderson, Howard, Kellogg, Norton, Osborn, Patterson of Tennessee, Pomeroy, Tipton, and Welch—10.

So the amendment was rejected.

The joint resolution was reported to the Senate as amended.

The President *pro tempore:* "The question is on concurring in the amendment made as in Committee of the Whole."

The amendment made as in Committee of the Whole was concurred in.

Mr. Morton: "I desire to renew the amendment I offered in regard to electing electors directly by the people, which was to insert as an additional article the following:

ARTICLE XVI.—The second clause, first section, second article of the Constitution of the United States shall be amended to read as follows: each State shall appoint, by a vote of the people thereof qualified to vote for Representatives in Congress, a number of electors equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative, or person holding an office of trust or profit under the United States, shall be appointed an elector; and the Congress shall have power to prescribe the manner in which such electors shall be chosen by the people."

The result was announced as follows:

YEAS—Messrs. Buckalew, Cameron, Cattell, Cole, Conkling, Conness, Corbett, Dixon, Doolittle, Ferry, Fessenden, Fowler, Grimes, Harlan, Howe, Kellogg, McDonald, Morrill of Maine, Morton, Osborn, Patterson of New Hampshire, Pool, Ramsey, Rice, Robertson, Ross, Sawyer, Spencer, Thayer, Vickers, Wade, Warner, Welch, Whyte, Willey, Williams, and Wilson—37.

NAYS—Messrs. Abbott, Chandler, Cragin, Davis, Drake, Edmunds, Frelinghuysen, Harris, Hendricks, McCreery, Morgan, Morrill of Vermont, Patterson of Tennessee, Saulsbury, Sherman, Stewart, Trumbull, Van Winkle, and Yates—19.

ABSENT—Messrs. Anthony, Bayard, Henderson, Howard, Norton, Nye, Pomeroy, Sprague, Sumner, and Tipton—10.

So the amendment was agreed to.

Mr. Morton: "There is another amendment connected with this, providing for its separate submission, which should be adopted along with the amendment, so that there will be no controversy about that."

Mr. Wilson: "I suggest to the Senator from Indiana that he is periling the whole measure by this proposition."

Mr. Morton: "I move to amend the preliminary part of the resolution so as to make it read:

Be it resolved, etc. (two-thirds of both Houses concurring), That the following articles be proposed to the Legislatures of the several States as amendments to the Constitution of the United States, either of which, when ratified by three-fourths of said Legislatures, shall be held as part of said Constitution."

The resolution was read the third time.

Mr. Wilson: "I move the reconsideration of the vote ordering the joint resolution to a third reading."

The motion to reconsider was agreed to.

Mr. Wilson: "Now, I move to reconsider the vote by which the amendment was adopted."

Mr. Anthony: "I move to recommit the whole subject to the Committee on the Judiciary."

The motion to recommit was not agreed to.

The amendments were ordered to be engrossed, and the joint resolution to be read a third time.

The resolution was read the third time.

The President *pro tempore:* "On the passage of this resolution the yeas and nays must be taken to ascertain whether the constitutional two-thirds required is obtained. The Clerk will therefore call the roll."

The question being taken by yeas and nays, resulted—yeas 39, nays 16; as follows:

YEAS—Messrs. Abbott, Cameron, Cattell, Chandler, Cole, Conkling, Conness, Cragin, Drake, Ferry, Harlan, Harris, Howe, Kellogg, McDonald, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Pool, Ramsey, Rice, Robertson, Ross, Sawyer, Sherman, Spencer, Stewart, Thayer, Van Winkle, Wade, Warner, Welch, Willey, Williams, Wilson, and Yates—39.

NAYS—Messrs. Anthony, Bayard, Corbett, Davis, Dixon, Doolittle, Edmunds, Fowler, Grimes, Hendricks, McCreery, Patterson of Tennessee, Saulsbury, Sprague, Vickers, and Whyte—16.

ABSENT—Messrs. Buckalew, Fessenden, Frelinghuysen, Henderson, Howard, Norton, Patterson of New Hampshire, Pomeroy, Sumner, Tipton, and Trumbull—11.

The President *pro tempore:* "Two-thirds having voted in the affirmative, the joint resolution is passed."

In the House, on February 15th, Mr. Boutwell, of Massachusetts, moved to take up the amendments of the Senate to the House joint resolution, which was agreed to, and the amendments of the Senate read as follows:

Line two add the letter "s" to the word "article."

Line three strike out the word "an" and add "s" to "amendment."

Line four, after "State," insert "either of."

After line six insert "first amendment."

Strike out the first section and insert in lieu thereof:

No discrimination shall be made in any State among the citizens of the United States in the exercise of the elective franchise or in the right to hold office in any State, on account of race, color, nativity, property, education, or creed.

At the end of the resolution insert the following:

Second amendment:

ARTICLE —. The second clause, first section, second article of the Constitution of the United States shall be amended to read as follows:

Each State shall appoint, by a vote of the people thereof qualified to vote for Representatives in Congress, a number of electors equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative or person holding an office of trust or profit under the United States shall be appointed an elector; and the Congress shall have power to prescribe the manner in which such electors shall be chosen by the people.

Amend the title of the resolution by striking out "an" and adding "s" to "amendment."

Mr. Boutwell said: Here is a proposition in regard to electors which has not been considered in this House. The proposition concerning suffrage has been materially changed. I have considered whether it is practicable to concur in the amendments of the Senate with an amendment, but I have come to the conclusion that that, as a matter of business, is impracticable. I see no way in the present condition of things except to non-concur in the action of the Senate, and to ask for a committee of conference, and I make that motion."

Mr. Bingham, of Ohio, moved that the House concur, which motion had the precedence.

The question was taken, and decided in the negative, as follows:

YEAS—Messrs. Axtell, Baker, Beatty, Bingham, Buckland, Sidney Clarke, Coburn, Cullom, Deweese, Dickey, Dockery, Donnelly, Eggleston, Haughey, Heaton, Asahel W. Hubbard, Ingersoll, Kitchen, George V. Lawrence, William Lawrence, Nunn, Orth, Pile, Plants, Poland, Scofield, Shanks, Spalding, Stover, Thomas, John Trimble, Robert T. Van Horn, Ward, Welker, James F. Wilson, John T. Wilson, and Stephen F. Wilson—57.

NAYS—Messrs. Anderson, Delos R. Ashley, James M. Ashley, Banks, Barnum, Beaman, Beck, Benjamin, Benton, Blaine, Blair, Boutwell, Bowen, Boyden, Boyer, Bromwell, Brooks, Buckley, Burr, Benjamin F. Butler, Roderick R. Butler, Callis, Cary, Chanler, Churchill, Reader W. Clarke, Clift, Cobb, Corley, Cornell, Covode, Dawes, Driggs, Edwards, Eldridge, Thomas D. Eliot, James T. Elliott, Farnsworth, Ferriss, Ferry, Fields, Fox, Glossbrenner, Gove, Gravely, Grover, Haight, Hamilton, Hawkins, Higby, Holman, Hopkins, Hotchkiss, Chester D. Hubbard, Hulburd, Humphrey, Hunter, Jenckes, Johnson, Alexander H. Jones, Thomas L. Jones, Julian Kelley, Kellogg, Kelsey, Kerr, Ketcham, Knott, Koontz, Laflin, Lash, Loan, Loughridge, Lynch, Mallory, Marshall, Marvin, McCarthy, McCormick, McKee, Miller, Moore, Moorhead, Morrell, Mungen, Myers, Newcomb, Newsham, Niblack, Nicholson, Norris, O'Neill, Plaine, Perham, Peters, Phelps, Pierce, Polsley, Pomeroy, Price, Prince, Pruyn, Randall, Raum, Robertson, Robinson, Roots, Ross, Sawyer, Shellabarger, Sitgreaves, Smith, Starkweather, Stewart, Stokes, Stone, Taber, Taffe, Trowbridge, Twichell, Upson, Burt Van Horn, Van Trump, Van Wyck, Cadwalader C. Washburn, Henry D. Washburn, William B. Washburn, Whittemore, William Williams, Windom, Wood, Woodward, and Young—133.

NOT VOTING—Messrs. Adams, Allison, Ames, Archer, Arnell, Bailey, Baldwin, Barnes, Blackburn, Boles, Broomall, Cake, Cook, Delano, Dixon, Dodge, Eckley, Ela, French, Garfield, Getz, Golladay, Goss, Griswold, Halsey, Harding, Hill, Hooper, Richard D. Hubbard, Judd, Lincoln, Logan, Maynard, McCullough, Mercur, Morrissey, Mullins, Pettis, Pike, Schenck, Selye, Stevens, Sypher, Taylor, Tift, Lawrence S. Trimble, Van Aernam, Van Auken, Vidal, Elihu B. Washburne, Thomas Williams, and Woodbridge—52.

In the Senate, on February 17th, Mr. Stewart, of Nevada, moved to take up the message of the House, asking for a committee of conference on the constitutional amendment. The motion was agreed to, and Mr. Stewart further moved that the Senate insist on its amendments and agree to the conference. Subsequently Mr. Stewart withdrew this motion, and moved that the Senate recede from its amendment and concur in the House proposition. On a division of the question, the motion to recede was adopted as follows:

YEAS—Messrs. Anthony, Cameron, Cattell, Chandler, Cole, Conkling, Corbett, Cragin, Drake, Edmunds, Ferry, Fessenden, Frelinghuysen, Harris, Howard, Kellogg, McDonald, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Patterson of New Hampshire, Pomeroy, Robertson, Stewart, Thayer, Trumbull, Van Winkle, Welch, Willey, Williams, and Yates—33.

NAYS—Messrs. Abbott, Bayard, Buckalew, Davis, Dixon, Doolittle, Fowler, Harlan, Hendricks, McCreery, Norton, Osborn, Patterson of Tennessee, Pool, Rice, Ross, Saulsbury, Sherman, Spencer, Vickers, Wade, Warner, Whyte, and Wilson—24.

ABSENT—Messrs. Conness, Grimes, Henderson, Howe, Ramsey, Sawyer, Sprague, Sumner, and Tipton—9.

The question was then taken on concurring in the resolution of the House, and rejected by the following vote:

YEAS—Messrs. Anthony, Cameron, Cattell, Chandler, Cole, Conkling, Cragin, Drake, Ferry, Fessenden, Frelinghuysen, Harlan, Harris, Howard, Kellogg, Morgan, Morrill of Vermont, Morton, Nye, Patterson of New Hampshire, Pool, Ramsey, Rice, Robertson, Sherman, Stewart, Trumbull, Van Winkle, Wade, Williams, and Yates—31.

NAYS—Messrs. Abbott, Bayard, Buckalew, Davis, Dixon, Doolittle, Edmunds, Fowler, Grimes, Hendricks, McCreery, McDonald, Norton, Osborn, Patterson of Tennessee, Pomeroy, Ross, Saulsbury, Sawyer, Spencer, Sumner, Thayer, Vickers, Warner, Welch, Whyte, and Wilson—27.

This closed the proceedings on the proposition of the House.

The motion was then made that the Senate, as in Committee of the Whole, resume the consideration of a joint resolution reported January 15th, and amended January 28th, proposing an amendment to the Constitution, which was agreed to.

The Chief Clerk: "The resolution when last up was amended to read as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid as part of the Constitution, namely:

ARTICLE XV. The right of citizens of the United States to vote and hold office shall not be denied or abridged by the United States or any State on account of race, color, or previous condition of servitude.

The Congress shall have power to enforce this article by appropriate legislation."

Mr. Stewart: "I move to insert the word 'by' before the words 'any State;' so as to read, 'shall not be denied or abridged by the United States or by any State.'"

The amendment was agreed to.

The joint resolution was then reported to the Senate as amended in Committee of the Whole, and agreed to. It was then adopted by the following vote:

YEAS—Messrs. Abbott, Chandler, Cole, Conkling, Cragin, Drake, Edmunds, Ferry, Frelinghuysen, Harlan, Harris, Kellogg, McDonald, Morgan, Morrill of Vermont, Morton, Osborn, Patterson of New Hampshire, Pomeroy, Pool, Ramsey, Rice, Robertson, Ross, Sawyer, Spencer, Stewart, Thayer, Van Winkle, Wade, Warner, Welch, Willey, Williams, and Wilson—35.

NAYS—Messrs. Bayard, Buckalew, Davis, Fowler, Hendricks, McCreery, Norton, Patterson of Tennessee, Saulsbury, Vickers, and Whyte—11.

ABSENT—Messrs. Anthony, Cameron, Cattell, Conness, Corbett, Dixon, Doolittle, Fessenden, Grimes, Henderson, Howard, Howe, Morrill of Maine, Nye, Sherman, Sprague, Sumner, Tipton, Trumbull, and Yates—20.

In the House, on February 20th, the rules were suspended, and the joint resolution of the Senate taken up. All amendments were rejected except one by Mr. Bingham, to strike out in line three the words "by the United States or," and to insert in line four, after the word "color," the words "nativity, property, creed;" so that it will read as follows:

The right of citizens of the United States to vote and hold office shall not be denied or abridged by any State on account of race, color, nativity, property, creed, or previous condition of servitude—

which was agreed to, yeas 92, nays 70; and the resolution was subsequently passed by the following vote:

YEAS—Messrs. Allison, Ames, Arnell, Delos R. Ashley, James M. Ashley, Baker, Banks, Beaman, Beatty, Benjamin, Benton, Bingham, Blaine, Blair, Boutwell, Bowen, Bromwell, Broomall, Buckland, Buckley, Benjamin F. Butler, Roderick R. Butler, Cake, Churchill, Reader W. Clarke, Sidney Clarke, Clift, Cobb, Coburn, Cook, Corley, Covode, Cullom, Dawes, Dickey, Dockery, Dodge, Donnelly, Driggs, Eckley, Eggleston, Ela, Thomas D. Eliot, James T. Elliott, Farnsworth, Ferriss, Ferry, Fields, French, Garfield, Goss, Gove, Gravely, Griswold, Halsey, Hamilton, Haughey, Heaton, Higby, Hill, Hooper, Hopkins, Chester D. Hubbard, Hulburd, Hunter, Alexander H. Jones, Judd, Julian, Kelley, Kellogg, Kelsey, Ketcham, Kitchen, Koontz, Laflin, Lash, George V. Lawrence, William Lawrence, Logan, Loughridge, Lynch, Marvin, Maynard, McKee, Mercur, Miller, Moore, Moorhead, Morrell, Myers, O'Neill, Orth, Paine, Perham, Peters, Pettis, Pile, Plants, Poland, Pomeroy, Price, Prince, Raum, Roots, Sawyer, Schenck, Scofield, Selye, Shanks, Shellabarger, Smith, Starkweather, Stevens, Stokes, Stover, Sypher, Taffe, Taylor, Thomas, Tift, John Trimble, Trowbridge, Twichell, Upson, Van Aernam, Burt Van Horn, Robert T. Van Horn, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Whittemore, Thomas Williams, William Williams, James F. Wilson, John T. Wilson, Stephen F. Wilson, Windham, Woodbridge, and the Speaker—140.

NAYS—Messrs. Archer, Axtell, Barnum, Beck, Boyer, Burr, Cary, Chanler, Eldridge, Fox, Getz, Golladay, Grover, Haight, Hawkins, Holman, Hotchkiss, Humphrey, Jenckes, Johnson, Knott, Marshall, McCormick, McCullough, Mungen, Niblack, Nicholson, Phelps, Pruyn, Randall, Robinson, Ross, Stone, Taber, Van Trump, Woodward, and Young—37.

NOT VOTING—Messrs. Adams, Anderson, Bailey, Baldwin, Barnes, Blackburn, Boles, Boyden, Brooks, Callis, Cornell, Delano, Deweese, Dixon, Edwards, Glossbrenner, Harding, Asahel W. Hubbard, Richard D. Hubbard, Ingersoll, Thomas L. Jones, Kerr, Lincoln, Loan, Mallory, McCarthy, Morrissey, Mullins, Newcomb, Newsham, Norris, Nunn, Pierce, Pike, Polsley, Robertson, Sitgreaves, Spalding, Stewart, Lawrence S. Trimble, Van Auken, Van Wyck, Vidal, Elihu B. Washburne, Henry D. Washburn, and Wood—46.

In the Senate, on February 23d, the amendment of the House was disagreed to. Messrs. Stewart, Conkling, and Edmunds, were appointed a committee of conference on the part of the Senate; and Messrs. Boutwell, Bingham, and Logan, on the part of the House.

In the House, on February 25th, Mr. Boutwell reported as follows:

The committee of conference on the disagreeing votes of the two Houses on the joint resolution (Senate No. 8) proposing an amendment to the Constitution of the United States having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from their amendments and agree to the resolution of the Senate, with an amendment, as follows:

In section one, line two, strike out the words "or hold office," and that the Senate agree to the same.

On agreeing to the report, the vote was as follows:

YEAS—Messrs. Allison, Ames, Anderson, Arnell, Delos R. Ashley, James M. Ashley, Bailey, Baker, Banks, Beaman, Beatty, Benjamin, Benton, Bingham, Blaine, Blair, Boutwell, Bowen, Boyden, Bromwell, Broomall, Buckley, Benjamin F. Butler, Roderick R. Butler, Callis, Churchill, Reader W. Clarke, Sidney Clarke, Clift, Cobb, Coburn, Cook, Corley, Cornell, Covode, Cullom, Dawes, Dickey, Dodge, Donnelly, Driggs, Eckley, Eggleston, Ela, Thomas D. Eliot, James T. Elliott, Farnsworth, Ferriss, Ferry, Fields, French, Garfield, Goss, Gove, Gravely, Griswold, Hamilton, Harding, Haughey, Heaton, Higby, Hill, Hooper, Hopkins, Chester D. Hubbard, Hulburd, Hunter, Ingersoll, Jenckes, Alexander H. Jones, Judd, Julian, Kelley, Kellogg, Kelsey, Ketcham, Kitchen, Koontz, Laflin, Lash, William Lawrence, Logan, Lynch, Marvin, Maynard, McCarthy, McKee, Mercur, Miller, Moore, Moorhead, Morrell, Mullins, Myers, Newsham, Morris, Nunn, O'Neill, Orth, Paine, Perham, Peters, Pettis, Pike, Plants, Poland, Pomeroy, Price, Prince, Raum, Robertson, Roots, Sawyer, Scofield, Shanks, Shellabarger, Smith, Spalding, Starkweather, Stevens, Stewart, Stokes, Stover, Taffe, Thomas, John Trimble, Trowbridge, Twichell, Upson, Van Aernam, Burt Van Horn, Robert T. Van Horn, Ward, Cadwalader C. Washburn, Henry D. Washburn, William B. Washburn, Welker, Whittemore, Thomas Williams, William Williams, James F. Wilson, John T. Wilson, Windom, and the Speaker—144.

NAYS—Messrs. Archer, Axtell, Barnes, Beck, Boyer, Brooks, Burr, Cary, Chanler, Eldridge, Fox, Getz, Glossbrenner, Golladay, Grover, Haight, Hawkins, Holman, Hotchkiss, Richard D. Hubbard, Humphrey, Johnson, Thomas L. Jones, Kerr, Knott, Loughridge, Mallory, Marshall, McCormick, McCullough, Mungen, Niblack, Nicholson, Phelps, Pruyn, Robinson, Ross, Stone, Taber, Van Auken, Van Trump, Wood, Woodward, and Young—44.

NOT VOTING—Messrs. Adams, Baldwin, Barnum,

Blackburn, Boles, Buckland, Cake, Delano, Deweese, Dixon, Dockery, Edwards, Halsey, Asahel W. Hubbard, George V. Lawrence, Lincoln, Loan, Morrissey, Newcomb, Pierce, Pile, Polsley, Randall, Schenck, Selye, Sitgreaves, Sypher, Taylor, Tift, Lawrence S. Trimble, Van Wyck, Vidal, Elihu B. Washburne, Stephen F. Wilson, and Woodbridge—35.

The vote in the Senate, on concurring in the report, was as follows:

YEAS—Messrs. Anthony, Cattell, Chandler, Cole, Conkling, Conness, Cragin, Drake, Ferry, Fessenden, Frelinghuysen, Harlan, Harris, Howard, Howe, Kellogg, McDonald, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Patterson of New Hampshire, Ramsey, Rice, Robertson, Sherman, Stewart, Thayer, Tipton, Trumbull, Van Winkle, Wade, Warner, Welch, Willey, Williams, and Wilson—39.

NAYS—Messrs. Bayard, Buckalew, Davis, Dixon, Doolittle, Fowler, Hendricks, McCreery, Norton, Patterson of Tennessee, Pool, Vickers, and Whyte —13.

ABSENT—Messrs. Abbott, Cameron, Corbett, Edmunds, Grimes, Henderson, Pomeroy, Ross, Saulsbury, Sawyer, Spencer, Sprague, Sumner, and Yates —14.

The joint resolution, as adopted, was as follows:

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid as part of the Constitution, namely:

ARTICLE XV. *Sec.* 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

SEC. 2. The Congress, by appropriate legislation, may enforce the provisions of this article.

On February 10th, at one o'clock P. M., the Senate proceeded to the hall of the House for the purpose of counting the vote for President of the United States. The President of the Senate took his seat as presiding officer of the joint convention of the two Houses. The Speaker occupied a chair on the left of the President of the Senate.

The certificate of the State of New Hampshire was read in full, after that the result merely in each State was announced. When the State of Louisiana was announced, Mr. Mullins, of Tennessee, objected to counting the vote, as follows:

I object to any count of the votes certified from the State of Louisiana, and raise the question in regard to them that no valid election of electors for President and Vice-President of the United States has been held in said State.

The rule in the case under which the convention was acting required that, upon objection being made to counting the vote of any State, each House should separately consider and decide on the question raised.

The Senate then withdrew to consider the objection. After numerous resolutions and amendments had been offered and rejected, the following resolution of Senator Sprague, of Rhode Island, was accepted as presenting the question in proper form:

Resolved, That the votes of the electors of the State of Louisiana for President and Vice-President be counted.

YEAS—Messrs. Abbott, Anthony, Buckalew, Cameron, Cattell, Cole, Conkling, Conness, Corbett, Cragin, Davis, Dixon, Doolittle, Drake, Edmunds, Ferry, Fessenden, Fowler, Frelinghuysen, Grimes, Harlan, Harris, Hendricks, Howe, Kellogg, McCreery, McDonald, Morgan, Morrill of Vermont, Osborn, Patterson of New Hampshire, Patterson of Tennessee, Pool, Ramsey, Rice, Ross, Saulsbury, Sawyer, Sherman, Spencer, Sprague, Stewart, Tipton, Trumbull, Van Winkle, Vickers, Warner, White, Willey, Williams, and Yates—51.

NAYS—Messrs. Chandler, Howard, Nye, Robertson, Sumner, Thayer, and Wilson—7.

ABSENT—Messrs. Bayard, Henderson, Morrill of Maine, Morton, Norton, Pomeroy, Wade, and Welch —8.

In the House, the question was put, as follows: "Shall the votes certified from the State of Louisiana be counted?" and decided in the affirmative—yeas 137, nays 63.

The House having notified the Senate of its concurrent vote in favor of counting the vote of Louisiana, both Houses again assembled in joint convention and proceeded to count the votes. Upon the State of Georgia being announced, Mr. Butler, of Massachusetts, made the following objections to counting the vote:

I object, under the joint rule, that the vote of the State of Georgia for President and Vice-President ought not to be counted, and object to the counting thereof, because, among other things, the vote of the electors in the electoral college was not given on the first Wednesday of December, as required by law, and no excuse or justification for the omission of such legal duty is set forth in the certificate of the action of the electors.

Secondly. Because at the date of the election of said electors the State of Georgia had not been admitted to representation as a State in Congress since the rebellion of her people, or become entitled thereto.

Thirdly. That at said date said State of Georgia had not fulfilled in due form all the requirements of the Constitution and laws of the United States, known as the reconstruction acts, so as to entitle said State of Georgia to be represented as a State in the Union in the electoral vote of the several States in the choice of President and Vice-President.

Fourthly. That the election pretended to have been held in the State of Georgia on the first Tuesday of November last past was not a free, just, equal, and fair election; but the people of the State were deprived of their just rights therein by force and fraud.

Whereupon the Senate retired to decide upon them, and adopted the following resolution:

Resolved, That, under the special order of the two Houses respecting the electoral vote from the State of Georgia, the objections made to the counting of the vote of the electors for the State of Georgia are not in order.

In the House, the following question was presented: "Shall the electoral vote of the State of Georgia be counted notwithstanding the objections thereto?" and decided in the negative.

The joint convention was then resumed, and, amid great confusion and loud objections by

Mr. Butler, of Massachusetts, the President ordered the result to be announced as follows:

List of Votes for President and Vice-President of the United States for the Constitutional Term to commence on the 4th of March, 1869.

STATES.	Number of electoral votes.	For President.		For Vice-President	
		Ulysses S. Grant, of Illinois.	Horatio Seymour, of New York.	Schuyler Colfax, of Indiana.	Francis P. Blair, Jr., of Missouri.

Including Georgia	294	214	80	214	80
Excluding Georgia	285	214	71	214	71

The President: "The tellers report that the whole number of votes cast for President and Vice-President of the United States, including the votes of the State of Georgia, is 294, of which the majority is 148; excluding the votes of the State of Georgia it is 285, of which the majority is 143. The result of the vote, as reported by the tellers, for President of the United States, including the State of Georgia, is—for Ulysses S. Grant, of Illinois, 214 votes; for Horatio Seymour, of New York, 80 votes. Excluding the State of Georgia, the result of the vote is—for Ulysses S. Grant, of Illinois, 214 votes; for Horatio Seymour, of New York, 71 votes. The result of the vote, as reported by the tellers, for Vice-President of the United States, including the State of Georgia, is—for Schuyler Colfax, of Indiana, 214 votes; and for Francis P. Blair, Jr., of Missouri, 80 votes. Excluding the State of Georgia, the result of the vote is—for Schuyler Colfax, of Indiana, 214 votes; and for Francis P. Blair, Jr., of Missouri, 71 votes.

"Wherefore, in either case, whether the votes of the State of Georgia be included or excluded, I do declare that Ulysses S. Grant, of the State of Illinois, having received a majority of the whole number of electoral votes, is duly elected President of the United States for four years, commencing on the 4th day of March, 1869; and that Schuyler Colfax, of the State of Indiana, having received a majority of the whole number of electoral votes for Vice-President of the United States, is duly elected Vice-President of the United States for four years, commencing on the 4th day of March, 1869.

"The object for which the House and Senate have assembled in joint convention having transpired, the Senate will retire to its Chamber."

The Senate accordingly retired from the Hall of the House of Representatives.

The Speaker then resumed the chair, and called the House to order.

Mr. Butler, of Massachusetts, said: "I rise to a question of privilege, and offer the following resolution:

Resolved, That the House protest that the counting of the vote of Georgia by the order of the Vice-President *pro tempore* was a gross act of oppression, and an invasion of the rights and privileges of the House."

Mr. Holman: "I object to the introduction of that resolution."

The Speaker: "The House has the right to adopt such resolutions as it may consider proper when it deems that its rights and privileges have been infringed upon. The Chair asks permission to make a statement in relation to what occurred in the joint convention, and has created so much feeling."

There was no objection.

The Speaker: "The Chair desires to submit the history of the joint rules, the apparent conflict in which has produced the excitement in the joint convention of the two Houses.

"By the Constitution of the United States the President of the Senate presides in joint convention when the electoral votes are counted. The Constitution proceeds no further; it simply provides that—

The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted: the person having the greatest number of votes for President shall be President—

"And—

the person having the greatest number of votes as Vice-President shall be the Vice-President, if such number be a majority of the whole number of electors appointed.

"On the 6th day of February, 1865, the two Houses of Congress adopted the twenty-second joint rule, in order, so far as possible, to prevent scenes like those which have occurred in the joint convention just adjourned. The sec-

ond paragraph of that joint rule reads as follows:

If upon the reading of such certificate by the tellers—

"This is the certificate of the vote of any State—

any question shall arise in regard to counting the votes therein certified, the same having been stated by the presiding officer, the Senate shall thereupon withdraw, and said question shall be submitted to that body for its decision; and the Speaker of the House of Representatives shall in like manner submit said question to the House of Representatives for its decision. And no question shall be decided affirmatively, and no vote objected to shall be counted except by the concurrent votes of the two Houses; which being obtained, the two Houses shall immediately reassemble, and the presiding officer shall then announce the decision of the question submitted; and upon any such question there shall be no debate in either House.

"If this rule stood alone, it would follow necessarily that if any objection were made to the counting of any vote from any State of the Union, whether that vote was uncontested or contested, the two Houses must meet in their respective Chambers, and without debate decide the question. A few days since, however, the same legislative power that enacted this joint rule saw fit to enact another in the form of a concurrent resolution covering part of the precise ground covered by the twenty-second joint rule. This was adopted in both branches upon the yeas and nays with direct reference to the joint meeting which has just been held. The Chair, though not a lawyer, supposes it to be one of the fundamental principles of legal interpretation, that when there are two statutes bearing upon any question, and it is impossible to reconcile them, the later statute must have the prevailing force. If they can be reconciled, they must both stand. The same bodies which enacted the twenty-second joint rule adopted, on votes by yeas and nays in both branches, a concurrent resolution, the preamble to which has been overlooked amid the feeling which has grown up in the joint convention. The twenty-second joint rule provides that 'if upon the reading of any such certificate,' that is, the certificate from any State, 'any question shall arise in regard to counting the votes therein certified,' a certain procedure shall then follow. The concurrent resolution, however, adopted within the last few days, lays down a different rule in regard to one State, and in the opinion of the Speaker of the House takes that State out of the operation of the twenty-second rule. The Chair thinks it was intended to be taken out, that intelligent gentlemen in voting for it intended to withdraw the State of Georgia from the operation of the twenty-second joint rule; otherwise, as the Chair will show, it would in the concluding part be an absurdity. The preamble to this concurrent resolution reads as follows:

Whereas, the question whether the State of Georgia has become and is entitled to representation in the two Houses of Congress is now pending and undetermined—

"That apparently being a fact within the knowledge of members of both branches of Congress—

and whereas, by the joint resolution of Congress passed July 20, 1868, entitled 'A resolution excluding from the electoral college votes of States lately in rebellion, which shall not have been reorganized,' it was provided that no electoral votes from any of the States lately in rebellion should be received or counted for President or Vice-President of the United States until, among other things, such State should have become entitled to representation in Congress pursuant to the acts of Congress in that behalf: Therefore,

Resolved by the Senate (the House of Representatives concurring), That on the assembling of the two Houses on the second Wednesday of February, 1869, for the counting of the electoral votes for President and Vice-President, as provided by law and the joint rules, if the counting or omitting to count the electoral votes, if any, which may be presented, as of the State of Georgia, shall not essentially change the result, in that case they shall be reported by the President of the Senate in the following manner:

"This is the language which the resolution commands shall be uttered by the mouth of the President of the Senate:

Were the votes presented, as of the State of Georgia, to be counted, the result would be, for —— for President of the United States, —— votes; if not counted, for —— for President of the United States, —— votes; but in either case —— is elected President of the United States; and in the same manner for Vice-President.

"This concurrent resolution, adopted by the same legal authority which adopted the joint rule, declares in its preamble that it is a fact apparent to Congress that it is a grave question whether the State of Georgia is entitled to representation; that that question is undetermined; and that therefore, when the two Houses shall assemble, '*as provided by law and by the joint rules*,' then if the counting, or the omitting to count, the electoral votes of Georgia shall not affect the result, the result shall be announced by the President of the Senate in a form of language which he is imperatively required to adopt. The President of the Senate has complied with the law which the two Houses laid down for him. In the opinion of the Chair, he would have been subject to the censure of the two Houses if he had not complied with the law which these bodies laid down for the performance of his duties in joint convention. The Chair entertained the objection of the gentleman from Massachusetts (Mr. Butler) when the Senate retired, because the Senate retired upon the ruling of their own President. But the Chair thinks that in the subsequent proceedings of the joint convention the President of the Senate complied exactly with his oath and his duty under the joint rules and the concurrent resolution, the latter being the later, and, so far as it differs from the other, qualifying and repealing it."

Mr. Butler, of Massachusetts: "Now, Mr. Speaker, let us see exactly where we stand.

The Constitution of the United States says that the President of the Senate shall open in convention all of the votes of all of the States, and they shall be therein counted, and it is as impossible for this House or the Senate, either jointly or separately, in concurrence or otherwise, to stop the operation of that constitutional enactment as it is to turn back the sun in its course; for, as you will see, sir, we stand in this position: if the House and the Senate, by joint action before had, can determine what votes shall be counted and what votes shall not be counted, then the House and the Senate can determine who is and who is not to be the President of the United States, and who is and who is not to be the Vice-President of the United States."

Subsequently Mr. Butler offered the following resolutions:

Resolved, That the House protest that the counting of the vote of Georgia by the order of the Vice-President *pro tempore* was a gross act of oppression, and an invasion of the rights and privileges of the House.

Resolved, That the twenty-second joint rule of the House and Senate be, and hereby is, rescinded on the part of the House.

Resolved further, That the resolutions now pending be, and are hereby, referred to a select committee of five, with leave to report at any time.

On these resolutions an extensive debate ensued, during which Mr. Woodward, of Pennsylvania, said: "I beg to inquire why the vote of Georgia should not have been counted; why it should have been counted with a qualification? That qualification was admirably stated by the president of the convention when he said that the effect of the concurrent resolution was to count the vote of Georgia if it meant nothing, and not to count the vote if it meant any thing. When he said that, he stated the legal effect and consequence of that resolution precisely. Now, I ask, why should a sovereign State of this Union be treated in that manner? Listen to it! The nation will listen to the words of Mr. Wade, uttered from that seat yesterday, that the two Houses had decided that if the vote of Georgia would effect nothing it should be counted, and if it would effect any thing it should not be counted. If you treat Georgia in that manner this year, what State may you not treat in the same manner next year or on some future occasion? What is that but a dissolution of the Union? Will you say that Georgia is not in the Union? Here are her members sitting on this floor. What right have they to be here if Georgia is not in the Union? Georgia has been in the Union from the beginning; she has never been out of the Union unless you allege what I deny, that her attempted secession took her out of the Union. But you say that her act of secession was null and void, and she herself has so declared and repealed the act, and you have reconstructed her. She is not only the original Georgia, but a Georgia reconstructed by this Republican Congress. Then, I ask, why should not her electoral vote be counted like the vote of any other State?

"Gentlemen will not find in the Constitution or laws of the United States, or in the Commentaries of Chancellor Kent, or in the writings of Justice Story, or in any other authority of that kind, the true reason for the course that has been pursued in regard to Georgia. I will give them the reason. The Senate had refused to admit the Senators from Georgia. It was the Senate that originated this concurrent resolution, and in an evil hour we concurred in it. And the President of the Senate came here and held us to our action, and he did well. But it was the Senate that invented this mode of excluding Georgia. Not because Georgia did not vote on the right day. That was not the reason; but the reason is contained in the preamble to the concurrent resolution, which sets forth that it is doubtful whether Georgia is within the Union, and that that question is now pending before Congress. That is the reason assigned by the Senate for excluding Georgia. The Senate is deliberating about admitting Senators from Georgia, and therefore does not want the vote of that State counted. I say, therefore, that this whole difficulty arises out of your reconstruction laws. If you would treat Georgia as Georgia ought to be treated, as a State in this Union, and admit her Senators into the Senate of the United States, as her members have been admitted on this floor, there is no more reason why the vote of Georgia should be counted with a slur, or not counted at all, than there is why the vote of Pennsylvania should be treated in like manner. That is the origin of this difficulty, and it is not to be removed by the adoption of the resolution submitted by the gentleman from Massachusetts (Mr. Butler). We are not to repair the wrong into which we have fallen by committing another wrong in censuring the president of the joint convention for holding the convention to the law which they had made for themselves. I am, therefore, opposed to the resolution of the gentleman from Massachusetts. If his proposition had been to repeal the concurrent resolution which was the cause of all this difficulty, no man on this floor would have voted for it more cordially and heartily than I would have done."

Mr. Eldridge, of Wisconsin, said: "I believe that the concurrent resolution and the twenty-second joint rule of the two Houses are both of them in contravention of the Constitution. the first utterly, and the latter in part, at least, void—a nullity for that reason. I raised that question yesterday as a point of order before the convention; but no attention, no consideration was given to it by the presiding officer. He virtually decided that the resolution was higher authority than the Constitution. I believe, if my point had been sustained, if it had been properly considered and decided, we would have avoided all the difficulties in which this House as well as the joint conven-

tion became involved. We should have avoided the disgraceful exhibition which the convention made of itself before the country and the world. We should have performed our duty to the country as required by the Constitution. We should have counted the votes of the States as the certificates were opened by the presiding officer, and, though the result would have been the same, so far as the persons elected are concerned, we should not have felt the sting of mortification and shame which we now all feel at the manner in which that work was done. The Constitution provides expressly that the Senate—which, according to my judgment, means the organized Senate, with its officers and machinery—and the House of Representatives, which is the organized House of Representatives with its officers and its machinery—shall be present when the Vice-President shall open the certificates; and that 'the votes shall then be counted.' It must be, therefore, if there is in contemplation of the Constitution a proper certificate from a State, and that certificate has been opened by the Vice-President, the duty of the body composed of the Senate and House of Representatives, as described and assembled, to count those votes. It has no right or power to count them merely as a matter of count; but it must count them for the purpose of the result, for the purpose of ascertaining the result—the count itself determining the result. This is the obvious, and, it seems to me, the only true meaning of the Constitution. To count them conditionally or hypothetically is no count at all.

"The Constitution determines the effect of the vote; the joint convention has nothing to do with that, nor has the House of Representatives or the Senate, or both combined. The vote of the State is to be counted, to be counted for a purpose, and that purpose is to ascertain who the people of the United States have by their will determined shall be the President and Vice-President for the four years next after the 4th of March. To count the vote of Georgia according to the concurrent resolution is a mockery; it is an insult. It matters not that it will not change the result as a matter of fact. If it can constitutionally be so counted in the case when it will not change the result, it may be so counted in case it would change the result. And then the voice of Georgia may be stifled; the voice of the people of a sovereign State may be suppressed. And it is not Georgia or the people of Georgia, but it is Massachusetts or Wisconsin that may not be allowed to utter its voice on the question."

The resolutions of Mr. Butler were subsequently modified by him so as to read as follows:

Resolved, That the House protests against the manner of procedure and the order of the President of the Senate *pro tempore*, in presence of the two Houses, in counting the vote of Georgia in obedience to the order of the Senate only, and against his acts dissolving the convention and the two Houses at his own will, as an invasion of the rights and privileges of the House.

Resolved, That the above resolution be, and hereby is, referred to a select committee of five, with leave to report at any time, and report by bill or otherwise.

Mr. Kelsey, of New York, offered the following substitute:

Resolved, That the subject of an amendment of the joint rules governing the convention of the two Houses of Congress for the purpose of counting electoral votes for President and Vice-President of the United States be referred to a select committee of five, with power to report by bill or otherwise at any time.

On motion, the resolutions were laid on the table, yeas 130, nays 55, not voting 38.

In the Senate, on January 11th, Mr. Washburne, of Illinois, introduced a bill to repeal an act regulating the tenure of certain civil offices, passed March 2, 1867. This bill passed the House, yeas 121, nays 47, not voting 53.

In the Senate, the Committee on Retrenchment, to whom the bill was referred, reported it back with an amendment to strike out, as follows:

That an act regulating the tenure of certain civil offices, passed March 2, 1867, be, and the same is hereby, repealed.

And to insert in lieu thereof:

That the first section of the act entitled "An act regulating the tenure of certain civil offices," passed March 2, 1867, is hereby amended, so as to read as follows: That every person (excepting the Secretaries of State, of the Treasury, of War, of the Navy, and of the Interior, the Postmaster-General, and the Attorney-General) holding any civil office to which he has been appointed by and with the advice and consent of the Senate, and every person who shall hereafter be appointed to any such office, and shall become duly qualified to act therein, is and shall be entitled to hold such office until a successor shall have been in like manner appointed and duly qualified, except as herein otherwise provided.

SEC. 2. *And be it further enacted*, That the second section of said act is hereby amended so as to read as follows: That it shall be lawful for the President, whenever, during a recess of the Senate, in his opinion, the public good shall require it, to suspend any officer appointed as aforesaid, excepting judges of the United States courts, and to designate some suitable person to perform temporarily the duties of such office until the next meeting of the Senate, and until the matter shall be acted upon by the Senate; and such person so designated shall take the oaths and give the bonds required by law to be taken and given by the person duly appointed to fill such office; and in case of such suspension it shall be the duty of the President, within twenty days after the first day of such next meeting of the Senate, to report to the Senate such suspension, with the name of the person so designated to perform the duties of such office; and if the Senate shall concur in such suspension, and advise and consent to the removal of such officer, they shall so certify to the President, who may thereupon remove such officer, and, by and with the advice and consent of the Senate, appoint another person to such office; but, if the Senate shall refuse to concur in such suspension, the officer so suspended shall forthwith resume the functions of his office, and the powers of the person so performing its duties in his stead shall cease; and the official salary and emoluments of such officer shall, during such suspension, belong to the person so performing the duties thereof, and not to the officer so suspended: *Provided, however*, That the President may, in his discretion, be-

fore reporting such suspension to the Senate as above provided, revoke the same, and reinstate such officer in the performance of the duties of his office.

SEC. 3. *And be it further enacted*, That no person shall hold, nor shall he receive, salary or compensation for performing the duties of more than one office or place of trust or profit under the Constitution or laws of the United States at the same time, whether such office or place be civil, military, or naval; and any person holding any such office or place, who shall accept or hold any other office or place of trust or profit under the Constitution or laws of the United States, shall be deemed to have vacated the office or place which he held at the time of such acceptance.

SEC. 4. *And be it further enacted*, That nothing in the foregoing section shall be construed to prevent such designations or appointments of officers to perform temporarily the duties of other officers as are or may be authorized by law, nor to prevent such appointments or designations to office or duty as are required by law to be made from the Army or Navy.

SEC. 5. *And be it further enacted*, That the penalties provided in the act to which this is an amendment shall apply to violations of this act.

Mr. Edmunds, of Vermont, said: "I think it right that, in a word or two, I should explain the action of the committee, as it respects this bill. The House bill proposes to sweep from the statute-book the law of 1867 altogether, and to restore, for all future time, so far as legislation goes, to the President of the United States, the power which, before that time, he had exercised, of controlling the appointments to all the offices of the United States, because, under the previous practice, the President of the United States, exercising the power of removals during vacations, and filling vacancies thus created by persons of his own selection, without the consent of the Senate, had it in his power, and frequently exercised that power, to hold persons in office whose nominations were not acceptable to the Senate; and it was done in all cases where he desired some other person to hold an office than the one to whose appointment the Senate had consented. As the Senate knows, and as the country knows, in 1867, we undertook to reform this abuse, as we thought it was, which had grown up in the administration of the law, and provided the Tenure-of-office Act of 1867. By that not only all the subordinate officers of the United States, but the heads of Departments, were made the officers of the law, and did not hold their places at the will of the President.

"The House of Representatives, as I have said, now propose to sweep that all away, and go back to the old system of things. The committee did not think that to be wise. Not legislating for to-day or to-morrow, or the next year, or the next four years, but legislating for the country, and for the future as well as for the present, they thought we ought to retain the substantial principle on which the act of 1867 was founded, that of making the public service of officers, who are exercising duties imposed upon them by law, dependent upon the law, according to the term that the law gives to them, and dependent upon the will of the Senate, advisory to the will of the President, in the selection of those agents. We, therefore, have recommended that, instead of repealing the act, it be so modified as to permit the President of the United States to suspend a civil officer whenever, in his judgment, the public good shall require it, subject, in the end, to the approval of the Senate, and to dispense with the detail, which the existing law requires, of his having specific evidence upon which he is to act, and with his being obliged to give specific reasons upon which we are to act when he comes to report his action to the next meeting of the Senate. That was a mere matter of detail and discretion; and, inasmuch as, under the adverse circumstances during which and under which this law has prevailed, a construction is claimed to have obtained which, it is said, ties up the hands of the President to specific evidence of a specific and formal character—although that, in my judgment, is far from being the true and fair construction of that law—we were willing to so modify that as to remove all possible objection on the ground of detail.

"Then a majority of the committee, one of which, I am free to say, I was not, have thought it fit that the heads of the Departments should be restored to the will of the President alone, so as to give him, for the future, practically the choice, independent of the will of the Senate, of the heads of Departments who are to administer the laws of the Government; and we have, therefore, proposed to insert, in the first section of the bill, an exception which shall exclude from the operation of the law these heads of Departments. As I have said, that does not meet my approval; but, under the direction of the committee, I have reported it."

Mr. Morton, of Indiana, said: "Mr. President, I am in favor of the total repeal of this law. I believe it was a mistake in the beginning. I do not believe that the country or the Republican party ever derived any benefit from it. On the contrary, I believe it has been the means by which, to some extent, thieves have been continued in office, and the responsibility for continuing them in office has been, more or less successfully, laid upon the Republican party.

"The amendment offered by the committee, while it gives to the President the choice of the members of his Cabinet, without the interference of the Senate to aid him in removals, yet leaves the rest of the law in a worse form than it was before. It provides that, as to all other officers, the President cannot remove them at pleasure, but, during the vacation of Congress, he may suspend them, and appoint some other persons to perform their duties. In twenty days after the beginning of the next session, he is to report the suspension, and the name of the person who has been appointed to perform the duties, but he is not required to give any reason for the suspension. If there be reasons for the suspension, the Senate is left to grope in the dark. Under the present law, the President is required to give the reasons

for the suspension, that the Senate may readily pass upon the suspension, whether it is justifiable or not; but, under this amendment, he is required to give no reason at all, and the Senate is, therefore, left in the dark as to the ground of the suspension, and whether it is justifiable or not. Then, Mr. President, if it shall turn out that the Senate refuse to concur in the suspension, the officer who has been suspended, and has been disgraced, and, as the Senate may think, wrongfully, is restored to his place, but with the loss of the emoluments of the office in the mean time. It may turn out, in the opinion of the Senate, that the suspension was entirely wrong, that he is a worthy officer, but he is thus, perhaps for months, suspended between heaven and earth, not knowing what his fate shall be; not, perhaps, at liberty to engage in other kinds of business; and when it shall turn out that he is innocent, and that he has been wrongly suspended, he is to be restored, but with a loss of the salary or emoluments of the office in the mean time. I cannot think of any thing more inequitable or unjust than this, and I know of no reason for such an amendment.

"I believe experience has shown that the tenure-of-office law has done the country no good. I believe it can only be the means of doing harm. I am, therefore, in favor of its total repeal."

Mr. Conkling, of New York, said: "Mr. President, in human action any thing is defended and justified by proving it the best alternative of which the case admits. If this be true of the Tenure-of-office Act, those who supported and voted for it ought perhaps to be spared the summary denunciation with which it has sometimes been visited. The other day a Senator characterized it, being, as it is, the twice-recorded judgment of two-thirds of both Houses of Congress, as 'absurd.' Whether it be absurd or not may be gathered from a single page of history. We need only recur to a brief passage now nearly closed, a passage which crimsons the record because it recounts an attempt, in the interest of slavery and treason, to make bribes of the country's power and places and honors, and to make merchandise of the integrity of the country's citizens—an attempt to employ the purse of the nation to advance and enrich the nation's foes. The case in few words was this: an edict went out to remove men from office because they were Republicans, unless they would deny and betray their political faith. This shameless and oppressive proceeding was adopted by one who had been trusted by Republicans so near the presidency that assassination made him President. He was surrounded by a Cabinet every member of which was pledged to the faith, the measures, and the men of the Republican party, and every member of which, should he assert his manhood or even remonstrate, might be dismissed by the waive of a perfidious hand. That all might, as some did, assert their manhood, was possible, at least if it were made safe to be manly.

"Had this been the whole case, the imperfect revelations of human judgment would have sanctioned the arrest of such abuse by any means authorized by the Constitution and consistent with the general good. In the old republics such a pollution of power to undermine the virtue of the citizen and seduce or coerce him was held a crime punishable with death.

"But this was not the whole case. The wrong went further—it was double-headed. First, those who would forswear their convictions and prostitute their opinions were retained in place, and those who would not were driven out; second, those notoriously unfit, even those notoriously depraved, were put and kept in places of honor and trust. So far had this evil gone before Congress interposed that the Commissioner of Internal Revenue testified before a committee of the House that the injury thus inflicted upon the revenues could be measured only by millions. I heard, the other day, a Senator affirm, and he is one whose duties here turn his studies toward such knowledge, that $100,000,000 would not reimburse the loss to the Treasury arising from the wanton exercise of the appointing power by the present Administration.

"It was to curb this licentiousness that Congress devised the Tenure-of-office Act. I voted for it, believing it an assertion of a half-disused but not doubtful design of the Constitution, and, like the Senator from Wisconsin, I insisted that its shield should cover Cabinet officers as well as lesser placemen. Was it a good law? It could not execute itself. Has man ever made a law which could execute itself? It could only forbid—it could not prevent its own violation or evasion. Can any law do more? It could not operate well when its execution was intrusted to those determined to nullify and frustrate it. Does this condemn it? If it does, all laws before and since the Decalogue deserve to be condemned. We are told that Andrew Johnson has refused to suspend bad men, and has kept them in place, and that, though this is not owing to the law, it is made to appear so, and thus the people hold Congress responsible for that masquerade of fraud and theft and shame nicknamed 'the whiskey ring.' This suggestion would trouble me if I knew nothing of the American people, but the pretence is too flimsy, the subterfuge is too transparent.

"Sir, the American people know as well as you know that not the Tenure-of-office Act, but the malignant spirit, the evil disposition, which has neutralized and paralyzed other acts, and inflicted upon the nation other and irreparable injury, is also at the bottom of the thefts and the frauds which have wasted the public revenue, the thefts and the frauds which have stalked high-headed in the public way, till Justice stands humbled and baffled, if not abashed,

in the presence of criminals too great to be punished.

"Like the Senator from Indiana, I would remove from the path of the incoming administration every obstacle. I wish to leave the President-elect free to the full and useful exercise of the good judgment and good qualities which we all ascribe to him. At the same time I wish, and particularly unless some motive, some practical inducement to the contrary can be presented, to preserve the consistency of the Senate, to preserve the position which the Senate has maintained in the last and most dire exigency known in our jurisprudence, to the end that at once we may observe all the considerations entitled to respect and preservation. The honorable Senator from Indiana thinks that considerations of one nature should yield to considerations wholly of a different nature. If he can show me that this amendment obstructs the way to administrative reform, then I will consider at least whether all the elements to which I have adverted should not be subordinated to the particular object now in view.

"But, if it be true, as I believe it is, that the amendment before us restores to the President or confers upon him all the authority, all the freedom, all the discretion in practice and effect which the Constitution allows, then, as I say, I prefer that the mode of conferring that freedom should be found in some way consistent with and observant of the convictions which great majorities of both Houses have solemnly recorded as to the spirit and the requirements of the Constitution. My reflection upon the subject has convinced me that the modification proposed is sufficient, and at the same time that it does preserve not as a sham, as the Senator said, not as a mere matter of form, but in theory of law and constitutional observance, the spirit of the Constitution in this regard. So believing, I shall vote for it cheerfully, unless in the mean time some Senator is able to point out considerations which have not occurred to me, and which conflict with its usefulness and the freedom it will give."

Mr. Doolittle, of Wisconsin, said: "I wish to call the attention of the Senate to some of the practical operations of the new doctrine that the President has not the power of removal, but that he must appear before the Senate of the United States as a prosecutor and bring the officers of his appointment to trial and judgment before the Senate before the removal can take place; for that is the substance of the bill which passed two years ago, and that in substance is retained in the present bill proposed as a modification.

"Now, sir, what has been our experience? We are the only body in this country that has ever had any experience upon the question. I submit that the judgment of the Senate must unanimously be that the attempt to place the President in the position of a prosecutor before he can remove men from office, to bring these men to trial before the Senate and show cause why they should be removed, to have those alleged causes considered, and to have the judgment of the Senate passed upon them, involving the character of the officer and his right to the office, is a thing almost impracticable to be carried out. What is the effect? A man occupies an office as a collector of revenue, if you please. The President suspends him, and sends in notice of his suspension to the Senate. It would be strange, indeed, if that officer should have no friend in the Congress of the United States. If he has a friend in the House of Representatives, that friend appeals at once to the sympathies, it may be, of the Senator who represents his State. The question comes before the Senate. This man's character is involved. This is a prosecution, it is alleged, to put him out of office for cause not at the pleasure of the President, not for political reasons, not because the President prefers another man to execute the duties of his office, which, if it were allowed to go into effect, would produce no bad result upon the character of the individual, but it is in the nature of a prosecution against the officer to dismiss him for some reason. What is that reason? What are the reasons for which a man should be displaced from office, if you are to go into that subject? Some maladministration, some fraud, some dishonesty, some incapability, some cause which must be alleged and must be proved. The case must go before a committee; the facts must be examined and reported to the Senate; the question must then be discussed in the Senate in executive session; the judgment of this body must be called upon; and, when they pass on the question whether the man ought to be removed for cause, they pass on his character as a man. They bring him to trial, and the case comes to trial and to judgment; and the decision of the Senate on the question of removal is a decision which is to blast the character of the individual forever. The attempt cannot be made to remove him for cause without bringing before the Senate all those considerations which are brought before a court when a man is placed on trial to be subjected to a penalty; to be made substantially incapable of holding an office, in the judgment of the Senate of the United States, for cause alleged against him. If the thing were to be entered upon, and every case of removal were to be tried by the Senate where the person was suspended for alleged cause, it would be practically impossible for the Senate of the United States to pass on all these cases. We know that these discussions take place in executive session. These executive sessions ordinarily occur late in the day, after the regular legislative business is passed. We know that any person, in executive session, who is very much for or against a proposition, by discussing it, may ordinarily postpone the executive session until it comes to an end; and the

case is either not to be considered at all or a hasty judgment is to be rendered, and the man's character it may be destroyed forever by consenting to his removal for cause. The thing is impracticable."

Mr. Dixon, of Connecticut, said: "I was somewhat surprised, Mr. President, when the Senator from New York opened that more than Ciceronian invective against Andrew Johnson. I supposed the day was past for attacks of a political character calculated to produce political influence and effect upon him. I am in the habit of being very much influenced by what that Senator says, and as he went on with his invectives I began almost to believe that it was really true that the President of the United States had for political purposes made all the removals which he stated; that he had deserted his principles and his party; and it was not until the Senator alluded to the fact that he came into his place by assassination that I began to doubt somewhat whether I ought to follow the Senator much longer. This charge is often made. I have heard it made in political meetings with considerable effect. I believe this is the first time it has ever been made in the Senate. Suppose it to be true that the President of the United States did come into his place by the assassination of his predecessor, does the Senator mean to say that he is responsible for that? Is there any more responsibility, any more guilt, upon Andrew Johnson on that account than upon any one of us? The consequences of that assassination were not trammelled up. He is not the only officer of this Government who came into his place by assassination. How came the respected and honored President of this Senate in the seat which he now occupies except by assassination?

"But for the assassination of Abraham Lincoln, you, sir, would have been an honored and respected Senator in your chair in this body instead of acting Vice-President of the United States. Suppose I should say here you came into your place by assassination, and bring it as a charge against you and attempted to excite a prejudice against the occupant of the chair of this body because he came into his place by assassination. I think the honorable Senator must see that intimations of this kind are hardly worthy of his high position and the place in which they were spoken."

Mr. Conkling: "If the Senator will allow me, I made no such observation as he alludes to in the sense or direction which he implies. I was commenting upon the fact that this political persecution and debauchery was carried on against Republicans by a man whom the Republicans had placed so near the Presidency that assassination made him President."

Mr. Dixon: "I accept that explanation with pleasure. I know that my honorable friend did not intend, himself being the sole authority, to make an allusion of this kind with any other intention than that which he has explained. I was stating why I was led to doubt whether his statements and arguments were exactly correct, and whether I ought to be carried away by the torrent of his eloquence. I was checked upon this point. I do not propose to make any party allusions upon this occasion; but I think I ought to allude to some of the remarks which that Senator made when he spoke of the cause and the origin of this bill, it having been forced upon the country by the perfidy and the falsehood of the President. I think the Senator will admit that that certainly was the drift of his argument."

Mr. Robertson, of South Carolina, said: "Mr. President, the practice of the Government from the administration of Washington to the administration of the present Executive was uniform in admitting the President's general power of removal. This practice worked well, and it is, I think, a strong argument for our returning to it. The present tenure-of-office law, which it is now proposed to repeal, was a special law, called for by the peculiar circumstances under which the country was placed from the wide divergence of views upon the subject of reconstruction between President Johnson and Congress. Under the circumstances from which this law arose the Congress were justified in the action they adopted; but President Johnson will no longer be an obstacle to the execution of the congressional policy of reconstruction. I think, therefore, we may with entire propriety go back to the former policy of the Government upon the subject. Under the President's power of removal the Government has been, generally speaking, well administered. I am therefore unwilling to depart from that policy. The present law has been, I think, productive of many inconveniences, and I am unwilling longer to continue it. The practice of this Government for nearly three-quarters of a century has demonstrated the wisdom of leaving in the hands of the President the general power of removal of his subordinates. What time has so fully tested I think we ought to abide by.

"Further, as a question of justice, I think that, as the President is made the executor of the law, and is responsible for the conduct of his subordinates, it is proper that he should have the fullest power of removal of incompetent officers. It is in this way only, I think, that we can enforce against him his full responsibility for a proper administration of the Government. The President as the chief executive officer must be held responsible for the administration of the Government in all its various branches and through its multitude of officers. To assert this responsibility, and yet tie his hands by the 'Tenure-of-office Bill' is, in my opinion, a mockery. If the President is compelled to carry on the Government through the instrumentalities of officers in whom he has no confidence, there will be an end to all efficient responsibility on his part.

A man of just feeling in the executive office would under such circumstances be discouraged, and, unable to effect removals, there would be great danger that peculation and incompetency would run riot in all the departments of the Government. The suspension of officers to await the final action of the Senate would, in effect, be constantly placing the President on trial here. An unfriendly Senate would soon impair the prestige of the President and leave him utterly powerless."

On March 2d, Mr. Morton, of Indiana, offered the following additional section to the Legislative Appropriation Bill:

And be it further enacted, That the act regulating the tenure of certain civil offices, passed March 2, 1867, be, and the same is hereby, repealed.

A question of order was raised, during the discussion of which Mr. Sumner, of Massachusetts, offered the following amendment to the amendment, by striking out all after the enacting clause:

That the first section of the act entitled "An act regulating the tenure of certain civil offices," passed March 2, 1867, is hereby amended so as to read as follows: That every person holding any civil office, to which he has been appointed by and with the advice and consent of the Senate, and every person who shall hereafter be appointed to any such office, and shall become duly qualified to act therein, is and shall be entitled to hold such office until a successor shall have been in like manner appointed and duly qualified, except as herein otherwise provided.

SEC. —. *And be it further enacted*, That the second section of said act is hereby amended so as to read as follows: That it shall be lawful for the President, whenever, during a recess of the Senate, in his opinion, the public good shall require it, to suspend any officer appointed as aforesaid, excepting judges of the United States courts, and to designate some suitable person to perform temporarily the duties of such office until the next meeting of the Senate, and until the matter shall be acted upon by the Senate; and such person so designated shall take the oaths and give the bonds required by law to be taken and given by the person duly appointed to fill such office; and, in case of such suspension, it shall be the duty of the President, within twenty days after the first day of such meeting of the Senate, to report to the Senate such suspension, with the name of the person so designated to perform the duties of such office; and, if the Senate shall concur in such suspension, and advise and consent to the removal of such officer, they shall so certify to the President, who may thereupon remove such officer, and, by and with the advice and consent of the Senate, appoint another person to such office; but, if the Senate shall refuse to concur in such suspension, the officer so suspended shall forthwith resume the functions of his office, and the powers of the person so performing its duties in his stead shall cease; and the official salary and emoluments of such officer shall, during such suspension, belong to the person so performing the duties thereof, and not to the officer so suspended: *Provided, however*, That the President may, in his discretion, before reporting such suspension to the Senate as above provided, revoke the same, and reinstate such officer in the performance of the duties of his office.

SEC. —. *And be it further enacted*, That no person shall hold nor shall he receive salary or compensation for performing the duties of more than one office or place of trust or profit under the Constitution or laws of the United States at the same time, whether such office or place be civil, military, or naval; and any person holding any such office or place, who shall accept or hold any other office or place of trust or profit under the Constitution or laws of the United States, shall be deemed to have vacated the office or place which he held at the time of such acceptance.

SEC. —. *And be it further enacted*, That nothing in the foregoing section shall be construed to prevent such designations or appointments of officers to perform temporarily the duties of other officers as are or may be authorized by law, nor to prevent such appointments or designations to office or duty as are required by law to be made from the Army or Navy.

SEC. —. *And be it further enacted*, That the penalties provided in the act to which this is an amendment shall apply to violations of this act.

The amendment of Mr. Sumner was rejected —yeas 17, nays 32:

YEAS—Messrs. Chandler, Conkling, Cragin, Harlan, Harris, Howard, Howe, Morrill of Maine, Morrill of Vermont, Patterson of New Hampshire, Ramsey, Sawyer, Sprague, Sumner, Welch, Willey, and Williams—17.

NAYS—Messrs. Abbott, Cameron, Cattell, Cole, Conness, Corbett, Dixon, Drake, Ferry, Frelinghuysen, Grimes, Henderson, McDonald, Morgan, Morton, Nye, Osborn, Pomeroy, Pool, Robertson, Ross, Sherman, Spencer, Thayer, Tipton, Trumbull, Van Winkle, Vickers, Wade, Warner, Whyte, and Wilson—32.

ABSENT—Messrs. Anthony, Bayard, Buckalew, Davis, Doolittle, Edmunds, Fessenden, Fowler, Hendricks, Kellogg, McCreery, Norton, Patterson of Tennessee, Rice, Saulsbury, Stewart, and Yates—17.

The amendment of Mr. Morton was rejected by the following vote:

YEAS—Messrs. Cole, Conness, Dixon, Drake, Grimes, Henderson, Kellogg, McDonald, Morgan, Morton, Osborn, Pomeroy, Pool, Ramsey, Robertson, Ross, Sherman, Thayer, Van Winkle, Vickers, Warner, and Whyte—22.

NAYS—Messrs. Abbott, Anthony, Cameron, Chandler, Corbett, Cragin, Ferry, Frelinghuysen, Harlan, Harris, Howard, Howe, Morrill of Maine, Morrill of Vermont, Patterson of New Hampshire, Sawyer, Spencer, Sprague, Sumner, Tipton, Trumbull, Wade, Welch, Willey, Williams, and Wilson.—26.

ABSENT—Messrs. Bayard, Buckalew, Cattell, Conkling, Davis, Doolittle, Edmunds, Fessenden, Fowler, Hendricks, McCreery, Norton, Nye, Patterson of Tennessee, Rice, Saulsbury, Stewart, and Yates—18.

No further action was taken on the subject at this session.

In the Senate, on February 11th, the bill for the further security of equal rights in the District of Columbia was considered. It proposed to repeal the word "white," wherever it occurs in the laws relating to the District of Columbia, or in the charter or ordinances of the cities of Washington or Georgetown, and operates as a limitation on the right of any elector of the District, or of either of the cities, to hold any office, or to be selected and to serve as a juror, and it is made unlawful for any person or officer to enforce, or attempt to enforce, that limitation, after the passage of the act.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

On March 2d, the bill was called, read, and passed, without debate, and without a count of the votes. President Johnson retained it unsigned.

In the Senate, on December 14th, Mr. Cattell, of New Jersey, offered the following resolution:

Resolved, That the Senate receive with profound regret the proposition of the President in his annual message, to repudiate a portion of the national obligations, and regard this and all forms of repudiation as a national crime. National honor requires the payment of the public debt in the utmost good faith to all creditors at home and abroad, not only according to the letter, but the spirit of the laws under which it was created.

Mr. Cattell: "Mr. President, it seems to me that the extraordinary proposition contained in the President's annual message, favoring the repudiation of the public debt, should not go to the country without a prompt and decided expression by the Senate of their unqualified disapprobation. And it is with this view I offer the resolution just read.

"Lest the full scope and meaning of this passage in the message may have escaped the attention of some Senators, I beg to read it again in your hearing:

It may be assumed that the holders of our securities have already received upon their bonds a larger amount than their original investment, measured by a gold standard. Upon this statement of facts it would seem but just and equitable that the six per cent. interest now paid by the Government should be applied to the reduction of the principal in semi-annual installments, which, in sixteen years and eight months would liquidate the entire national debt. Six per cent. in gold would at present rates be equal to nine per cent. in currency, and equivalent to the payment of the debt one and a half times in a fraction less than seventeen years. This, in connection with all the other advantages derived from their investment, would afford to the public creditors a fair and liberal compensation for the use of their capital, and with this they should be satisfied. The lessons of the past admonish the lender that it is not well to be over-anxious in exacting from the borrower rigid compliance with the letter of the bond.

"Mr. President, here is a simple, plain proposition, emanating from the President of the United States in his message to Congress, and advocated as just and equitable, to pay to the public creditor simply the interest provided for by law and stipulated in the bond for a given number of years, and at the expiration of that period to repudiate the entire principal of the debt. It passes belief that a proposition so monstrous as this, so disgraceful, in my opinion, to the nation, so damaging to its credit at home and abroad, should emanate from the Chief Executive of this Government, whose duty it is to guard the honor and faith of the nation rather than to tarnish the one and to break the other. No man in the United States, so far as my knowledge extends, has been found hitherto bold enough to advocate open, undisguised, and unqualified repudiation. So indefensible a proposition as this has been reserved for Andrew Johnson, as a fitting climax to the wickedness and folly of his administration. I move, sir, that this resolution be referred to the Committee on Finance."

Mr. Edmunds, of Vermont, said: "I am entirely in favor of the resolution, except that I should wish it to state a little more specifically, so that there should not be any double construction put upon it, what it means. That resolution is in the substantial, and for aught I know in the literal, language of the Chicago platform; and there are certain good men in the country claiming to be Republicans, claiming to be in favor of national honesty, and probably being so, who have maintained that the letter and the spirit of the obligation merely require us to pay in something else, and not in money. There are a good many such people who maintain that proposition. Therefore, in the face of such a message as we have received, to merely reassert an equivocal proposition would amount to nothing at all. Let us, then, send the resolution to the Committee on Finance, who may report it to-morrow, as I hope, in such language that it will mean, beyond equivocation or misconstruction, that we intend to pay the public funded debt of the United States in real money, in coin, or that we do not—one or the other. Let us get rid of the equivoque which certain adroit persons maintain is found in the Chicago platform."

Mr. Hendricks, of Indiana, said: "I understand this proposition is the platform of a political party of last year. I should like to have the opportunity to present, when this is considered, as an amendment to it or substitute for it, the proposition of another political party presented to the people in the last contest. My own opinion is that that platform presents the real doctrine in regard to our public debt more correctly, and presents it as it was claimed by very many persons during the last contest, that this resolution should be so construed as to agree with the New York platform.

"If the Senator from New Jersey wishes to rebuke the President of the United States, it is not becoming that the rebuke shall be contained in equivocal language. If the President be wrong and the Senate intends to state what is the right, it ought to state it. This does not. This assumes that between the letter of the law and the spirit of the law under which the debt was contracted there is a difference. What is that difference? Is the letter of the law that the debt shall be paid in the lawful money of the United States, but is the spirit of the law, according to the judgment of the Senator from New Jersey, according to the judgment of the Senator from Vermont, that it shall be paid in gold? Now, we are not dealing with this question with a view to a political result, I presume; and, if the Senate makes a declaration on this question at all, it ought to be done frankly and fully, especially if it is to be regarded as a rebuke to the Chief Magistrate of the country. He has declared his views upon it, in which I do not concur; but if he is to be rebuked, let him be rebuked plainly. If it is the business of the Senate to pass resolutions intended to be those of censure, let them declare the true doctrine as the doctrine in-

stead of that contained in the President's message."

Mr. Cattell: "The object of this resolution was simply to express the disapprobation of the Senate in regard to that portion of the President's message which I read and commented upon; and in doing so I added to that general form of expression of opinion an expression which has been passed upon by a body higher than the Senate, or the Congress, or the Executive—passed upon by the people of the United States; and I am somewhat surprised to find that so good a Democrat as my friend from Indiana is disposed now, after that high court has passed upon this question, to propose to incorporate upon this resolution a portion of the platform which has been condemned by the people.

Mr. Hendricks: "Did the people decide, in voting upon this resolution, in favor of paying the debt in gold or in the lawful money of the United States?"

Mr. Cattell: "I think they decided that the resolution of the Chicago platform was very much preferable to that issued in New York. I think that was the great decision made on that occasion."

Mr. Edmunds: "Mr. President, I wish to ask my friend from Indiana, if I can have his attention, the same question that he asked the Senator from New Jersey: what he understands the people to have decided on that subject in the last campaign?"

Mr. Hendricks: "If I were to answer the Senator just as I believe, I would say that I think the people really decided nothing upon it. I understand that in the region of the country in which he lives it was claimed that the resolution meant that the spirit of the contract was that the payment should be made in gold, and I presume the people of Vermont decided thus, while I know that in the region of the country in which I live the advocates of the Chicago platform claimed that it meant a payment in lawful money, in very many instances, so that very many persons in our section of the country voted for the candidates standing on the Chicago platform, assuming that that meant that the debt might be paid in lawful money, that that was the spirit of the contract as well as the letter; so I cannot say what was decided."

Mr. Willey, of West Virginia, said: "Mr. President, it strikes me that the whole merit of this question depends upon the speedy and prompt action of the Senate. I doubt whether by referring it to a committee the object can be accomplished; and I question the propriety of bringing up a discussion upon the financial policy of the Government on an abstract resolution of this character. The President's message has gone out to the country. It has its influence, and is at present having its influence at home and abroad on the credit of the country and on the national honor. If we desire to counteract that, we ought to do it by some expression of the Senate immediately had. I suggest, therefore, to the honorable Senator from New Jersey whether the resolution could not be so modified as simply to present to the Senate the question as to its opinion upon what the President has proposed himself, that, and no more; not a resolution in a form that will involve whether we are to pay our debt in gold or in the legal currency, or what the policy of the Government on our financial matters heretofore has been, but simply an expression on the part of the Senate condemning so much of the President's message as relates to the repudiation of our public debt, which is a matter entirely different from the manner in which we should pay it. I will offer this as a substitute for the resolution of the Senator from New Jersey, and ask action on it now."

The Chief Clerk read as follows:

Resolved, That the Senate, properly cherishing and upholding the good faith and honor of the nation, do hereby utterly disapprove of and condemn the sentiments and proposition contained in so much of the late annual message of the President of the United States as reads as follows: "It may be assumed that the holders of our securities have already received upon their bonds a larger amount than their original investments, measured by a gold standard. Upon this statement of facts it would seem but just and equitable that the six per cent. interest now paid by the Government should be applied to the reduction of the principal in semi-annual instalments, which in sixteen years and eight months would liquidate the entire national debt. Six per cent. in gold would at present rates be equal to nine per cent. in currency; and equivalent to the payment of the debt one and a half time in a fraction less than seventeen years. This, in connection with all the other advantages derived from their investment, would afford to the public creditors a fair and liberal compensation for the use of their capital, and with this they should be satisfied. The lessons of the past admonish the lender that it is not well to be over-anxious in exacting from the borrower rigid compliance with the letter of the bond."

Mr. Warner, of Alabama: "I have a resolution to offer to go to the committee with the other resolutions, and I ask that it be read now for information."

The Chief Clerk read as follows:

Resolved by the Senate of the United States, That we regard as dishonest the proposition of the President contained in his message, to appropriate the interest of the public debt to the payment of the principal.

Mr. Saulsbury, of Maryland, said: "Mr. President, I shall vote for none of these propositions in their present shape, and I doubt whether I shall vote for them in any shape in which they may be presented. If the President's message, however, means that which gentlemen seem to conceive it means, repudiation in any form, I condemn the proposition as strongly as anybody. I shall not attempt to give any explanation as to the meaning of the President of the United States in his message. That he meant repudiation of the public indebtedness, that he meant to advocate bad faith toward the public creditors or toward any other class of men, I do not for a moment

believe. While I have been no partisan of his administration, I will do him the justice to say that his whole life has shown him to be a man who does not repudiate honest and honorable obligations either in public or in private life."

All the resolutions were referred to the Committee on Finance, and on the next day the committee reported back the resolution offered by Mr. Willey, of West Virginia, without amendment. On the next day, December 16th, the subject was considered, and Mr. Hendricks, of Indiana, said: "I move to amend the resolution by striking out all after the word 'resolved,' and inserting as a substitute:

That the Senate cordially indorse the sentiment in the President's message that "our national credit should be sacredly observed," and declare that the public debt shall be paid as rapidly as practicable, exactly in accordance with the terms of the contracts under which the several loans were made; and where the obligations of the Government do not expressly state upon their face, or the law under which they were issued does not provide that they shall be paid in coin, they ought in right and justice to be paid in the lawful money of the United States.

"I think, Mr. President, if Congress is now called upon to make any expression of opinion at all, that this is the statement which ought to be made, that the public faith is to be observed, and that it is to be observed according to the contract; that if it be the contract that the bonds shall be paid in gold, they shall be thus paid; but if that be not the contract, then, under the law of 1862, they may be paid in the lawful money of the United States. While we have no right to repudiate the obligation to the bondholder, and perhaps have no desire to do so, we have no right, in my judgment, to increase the obligations of the Government to the bondholder. He is entitled to his contract. When he gets his contract, he cannot say that there is repudiation."

Mr. Edmunds, of Vermont, said: "I agree, I may say now, however, without going into the discussion, to the assertion of the Senator from Indiana, that we are to pay according to the contract; but the great question is, as between us, who are the final arbiters of what that contract is and the people who hold it; what is that contract in the light of the circumstances under which it was made, in the same light that it would be viewed by the gentleman himself if he had made a promise in similar language, and only his own honor could be appealed to to interpret and enforce it?"

Mr. Buckalew, of Pennsylvania, said: "I was very much struck with the argument heretofore made by the colleague of the Senator from Indiana, that, assuming that the five-twenty bonds were payable in lawful money of the United States, it would be against good faith that the volume of that currency as issued in former years should be increased. I believe it was the argument of the Senator from Indiana to whom I refer (Mr. Morton) that the greenbacks issued up to 1864, constituting a volume of currency of a certain magnitude, were applicable under the laws to the payment of the principal of the five-twenty bonds. It was his argument that the creditor received his securities in view of the existing state of the currency under the authority given by law to the Secretary of the Treasury to issue that sort of securities, and that it would be a violation, not of express but of implied faith on the part of the Government, by issuing additional currency, to reduce the amount of compensation which the creditor would receive when the bonds came to be paid. Now, sir, at present my impression is that that argument is sound; that we can apply the currency issued under the act of 1862, and one or two subsequent acts, to the payment of the principal of the bonds authorized to be issued by the same class of laws passed *pari passu* with it; but, on the other hand, it would be inequitable and unjust for the Government, by diluting the currency by subsequent issues of paper-money, to depreciate the value those creditors should receive. I do not know in what exact form this amendment is proposed. I am averse to voting for an amendment without any limitation, and which declares a general doctrine upon which I have bestowed no attention."

The amendment of Mr. Hendricks was rejected by the following vote:

YEAS—Messrs. Buckalew, Davis, Hendricks, McCreery, Saulsbury, Vickers, and Whyte—7.

NAYS—Messrs. Abbott, Anthony, Cattell, Chandler, Cole, Conkling, Corbett, Dixon, Drake, Edmunds, Ferry, Fessenden, Frelinghuysen, Grimes, Harris, Henderson, Howard, Howe, Kellogg, Morgan, Morrill of Maine, Morrill of Vermont, Nye, Osborn, Pool, Ramsey, Rice, Robertson, Ross, Sawyer, Sherman, Spencer, Stewart, Sumner, Thayer, Trumbull, Van Winkle, Wade, Warner, Welch, Willey, Williams, Wilson, and Yates—44.

ABSENT—Messrs. Bayard, Cameron, Conness, Cragin, Doolittle, Fowler, Harlan, McDonald, Morton, Norton, Patterson of New Hampshire, Patterson of Tennessee, Pomeroy, Sprague, and Tipton—15.

The resolution reported by the committee was agreed to by the following vote:

YEAS—Messrs. Abbott, Anthony, Cameron, Cattell, Chandler, Cole, Conkling, Corbett, Cragin, Dixon, Edmunds, Ferry, Fessenden, Frelinghuysen, Grimes, Harlan, Harris, Henderson, Howard, Howe, Kellogg, Morgan, Morrill of Vermont, Nye, Osborn, Pomeroy, Ramsey, Rice, Robertson, Ross, Sawyer, Sherman, Spencer, Stewart, Sumner, Thayer, Van Winkle, Wade, Warner, Willey, Williams, Wilson, and Yates—43.

NAYS—Messrs. Davis, McCreery, Patterson of Tennessee, Saulsbury, Vickers, and Whyte—6.

ABSENT—Messrs. Bayard, Buckalew, Conness, Doolittle, Drake, Fowler, Hendricks, McDonald, Morrill of Maine, Morton, Norton, Patterson of New Hampshire, Pool, Sprague, Tipton, Trumbull, and Welch—17.

In the House, on December 14th, Mr. Broomall, of Pennsylvania, offered the following resolution:

Whereas, the President of the United States, in his annual message to the Fortieth Congress at its third session, says: "It may be assumed that the holders of our securities have already received upon their

bonds a larger amount than their original investment, measured by a gold standard. Upon this statement of facts it would seem but just and equitable that the six per cent. interest now paid by the Government should be applied to the reduction of the principal in semi-annual instalments, which in sixteen years and eight months would liquidate the entire national debt. Six per cent. in gold would at present rates be equal to nine per cent. in currency, and equivalent to the payment of the debt one and a half time in a fraction less than seventeen years. This, in connection with all the other advantages derived from their investment, would afford to the public creditors a fair and liberal compensation for the use of their capital, and with this they should be satisfied. The lessons of the past admonish the lender that it is not well to be over-anxious in exacting from the borrower rigid compliance with the letter of the bond;" and, whereas, such sentiments, if permitted to go to the world without immediate protest, may be understood to be the sentiments of the people of the United States and their Representatives in Congress: Therefore,

Resolved, That all forms and degrees of repudiation of national indebtedness are odious to the American people. And that under no circumstances will their Representatives consent to offer the public creditor, as full compensation, a less amount of money than that which the Government contracted to pay him.

The preamble and first clause of the resolution were agreed to by the following vote:

YEAS—Messrs. Allison, Ames, Arnell, James M. Ashley, Axtell, Bailey, Baker, Baldwin, Banks, Barnum, Beaman, Beatty, Benjamin, Benton, Bingham, Blair, Boutwell, Bowen, Boyden, Boyer, Broomall, Buckley, Roderick R. Butler, Callis, Cary, Chandler, Churchill, Reader W. Clarke, Sidney Clarke, Coburn, Cook, Corley, Covode, Cullom, Dawes, Deweese, Dickey, Dixon, Donnelly, Driggs, Eckley, Edwards, Eggleston, Ela, Eliot, Farnsworth, Ferriss, Ferry, Fields, French, Garfield, Getz, Glossbrenner, Goss, Gove, Griswold, Haughey, Hawkins, Higby, Hooper, Hopkins, Hotchkiss, Chester D. Hubbard, Richard D. Hubbard, Hulburd, Hunter, Ingersoll, Jenckes, Alexander H. Jones, Judd, Julian, Kelley, Kellogg, Kelsey, Ketcham, Kitchen, Koontz, Lash, George V. Lawrence, William Lawrence, Lincoln, Loan, Loughridge, Lynch, Mallory, Marvin, McCarthy, McKee, Mercur, Miller, Moore, Moorhead, Morrell, Morrissey, Mullins, Myers, Newsham, Norris, O'Neill, Orth, Paine, Perham, Peters, Pettis, Phelps, Pike, Pile, Plants, Poland, Polsley, Price, Prince, Pruyn, Randall, Raum, Robertson, Robinson, Schenck, Scofield, Shanks, Sitgreaves, Smith, Spalding, Starkweather, Stevens, Stewart, Stokes, Stover, Sypher, Taber, Taffe, Taylor, Thomas, Tift, Trowbridge, Twichell, Upson, Van Aernam, Burt Van Horn, Van Wyck, Ward, Cadwalader C. Washburn, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Welker, Whittemore, William Williams, James F. Wilson, John T. Wilson, Stephen F. Wilson, Windom, Wood, Woodbridge, and Woodward—155.

NAYS—Messrs. Adams, Archer, Grover, Thomas L. Jones, Mungen, and Lawrence S. Trimble—6.

NOT VOTING—Messrs. Anderson, Delos R. Ashley, Barnes, Beck, Blackburn, Blaine, Boles, Bromwell, Brooks, Buckland, Burr, Benjamin F. Butler, Cake, Clift, Cobb, Cornell, Delano, Dockery, Dodge, Eldridge, Fox, Golladay, Gravely, Haight, Halsey, Hamilton, Harding, Heaton, Hill, Holman, Asahel W. Hubbard, Humphrey, Johnson, Kerr, Knott, Laflin, Logan, Marshall, Maynard, McCormick, McCullough, Newcomb, Niblack, Nicholson, Nunn, Pierce, Pomeroy, Roots, Ross, Sawyer, Selye, Shellabarger, Stone, John Trimble, Van Auken, Robert T. Van Horn, Van Trump, Vidal, Thomas Williams, and Young—60.

The remainder of the resolution was agreed to without a count.

In the House, on February 22d, Mr. Schenck, of Ohio, called up the bill reported back from the Committee of Ways and Means, with a recommendation that it be passed without amendment, as follows:

A bill to strengthen the public credit, and relating to contracts for the payment of coin.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in order to remove any doubt as to the purpose of the Government to discharge all just obligations to the public creditors, and to settle conflicting questions and interpretations of the laws by virtue of which such obligations have been contracted, it is hereby provided and declared that the faith of the United States is solemnly pledged to the payment in coin or its equivalent of all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of any such obligation has expressly provided that the same may be paid in lawful money or other currency than gold and silver: *Provided, however*, That, before any of said interest-bearing obligations, not already due, shall mature or be paid before maturity, the obligations not bearing interest, known as United States notes, shall be made convertible into coin at the option of the holder.

SEC. 2. *And be it further enacted*, That any contract hereafter made specifically payable in coin, and the consideration of which may be a loan of coin, or a sale of property, or the rendering of labor or service of any kind, the price of which as carried into the contract may have been adjusted on the basis of the coin value thereof at the time of such sale or of the rendering of such service or labor, shall be legal and valid, and may be enforced according to its terms; and, on the trial of a suit brought for the enforcement of any such contract, proof of the real consideration may be given.

He said: "We have issued certain other bonds under provisions of law which describe the amounts of them as for so many 'dollars.' In those authorizing laws it has not been expressed that the 'dollar' was to mean or stand for any thing else than what a dollar had been held to be always since the beginning of the Government—a hundred cents, or its equivalent in coin. We have had disputes among ourselves as to the true meaning of these statutes, and conflicting interpretations have been given, depending on comparison and construction of their various sections and clauses, until the heads of honest men have been made to ache in the endeavor to hunt a clear meaning through ambiguity. Honest men have remembered, too, that the bonds were taken on the faith of contemporaneous declarations by Congress and the agents of the Government that they were payable in gold. But there, in the law, all the while, has stood out plainly the promise to pay so many dollars to the public creditor. Let us do it. Let us do it, remembering that the most priceless property of a nation is its credit, on the maintenance of which untarnished its very power to preserve its existence may some time depend. Remembering, too, that, while dealings between individuals of the same country may be presumed in the absence of express agreement to be in what is made the lawful currency of that country, a nation, on the contrary, is but as an in-

dividual member of the family of nations; and when it puts forth its obligations it offers them not only to its own citizens, but in the market of the world for the money of the world. And the money of the world, it needs no argument to show, is that universal standard of value and medium of exchange which all governments have concurred in making of the precious metals.

"So much for the first section of the bill.

"The second section is not a provision for the resumption of specie payments, but a preparation for resumption. It leaves to the people by their voluntary transactions to bring about for themselves a change from the use of depreciated paper to the representative of actual values. And, while this is done by giving the power to enforce contracts for coin and coin values, the provision is so carefully guarded in terms as not to be subject to the objection most frequently urged against such an act of legislation. It cannot be made an instrument in the hands of a hard creditor for the oppression of an embarrassed debtor under the specious pretext of renewal of a contract made on a different basis.

"I think there are few intelligent persons now who do not believe that a return to specie payments is desirable. The common judgment of the country is for only such paper substitute, to be used for a circulating medium, as is convertible at pleasure into that which is recognized as a safer and more certain measure of values all the world over.

"Whether, in view of the decision just made by the Supreme Court of the United States, any provision of law for legalizing contracts for the payment of coin be needed, may, perhaps, be a question. But it is a question which had better be resolved by positive enactment. And in any event it is desirable to be moving in the direction of judicial judgment.

"But how, or by what process, are we to come back to the gold standard? That is the problem to be solved.

"Return at once to specie payments is, from the want of coin sufficient for such an occasion, simply impossible. And, if such sudden resumption were possible, it would be most disastrous in its effects by the ruin it would bring upon the debtor class, which controls the productive industry of the country.

"A scheme for resumption to take place at any near certain date in the future, to be fixed by law, would be productive, I believe, of embarrassment and disaster little less serious and immediate. While the Government would be hoarding or purchasing coin to prepare for the given day, thus withdrawing that solid part of our currency from any use as such, and so enhancing its comparative value by an increased demand, brokers and speculators, on the other hand, stimulated and tempted by the percentage of profit to be made by the operation, would be taking the paper-money of the Government out of circulation and laying it up for conversion into gold when the day of coin payments should arrive. Thus the channels of trade would be drained of money in two directions, and the country deprived in a good degree of both kinds of currency. Prices of all property and labor would go down under this double exhaustion of the present supply of a circulating medium until the prescribed period for resumption; and then the hoarders of greenbacks, having converted them into coin, would make accumulated gain by purchasing every thing at the ruinous rates to which market values would be reduced; and a third profit would follow from the subsequent gradual and natural rise of prices to an ordinary specie standard.

"To me it seems that every plan is a mistake which proposes resumption as the direct object of legislation, or which at this time would enforce specie payments at a fixed date. Resumption, in my opinion, to be safe and lasting, must come as a consequence of wise and wholesome legislation, and of an economical and sagacious administration of our financial affairs."

Mr. Pruyn, of New York, said: "What do we mean by this legislation? Do we mean any thing or nothing? Is it a renewed declaration of what former statutes provide, or something else? If the former, it is deceptive, and so I look upon it; but if it is the latter, then the gentleman undertakes by this law to create a new obligation on the part of the Government to its creditors, such as the acts under which the issue of bonds was made did not create.

"Now, sir, this whole question will eventually be solved in one way. If the gentleman is of the opinion that, in 1882, when the bonds of 1862 will have matured, the Government will then have resumed specie payment, the whole question is then solved, for we will then pay coin, of course. The labor, the industry, and the toil of the country must work out this problem; but if, when that time arrives, we cannot pay in coin, if we shall not have reached coin value, then we must pay in new obligations, and the public creditor must wait until the country is able to meet its obligations in coin. We stated to the world that we meant to carry on the war not upon a specie basis, that we were not able to carry on the war with coin, but we intended to draw on posterity and the labor of the future. We promised gold for interest, but that the public creditors must take the result as to the principal; that, if we put down the rebellion, if we succeeded in that work, we should soon resume specie payment, and then, of course, every obligation of the Government would be paid in coin. If we did not reach that point, then it would be impossible for us to pay in coin, and the public creditors must take new obligations and wait until we could reach specie payment. That was the proposition we made in 1862 to the public creditors, and under which they took those bonds.

"Now, sir, what has been the cause of our expenditure since the war closed? We are more indebted now than we were then, notwithstanding a system of taxation more heavy than was ever before imposed upon any people living under a republican form of government. Notwithstanding these drafts upon our resources, our debt has been accumulating, and we are further from specie payment than three years ago; and so it will be until we have a sound system of finance on the part of the Government—a sound system of taxation on one side levied on a few articles, and a wise system of expenditure on the other. Until we do that, we shall have to give the public creditors renewed promises to pay. On the other hand, a wise, sound, and judicious system of finance can bring us to specie payments in a very few years. But Congress can do nothing by legislation of this kind. It is futile, it is useless, it is deceptive. The first section of this bill, so far as I can see, means nothing. If it means more than the former statutes do, then I submit that this is not the way to meet that question. If this Government is to come under increased and enlarged obligations, this whole thing should be fairly and squarely considered in open debate, giving an opportunity to all gentlemen to advance their respective views in regard to it, and we should determine, by conjoint effort, in what way we can best protect the credit and power of the country."

The bill was ordered to be engrossed, read a third time, and passed, by the following vote:

YEAS—Messrs. Allison, Ames, Anderson, Arnell, Delos R. Ashley, James M. Ashley, Axtell, Baldwin, Banks, Barnum, Beaman, Benjamin, Benton, Blackburn, Blaine, Blair, Boyden, Boyer, Brooks, Broomall, Buckley, Callis, Chandler, Churchill, Reader W. Clarke, Sidney Clarke, Clift, Corley, Cornell, Cullom, Dawes, Delano, Dixon, Dodge, Driggs, Eckley, Thomas D. Eliot, James T. Elliott, Ferriss, Ferry, Fields, Getz, Glossbrenner, Gove, Griswold, Halsey, Harding, Heaton, Higby, Hill, Hooper, Hotchkiss, Chester D. Hubbard, Richard D. Hubbard, Hulburd, Jenckes, Alexander H. Jones, Judd, Julian, Kellogg, Kelsey, Ketcham, Kitchen, Koontz, Laflin, Lash, George V. Lawrence, Lynch, Marvin, Maynard, McKee, Mercur, Miller, Moore, Moorhead, Morrell, Mullins, Myers, Newcombe, Newsham, Norris, O'Neill, Paine, Perham, Peters, Pettis, Phelps, Plants, Poland, Pomeroy, Price, Raum, Robertson, Robinson, Roots, Sawyer, Schenck, Scofield, Shellabarger, Smith, Spalding, Starkweather, Stewart, Stover, Taber, Taylor, Trowbridge, Twichell, Upson, Van Aernam, Burt Van Horn, Robert T. Van Horn, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Whittemore, Thomas Williams, James F. Wilson, and Windom—120.

NAYS—Messrs. Archer, Baker, Beatty, Beck, Bowen, Bromwell, Burr, Benjamin F. Butler, Roderick R. Butler, Cake, Cobb, Coburn, Cook, Covode, Deweese, Donnelly, Eggleston, Ela, Eldridge, Farnsworth, Fox, French, Golladay, Goss, Grover, Haight, Hawkins, Holman, Hopkins, Humphrey, Hunter, Ingersoll, Johnson, Thomas L. Jones, Kelley, Kerr, Knott, William Lawrence, Loughridge, Marshall, McCormick, Mungen, Niblack, Nunn, Orth, Pike, Ross, Shanks, Stevens, Stokes, Stone, Taffe, Thomas, Tift, Van Trump, Henry D. Washburn, William Williams, John T. Wilson, Wood, and Young—60.

NOT VOTING—Messrs. Adams, Bailey, Barnes, Bingham, Boles, Boutwell, Buckland, Cary, Dickey, Dockery, Edwards, Garfield, Gravely, Hamilton, Haughey, Asahel W. Hubbard, Lincoln, Loan, Logan, Mallory, McCarthy, McCullough, Morrissey, Nicholson, Pierce, Pile, Polsley, Prince, Pruyn, Randall, Selye, Sitgreaves, Sypher, John Trimble, Lawrence S. Trimble, Van Auken, Van Wyck, Vidal, Elihu B. Washburne, Stephen F. Wilson, Woodbridge, and Woodward—42.

In the Senate, on February 26th, the bill was reported back from the Committee of Finance to whom it had been referred, with an amendment to strike out in line nine of the first section the words "interest-bearing," and also to strike out the proviso at the end of the first section in the following words:

Provided, however, That, before any of said interest-bearing obligations, not already due, shall mature or be paid before maturity, the obligations not bearing interest, known as United States notes, shall be made convertible into coin at the option of the holder.

Mr. Davis, of Kentucky, moved to recommit the bill, with instructions to the committee to report a bill embodying the following propositions:

First. That gold and silver coin is the measure and the par established by the world and adopted by the Constitution of the United States for all property, values, debts, and other pecuniary liabilities; and the Government of the United States having, on the sale of the bonds which constitute the bulk of the national debt, received greatly less, when measured by the par of gold and silver coin, than their nominal amount, said bonds should be discharged by the payment in coin of their value by that par at the days they were respectively sold by the Government; and the future interest upon said bonds should be reduced to four and a half per cent. per annum on their value as aforesaid, payable in coin.

Second. That all other debts and pecuniary liabilities created or incurred since the issue of legal-tender notes, and which do not express to be payable in gold or silver coin, were contemplated and intended by the parties to be met and paid in currency; and on the general resumption of specie payments such debts and liabilities should be discharged by the payment in gold or silver coin of their value by that par when they become due and payable.

Third. That the annual expenditures of the Government should be reduced within the following general scale: for the civil service, $45,000,000; pensions and Indians, $30,000,000; Department of War, $25,000,000; Navy Department, $20,000,000; contingencies and miscellanies, $10,000,000; and interest on the public debt, $50,000,000; and the whole surplus of the revenue should be faithfully applied to the extinguishment of the public debt.

Fourth. The taxes, which are now so grievous a burden upon the people of the United States, should be reduced at least $100,000,000 annually, of their aggregate amount; and a day, within three years, should be named for the general resumption of specie payments.

The motion of Mr. Davis was not agreed to. The question was then taken on the amendment of the committee, and it was agreed to.

Mr. Bayard, of Delaware, moved to strike out the second section, which was lost by the following vote:

YEAS—Messrs. Chandler, Cole, Davis, Doolittle, Fowler, Howe, and Wade—7.

NAYS—Messrs. Abbott, Anthony, Cameron, Cattell, Conkling, Conness, Corbett, Cragin, Dixon,

Drake, Edmunds, Ferry, Fessenden, Frelinghuysen, Harlan, Kellogg, McCreery, McDonald, Morgan, Morrill of Vermont, Morton, Nye, Osborn, Patterson of New Hampshire, Pomeroy, Ramsey, Ross, Sherman, Stewart, Sumner, Thayer, Trumbull, Welch, Willey, Williams, and Wilson—36.

ABSENT—Messrs. Bayard, Buckalew, Grimes, Harris, Henderson, Hendricks, Howard, Morrill of Maine, Norton, Patterson of Tennessee, Pool, Rice, Robertson, Saulsbury, Sawyer, Spencer, Sprague, Tipton, Van Winkle, Vickers, Warner, Whyte, and Yates—23.

Mr. Henderson, of Missouri, moved to amend the second section so as to read as follows:

And be it further enacted, That any contract hereafter made specifically payable in coin shall be legal and valid, and may be enforced according to its terms.

The motion was lost by the following vote:

YEAS—Messrs. Cole, Conkling, Corbett, Dixon, Fessenden, Henderson, Pomeroy, Ross, Stewart, and Trumbull—10.

NAYS—Messrs. Abbott, Anthony, Cameron, Cattell, Chandler, Conness, Cragin, Davis, Doolittle, Drake, Edmunds, Ferry, Frelinghuysen, Harlan, Howe, Kellogg, McDonald, Morgan, Morrill of Vermont, Morton, Nye, Osborn, Patterson of New Hampshire, Ramsey, Rice, Sawyer, Sherman, Sumner, Thayer, Wade, Welch, Willey, Williams, and Wilson—34.

ABSENT—Messrs. Bayard, Buckalew, Fowler, Grimes, Harris, Hendricks, Howard, McCreery, Morrill of Maine, Norton, Patterson of Tennessee, Pool, Robertson, Saulsbury, Spencer, Sprague, Tipton, Van Winkle, Vickers, Warner, Whyte, and Yates—22.

The bill, as amended by the Finance Committee, was passed by the following vote:

YEAS—Messrs. Abbott, Cattell, Conkling, Conness, Corbett, Cragin, Dixon, Edmunds, Ferry, Fessenden, Frelinghuysen, Grimes, Harlan, Harris, Howard, Morgan, Morrill of Maine, Morrill of Vermont, Nye, Patterson of New Hampshire, Robertson, Sawyer, Sherman, Stewart, Sumner, Thayer, Tipton, Willey, Williams, and Wilson—30.

NAYS—Messrs. Cole, Davis, Doolittle, Fowler, Henderson, Hendricks, McCreery, McDonald, Morton, Osborn, Patterson of Tennessee, Pomeroy, Ross, Spencer, Wade, and Welch—16.

ABSENT—Messrs. Anthony, Bayard, Buckalew, Cameron, Chandler, Drake, Howe, Kellogg, Norton, Pool, Ramsey, Rice, Saulsbury, Sprague, Trumbull, Van Winkle, Vickers, Warner, Whyte, and Yates—20.

Mr. Sherman, of Ohio, said: "I move to amend the title so as to read, 'An act relating to the public debt.'"

The motion was agreed to.

On March 2d the House refused to concur in the amendments of the Senate, and appointed a committee of conference.

On the same day the Senate insisted on its amendments, and appointed a committee of conference.

This joint committee, on March 3d, reported to each House the following bill:

An Act to strengthen the public credit, and relating to contracts for the payment of coin.

SECTION 1. *Be it enacted, etc.*, That, in order to remove any doubt as to the purpose of the Government to discharge all just obligations to the public creditors, and to settle conflicting questions and interpretations of the laws, by virtue of which obligations have been contracted, it is hereby provided and declared that the faith of the United States is solemnly pledged to the payment in coin, or its equivalent, of all obligations of the United States not bearing interest, known as United States notes, and of all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of any such obligation has expressly provided that the same may be paid in lawful money, or other currency than gold and silver. But none of said interest-bearing obligations not already due shall be redeemed or paid before maturity, unless at such time United States notes shall be convertible into coin, at the option of the holder, or unless at such time bonds of the United States, bearing a lower rate of interest than the bonds to be redeemed, can be sold at par in coin. And the United States also solemnly pledges its faith to make provision, at the earliest practicable period, for the redemption of the United States notes in coin.

SEC. 2. *And be it further enacted*, That any contract hereafter made specifically payable in coin, and the consideration of which may be a loan of coin, or a sale of property, or the rendering of labor or service of any kind, the price of which, as carried into the contract, may have been adjusted on the basis of the coin value thereof at the time of such sale, or the rendering of such service or labor, shall be legal and valid, and may be enforced according to its terms; and, on the trial of a suit brought for the enforcement of any such contract, proof of the real consideration may be given.

Mr. Sherman, of Ohio, said: "If the Secretary will send the report and the bill to me, I will explain, in a very few words, the result of the conference. The Senate made four amendments to this short bill. The first amendment was designed to extend the pledge of the first section to the United States notes as well as the bonds. In the House bill, the obligations were described as 'all interest-bearing obligations,' but there was no pledge to pay in coin United States notes. The Senate, by striking out the words 'interest-bearing,' intended to extend the pledge to all obligations of the United States; but the House conferees feared that this would include obligations not intended to be embraced by this claim. In order to avoid all ambiguity, we now say that the pledge shall extend to the payment of all United States notes in coin, and all interest-bearing obligations, except those where other provision was made, so as to prevent including other obligations not intended to be reached by this measure; and, in that respect, I think the report of the conferees is decidedly an improvement, because it is more specific.

"The second amendment of the Senate was to strike out the proviso to the first section. The objections made in the Senate to the proviso were these: That it tied up the power of the Government to pay the debt, or do any thing toward reducing the rate of interest, until after the return of specie payments. This provision is stricken out, and, instead of it, we have inserted a provision that we will not attempt to pay the principal of this debt until either we resume specie payments or we can sell a bond bearing a lower rate of interest than the bonds, to be redeemed at par in coin. Then we are at liberty to proceed to pay off the outstanding bonds, even if specie payments have not been resumed.

"I think that this is a great improvement. The United States postpones payment of this debt until we can pay it at par in coin, either by the sale of bonds or by the resumption of specie payments, and we also announce to the country that we will take steps, as early as practicable, to specie payment of the notes.

"I will state, in regard to the third amendment, that I did not agree to the conclusion in regard to it. The third amendment of the Senate was made on motion of the honorable Senator from New Jersey (Mr. Frelinghuysen), to strike out the last clause of the second section. That clause allowed, by implication at least, the consideration of a negotiable note to be inquired into between others than the original parties. In order to avoid that construction, the Senate struck out that last clause, leaving the question of inquiring into the consideration to depend upon the general and local law in each State. That is the way it ought to be; but the House conferees were not willing to agree to this report unless this provision was retained. I myself was not disposed to yield that, but a majority of the Senate conferees thought it was better to yield in order to secure the passage of the bill. The words which are retained and which the Senate struck out are these:

And, on the trial of a suit brought for the enforcement of any such contract, proof of the real consideration may be given.

"That would seem to imply that this proof could be given in a suit brought by a *bona fide* holder on a note where there was usury between the original parties; but, as this clause does not state the effect of the evidence on the real consideration, we thought it better, or at least a majority of the conferees, against my opinion, thought it best, to leave that clause in, rather than endanger the passage of the bill."

Mr. Sprague, of Rhode Island, said: "Mr. President, I desire in one word, in behalf of the industries, so far as I know them, of this country, to enter my solemn protest against the passage of this act, a measure calculated, in my judgment, more to repudiate the national debt than any measure that has yet been enacted, and as certain to result in that direction if the people are true to themselves. It seems, sir, that the industries of this country, crushed to the very earth in the past three years, are not crushed sufficiently, but they must have this staggering, this most outrageous blow dealt upon them. If there is any measure calculated to prostrate whatever there is in the present profitable occupation of this country, this is it. I affirm to this Senate and to this country, and I shall be borne out in it, that there is no industry, commencing three years ago, that is at all in a profitable condition except that which is receiving to-day the pap of Government appropriations. Why tamper with this most sacred and most delicate instrument? Sir, I have not words to express the feeling of outrage that is in me at this constant manipulation of the finances, first of the Government and then of the people, for what purpose? You have contracted your currency nearly four hundred million dollars in three years for the purpose of enhancing its value. What has been the result of it? Have you enhanced the value of the nation's credit? Not one cent. You have prostrated every interest and every industry in consequence of that most suicidal and most damnable policy. I protest, therefore, in the name of the industries of this country and in their behalf, representing them as I do, and as I know they at present exist, against the additional load that will be put on them by this most unholy and most inconsiderate legislation."

Mr. Hendricks: "Mr. President, I do not intend again to discuss this question, but to ask of the Senate whether this body is now prepared to change the contract between the Government and its creditors, as is proposed by this report? In my judgment the measure has not been improved by the action of the committee of conference. By this proposition we now undertake to waive permanently the right to redeem the five-twenty bonds during the period of twenty years allowed by the original law to the discretion of the Government, and to provide that the Government shall not redeem at all unless Treasury notes are equal with gold in value.

"This, sir, is now the distinct proposition; and, as far as we can, in the absence of a new consideration, we undertake to bind the Government to a material modification of the contract, to the benefit of the creditor and to the prejudice of the people. After the contract has been made by the law and by the language of the bonds, and before the maturity of the bonds, why shall we undertake to change the nature and extent of that contract? Why not leave it as it stood at the time the Government made the contract? There were some merits in the funding bill urged by the Senator from Ohio last year and urged by the Committee on Finance in its elaborate report of December, 1867. There was some compensation in that measure. In that bill it was proposed as a compensation to the tax-payers that there should be a reduction of the interest, that the six per cent. bonds should fall to four and four and a half per cent., making a large saving annually to the people in interest and a very great relief to the burdened interests of the country; but, as I thought, not sufficient to justify then a change of the contract.

"But now, Mr. President, abandoning the idea of compensation, it is proposed, without consideration, as far as we now can do it, to change the contract and to make obligations which may be redeemed within a specified period, in the legal-tender notes of the Government, gold obligations. Where is the return? The present proposed policy is in strange contrast with the policy that was adopted at the

time this debt was contracted. As I read to the Senate the other evening from the report of the Committee on Finance, the policy of Congress in 1862 and 1863 was, to reduce the value of the paper currency issued by the Government so as that there should be an inducement on the part of the persons holding that currency to invest it in the bonds. Depreciation was then the policy of the Government—a depreciated currency made necessary, in the language of the committee, by the fact that the bonds would not sell under the act of February 25, 1862. The depreciated currency was the consideration the Government received for its bonds, and that depreciation was brought about upon a purpose and a policy. To secure a sale of bonds then, the currency was purposely depreciated; but when the Government comes to assume and to provide for its payment, then the opposite policy is to be adopted and the currency is to be by special legislation appreciated, or if it cannot be appreciated, then that the bonds shall not be paid until the Government can pay in gold. Why this reversal of policy? If it was right that the Government should be paid for these bonds in a currency purposely depreciated, why is there an obligation that we shall provide for an appreciation of the currency when the Government comes to redeem the bonds? I desire that there shall be an appreciation of the currency; but, as I said the other evening, I look to that only through a restored prosperity in the business of the country."

Mr. Morton, of Indiana, said: "Mr. President, I was a member of the committee of conference, but I could not sign this report for the reason that it would commit me to a construction of the law and the contract in regard to the five-twenty bonds from which I have always dissented. I believe that under the law the Government had as much right to pay those bonds in legal-tender notes as it has to pay any other debt, and that this declaration is substantially a change of the contract, and it is committing the Government to a payment in coin which is not required by the original contract. Therefore I cannot and will not vote for it.

"But, Mr. President, this report contains one important statement which I would be very glad to vote for if I could do so without voting for the rest of it. It is, 'and the United States also solemnly pledges its faith to make provision at the earliest practicable period for the redemption of the United States notes in coin.' This I regard as a very important statement upon the part of the conference committee. It prescribes the way by which the Government shall return to specie payments, and the Government solemnly pledges its faith that it will make provision at the earliest practicable period for the redemption of the greenback currency in coin. The Senator from Vermont a little while ago asked a question of the chairman of the committee, whether this would interfere with the funding of these notes. I say unquestionably it will. If these notes can be funded and disposed of in that way after the passage of this bill, it would be a direct violation of the solemn pledge that is here given. What is the pledge that is given? It is a pledge given to the whole country that the Government will make provision at the earliest practicable moment not to fund these notes, not to return to the old policy of contraction, which has been condemned most solemnly by Congress, but that it will make provision to redeem these notes in coin. If this pledge is treated as a nullity before it has even been passed, we need not place much importance upon it hereafter."

Mr. Williams, of Oregon, said: "Now, the simple question is, as to this part of the bill, did the people of the country expect when these bonds were issued, did those who supported the Government during the rebellion and the men who gave their money to the Government and took these bonds—did they expect that they would be paid in depreciated paper? Was it the general expectation of the country that these bonds would be cancelled by promises of the Government depreciated in value, or was it the general understanding that they would be paid in gold or its equivalent? Suppose you admit, for the sake of the argument, that they are payable in Treasury notes, then the other conclusion necessarily follows that these notes, when payment was to be made, were to be worth their face in gold. That was the general opinion on the subject at the time the bonds were issued, and it is for the purpose of carrying out that understanding in good faith that this bill is enacted, and I do not understand that in any respect it changes the nature or even the form of the contract. It is simply a pledge on the part of the Government that these bonds when they are paid shall be paid in gold or its equivalent, and that pledge is accompanied by another that the Treasury notes shall also be paid in gold; so that all the obligations of the Government, without any distinction, shall be so paid. No preference is given to the bondholders by this bill, none given to those who hold Treasury notes of the Government; but here is a solemn pledge of this nation made at this time, to be noticed by the whole world, that the Government of the United States will redeem all its promises, without distinction, in the money that is recognized as such by the world. This is the promise that is made, and this is all there is of it."

"Now, sir, as to the second section, it is not precisely in the form that I should desire to have it, but it was impossible to agree unless this second section was incorporated in the report as it was adopted by the House; and, as it is a piece of legislation which contains no pledge or promise whatever to anybody, it may, if it is found to be bad in operation, be changed, by subsequent legislation. If this

provision as to gold contracts is not satisfactory to the people, if it is found to be defective in any way, the section does not estop Congress at its next session, or at any future time, from passing a law that will change it, and make it conform to the necessities and circumstances of the country."

Mr. Norton, of Minnesota, said: "My objection to this proposition is, that it looks to and inevitably brings about a permanency of the public debt. What is the interest of the Government in regard to the public debt? It is that it should be in the control of the Government. The Government, acting for and representing the people, should have the debt in their control, and when they were able to pay it they should be permitted to do it. The interest of the bondholders is, that it should be in their control, and that the Government should not pay any of it until they are willing to receive it, and in the mean time the people bear the burdens in the shape of taxation.

"Then this proposition brings to an actual issue, as I think, the interest of the people who pay the taxes, and the interest of the men who hold the public debt and pay comparatively none of the taxes; and because I see in it a question between the men who hold the debt and the people who pay the taxes, and because I believe that Congress should look to the interests of the people quite as much as to the interests of the bondholders, I believe the residue of this session of Congress cannot be more profitably spent than in discussing this very measure. It would be far better for the interests of the country that all the appropriation bills should fail than that this proposition should pass. The Senator from Oregon talked about this Congress pledging the faith of the nation, and that nothing of repudiation should be heard of. Sir, when this Congress pledges the faith of the nation to pay the five-twenties in coin, they repudiate the interests of the people, and impose upon them burdens that they ought not to be required to bear."

The result was announced, as follows:

YEAS—Messrs. Abbott, Anthony, Cameron, Cattell, Chandler, Conkling, Conness, Corbett, Cragin, Dixon, Drake, Edmunds, Ferry, Fessenden, Frelinghuysen, Harris, Howard, Morgan, Morrill of Maine, Morrill of Vermont, Nye, Patterson of New Hampshire, Ramsey, Sherman, Stewart, Sumner, Trumbull, Van Winkle, Warner, Willey, and Williams—31.

NAYS—Messrs. Bayard, Buckalew, Cole, Davis, Doolittle, Fowler, Hendricks, Kellogg, McCreery, McDonald, Morton, Norton, Osborn, Patterson of Tennessee, Robertson, Ross, Sawyer, Spencer, Sprague, Thayer, Tipton, Vickers, Wade, and Whyte —24.

ABSENT—Messrs. Grimes, Harlan, Henderson, Howe, Pomeroy, Pool, Rice, Saulsbury, Welch, Wilson, and Yates—11.

So the report was concurred in.

In the House the report was concurred in by the following vote:

YEAS—Messrs. Allison, Ames, Arnell, Delos R. Ashley, James M. Ashley, Axtell, Bailey, Barnes, Barnum, Beaman, Benjamin, Benton, Bingham, Blair, Boutwell, Bowen, Boyden, Brooks, Broomall, Buckley, Cake, Callis, Chanler, Churchill, Reader W. Clarke, Sidney Clarke, Clift, Corley, Cornell, Cullom, Dawes, Dickey, Dixon, Dodge, Eckley, Thomas D. Eliot, James T. Elliott, Ferriss, Ferry, Fields, Garfield, Gove, Griswold, Halsey, Haughey, Heaton, Higby, Hill, Hooper, Hotchkiss, Richard D. Hubbard, Hulburd, Jenckes, Alexander H. Jones, Judd, Julian, Kellogg, Kelsey, Ketcham, Laflin, Lash, George V. Lawrence, Lincoln, Logan, Lynch, Mallory, Marvin, Maynard, McCarthy, McKee, Mercur, Miller, Moore, Moorhead, Morrell, Mullins, Myers, Newsham, Norris, O'Neill, Paine, Perham, Peters, Pierce, Pile, Plants, Poland, Price, Prince, Raum, Robertson, Robinson, Roots, Sawyer, Schenck, Scofield, Shellabarger, Smith, Starkweather, Stevens, Stewart, Stover, Sypher, Taber, Taylor, Trowbridge, Twichell, Upson, Burt Van Horn, Van Wyck, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Whittemore, James F. Wilson, Woodbridge, and the Speaker—118.

NAYS—Messrs. Adams, Archer, Baker, Beatty, Beck, Boyer, Bromwell, Burr, Roderick R. Butler, Cary, Cobb, Coburn, Cook, Deweese, Dockery, Donnelly, Eldridge, Farnsworth, Getz, Golladay, Goss, Haight, Harding, Hawkins, Holman, Hopkins, Hunter, Ingersoll, Johnson, Thomas L. Jones, Kerr, Knott, William Lawrence, Marshall McCormick, McCullough, Mungen, Niblack, Orth, Pruyn, Randall, Ross, Shanks, Sitgreaves, Stone, Thomas, Tift, Lawrence S. Trimble, Van Aernam, Van Auken, Van Trump, Henry D. Washburn, William Williams, Stephen F. Wilson, Wood, Woodward, and Young —57.

NOT VOTING—Messrs. Anderson, Baldwin, Banks, Blackburn, Blaine, Boles, Buckland, Benjamin F. Butler, Colfax, Covode, Delano, Driggs, Edwards, Eggleston, Ela, Fox, French, Glossbrenner, Gravely, Grover, Hamilton, Asahel W. Hubbard, Chester D. Hubbard, Humphrey, Kelley, Kitchen, Koontz, Loan, Loughridge, Morrissey, Newcomb, Nicholson, Nunn, Pettis, Phelps, Pike, Polsley, Selye, Spalding, Stokes, Taffe, John Trimble, Robert T. Van Horn, Vidal, Elihu B. Washburne, Thomas Williams, John T. Wilson, and Windom—48.

On March 3d, the Speaker resigned his seat, and Theodore M. Pomeroy, of New York, was elected to fill the vacancy as Speaker.

The following joint resolution was also passed by both Houses, and sent to the President on February 6th, and became of force without his signature:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the persons now holding civil offices in the provisional governments of Virginia and Texas, who cannot take and subscribe the oath prescribed by the act entitled "An act to prescribe an oath of office, and for other purposes," approved July 2, 1862, shall, on the passage of this resolution, be removed therefrom; and it shall be the duty of the district commanders to fill the vacancies so created by the appointment of persons who can take said oath: *Provided*, That the provisions of this resolution shall not apply to persons who, by reason of the removal of their disabilities as provided in the fourteenth amendment to the Constitution, shall have qualified for any office in pursuance of the act entitled "An act prescribing an oath of office by persons from whom legal disabilities shall have been removed," approved July 11, 1868: *And provided further*, That this resolution shall not take effect until thirty days from and after its passage: *And it is further provided*, That this resolution shall be, and is hereby, extended to and made applicable to the State of Mississippi.

The session closed at noon on March 4th.

The first session of the Forty-first Congress* commenced at 12 M., March 4th. In the Senate, Schuyler Colfax was qualified as Vice-President of the United States, and took the chair.

In the House, James G. Blaine was chosen Speaker, he having received 135 votes, and Michael C. Kerr, of Indiana, 57 votes.

In the Senate, on March 6th, the following communication was received from President Grant:

To the Senate of the United States:

Since the nomination and confirmation of Alexander T. Stewart to the office of Secretary of the Treasury, I find that by the eighth section of the act of Congress, approved September 2, 1789, it is provided as follows, to wit:

"*And be it further enacted*, That no person appointed to any office instituted by this act shall directly or indirectly be concerned or interested in carrying on the business of trade or commerce, or be owner in whole or in part of any sea-vessel, or purchase, by himself or another in trust for him, any

---

* The following is a list of the members of Congress:

SENATE.

Alabama—Willard Warner, George E. Spencer.
Arkansas—Alexander McDonald, Benjamin F. Rice.
California—Cornelius Cole, Eugene Casserly.
Connecticut—William A. Buckingham, Orrin S. Ferry.
Delaware—Thomas F. Bayard, Willard Saulsbury.
Florida—Abijah Gilbert, Thomas W. Osborn.
Georgia—Not admitted.
Illinois—Lyman Trumbull, Richard Yates.
Indiana—Oliver P. Morton, Daniel D. Pratt.
Iowa—James W. Grimes, James Harlan.
Kansas—Samuel C. Pomeroy, Edmund G. Ross.
Kentucky—Garret Davis, Thomas C. McCreery.
Louisiana—John S. Harris, William P. Kellogg.
Maine—Hannibal Hamlin, William Pitt Fessenden.
Maryland—William T. Hamilton, George Vickers.
Massachusetts—Charles Sumner, Henry Wilson.
Michigan—Zachariah Chandler, Jacob M. Howard.
Minnesota—Alexander Ramsey, Daniel S. Norton.
Missouri—Charles D. Drake, Carl Schurz.
Nebraska—John M. Thayer, Thomas W. Tipton.
Nevada—William M. Stewart, James W. Nye.
New Hampshire—James W. Patterson, Aaron H. Cragin.
New Jersey—Alexander G. Cattell, John P. Stockton.
New York—Roscoe Conkling, Reuben E. Fenton.
North Carolina—Joseph C. Abbott, John Pool.
Ohio—John Sherman, Allen G. Thurman.
Oregon—Henry W. Corbett, George H. Williams.
Pennsylvania—Simeon Cameron, John Scott.
Rhode Island—William Sprague, Henry B. Anthony.
South Carolina—Thomas J. Robertson, Frederick A. Sawyer.
Tennessee—William G. Brownlow, J. S. Fowler.
Vermont—Justin S. Morrill, George F. Edmunds.
West Virginia—Arthur J. Boreman, Waitman T. Willey.
Wisconsin—Timothy O. Howe, Matthew H. Carpenter.

Not admitted at this session.

Mississippi,
Virginia,
Texas.

HOUSE.

Arkansas—Logan H. Roots, Anthony A. C. Rogers, Thomas Boles.
Alabama—Entitled to six members, but not yet elected.
California—Samuel B. Axtell, Aaron A. Sargent, James A. Johnson.
Connecticut—Julius Strong, Stephen W. Kellogg, H. H. Starkweather, William H. Barnum.
Delaware—Benjamin T. Biggs.
Florida—Charles M. Hamilton.
Georgia—Entitled to seven members, but no election yet been held.
Illinois—John A. Logan, Norman B. Judd, John F. Farnsworth, Elihu B. Washburne,* John B. Hawley, Egbert C. Ingersoll, Burton C. Cook, Jesse H. Moore, Shelby M. Cullom, T. W. McNeely, Albert G. Burr, Samuel S. Marshall, John B. Hay, John M. Crebs.
Indiana—William E. Niblack, Michael C. Kerr, William S. Holman, George W. Julian, John Coburn, Daniel W. Voorhees, Godlove S. Orth, James M. Tyner, John P. C. Shanks, William Williams, Jasper Packard.
Iowa—George W. McCrary, William Smyth, William B. Allison, William Loughridge, Francis W. Palmer, Charles Pomeroy.
Kansas—Sidney Clarke.
Kentucky—Lawrence S. Trimble, William M. Sweeny, Jacob S. Golladay, J. Proctor Knott, Boyd Winchester, Thomas L. Jones, James B. Beck, George M. Adams, John M. Rice.
Louisiana—1 (vacancy), Lewis A. Sheldon, 3 (vacancy), 4 (vacancy), 5 (vacancy).
Maine—John Lynch, Samuel P. Morrill, James G. Blaine, John A. Peters, Eugene Hale.
Maryland—Samuel Hambleton, Stevenson Archer, Thomas Swann, Patrick Hamill, Frederick Stone.
Massachusetts—James Buffinton, Oakes Ames, Ginery Twichell, Samuel Hooper, Benjamin F. Butler, Nathaniel P. Banks, George S. Boutwell,* George F. Hoar, William B. Washburn, Henry L. Dawes.
Michigan—Fernando C. Beaman, William L. Stoughton, Austin Blair, Thomas W. Ferry, Omar D. Conger, Randolph Strickland.
Minnesota—Morton S. Wilkinson, Eugene M. Wilson.
Mississippi—Entitled to five members, but no election.
Missouri—Erastus Wells, Gustavus A. Finkelburg, James R. McCormick, S. H. Boyd, Samuel S. Burdett, Robert T. Van Horn, Joel F. Asper, John F. Benjamin, David P. Dyer.
Nebraska—John Taffe.
Nevada—Thomas Fitch.
New Hampshire—Jacob H. Ela, Aaron F. Stevens, Jacob Benton.
New Jersey—William Moore, Charles Haight, John T. Bird, John Hill, Orestes Cleveland.
New York—Henry A. Reeves, John G. Schumaker, Henry W. Slocum, John Fox, John Morrissey, Samuel S. Cox, Hervey C. Calkin, James Brooks, Fernando Wood, Clarkson N. Potter, George W. Greene, John H. Ketcham, John A. Griswold, Stephen L. Mayham, Adolphus H. Tanner, Orange Ferris, William A. Wheeler, Stephen Sandford, Charles S. Knapp, Addison H. Laflin, Alexander H. Bailey, John C. Churchill, Dennis McCarthy, George W. Cowles, William H. Kelsey, Giles W. Hotchkiss, Hamilton Ward, Noah Davis, John Fisher, David S. Bennett, Porter Sheldon.

* Resigned, March 6th.

* Resigned, March 12th.
† Did not qualify.
‡ In place of John Moffat, unseated.

public lands or other public property, or be concerned in the purchase or disposal of any public securities of any State or of the United States, or take or apply to his own use any emolument or gain for negotiating any business in the said Department other than what shall be allowed by law; and if any person shall offend against any of the prohibitions of this act he shall be deemed guilty of a high misdemeanor and forfeit to the United States the penalty of $3,000, and shall upon conviction be removed from office and forever thereafter incapable of holding any office under the United States: *Provided*, That if any other person than a public prosecutor shall give information of any such offence upon which a prosecution and conviction shall be had, one-half the aforesaid penalty of $3,000, when recovered, shall be for the use of the person giving such information."

In view of these provisions, and the fact that Mr. Stewart has been unanimously confirmed by the Senate, I would ask that he be exempted by joint resolution of the two Houses of Congress from the operations of the same. U. S. GRANT.

WASHINGTON, D. C., *March* 6, 1869.

On March 9th, and before any action had been taken on the preceding message, the following was received from the President:

To the Senate of the United States:

I have the honor to request to be permitted to withdraw from the Senate of the United States my message of the 6th instant, requesting the passage of a joint resolution of the two Houses of Congress to relieve the Secretary of the Treasury from the disabilities imposed by section eight of the act of Congress approved September 2, 1789.

U. S. GRANT.

WASHINGTON, D. C., *March* 9, 1869.

The request was granted.

In the Senate, on March 8th, the bill for the further protection of equal rights in the District of Columbia, which was passed at the previous session, but failed to receive the signature of the President, was, on motion of Mr. Sumner, taken up and passed (see page —). On March 15th the same bill passed the House.

In the House, on March 10th, Mr. Boutwell, of Massachusetts, offered the following resolution:

Resolved, That there be appointed for the Forty-first Congress a select Committee on Reconstruction, to consist of thirteen members, under the same rules and regulations as governed the proceedings of the Reconstruction Committee in the last Congress, and that all the documents and resolutions before the Committee on Reconstruction of the last Congress yet undisposed of be referred to them.

It was adopted by the following vote:

YEAS—Messrs. Allison, Ambler, Arnell, Asper, Bailey, Banks, Beaman, Benjamin, Bingham, Blair, Boles, Boutwell, Bowen, Buffinton, Burdett, Roderick R. Butler, Cake, Cessna, Churchill, Amasa Cobb, Coburn, Cook, Conger, Cowles, Cullom, Davis, Dawes, Dickey, Donley, Duvall, Dyer, Farnsworth, Ferriss, Ferry, Finkelburg, Fisher, Garfield, Gilfillan, Hale, Hawley, Heaton, Hill, Hoar, Hooper, Hopkins, Hotchkiss, Jenckes, Alexander H. Jones, Judd, Julian, Kelley, Kelsey, Ketcham, Knapp, Laflin, Lash, Lawrence, Logan, Loughridge, Maynard, McCrary, McGrew, Eliakim H. Moore, Jesse H. Moore, William Moore, Daniel J. Morrell, Samuel P. Morrill, Negley, O'Neill, Orth, Packard, Packer, Paine, Palmer, Phelps, Poland, Pomeroy, Prosser, Roots, Sandford, Sargent, Sawyer, Scofield, Shanks, Sheldon, John A. Smith, William Smyth, Stevenson, Stokes, Stoughton, Taffe, Tanner, Tillman, Townsend, Twichell, Tyner, Upson, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Whittemore, Wilkinson, Willard, Williams, John T. Wilson, Winans, and Witcher—109.

NAYS—Messrs. Adams, Archer, Axtell, Biggs, Bird, Burr, Cleveland, Dickinson, Eldridge, Golladay, Griswold, Hamill, Holman, Thomas L. Jones, Kerr, Knott, Marshall, Mayham, McCormick, McNeely, Moffet, Mungen, Niblack, Potter, Randall, Reading, Reeves, Rice, Schumaker, Slocum, Stiles, Strader, Swann, Sweeney, Trimble, Van Auken, Van Trump, Voorhees, Wells, Eugene M. Wilson, Winchester, Wood, and Woodward—43.

NOT VOTING—Messrs. Ames, Armstrong, Beatty, Beck, Bennett, Boyd, Brooks, Benjamin F. Butler, Calkin, Clarke, Clinton L. Cobb, Crebs, Deweese, Dixon, Dockery, Fitch, Fox, Getz, Greene, Haight, Haldeman, Hambleton, Hamilton, Hawkins, Hay, Hoag, Ingersoll, Johnson, Lynch, McCarthy, Mercur, Morgan, Morrissey, Peters, Rogers, Schenck, Joseph S. Smith, William J. Smith, Worthington C. Smith, Stone, Strickland, and Van Horn—42.

On the same day Mr. Butler, of Massachuchetts, introduced a bill to repeal an act regulating the tenure of certain civil offices, which was read and passed—yeas 138, nays 16, not voting 40.

In the Senate, on the same day, this House bill was taken up and referred to the Judiciary Committee. On March 16th the committee proposed to strike out the word "repealed," and to insert "suspended until the next session of Congress."

Mr. Trumbull, of Illinois, said: "While the Committee on the Judiciary believed that it was proper that the present Administration should not be embarrassed or obstructed in its efforts to introduce reform into the public service, and to have able and efficient officers to discharge public duties, they were unwilling, after Congress had with such great unanimity adopted this law within the last two years, and adopted it upon the principle that some law of this kind was proper to regulate the civil service, to recommend its absolute repeal; and believing that every thing could be accomplished that is desired by any one by removing this law out of the way for the present and affording an opportunity, after the public service shall have been reformed in this matter of office, to consider the bill disconnected with any pressure for office, they thought it better to recommend the suspension of the act until the next session of Congress, and then Congress can either repeal it or adopt some civil service bill, which, in its judgment, shall be thought to be for the best and permanent interests of the country. It was with this view that the Committee on the Judiciary recommended that, instead of an absolute repeal, the law should be suspended until the next session of Congress."

Mr. Thurman, of Ohio, said: "It is not my purpose to go into an argument of the constitutional question where the power of removal is vested. That question has been argued until I imagine no new light is likely to be shed upon it. I shall not, therefore, go into that discussion, further than to notice the different opinions that have prevailed with respect to it.

"Until lately I supposed there were but two interpretations thought of; one an interpretation that gives to the President the unqualified power of removal, the other an interpretation that requires the concurrence of the Senate in the exercise of the power of removal. Of late I understand that a third interpretation has been suggested, and that is that the President may exercise the power of removal, but subject to such regulations as Congress in its wisdom may prescribe. To my apprehension, sir, this third view of the Constitution is totally inadmissible. Either the power is vested in the President by the Constitution without limit or qualification, or the concurrence of the Senate is made necessary to the exercise of that power. If the Constitution vests the power absolutely in the President, then it is not competent for Congress to restrict, restrain, or limit it. So, if the Constitution vests the power in the President with the concurrence of the Senate, it is equally inadmissible for Congress to restrain or limit or restrict a power thus vested in the President and Senate.

"I do not, therefore, with great deference to those who think differently, suppose that this is a subject for legislation. I suppose that Congress may well enough prescribe a term of office; but I do not suppose that that touches the question where the power of removal resides. Congress may prescribe a term of office; but, if the Constitution vests either in the President alone, or in the President and this body, the right to remove, that power can be exercised notwithstanding it may abridge the incumbency of any individual.

"I say, then, Mr. President, that we are brought simply back to the original question, is the power of removal vested in the President alone, or is the concurrence of the Senate necessary to that power? It is not, in my humble judgment, a question for legislation; it is a question of constitutional interpretation. This being the case, it seems to me that there is but one of two modes to adopt. If, in the opinion of this Senate, the power of removal is vested in the President alone, then the civil Tenure-of-office Act ought to be repealed. If, in the opinion of the Senate, he does not possess that unqualified power, but the assent of the Senate is necessary to a removal, then I submit that the Tenure-of-office Act or some similar law should stand as the law of the land.

"Why, Mr. President, what is it now proposed to do? To take neither one of these interpretations. I understand it to be very truly stated by the Senator from Illinois that a majority of this body believe that the true interpretation of the Constitution requires the concurrence of the Senate in the removal of an officer. If so, I submit to honorable Senators how can they vote to suspend this law? There is one theory upon which they can vote for it very well, one theory upon which they could vote for the repeal of the Tenure-of-office Act, and that is that the President of the United States will obey the Constitution as they understand it; that without any law on the statute-book he will, in every instance, submit to the Senate the question of removal from office. Do Senators expect that? Do they expect that the President will interpret the Constitution as they interpret it, and act upon it as they think it requires? Do they expect that every removal from office will be submitted to this body if the Tenure-of-office Act should be repealed? If they do not expect that, what, then, do they propose to do? Do they propose to suffer the President of the United States to violate the Constitution, according to their interpretation of that instrument; or what will they do should he so violate it? Should he so violate it, and should he be impeached for that violation, what will be their votes on the impeachment? Will they find him guilty or not guilty of an infraction of the Constitution? If they believe that he has no unqualified power of removal, if they believe that the concurrence of this body is necessary in every instance of removal, how can they say that he will be guiltless of a violation of the Constitution if he remove an officer without submitting the question to the Senate? And yet is not that the object of this bill, to suspend this act? Suspend it, why? Suspend it for what? Suspend it that the President of the United States may exercise that absolute and unqualified power of removal that was exercised before the passage of the Tenure-of-office Act.

"Now, sir, it does seem to me that it will be regarded throughout the country, if this bill be passed, that the Senate of the United States interprets the Constitution to mean one thing when one man is President, and interprets it to mean another thing when another man is President; and I do most respectfully submit to this body that it is hardly consistent with its dignity, that it is hardly consistent with the dignity of the Congress of the United States, to pass a law like the Tenure-of-office Act after great and solemn consideration, and the moment that another President is elected and installed into office to suspend that law and make it a dead letter. Let this precedent be set, and what will be the value of the claim of the Senate to a concurrence in the power of removal from office?"

A debate ensued which continued several days and embraced the views advanced on the passage of the original bill (see ANNUAL CYCLOPÆDIA, 1867). It closed with a vote to recommit the report.

On March 24th the committee again reported back the bill, with an amendment, which was to strike out all of the bill after the enacting clause, and to insert the following:

That the first and second sections of an act entitled "An act regulating the tenure of certain civil offices," passed March 2, 1867, be, and the same are hereby,

repealed, and, in lieu of said repealed sections, the following are hereby enacted:

That every person holding any civil office, to which he has been or hereafter may be appointed, by and with the advice and consent of the Senate, and who shall have become duly qualified to act therein, shall be entitled to hold such office during the term for which he shall have been appointed, unless sooner removed, by and with the advice and consent of the Senate, or by the appointment, with the like advice and consent, of a successor in his place, except as herein otherwise provided.

And be it further enacted, That, during any recess of the Senate, the President is hereby empowered, in his discretion, to suspend any civil officer appointed by and with the advice and consent of the Senate, except judges of the United States courts, until the end of the next session of the Senate, and to designate some suitable person, subject to be removed, in his discretion, by the designation of another to perform the duties of such suspended officer in the mean time; and such person so designated shall take the oaths and give the bonds required by law to be taken and given by the suspended officer; and shall, during the time he performs his duties, be entitled to the salary and emoluments of such office, no part of which shall belong to the officer suspended; and it shall be the duty of the President, within thirty days after the commencement of each session of the Senate (except for any office which, in his opinion, ought not to be filled), to nominate persons to fill all vacancies in office which existed at the meeting of the Senate, whether temporarily filled or not, and also in the place of all officers suspended; and if the Senate, during such session, shall refuse to advise and consent to an appointment in the place of any suspended officer, and shall also refuse by vote to assent to his suspension, then, and not otherwise, such officer, at the end of the session, shall be entitled to resume the possession of the office from which he was suspended, and afterward to discharge its duties and receive its emoluments, as though no such suspension had taken place.

The motion to amend was agreed to by the following vote:

YEAS—Messrs. Abbott, Anthony, Boreman, Brownlow, Buckingham, Carpenter, Cattell, Chandler, Conkling, Cragin, Drake, Edmunds, Ferry, Gilbert, Hamlin, Harlan, Harris, Howard, Kellogg, Morrill, Osborn, Patterson, Pratt, Ramsey, Rice, Sawyer, Schurz, Scott, Spencer, Stewart, Sumner, Tipton, Trumbull, Willey, Williams, Wilson, and Yates—37.

NAYS—Messrs. Bayard, Casserly, Davis, Fessenden, Fowler, Grimes, McCreery, McDonald, Norton, Ross, Sprague, Stockton, Thurman, Vickers, and Warner—16.

ABSENT—Messrs. Cameron, Cole, Corbett, Fenton, Howe, Morton, Nye, Pomeroy, Pool, Robertson, Saulsbury, Sherman, and Thayer—16.

Mr. Trumbull, of Illinois, said: "The bill was intended, by the committee who reported it, to remove out of the way of the Executive any embarrassments which it was supposed that the tenure-of-office law interposed to the carrying out of the policy indicated by him of a reform in the civil service of the country, to leave him at liberty to select competent and efficient officers to discharge the duties imposed upon them by law, and, at the same time, to preserve the principle underlying this law, and which is believed, by many Senators, to be a constitutional principle. The bill, as it is reported to the Senate, strikes out from the original tenure-of-office law all those features which prescribed the causes for which persons in office could be suspended, and required the President to communicate to the Senate, at its next meeting after the suspension of the officer, the name of the officer suspended, together with the evidence upon which he was suspended, and the reasons for the suspension. This feature of the Tenure-of-office Act was admitted on all hands to be difficult of execution. It was objected to strongly in the Senate, as putting the President in the position of a prosecutor, requiring him to make out a case against an officer before he could be displaced.

"The bill, as reported, authorizes the President to suspend, in his discretion, any civil officer, during the recess of the Senate, and to substitute in his place some person to perform the duties, who will receive the emoluments for the time being, until the end of the next session of the Senate. In the mean time it is made the duty of the President, within thirty days after the reassembling of the Senate, to communicate to that body a nomination of some person to fill the office from which the officer has been suspended. If the Senate advise and consent to that nomination, that is the end of the matter, and another officer is substituted in lieu of the one who has been suspended. If the person nominated is not satisfactory to the Senate, and it refuses to give its advice and consent to the first person nominated, the President may nominate some other person, and may continue to make nominations during the whole session of the Senate: but, if none of the nominations sent in by the President are confirmed by the Senate, and if the Senate, in addition, shall by vote declare that they disagree to the suspension of the officer, then the bill provides that the suspended officer, at the end of the session, shall resume his office, and afterward receive the emoluments and perform the duties.

"It was said by the Senator from Indiana (Mr. Morton) that there was nothing to prevent the President again suspending the restored officer after the close of the session. It is true that the bill does not provide that the President shall not do this; but has not the Senator from Indiana sufficient confidence in the President to believe that he will carry out the spirit and intention of the law? And would it not be trifling with the legislation of the country, trifling with that oath which the President takes to see that the laws are faithfully executed, if, the moment that, by the execution of the law, an officer was restored to his former position, he should again suspend him? This would be trifling with the statute; and I have altogether too much confidence in the President of the United States to think, for a moment, that he would do, or attempt to do, any such thing. That is not a fair interpretation to be put upon the bill. The presumption is that, when the Senate had distinctly refused to confirm an officer appointed in lieu of a suspended officer, and had also, by its vote, declared that that officer ought not to have been

suspended, no President would think, the moment the Senate had adjourned, in defiance of its action, of again suspending the officer who was by law restored to his former position, unless it was for some cause subsequently arising.

"The bill, then, preserves, as we have reported it, the principle which has been contended for, and which lies at the foundation of the Tenure-of-office Act, and, at the same time, it removes out of the way every obstacle to the President's filling the offices of the country with competent and efficient men; for, if this law were repealed totally, as some insist it ought to be, the President could not fill these offices, except temporarily, but by the consent of the Senate. If we had no tenure-of-office law, all the President could do would be to put into office an individual to occupy the position until the end of the next session of the Senate; it would be but a temporary appointment; but, under the bill as we have reported it, he may designate a person, who will continue to discharge the duties for the same length of time. Therefore, by this bill, there will be no obstacle in the way of the President's selecting such officers as he desires to administer the Government which is not interposed by the Constitution itself, which make the advice and consent of the Senate necessary to these appointments."

The bill was then passed.

In the House, on March 25th, on motion of Mr. Butler, of Massachusetts, the bill and amendments were referred to the Judiciary Committee, yeas 94, nays 79.

On the 26th, this vote was reconsidered without a division, and the House refused to concur, by the following vote:

YEAS—Messrs. Ames, Armstrong, Asper, Bailey, Beaman, Beatty, Benton, Bingham, Boles, Burdett, Roderick R. Butler, Cessna, Churchill, Clinton L. Cobb, Coburn, Cowles, Dixon, Dockery, Donley, Duvall, Ela, Farnsworth, Ferriss, Finkelburg, Garfield, Gilfillan, Hawley, Hill, Hooper, Hotchkiss, Ingersoll, Jenckes, Kelley, Kelsey, Ketcham, Knapp, Ladin, Lash, Lawrence, Lynch, Maynard, McCarthy, McGrew, Mercur, Eliakim H. Moore, William Moore, Packer, Poland, Pomeroy, Prosser, Roots, Sandford, Sargent, Sawyer, Schenck, Scofield, Shanks, William J. Smith, William Smyth, Stevens, Stoughton, Strickland, Taffe, Tillman, Twichell, Ward, Welker, Wheeler, John T. Wilson, and Winans—70.

NAYS—Messrs. Allison, Ambler, Archer, Axtell, Banks, Beck, Biggs, Bird, Blair, Boyd, Brooks, Buffinton, Burr, Benjamin F. Butler, Calkin, Clarke, Cleveland, Amasa Cobb, Cook, Conger, Crebe, Cullom, Davis, Dawes, Deweese, Dickey, Dickinson, Dyer, Eldridge, Ferry, Fisher, Fox, Getz, Golladay, Griswold, Haight, Haldeman, Hambleton, Hawkins, Hay, Heaton, Hoag, Hoar, Holman, Hopkins, Johnson, Alexander H. Jones, Thomas L. Jones, Julian, Kerr, Knott, Logan, Loughridge, Marshall, Mayham, McCrary, McNeely, Moffet, Jesse H. Moore, Morgan, Mungen, Niblack, O'Neill, Orth, Packard, Paine, Palmer, Phelps, Randall, Reading, Reeves, Rice, Rogers, Schumaker, Sheldon, Slocum, John A. Smith, Joseph S. Smith, Stevenson, Swan, Sweeney, Tanner, Townsend, Trimble, Tyner, Upson, Van Horn, Van Trump, Cadwalader C. Washburn, William B. Washburn, Wells, Whittemore, Wilkinson, Williams, Eugene M. Wilson, Winchester, Witcher, Wood, and Woodward—99.

NOT VOTING—Messrs. Adams, Arnell, Benjamin, Bennett, Bowen, Cake, Fitch, Greene, Hale, Hamill, Hamilton, Judd, McCormick, Daniel J. Morrell, Samuel P. Morrill, Morrissey, Negley, Peters, Potter, Worthington C. Smith, Stiles, Stokes, Stone, Strader, Van Auken, Voorhees, and Willard—48.

On March 29th, the Senate refused to recede, by the following vote:

YEAS—Messrs. Bayard, Casserly, Cole, Davis, Fenton, Fessenden, Fowler, Grimes, McCreery, McDonald, Morton, Pool, Robertson, Ross, Sprague, Stockton, Thayer, Thurman, Vickers, and Warner—20.

NAYS—Messrs. Abbott, Anthony, Boreman, Brownlow, Buckingham, Cameron, Carpenter, Cattell, Conkling, Cragin, Drake, Edmunds, Ferry, Gilbert, Hamlin, Harlan, Harris, Howard, Howe, Kellogg, Morrill, Nye, Patterson, Pomeroy, Pratt, Ramsey, Rice, Sawyer, Schurz, Scott, Spencer, Sumner, Tipton, Trumbull, Willey, Williams, and Wilson—37.

ABSENT—Messrs. Chandler, Corbett, Hamilton, Norton, Osborn, Saulsbury, Sherman, Stewart, and Yates—9.

A committee of conference, consisting of Messrs. Trumbull, Edmunds, and Grimes, was appointed on the part of the Senate, and Messrs. Butler, C. C. Washburn, and Bingham, on the part of the House, who recommended the following amendments to the bill.

On March 31st, the committee agreed to report to each House as follows:

That the House of Representatives recede from its disagreement to the Senate amendment, and agree to the same, with the following amendments:

Strike out all after the word "officer" in line twenty-seven of the second section of the Senate amendment to the end of the section, and insert in lieu thereof the following: "Then, and not otherwise, the President shall nominate another person as soon as practicable to said session of the Senate for said office."

Amend section three of the act to which this is an amendment, by inserting after the word "resignation" in line three of said section the words following: "or expiration of term of office."

In the Senate, Mr. Trumbull, of Illinois, said: "As the bill passed the Senate, it will be recollected it provided that if no nomination was confirmed by the Senate in place of a suspended officer during the session, and the Senate by a vote refused to concur in the suspension, then, at the end of the session, the suspended officer should be restored to the office and discharge its duties and receive its emoluments. All this is stricken out by the conference committee, and in lieu of it is inserted that the President shall, as soon as practicable, make another nomination to the Senate. This leaves the law in this shape: the first section of the act provides that all persons appointed by and with the advice and consent of the Senate, except judges, shall hold their offices during the term for which they were appointed, unless sooner removed by and with the advice and consent of the Senate, except as is provided in the next section.

"The second section authorizes the President of the United States, during a recess of the Senate, to suspend from office any officer appointed by and with the advice and consent

of the Senate, until the end of the next session of the Senate, and requires him within thirty days after the meeting of the Senate to make nominations in place of all suspended officers; and now there is added to that a provision that, if such a nomination is not approved, he shall, as soon as practicable, make another nomination, and, as a matter of course, if none of the nominations are approved, his authority to suspend under the law expires with the session, and the old officer takes possession of the office. The only change made is this: as the bill passed the Senate it required a positive affirmative vote on the part of the Senate disagreeing to the suspension before the old officer could go back. As the committee of conference report it, the officer would go back at the end of the session unless somebody else was confirmed in his place. The authority of the President to suspend extends to the end of the session, and no further, and, of course, the old officer then takes possession of the office."

The report was concurred in by the Senate, yeas 42, nays 8; by the House, yeas 108, nays 67.

In the Senate, on March 11th, the Senate bill to strengthen the public credit was taken up. This was the bill passed at the previous session, and which had not been signed by President Johnson.

Mr. Sumner, of Massachusetts, moved to strike out the second section. He said: "Since the action of the Senate at the last session I have had occasion to consider the operation of this section in the light of the recent decision of the Supreme Court of the United States, and I have been led to doubt seriously its practical value. As I understand the recent decision of the Supreme Court, contracts in gold are legal, and you have the authority of the highest judicial tribunal of the land to that effect. What more, then, do you require? Another decision? No. An act of Congress? Why? For myself, sir, I can see no reason why Congress should now intervene in order to give any additional sanction to contracts in gold. On the contrary, I see difficulties. For instance, this section which undertakes to legalize these contracts is an essentially different proposition from that which has the sanction of the Supreme Court. How will you reconcile the two? Do you not, if you pass this section, create a new brood of lawsuits which must ultimately come before the Supreme Court for adjudication? It seems to me that you do."

Mr. Sherman, of Ohio, replied: "The reason now given for this motion, by the Senator from Massachusetts, is, that the Supreme Court have, by a decision, rendered unnecessary the second section. I have examined that decision. The point decided was simply that a contract payable in coin, made before the passage of the Legal-tender Act, could be enforced. It is true the Supreme Court state that two kinds of currency are legalized by Congress, one a currency called lawful money, and the other a currency called coin, and that contracts made in both, or either, are valid. But the real point decided in that case was only that a contract made payable in coin before the passage of the Legal-tender Act, was valid. The reasoning of the decision extends to all contracts made either in coin or in currency. The actual case only raised the first question. The general principle decided seemed to settle the other question; but we know, and the Senator from Massachusetts knows, that a decision made on a question not necessarily involved in the case has not the same weight of authority that a decision of the identical point raised, and necessarily to be decided, has. He has complained very often of the attempt of the Supreme Court to extend the latitude of its decision, in the Dred Scott case, to questions not necessarily involved in that case; and yet now he gives an effect to the decision of the Supreme Court, which I think ought not fairly to be given to any decision of any court. They decided the case before them, and the principle of that decision undoubtedly would make legal and valid all contracts in coin. I think, therefore, it is important, in order to legalize gold contracts and remove all doubts about it, to pass this section."

Mr. Howard, of Michigan, moved to insert the word "written" before the word "contract," which was agreed to. Mr. Pratt, of Indiana, offered the following amendment, which was rejected:

And provided further, That such contracts shall not be valid until the Government shall redeem its United States notes in coin.

The motion of Mr. Sumner, to strike out the second section, was agreed to by the following vote:

YEAS—Messrs. Bayard, Boreman, Carpenter, Casserly, Conkling, Corbett, Cragin, Ferry, Fessenden, Gilbert, Harris, Kellogg, McDonald, Norton, Nye, Pratt, Robertson, Sawyer, Schurz, Scott, Sprague, Stewart, Stockton, Sumner, Thurman, Trumbull, Vickers, and Wilson—28.

NAYS—Messrs. Abbott, Anthony, Brownlow, Drake, Grimes, Hamlin, Morrill, Morton, Osborne, Patterson, Ramsey, Ross, Sherman, Warner, and Williams—15.

ABSENT—Messrs. Buckingham, Cameron, Cattell, Chandler, Cole, Davis, Edmunds, Fenton, Fowler, Harlan, Howard, Howe, McCreery, Pomeroy, Pool, Rice, Saulsbury, Spencer, Thayer, Tipton, Willey, and Yates—22.

Mr. Thurman, of Ohio, offered the following amendment:

Provided, That nothing herein contained shall apply to the obligations commonly called five-twenty bonds.

It was rejected by the following vote:

YEAS—Messrs. Bayard, Boreman, Casserly, Morton, Norton, Osborn, Pratt, Ross, Sprague, Stockton, Thurman, and Vickers—12.

NAYS—Messrs. Abbott, Anthony, Brownlow, Carpenter, Conkling, Corbett, Cragin, Drake, Fenton, Ferry, Gilbert, Grimes, Hamlin, Harris, Kellogg, McDonald, Morrill, Nye, Patterson, Ramsey, Sawyer, Schurz, Scott, Sherman, Stewart, Sumner, Tipton, Trumbull, Warner, Williams, and Wilson—31.

ABSENT—Messrs. Buckingham, Cameron, Cattell, Chandler, Cole, Davis, Edmunds, Fessenden, Fowler, Harlan, Howard, Howe, McCreery, Pomeroy, Pool, Rice, Robertson, Saulsbury, Spencer, Thayer, Willey, and Yates—22.

Mr. Morton, of Indiana, moved to strike out the words "authorizing the issue of any such obligation," which was rejected—yeas 14, nays 32.

In the House, on March 12th, the original bill was taken up, and the second section struck out, and the bill passed by the following vote:

YEAS—Messrs. Allison, Ambler, Ames, Armstrong, Arnell, Asper, Axtell, Bailey, Banks, Beaman, Benjamin, Bennett, Bingham, Blair, Boles, Boyd, Buffinton, Burdett, Cessna, Churchill, Clinton L. Cobb, Cook, Conger, Cowles, Cullom, Dawes, Donley, Duvall, Dyer, Farnsworth, Ferriss, Ferry, Finkelburg, Fisher, Fitch, Garfield, Gilfillan, Hale, Hawley, Heaton, Hoar, Hooper, Hotchkiss, Jenckes, Alexander H. Jones, Judd, Julian, Kelsey, Ketcham, Knapp, Laflin, Lash, Lawrence, Lynch, Maynard, McCrary, McGrew, Mercur, Jesse H. Moore, William Moore, Samuel P. Morrill, Negley, O'Neill, Packard, Paine, Palmer, Phelps, Poland, Pomeroy, Prosser, Roots, Sandford, Sargent, Sawyer, Schenck, Scofield, Sheldon, John A. Smith, Worthington C. Smith, William Smyth, Stokes, Stoughton, Strickland, Tanner, Tillman, Twichell, Upson, Van Horn, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Whittemore, Wilkinson, Willard, Williams, and Winans—98.

NAYS—Messrs. Archer, Beatty, Beck, Biggs, Bird, Burr, Benjamin F. Butler, Roderick R. Butler, Amasa Cobb, Coburn, Crebs, Deweese, Dickinson, Eldridge, Getz, Golladay, Hawkins, Holman, Hopkins, Johnson, Thomas L. Jones, Kerr, Knott, Marshall, Mayham, McCormick, McNeely, Moffett, Mungen, Niblack, Orth, Reading Reeves, Rice, Shanks, Joseph S. Smith, Stiles, Stone, Strader, Sweeney, Taffe, Trimble, Tyner, Van Trump, John T. Wilson, Winchester, and Woodward—47.

NOT VOTING—Messrs. Adams, Boutwell, Bowen, Brooks, Cake, Calkin, Clarke, Cleveland, Davis, Dickey, Dixon, Dockery, Fox, Greene, Griswold, Haight, Haldeman, Hambleton, Hamill, Hamilton, Hay, Hill, Hoag, Ingersoll, Kelley, Logan, Loughridge, McCarthy, Eliakim H. Moore, Morgan, Daniel J. Morrell, Morrissey, Packer, Peters, Potter, Randall, Rogers, Roots, Schumaker, Slocum, William J. Smith, Stevenson, Swann, Townsend, Van Auken, Voorhees, Wells, Eugene M. Wilson, Witcher, and Wood—49.

On motion of Mr. Schenck, of Ohio, the title was amended so as to read, "An act to strengthen the public credit of the United States."

On March 15th, the above-mentioned bill was taken up in the Senate, and substituted for the Senate bill.

Mr. Davis, of Kentucky, offered the following amendment, which was, to strike out all after the enacting clause of the bill, and to insert:

That the just and equitable measure of the obligation of the United States upon their outstanding bonds, which were issued and sold as a means of borrowing money, is the value at the time in gold and silver coin of the paper currency advanced and paid to the Government on those bonds.

It was rejected.

Mr. Vickers, of Maryland, offered the following proviso:

Provided, That nothing herein contained shall be considered as binding the Government to purchase coin to pay the bonds of the Government not expressly provided by law to be paid in coin, if there shall not be coin or its equivalent in the Treasury with which to discharge the said obligations.

It was rejected.

The bill was then passed, without amendment, by the following vote:

YEAS—Messrs. Abbott, Anthony, Boreman, Brownlow, Cameron, Cattell, Chandler, Conkling, Corbett, Cragin, Drake, Edmunds, Fenton, Ferry, Fessenden, Gilbert, Grimes, Harris, Howard, Kellogg, McDonald, Morrill, Nye, Patterson, Pool, Pratt, Ramsey, Robertson, Sawyer, Schurz, Scott, Sherman, Stewart, Sumner, Thayer, Tipton, Trumbull, Warner, Willey, Williams, Wilson, and Yates—42.

NAYS—Messrs. Bayard, Carpenter, Casserly, Cole, Davis, Morton, Osborn, Rice, Ross, Spencer, Stockton, Thurman, and Vickers—13.

ABSENT—Messrs. Buckingham, Fowler, Hamlin, Harlan, Howe, McCreery, Norton, Pomeroy, Saulsbury, and Sprague—10.

In the House, on March 22d, Mr. Johnson, of California, asked the unanimous consent of the House to offer the following resolution:

Resolved, That in passing the resolution for the fifteenth amendment to the Constitution of the United States this House never intended that Chinese or Mongolians should become voters.

He then moved to suspend the rules, and demanded the yeas and nays, which were as follows:

YEAS—Messrs. Archer, Axtell, Bird, Brooks, Burr, Calkin, Crebs, Dickinson, Eldridge, Fitch, Golladay, Haight, Haldeman, Hambleton, Hamill, Hawkins, Holman, Johnson, Thomas L. Jones, Kerr, Knott, Mayham, McNeely, Potter, Randall, Reading, Reeves, Sargent, Slocum, Joseph S. Smith, William J. Smith, Stiles, Stone, Strader, Swann, Van Auken, Van Trump, Wells, Eugene M. Wilson, Winchester, Wood, and Woodward—42.

NAYS—Messrs. Allison, Ambler, Arnell, Asper, Bailey, Beaman, Beatty, Benjamin, Benton, Bingham, Blair, Bowen, Boyd, Buffinton, Burdett, Benjamin F. Butler, Cessna, Churchill, Clarke, Amasa Cobb, Clinton L. Cobb, Cook, Conger, Cowles, Davis, Dawes, Dickey, Dixon, Dockery, Duvall, Ferriss, Ferry, Finkelburg, Garfield, Gilfillan, Greene, Hawley, Hay, Hoar, Hooper, Hopkins, Hotchkiss, Ingersoll, Jenckes, Alexander H. Jones, Julian, Kelley, Kelsey, Knapp, Laflin, Lash, Lawrence, Loughridge, Lynch, Maynard, McCarthy, McCrary, McGrew, Mercur, Eliakim H. Moore, Jesse H. Moore, William Moore, Daniel J. Morrell, Samuel P. Morrill, Negley, O'Neill, Orth, Packard, Packer, Paine, Palmer, Peters, Phelps, Poland, Pomeroy, Prosser, Rogers, Roots, Sandford, Sawyer, Schenck, Scofield, Shanks, Sheldon, John A. Smith, Stevens, Stevenson, Stokes, Stoughton, Strickland, Taffe, Tanner, Tillman, Townsend, Twichell, Tyner, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Whittemore, Wilkinson, Willard, Williams, John T. Wilson, and Winans—106.

NOT VOTING—Messrs. Adams, Ames, Armstrong, Banks, Beck, Bennett, Biggs, Boles, Roderick R. Butler, Cake, Cleveland, Coburn, Cullom, Deweese, Donley, Dyer, Ela, Farnsworth, Fisher, Fox, Getz, Griswold, Hale, Hamilton, Heaton, Hill, Hoag, Judd, Ketcham, Logan, Marshall, McCormick, Moffet, Morgan, Morrissey, Mungen, Niblack, Rice, Schumaker, Worthington C. Smith, William Smyth, Sweeney, Trimble, Upson, Van Horn, Voorhees, Wheeler, and Witcher—48.

So the House refused to suspend the rules.

In the House, on April 7th, the following message was received from President Grant:

To the Senate and House of Representatives:

While I am aware that the time in which Congress proposes now to remain in session is very brief, and that it is its desire, as far as is consistent with the public interest, to avoid entering upon the general business of legislation, there is one subject which concerns so deeply the welfare of the country that I deem it my duty to bring it before you.

I have no doubt that you will concur with me in the opinion that it is desirable to restore the States which were engaged in the rebellion to their proper relations to the Government and the country at as early a period as the people of those States shall be found willing to become peaceful and orderly communities, and to adopt and maintain such constitutions and laws as will effectually secure the civil and political rights of all persons within their borders. The authority of the United States, which has been vindicated and established by its military power, must, undoubtedly, be asserted for the absolute protection of all its citizens in the full enjoyment of the freedom and security which is the object of a republican government. But, whenever the people of a rebellious State are ready to enter, in good faith, upon the accomplishment of this object, in entire conformity with the constitutional authority of Congress, it is certainly desirable that all causes of irritation should be removed as promptly as possible, that a more perfect union may be established, and the country be restored to peace and prosperity.

The convention of the people of Virginia, which met in Richmond on Tuesday, December 3, 1867, framed a constitution for that State, which was adopted by the convention on the 17th of April, 1868, and I desire respectfully to call the attention of Congress to the propriety of providing by law for the holding of an election in that State at some time during the months of May and June next, under the direction of the military commander of that district, at which the question of the adoption of that constitution shall be submitted to the citizens of the State; and if this should seem desirable, I would recommend that a separate vote be taken upon such parts as may be thought expedient, and that, at the same time and under the same authority, there shall be an election for the officers provided under such constitution, and that the constitution, or such parts thereof as shall have been adopted by the people, be submitted to Congress on the first Monday of December next for its consideration, so that, if the same is then approved the necessary steps will have been taken for the restoration of the State of Virginia to its proper relations to the Union. I am led to make this recommendation from the confident hope and belief that the people of that State are now ready to cooperate with the national Government in bringing it again into such relations to the Union as it ought as soon as possible to establish and maintain, and to give to all its people those equal rights under the law which were asserted in the Declaration of Independence in the words of one of the most illustrious of its sons.

I desire also to ask the consideration of Congress to the question whether there is not just ground for believing that the constitution framed by a convention of the people of Mississippi for that State and once rejected, might not be again submitted to the people of that State in like manner, and with the probability of the same result. U. S. GRANT.

WASHINGTON, D. C., *April* 7, 1869.

On April 8th, Mr. Butler, of Massachusetts, from the Committee on Reconstruction, reported the following bill:

A bill authorizing the submission of the constitutions of Virginia, Mississippi, and Texas, to a vote of the people, and authorizing the election of State officers provided by the said constitution, and members of Congress.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States, at such time as he may deem best for the public interest, may submit the constitution which was framed by the convention which met in Richmond, Virginia, on Tuesday, the 3d day of December, 1867, to the registered voters of said State, for ratification or rejection; and may also submit to a separate vote such provisions of said constitution as he may deem best.

SEC. 2. *And be it further enacted*, That at the same election the voters of said State may vote for and elect members of the General Assembly of said State, and all the officers of said State provided for by the said constitution, and for members of Congress; and the officer commanding the district of Virginia shall cause the lists of registered voters of said State to be revised and corrected prior to such election, and for that purpose may appoint such registrars as he may deem necessary. And said elections shall be held and returns thereof made in the manner provided by the election ordinance adopted by the convention which framed said constitution.

SEC. 3. *And be it further enacted*, That the President of the United States may in like manner submit the constitution of Texas to the voters of said State at such time and in such manner as he may direct, either the entire constitution or separate provisions of the same, to a separate vote, and at the same election the voters may vote for and elect the members of the Legislature and all the State officers provided for in said constitution, and members of Congress: *Provided also*, That no election shall be held in said State of Texas for any purpose till the President so directs.

SEC. 4. *And be it further enacted*, That the President of the United States may in like manner resubmit the constitution of Mississippi to the voters of said State, at such time and in such manner as he may direct, either the entire constitution or separate provisions of the same to a separate vote, and at the same election the voters may vote for and elect the members of the Legislature and all the State officers provided for in said constitution, and members of Congress.

SEC. 5. *And be it further enacted*, That if either of said constitutions shall be ratified at such election the Legislature of the State so ratifying, elected as provided for in this bill, shall assemble at the capital of said States respectively on the fourth Tuesday after the official promulgation of such ratification by the military officer commanding in said State.

SEC. 6. *And be it further enacted*, That in either of said States the commanding general, subject to the approval of the President of the United States, may suspend, until the action of the Legislatures elected under their constitutions respectively, all laws that he may deem unjust and oppressive to the people.

Mr. Butler, of Massachusetts, said: "The first section provides that the President of the United States may, at such time and in such manner as he may deem best for the public service, submit to the people of Virginia the constitution framed by the convention of that State, and may submit any separate clause of that constitution to a like vote.

"The second section provides that the voters of Virginia may at the same time elect State officers and members of Congress; that the registration may be corrected for that purpose, and that the commanding general may appoint registrars and judges of election as may be necessary.

"The third section provides that the President may in like manner submit the constitution of the State of Mississippi to the voters of that State with like effect and under like circumstances.

"The fourth section provides that the President may submit the constitution of the State of Texas, at such time as he may deem fit for the public service, to a vote of the registered voters, who at the same time may vote for State officers and members of Congress.

"The sixth section provides that in the mean time the military commander, with the approval of the President, may suspend any obnoxious, oppressive, and unjust laws. This last provision is principally levelled against the unjust poll-tax in Mississippi, and two or three laws kindred thereto as to the collection of debts. I myself am of opinion that the district commander under the reconstruction act may have that power now; but as there has been doubt raised with regard to it, and as the district commanders have expressed their doubts, the committee have reported this provision.

"That, in a word, is all the bill. It allows the President in these States, when he deems it best for the public service, to submit the constitutions which have been heretofore prepared to a vote of the people, but it provides that there shall be no vote in any of the States except when he so directs; and when he submits the constitution they vote in all these States for State officers and members of Congress, and all unjust and oppressive laws may be suspended, until the Legislatures can act upon them."

Mr. Garfield, of Ohio, moved to amend the bill, by adding at the end of the first section the following:

Such vote to be taken either upon each of said provisions alone or in connection with the other provisions of said Constitution, as the President may direct—

which was agreed to.

Mr. Butler, of Massachusetts, moved to amend section three by inserting after the words "provisions of the same" the words "as provided in the first section of this act," which was agreed to.

The bill was then passed, by the following vote:

YEAS—Messrs. Allison, Ambler, Armstrong, Arnell, Axtell, Bailey, Banks, Beaman, Beatty, Beck, Bingham, Blair, Boles, Bowen, Brooks, Buffinton, Burdett, Benjamin F. Butler, Roderick R. Butler, Calkin, Cessna, Churchill, Clarke, Amasa Cobb, Clinton L. Cobb, Coburn, Cook, Conger, Crebs, Cullom, Davis, Dawes, Deweese, Dickey, Dickinson, Dixon, Dockery, Donley, Duvall, Ela, Farnsworth, Ferriss, Ferry, Finkelburg, Fisher, Fitch, Garfield, Gilfillan, Hale, Hawley, Hay, Heaton, Hill, Hoar, Hoge, Hopkins, Hotchkiss, Ingersoll, Jenckes, Alexander H. Jones, Judd, Julian, Kelley, Kelsey, Ketcham, Knapp, Laflin, Lash, Lawrence, Logan, Loughridge, Lynch, McCarthy, McCormick, McCrary, McGrew, William Moore, Morgan, Daniel J. Morrell, Samuel P. Morrill, Negley, O'Neill, Orth, Packard, Packer, Paine, Palmer, Phelps, Poland, Pomeroy, Prosser, Roots, Sandford, Sawyer, Schenck, Scofield, Shanks, Sheldon, Slocum, John A. Smith, William J. Smith, William Smyth, Stevens, Stevenson, Stokes, Stoughton, Strickland, Tanner, Tillman, Townsend, Tyner, Upson, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Whittemore, Wilkinson, Willard, Williams, John T. Wilson, Winans, Witcher, and Woodward—125.

NAYS—Messrs. Adams, Archer, Biggs, Bird, Burr, Cleveland, Eldridge, Getz, Golladay, Haldeman, Hamill, Holman, Thomas L. Jones, Kerr, Knott, McNeely, Moffet, Niblack, Potter, Randall, Reeves, Sweeney, Trimble, Wells, and Winchester—25.

NOT VOTING—Messrs. Ames, Asper, Benjamin, Bennett, Benton, Boyd, Cake, Cowles, Dyer, Fox, Greene, Griswold, Haight, Hambleton, Hamilton, Hawkins, Hoag, Hooper, Johnson, Marshall, Mayham, Maynard, Mercur, Eliakim H. Moore, Jesse H. Moore, Morrissey, Mungen, Peters, Reading, Rice, Rogers, Sargent, Schumaker, Joseph S. Smith, Worthington C. Smith, Stiles, Stone, Strader, Swann, Taffe, Twichell, Van Auken, Van Horn, Van Trump, Voorhees, Eugene M. Wilson, and Wood—47.

In the Senate, on April 9th, Mr. Morton, of Indiana, offered the following amendment to the preceding bill:

And be it further enacted, That, before the States of Virginia, Mississippi, and Texas, shall be admitted to representation in Congress, their several Legislatures which may be hereafter lawfully organized shall ratify the fifteenth article which has been proposed by Congress to the several States as an amendment to the Constitution of the United States.

Mr. Morton said: "So far as I am concerned, I would rather see this bill fail than to pass without this amendment attached to it. I would rather see the whole matter go over until the next session of Congress. I will speak frankly here on the subject. I know what the expectation of the opposing party is. They know the prejudice that has existed in the Western States in regard to negro suffrage, and I know that the Democratic party desire to keep this question open as an element of political success in the elections of 1870 and of 1872. Look at what has taken place in the State of Indiana. The Democratic party in the State of Indiana, for the purpose of preventing the Legislature, which has a large majority of Republicans in both Houses, from ratifying the amendment, and to keep it as an open question, broke up the Legislature by every man of them resigning. That Legislature was called together again yesterday, and I am advised that, the very moment the amendment is presented, the Democratic members will again resign. They have made the calculation that without the votes of Virginia, of Texas, and of Mississippi, the amendment cannot be ratified unless it receives the vote of Indiana. Indiana they regard, therefore, as the pivotal State upon which the ratification of the amendment is to turn; but if it shall be ratified by these three unreconstructed States, it will then become a part of the Constitution without the vote of Indiana, and the revolutionary measure that has been adopted in the State of Indiana will not be successful after all.

"Now, sir, if we shall make the ratification of the fifteenth article a condition of the reconstruction of these States just as we did the ratification of the fourteenth article, these States will accept it at once, they will ratify it without a moment's delay, and then it will become

a part of the Constitution; the question will be taken out of our politics forever, and the Democratic revolution in Indiana will have failed; otherwise this question will be kept open during the elections of 1870 and 1872. Therefore, I repeat, I would rather see this bill fail, and the whole matter go over until the next session of Congress, than to have it pass without this amendment. Sir, it is right in itself. There is no breach of faith involved. It is of vast importance to the country, and it is of vast importance to the party to which I claim to belong. If the people of the Southern States, in coming in, are not willing to put this amendment into the Constitution of the United States, it will be proof that they are not accepting their State constitutions in good faith, and that they are relying upon subsequently amending their State constitutions so as to strike colored suffrage from them.

"In every point of view this amendment is right, proper, and necessary; and I trust that no member of the Senate who is a friend to the fifteenth article will refuse to vote to put it on this bill."

Mr. Thurman, of Ohio, said: "Mr. President, this is not a question that concerns Virginia, Mississippi, and Texas, alone; it is a question that concerns every State in the Union whether the proposed fifteenth amendment shall be a part of the Constitution of the United States. Now, what is proposed to be done? The power given to Congress is simply a power to propose amendments, and when Congress has executed that power it is *functus officio*, as the lawyers say; it has no right whatsoever to coerce the States into action on them. The States are entitled to their free and unbiassed judgment upon the proposition that Congress is authorized to submit. The power of Congress is at an end when it has made the proposition. But now the Senator from Indiana proposes that Congress shall not only propose an amendment to the Constitution, but that Congress shall coerce three States into the adoption of that amendment, not for themselves alone, but for every State in this Union; that they shall force that constitutional amendment, not simply upon Virginia, Mississippi, and Texas, but upon Ohio, Indiana, and Illinois as well, whatever may be the opinion of the three last-named States.

"When you coerce Virginia, Mississippi, and Texas, to put this article in the Constitution of the United States, to vote for it as a part of the Constitution of the United States, you do not coerce them alone. You coerce Ohio, you coerce Indiana, you coerce Illinois, you coerce every State whose people are unwilling to adopt the amendment."

The yeas and nays were ordered, and, being taken, resulted as follows:

YEAS—Messrs. Abbott, Brownlow, Buckingham, Carpenter, Chandler, Cole, Drake, Harris, Howard, McDonald, Morrill, Morton, Nye, Osborn, Pool, Pratt, Ramsey, Rice, Robertson, Ross, Schurz, Sherman, Stewart, Sumner, Thayer, Tipton, Warner, Williams, Wilson, and Yates—30.

NAYS—Messrs. Anthony, Bayard, Boreman, Casserly, Conkling, Davis, Edmunds, Fenton, Ferry, Fessenden, Fowler, McCreery, Norton, Patterson, Sawyer, Sprague, Stockton, Thurman, Trumbull, and Willey—20.

ABSENT—Messrs. Cameron, Cattell, Corbett, Cragin, Gilbert, Grimes, Hamilton, Hamlin, Harlan, Howe, Kellogg, Pomeroy, Saulsbury, Scott, Spencer, and Vickers—16.

So the amendment was agreed to.

Mr. Trumbull, of Illinois, said: "I move, in line seven of section one, to insert the word 'then' before 'registered,' so that the constitution shall be submitted at a time to be designated by the President to 'the then registered voters.'"

The President *pro tempore:* "That amendment will be made if there be no objection. It is a verbal amendment."

Mr. Trumbull: "I move, in section two, line seven, after the word 'revised' to insert the word 'enlarged.'"

The President *pro tempore:* "That amendment will be considered as adopted if there be no objection."

Mr. Trumbull: "Then I move, after the word 'election' in the same line, to insert the words 'according to law.' The reconstruction acts already provide how this is to be done."

The President *pro tempore:* "That amendment will be considered as adopted if there be no objection."

Mr. Trumbull: "I move to strike out in lines ten and eleven of the second section the words 'election ordinance adopted by the convention which framed said constitution,' and to insert the words 'acts of Congress commonly called the reconstruction acts;' so that the clause will read:

> And said election shall be held and returns thereof made in the manner provided by the acts of Congress commonly called the reconstruction acts."

The amendment was agreed to.

Mr. Trumbull: "There is another slight amendment that I wish to offer. In line four of section five the word 'States' should be 'State,' and the word 'respectively' ought to be stricken out."

The President *pro tempore:* "Those amendments will be made, being verbal."

Mr. Trumbull: "In section six, lines four and five, the word 'respectively' should be stricken out."

The President *pro tempore:* "That amendment will be made."

The bill was then further amended by striking out the sixth section. On motion of Mr. Edmunds, the following additional section was adopted:

> *And be it further enacted*, That the proceedings in any of said States shall not be deemed final or operate as a complete restoration thereof until their action respectively shall be approved by Congress.

The first section was further amended by striking out the words "registered voters of

said State," and inserting "voters of said State registered at the date of said submission."

Mr. Stockton, of New Jersey, said: "Under what principle, I ask, can you deprive a sovereign State of representation when you admit that it is sovereign? You have defended yourselves heretofore by saying that these States were not in the Union, that they needed reconstruction; but now, remember, you reconstruct them first, and then you do not say that they are not reconstructed; you do not say that they are not legal States; you do not say in your amendment that they are not a part of the Union, that their State governments cannot work regularly, but simply that they shall not be entitled to representation. How are they to be entitled to representation? Has General Longstreet entitled himself to office and to have his disabilities removed? Are they to bathe in Jordan? Is that the only way? Abana and Pharpar are rivers of Damascus; but they are not the river Jordan. They must bathe in the pool of your party politics before they can be cleansed. They are to join with you in assisting to strike out the word 'white' from the constitutions of the Northern States. They are to be forced to do this under the amending clause of the Constitution which requires a ratification by sovereign States. Do you suppose that your fifteenth amendment will ever become a part of the Constitution of this country under this bill? Never. The ratification thus forced is unconstitutional. The means of altering the compact made by sovereign States is provided in the instrument itself, and that is a ratification; and that ratification requires that every State shall have a free choice and a free vote; and when you say to your slaves, when you say to the Southern States, 'We have conquered you; you are conquered provinces; we have entered upon and possessed your land; you are slaves of our sword and our spear; you can only be admitted to the position of freemen again by ratifying this constitutional amendment,' do you allow them a free vote? No, sir; they are powerless. They cannot ratify it. Can they assist you in striking the word 'white' out of the constitution of my State without a free choice at all, without being States themselves even on your own theory? No, Mr. President."

Mr. Bayard, of Delaware, said: "The fifteenth amendment to the Constitution is plainly, to my mind, the most dangerous claim of power, the most destructive to the system of our Government, that ever was or could be devised. If I know aught of the Government under which we live, it is the elective franchise, it is the process of carrying on Government by the elective system that marks it from its first organization to its last act. It is a power that must be, in the very nature of things, the controlling power, because the election is your test of power, of law in every shape, and at every stage of your country's Government. That power you propose to take from the States and deposit with the Federal Government, to consolidate the power of all powers, that which underlies and creates all other powers; and that you propose to place in the hands of Congress! There never was a graver question, there never was an act which will affect the whole structure and genius of our Government to the extent that this must, should it succeed in obtaining the consent of the people of this country.

"It has been demonstrated before this Senate, in a manner that could not be and has not been replied to, by my honorable friend, the Senator from Ohio (Mr. Thurman), that by the amendment of the honorable Senator from Indiana (Mr. Morton) you do coerce the choice not only of the Southern States, which is a barefaced act of simple power, but you coerce the sentiment of every Northern State under your pretended power of governing the Southern States. Talk of the free choice of Indiana or Ohio or New York! What is it when Congress can by law insist that the votes of certain States shall be cast in opposition to it? All freedom is gone. Sir, when Congress adopts such a measure as this, it is doing nothing less than playing with cogged dice. It is the intention, therefore, by a measure like this to destroy, first, all shadow of freedom in the exercise of their opinions by the people of these three States, and next, having destroyed that, to make their votes the instrument whereby you crush out the sentiment of the Northern States. *Per fas aut nefas* seems to me to be the rule by which this amendment is to be forced upon the American people; and the question will yet come up—it cannot be long kept down—how any law, how any amendment obtained by means like this, can be held binding upon the conscience of a people who have neither the sense nor the manhood to remain free."

The bill, as amended, was passed by the following vote:

YEAS—Messrs. Abbott, Boreman, Brownlow, Buckingham, Carpenter, Cattell, Chandler, Cole, Conkling, Corbett, Cragin, Drake, Fenton, Ferry, Fessenden, Hamlin, Harris, Howard, Howe, McDonald, Morrill, Morton, Nye, Patterson, Pomeroy, Pratt, Ramsey, Rice, Robertson, Ross, Sawyer, Schurz, Scott, Sherman, Spencer, Stewart, Sumner, Thayer, Tipton, Trumbull, Warner, Willey, Williams, and Wilson—44.

NAYS—Messrs. Bayard, Casserly, Davis, Fowler, McCreery, Norton, Sprague, Stockton, and Thurman—9.

ABSENT—Messrs. Anthony, Cameron, Edmunds, Gilbert, Grimes, Hamilton, Harlan, Kellogg, Osborn, Pool, Saulsbury, Vickers, and Yates—13.

The House concurred in the amendments of the Senate.

In the House, on April 9th, Mr. Banks, of Massachusetts, offered the following resolution:

Resolved by the House of Representatives, That the people of the United States sympathize with the people of Cuba in their patriotic efforts to secure their independence and establish a republican form of gov-

ernment, guaranteeing the personal liberty and the equal political rights of all the people; and the House of Representatives will give its constitutional support to the President of the United States whenever, in his opinion, a republican government shall have been in fact established, and he may deem it expedient to recognize the independence and sovereignty of such republican government.

The rules were suspended by the following vote:

YEAS—Messrs. Allison, Ambler, Ames, Archer, Armstrong, Asper, Axtell, Banks, Beatty, Bingham, Blair, Boyd, Brooks, Buffinton, Burdett, Benjamin F. Butler, Roderick R. Butler, Cessna, Churchill, Clarke, Amasa Cobb, Clinton L. Cobb, Coburn, Conger, Deweese, Dickinson, Dockery, Donley, Duval, Ferriss, Ferry, Finkelburg, Garfield, Getz, Gilfillan, Hawley, Hay, Heaton, Hill, Hoge, Holman, Hopkins, Hotchkiss, Ingersoll, Jenckes, Alexander H. Jones, Thomas L. Jones, Judd, Julian, Kelley, Knapp, Lash, Lawrence, Logan, Loughridge, Lynch, Maynard, McCarthy, McGrew, Mercur, Daniel J. Morrill, Myers, Negley, O'Neill, Orth, Packard, Phelps, Pomeroy, Prosser, Roots, Sawyer, Scofield, Shanks, Lionel A. Sheldon, Porter Sheldon, John A. Smith, Worthington C. Smith, Stevenson, Stokes, Stoughton, Taffe, Tanner, Tillman, Trimble, Twichell, Tyner, Upson, Van Horn, Voorhees, Ward, Cadwalader C. Washburn, Welker, Whittemore, Wilkinson, Williams, John T. Wilson, Winans, and Witcher—98.

NAYS—Messrs. Adams, Beaman, Biggs, Burr, Cleveland, Davis, Eldridge, Golladay, Hale, Hawkins, Kerr, Niblack, Packer, Paine, Poland, Rogers, Sargent, Stevens, Sweeney, Townsend, Van Trump, Wells, Willard, Eugene M. Wilson, and Winchester—25.

NOT VOTING—Messrs. Arnell, Bailey, Beck, Benjamin, Bennett, Benton, Bird, Boles, Bowen, Cake, Calkin, Cook, Cowles, Crebs, Cullom, Dawes, Dickey, Dixon, Dyer, Ela, Farnsworth, Fisher, Fitch, Fox, Greene, Griswold, Haight, Haldeman, Hambleton, Hamill, Hamilton, Hosg, Hoar, Hooper, Johnson, Kellogg, Kelsey, Ketcham, Knott, Laflin, Marshall, Mayham, McCormick, McCrary, McNeely, Eliakim H. Moore, Jesse H. Moore, William Moore, Morgan, Samuel P. Morrill, Morrissey, Mungen, Palmer, Peters, Potter, Randall, Reading, Reeves, Rice, Sanford, Schenck, Schumaker, Slocum, Joseph S. Smith, William J. Smith, William Smyth, Starkweather, Stiles, Stone, Strader, Strickland, Strong, Swann, Van Auken, William B. Washburn, Wheeler, Wood, and Woodward—78.

The resolution was then agreed to.

In the Senate, on the withdrawal of the Vice-President, Mr. Anthony, of Rhode Island, was chosen President *pro tem.*

This session of Congress closed on April 10th.

CONNECTICUT. The public affairs of this State during the year have pursued their regular course, with a marked tendency to improvement in several departments.

The condition of the finances appears to be satisfactory. The State funded debt was, last year, reduced by $349,244.61, the whole amount of her liabilities over the assets on April 1, 1869, being $6,974,992.10. The value of taxable property for 1869 had also increased by nearly eight millions over that assessed for 1868.

The entire receipts of the State during the last year were $2,380,790.42; of which $757,286.10 came from the two and one-half mill tax, $432,199.64 from savings-banks, $228,308.94 from railroad corporations, $126,400.81 from mutual insurance companies, $287,000 from sale of bank stocks, $204,386.28 from bank dividends, and the balance from miscellaneous sources.

The total expenditures for the year were $2,526,045.81. Of this $799,900 were for the redemption of bonds, $492,628 were for interest on the public debt, $201,250 for public buildings and institutions, and $117,154.65 for the maintenance of soldiers' children.

Claims of the State against the General Government, amounting to more than $200,000, have been so far disallowed. Under the new views held in the Treasury Department, however, it is anticipated that, if properly presented, they will be recognized and paid.

The number of men available for military duty in the State is 83,185; but its actually organized military force is composed of 3,691 men, commanded by 169 officers. The cost of this military establishment, last year, was $113,097; but the actual expenditure of the State on that account was only $52,463.94, the remaining $60,634 of that sum having been made up and paid from commutation taxes.

Public schools are well provided for in Connecticut. Their condition and cost to the State are shown by the detailed report of the Secretary of the Board of Education for 1868, which states that "there are 1,572 districts, a decrease of 18 from last year. There are 1,640 public schools, a decrease of five. The number of children in 1868 was 123,650, and in 1869, 124,082, an increase of 432. Average number in each district between the ages of 4 and 16 years of age, January, 1869, 79. Whole number of scholars registered in winter, 82,140; in summer, 75,177. Number of teachers in summer, 2,207; in winter, 2,225, of whom 651 never taught before. Average wages of male teachers $56.64 per month, including board; of females, $26.93. Twenty-nine new schoolhouses were erected during the year; whole number of graded schools, 203; number of school-houses in good condition, 877; in fair condition, 458; in poor condition, 304. Capital of the school fund, $2,046,108.87; revenue of same in 1868, $136,015; in 1869, $124,082. The first year there was a dividend of $1.10 per child; last year, $1.00. Capital of town deposit fund, $763,661.83; revenue from same, $43,985.75. Amount raised for school by town tax, $160,347.35; increase for the year, $10,666.36. Amount raised by district tax, $467,804.77; increase, $872.87. Total amount received for public schools from all sources, $1,043,086.71; increase, $59,280.39."

The better to provide the common schools with competent teachers, purposely trained to the performance of their duties, the Governor, in his message to the General Assembly, warmly recommended the reëstablishment of the State Normal School, which had been for some years discontinued; representing such a meas-

ure as both needed for the advancement of the general interests of the State, and wished for by all those who are at all conversant with the subject. He suggested also "the expediency of adding to the Normal School, or to the Scientific School at New Haven, or of aiding in the establishment elsewhere, if opportunity presents, a Polytechnic Institute, which shall give theoretical and practical instruction to those wishing to engage in mechanical pursuits, fitting young men to be machinists, artisans, civil engineers, draughtsmen, etc., and young women for the many practical arts in which they may become skilled."

Of the Sheffield Scientific School of Yale College, on which the State has bestowed the congressional appropriation of $130,000, and in which thirty-one persons hold State scholarships for gratuitous tuition, the Governor speaks in terms of high commendation. After stating that it "continued to afford free instruction in the various branches of science, in their application to the useful arts," and that the whole number of scholars at the beginning of the collegiate year was 132, he says: "The usefulness of this institution is not measured by the number of students who attend upon its course of instruction. It is shown in its scientific collections, lectures, and publications, and the general diffusion of practical knowledge upon agricultural pursuits."

The banks of discount and deposit in Connecticut are numerous, and nearly all under the control of the laws which regulate the system now prevailing throughout the whole country. Five of the old State banks still remain, however, with an aggregate capital of $1,610,000, making exceptions to this rule, though some of them seem to be on the point of closing their business within a short time.

The number of savings-banks in the State is fifty-five, and they appear to enjoy the confidence of the people. Their deposits, taken together, amount to little less than $42,000,000; above one-half of which sum is securely invested in bond and mortgage loans on real estate. The deposits intrusted to them, in 1868, exceeded those made in the previous year by $5,520,220.64.

The insurance business in this State seems to be very active and extensive. Besides those that are local, fifty-eight fire and thirty-two life insurance companies, incorporated by charter in other States, were transacting business in Connecticut during the year 1868. The amount of the operations carried on by the fifty-eight fire-insurance companies within that period was apparently large, though not perhaps with quite satisfactory results. The Commissioner of Insurance, in his annual report, states that "the gross capitals of these companies amount to $21,586,070, and their receipts for the year 1868 were $25,245,850; their losses, paid, $13,229,330; and their expenses were $7,289,044, leaving but $4,797,476 for dividends and unearned premiums for the current year."

With regard to charitable institutions, for the relief of the suffering and unfortunate, the main building of the General Hospital for the Insane, at Middletown, erected on a most desirable and healthy location, had recently been finished. The Governor declared it to be "very complete in all its appointments, sanitary and domestic, and its general arrangements second to no other institution in the country." The main building is now in full operation, and wholly occupied by some 225 patients; whereupon the Governor adds: "No more can be taken, although there are large numbers yet in the State uncared for."

This establishment has received from the State $380,000 already; but the Governor avers that "at no distant day it will undoubtedly be the true economy of the State to complete the wings, which will more than double its capacity at less than half the cost." Meantime, he recommended an appropriation to pay off $18,000 of which the hospital is now in debt, "and, perhaps, to construct outbuildings and fences, in which the establishment is sadly deficient."

In the Retreat for the Insane, there were, early in the year, twenty-one patients receiving aid from the State. While praising the management of this institution in a high degree, the Governor thought that the appropriation for it might properly be reduced, "as the General Hospital for the Insane is now taking most of the patients."

The Connecticut School for Imbeciles has twenty pupils partially supported by the State, and the mental progress made by them is spoken of as most gratifying.

In respect to persons held in restraint as lunatics, whether in public asylums or elsewhere, there exists a necessity for some further legislation calculated effectually to protect such persons from the effect of conspiracies and frauds; experience showing that plans are not unfrequently contrived and acted upon by interested parties to restrain individuals as lunatics who are far from laboring under such calamity.

The Hartford Hospital was performing its good work. It has a permanent fund amounting to $92,000, the income received from which is devoted to meeting its current expenses. Of the $105,000 which it has already cost, $10,000 have been contributed by the State, the rest by individuals. It is now in debt $27,000, expended in the construction of a new wing, and the trustees applied to the Legislature of 1869 for an appropriation of $20,000 to complete the building.

The American Asylum for the education of the Deaf and Dumb is reported as being managed with the greatest ability, and the endeavors of its managers crowned with an equally great success. The pupils under instruction in it last year were 279, of which

number forty-eight were State beneficiaries. Their cost to the institution amounted to $260 each, the State having contributed $175 of that sum.

Concerning the blind, the State causes them to be taken care of in the well-known Perkins Institution at Boston, appropriating annually $3,000 to assist in their education. This sum is not all expended for that purpose; the persons who now receive State aid in that institution being only nine, as Connecticut sends thither fewer pupils in proportion to its population than any other New-England State. These facts should be more generally known, as it is probable that there are others who would take advantage of the State aid, if they understood it.

The children of those who fought and died in the late civil war are provided for in the Connecticut Soldiers' Orphans' Home at Mansfield, and in the Fitch's Soldiers' Orphans' Home at Darien. Both establishments are accomplishing the purpose intended; the appropriations made for them from the State money are very moderate, but have been faithfully and economically expended.

As to the soldiers from the State who survived the war and to whom the Federal Government owed money for bounties, or on other accounts, a good work has been done by the Bureau of Claims in the Adjutant-General's office; since its organization it has collected $711,698.46 for soldiers, at no cost whatever to the claimants.

The Connecticut Industrial School for Girls is making good progress toward attaining the end of its establishment, and is enjoying, in no small measure, the sympathy and favor of the benevolent people of the State. A valuable farm had recently been donated to it, the active operations of which were expected to commence with the beginning of the year 1870.

With regard to the State Reform School, the number of boys committed to it since its establishment, in 1854, is 1,390. Those discharged in 1868 were 144, there remaining yet in the school 244 boys. Their earnings in the course of that year amounted to $12,000, which was sufficient for the current expenses of the establishment. The trustees, who had unsuccessfully applied to the two previous Legislatures for an appropriation of $50,000, to be expended in the erection of an additional building, made the same application to the General Assembly of 1869.

The State Prison's management and discipline, as well as its internal arrangements, are highly commended. The number of convicts in confinement in 1868 was 183, which is eight less than in 1867. By their labor during last year they earned $23,040.50, which sum had covered all the expenses of the establishment and left a net surplus on hand of above $2,000.

As to other criminals, the whole number of commitments to the different jails of the State in 1868 was 1,821, being 128 more than the previous year. The number in confinement in all the jails of Connecticut on April 1, 1869, was 244, being 17 more than one year previous.

The Governor, in his message to the Legislature, called their attention to the fact that intemperance is widely spreading and setting deep roots in Connecticut; he said: "In many parts of our State existing laws are so far a dead letter that, not only intoxicating liquors, but adulterations thereof, containing the vilest and most poisonous ingredients, are openly and freely sold during the whole seven days of the week." In order to check the growth of so great an evil, which, if tolerated, cannot but have the most lamentable results upon the people's health and the domestic peace of families, he avers that "further legislation is needed."

He recommended also a revision and modification of the State law concerning divorce, pointing to the fact that "discontented people come to Connecticut from other States to take advantage of what is called her liberal legislation, to obtain divorces which would be denied them at home." He regarded the causes of divorces set down in the existing laws to be "too numerous and not sufficiently defined, and too wide a discretion given to the courts." He suggested, among other things, "that the law provide that no decree of divorce shall take effect till one year after it is granted." The number of marriages contracted within the State in 1868 was 4,734; and the number of divorces granted, 476. The births in the State during the year were 12,469, the deaths, 7,549. This excess of births over deaths was the largest ever shown in Connecticut.

The condition of married women, in reference to their property, held before or acquired after marriage, has been considered to have been so far not sufficiently provided for, and the General Assembly was urged to such further amendment of the State laws as would secure to a married woman all her property, with the full control of it during her married life, and free from liability for any debts, except those contracted by herself, or for which she had voluntarily made herself responsible, with the same right on the part of the husband to an interest in her property, on his surviving her, that she now had, or that it may be best to give her, in his.

In order to prevent a too great accumulation of cases before the existing Courts, and the consequent delay in their decisions, to the injury of the parties concerned, and of the community in general, it was considered to be necessary to provide for the proper dispatch of judicial business, and the appointment of two criminal courts, "with a single judge in each, and frequent sessions, for the counties of Hartford and New Haven."

A large portion of the people in Connecticut being devoted to agricultural pursuits, it became a vital interest of the State to take

effectual measures for guarding the cattle and other useful animals from contagious diseases.

The General Assembly were urged to consider the necessity of a legislative enactment, advancing the rate of interest on money to seven per cent., as the existing law, which limits it to six, forced the capital of the State to seek a more remunerative return abroad, besides, that borrowers experienced great difficulty in obtaining loans in their need, and, when they succeeded in obtaining them, it was by paying higher rates than the legal.

Following the example of his immediate predecessor in office, the Governor recommended to the Legislature a change in the State constitution for the purpose of changing the elections from annual to biennial; and said, that "the election should be held in the fall, and that the Legislature should assemble in winter, is, I think, the almost unanimous sentiment in the State."

He appealed to the General Assembly to provide a means to secure the purity of the ballot-box, and said: "Any attempt, on the part of any person or party, to control the votes of the ignorant or vicious, by money, misrepresentation, or fraud, ought to be particularly guarded against; and, to the end that our elections may be fairly and properly conducted, I would suggest that more voting districts may be established in some of our larger towns and cities, and that the police departments be managed and regulated by non-partisan boards of commissioners."

The May session of the Connecticut Legislature in 1869 was twenty-six days shorter than that of the preceding year, and adjourned *sine die* on July 10th. They transacted, however, no small amount of business, though most of it was of personal or local interest. Among the chief matters of a public character which the General Assembly discussed and passed in this session, besides making appropriations in favor of some public institutions, they reduced the State-tax from three to two and a half mills on the dollar, reëstablished the State Normal School at New Britain, created two new Courts of Common Pleas for the counties of Hartford and New Haven, and passed the proposed amendment to the State constitution making one capital, and that the city of Hartford.

Upon the repeal of the usury law, so far as to increase the legal rate of interest from six to seven per cent., and the modification of the laws concerning divorce, to the end of rendering the dissolution of marriage less easily obtainable, the Legislature came to no decision.

The bill for a temperance law was defeated; but an act was passed to punish, by a $100 fine, the adulteration of liquor, and appointed a State chemist who should make the analysis to ascertain its quality.

One of the most important matters argued and acted upon by the Legislature was the application "for an act of incorporation authorizing the construction of a railroad from the town of Derby, in New Haven County, to the State line in the town of Greenwich, in Fairfield County." The proposed new line of railway is commonly named the "Parallel road," it being intended to run parallel with that of the New York and New Haven Railroad, which the citizens of Connecticut are now compelled to make use of in all the business they may have with New York for travel and transportation of merchandise. After an animated discussion in both Houses, the bill was finally defeated, though by small majorities, the vote having been 10 to 11 in the Senate, and 104 to 117 in the House of Assembly.

As to the action of the Legislature in political matters, the Fifteenth Amendment to the United States constitution was promptly ratified by both branches, and an amendment to the State Constitution, striking out the word "white," was passed. This amendment has twice before, in 1847 and 1865, been passed by the Legislature and submitted to the people. In 1847 the whole vote upon it was 25,106, out of which a majority against its passage of 13,874 was given. In 1865, at a special election in October, the whole vote upon the amendment was 60,706, of which 27,217 were in favor of its adoption, and 33,489 were against it.

The Democratic State Convention assembled at Hartford on January 27, 1869, and nominated candidates for the State offices, and adopted the following resolutions:

Resolved, That the issue of the late presidential election was in no sense an indorsement by the people of the United States of the repeated violations of the Constitution by the radical party, but was the result of a system of proscription and corruption unparalleled in the history of the country.

Resolved, That we shall continue to adhere to every constitutional principle heretofore avowed and supported by the Democratic party, under which party the country has prospered, and taken the front rank among the nations of the earth.

Resolved, That while we opposed with our best efforts the election of General Grant to the presidency, we nevertheless have no desire or design to embarrass his Administration by any captious opposition to his recommendations, but are disposed to sustain him in every just and constitutional measure which he may propose.

Resolved, That the attempt of the leaders of the radical party in Congress to deprive the States of the Union of their right to prescribe the terms and conditions of the suffrage of their own citizens is designed as a fatal blow at the most essential reserved right of the States; that it is an assumption of superiority by the creature over the creator—an audacious usurpation by our servants in Congress over their masters, the people; and we will resist, by all lawful means, this contemplated outrage upon the principle of self-government.

Resolved, That the spirit of hatred and revenge so pertinaciously encouraged by the radical leaders toward the people of the South is disgraceful to our common humanity, places our Union in constant peril, and threatens to alienate forever those feelings of fraternity and patriotism upon which depend the very existence of republican institutions.

Resolved, That the charge of intending to repudiate any portion of the national debt, so persistently made against us by our political opponents, is a slander, without excuse or provocation, as our pur-

pose of economy in the public expenditures is the best and most certain means of extinguishing the public debt, and leading to a general and safe resumption of specie payments; and to this end we demand of our representatives in Congress and in the Legislature the sternest opposition to all appropriations, that are not absolutely required for the support of the Government, until every creditor of the same is paid his honest dues to the uttermost farthing.

Resolved, That we view with increasing alarm the progress of the radical policy in the Congress of the United States, by which the division lines between the State and the Federal Government, and the several departments of the same Government, are nearly obliterated; by which the great interests of the country, its revenue laws, its lands, its incorporations, its contracts, are made subservient to the interests of unscrupulous politicians, which policy is a continued blight upon our national character, is destructive of the commercial, agricultural, and manufacturing interests of the country, and falls with crushing effect upon hard-handed labor, which is the source of all our wealth, while it is the least able to bear the heavy burdens thrown upon it by such reckless and tyrannical legislation.

Resolved, That we heartily invite all Conservative men, regardless of their former party associations, to unite with us in our present efforts to save the State from the malign influences of radicalism, they having a common interest with us in the preservation of the Constitution, and the prosperity of our common country.

Resolved, That we point with pride and satisfaction to the successful administration of the executive affairs of our State by his Excellency Governor James E. English, and with equal pride and pleasure to the man whose pure character, honest and patriotic purposes, unerring judgment, marked ability and benevolent heart, will make him in the future, as he has been in the past, our invincible standard-bearer, under whom we will once more rally, confident of a triumphant victory.

Resolved, That to the whole State ticket as nominated by us this day we pledge our warmest support, confident that their merits and the interests of our great cause will command for them the success which is due to their character, ability, and devotion to the best welfare of the State and nation.

The Republicans, on their part, held their State Convention at New Haven on February 3, 1869, for the purpose of nominating the Governor and other State officers. Before adjourning, they adopted the platform reported by their committee on resolutions, as follows:

Resolved, That, having evinced our devotion to the cause of our common country during the war, we now declare our entire sympathy with the administration of our national Government by the Republican party, as we believe it will be administered by the incoming Chief Magistrate and his associates, and hereby pledge the Republicans of Connecticut to a hearty coöperation with the national party of the Constitution and the Union.

Resolved, That we heartily rejoice over the success of the Union Republican party in the presidential election, and its already beneficial effect upon peace and order. We look with the highest hopes to the coming Administration of General Grant, the able, patriotic, honest, and inflexible soldier and statesman, believing that our country's honor, at home and abroad, will be safe in his keeping, and we pledge him our enthusiastic support in protecting the equal rights of the people and enforcing the severest supervision of the revenues and expenditures. And we heartily approve in all respects the declarations of the Republican national platform adopted at Chicago.

Resolved. That full freedom and equal citizenship of all citizens, native or adopted, having been established by constitutional amendment, honor and justice, as well as the preservation of our full representation in Congress, require that conditions of suffrage should apply impartially to all men, so that this may be truly a government "deriving its just powers from the consent of the governed."

Resolved, That we demand that loyal men throughout the republic shall be protected in the right to speak, print, assemble, vote, and petition, and in their rights of person and property.

Resolved, That we recognize the vast importance of the pending issues concerning debt, currency, and taxation. "The best policy to diminish the burden of debt is to so improve our credit that capitalists will seek to lend us money at lower rates than we now pay." We unreservedly denounce the wickedness and meanness of repudiation in all its forms and disguises, and believe it to be the duty of Congress to—

1. Formally affirm that when the national debt is paid it must be paid in gold, except where it is otherwise distinctly provided for in the original contract.
2. Introduce the strictest economy into every branch of the Government.
3. Refuse all subsidies and appropriations to railroad and other enterprises outside of the indispensable machinery of the Government.
4. See to it that the taxes are impartially levied and energetically and honestly collected, and surplus revenues applied to the reduction of the debt.
5. Make it a constant aim to resume specie payment, and give the people a uniform and steady currency as soon as may be without a violent disturbance of business; and
6. To remove taxation from labor and necessaries of life, and to impose it as far as possible upon articles of luxury.

Resolved, That we denounce as enemies of the people, and robbers, to be indignantly visited with the full penalties of public opinion and statute law, all officials, State or national, who commit or permit dishonesty, partiality, or negligence, in the collection or disbursement of the treasure of a greatly-burdened people, and make thieving sport of the taxes that patriotic labor cheerfully pays. No rebels were ever so dangerous to the country we love.

Resolved, That we point proudly to the fact that under Republican legislation the credit of the State has been fully maintained, taxes reduced yearly since the close of the war, State charities liberally conducted, and large payments made annually upon the principal of the State debt. We call for short and industrious sessions of the General Assembly, no expenditures for mileage or other allowances save in the strictest obedience to law and the necessities of the public service, and economy as rigid as the true interests and honor of the State will permit.

Resolved, We renew our thanks to the soldiers and sailors of the Union engaged in the late civil war, and hereby express our sincere sympathy with those who have suffered bereavement and loss in the cause of the country.

Resolved, That, in a government of the majority, the absolute purity of the ballot-box is indispensable to the perpetuity of republican institutions.

Resolved, That we place in nomination to-day capable, faithful, and patriotic citizens, worthy of honor and trust, and, reaffirming our determination to keep the Republican party worthy to lead the destinies of a free nation, we appeal to our fellow-citizens to repeat in April the great triumph of last November.

The returns of the election were as follows: For Governor, Marshall Jewell received 45,498 votes; and James E. English 45,082; Jewell's majority 411.

COTTON. The cotton crop of the season ending September 1, 1869, shows a falling-off from the amount of that important product

raised the preceding year. The main difficulty seems to arise from the transitory state of the labor system in the Southern States. It has been found impossible to employ successfully associated labor to the extent necessary to carry on large plantations, and the "squad system" which has succeeded that method has proved to be much less productive, on account of a lack of concert of action and systematic division and distribution of labor. The consequence is, that large plantations have been abandoned or broken up into small farms, and a much larger portion of the land than formerly devoted to the production of grain and vegetables. There has also been a great lack of working force which could be applied in any form to the cultivation of cotton. The freedman shows a disinclination to be employed in any extended system of labor, and prefers to have a little home of his own, where he can raise grain and provisions for his own support, and give little attention to this great staple of the South. The whole number of negroes engaged in cultivating cotton during the past year has been 600,000, while 200,000 white men have been engaged in the same occupation. Steps have been taken in several of the Southern States for the encouragement of immigration, with a view to building up this and the other material interests of that section of the country. Improved lands in the cotton-growing States can now be purchased at prices ranging from $5 to $25 per acre. The aversion which the proprietors formerly had to a division of their plantations is rapidly giving way to the demands of the altered times, and lots of any desired extent can be easily obtained. Whether the cultivation of cotton upon large plantations is to be entirely superseded by its production on small farms like the grain crops of the North, is one of the problems which the immediate future is likely to solve. The use of fertilizers on the cotton-fields has been already introduced with favorable results.

The consumption of cotton in the United States during the last year amounted to 968,000 bales, which shows a falling off of 14,000 bales from the amount used during the preceding year. A somewhat larger proportion of the manufacturing of the country has been done in the South and West than heretofore, but the change is not significant. The following table exhibits with approximate accuracy the state of the cotton manufactures for the year ending October 1, 1869:

STATES.	Mills.	Spindles.	Yarn.	Cotton spun.	Average per Spindle.	Otherwise used.
Maine	19	490,424	23¾	25,090,047	51.20	.....
New Hampshire	43	745,930	26	39,394,541	52.81	680,431
Vermont	11	22,163	30½	1,071,867	48.73	112,534

The total crop of cotton in the United States for the year 1868–'69 amounted to 2,439,039 bales, against 2,593,993 bales for the preceding year, the average weight of a bale being about 465 pounds. The following statement gives in parallel columns the product of the two years in the different cotton-growing States:

STATES.	1868-'69.	1867-'68.
	Bales.	Bales.
Louisiana	794,205	584,240
Alabama	230,621	366,193
Texas	147,817	114,666
Florida	14,392	58,593
Georgia	357,253	495,959
South Carolina	199,072	240,431
North Carolina	35,906	38,643
Virginia	160,971	166,587
Tennessee, etc	439,800	466,681
Total	2,379,039	2,531,992

This includes the shipments from the different ports, but not the amount consumed in the Southern States, which was about 60,000 bales. The following fignres will serve for the purposes of a general comparison of the resources of the country derived from this one product at different periods: Total crop in 1821–2, 455,000 bales; in 1830–1, 1,038,848; in 1841–2, 1,683,574; in 1850–1, 2,355,257; in 1857–8, 3,113,962; in 1859–60, 4,669,770; in 1865–6, 2,193,987; in 1866–7, 2,019,774; in 1867–8, 2,593,993; in 1868–9, 2,439,039.

The crop of Sea Island cotton for the past year has been as follows: In Florida, 6,748 bales; Georgia, 6,480; South Carolina, 5,454: Total, 18,682. This is the smallest amount recorded for many years.

The average weekly consumption of cotton in Great Britain for the year 1868–'69 was about 3,000 bales less than in 1867–'68, while the Continent of Europe and the United States together consumed about 3,000 less per week. The supply on hand at the beginning of the new year (September 1st) was about 330,000 less than it was one year before.

The exportation of cotton from various ports of this country during the past year, as compared with the preceding year and with 1860, is exhibited in the following table:

FROM	1860.	1868.	1869.
New Orleans....bales	2,005,662	581,477	619,534
Mobile	659,481	236,511	163,154
South Carolina	386,770	105,818	56,809
Georgia	337,755	259,604	167,537
Texas	111,967	68,595	88,376
Florida	59,108	....	810

Boston	9,694	1,441	1,491
Philadelphia	292	1,440	99
Baltimore	257	16,309	19,212
Portland, Maine	....	2,807	1,907
San Francisco	....	1	....
Total from the U. S.	3,774,178	1,657,015	1,448,020

Of this amount, 976,986 bales were received at Liverpool; 224,101 at Havre; 110,822 at Bremen; 84,011 at Barcelona; 31,841 at Hamburg; and 70,259 at other ports.

The prices of cotton during the year ending August 30, 1869, have been as follows, at Liverpool and New York:

1868-'69.	Price per Pound.	
	New York.	Liverpool.
	Cents.	Pence.
Beginning of year, Sept. 4 ('68)..	29¼	10¾
Minimum price, Nov. 13, "	24¼	(Sept. 25) 9⅞
Maximum price, Aug. 20 ('69)...	35	13¾
End of the year, Aug. 27, "	34¼	13¾

In 1867–'68 the maximum price was 42 cents at New York, and 15¾ pence at Liverpool; the minimum 25 cents at New York, and 10½ pence at Liverpool.

The growth of cotton in other countries has been somewhat less than during the preceding year. In India the season was unfavorable, and the product did not exceed 1,500,000 bales of 394 pounds each. About 230,000 bales were produced in Egypt; 12,500 in Turkey, the Levant, etc.; and 707,500 in Brazil, Peru, and the West Indies. The entire production of cotton in the world in the year 1869 has been estimated at 5,000,000 bales, while the consumption amounted to about 6,000,000, leaving an apparent deficit in the supply for the coming year of 1,000,000 bales.

CUBA. The most important island of the Western Hemisphere. It has always from the time of its discovery been a dependency of Spain. Several attempts have been made to establish its independence, but failed. The most important movement of this kind is the revolution which broke out in 1868,* and which, at the close of the year 1869, was not entirely subdued. The area of the island is 48,489 square miles, it being nearly equal to the area of Belgium, Holland, Denmark, and Switzerland, taken together. The population is increasing with great rapidity; it had, according to official returns, 170,370 inhabitants in 1775; 551,998 in 1817; 704,487 in 1827 (311,051 white, 106,494 free colored, 286,942 slaves); in 1846, 898,752 (425,767 white, 149,226 free colored, 323,759 slaves); in 1862, 1,359,238 (864,754 white, 225,938 free colored, 368,550 slaves). The island is divided into three provinces. The government is vested in a Captain-General, who is the military commander of the whole island, and the civil governor of one of the three provinces. The chief towns of Cuba are Havana, Santiago, Matanzas, Santa Clara, Santa Maria, and Trinidad. According to the new Spanish Constitution, Cuba is to be represented hereafter in the Spanish Cortes, but no representatives were elected in the course of the year 1869.

The commencement of the insurrection of 1868 was the issue of a document by the "Junta of the Laborers," which, after enumerating the wrongs and insults inflicted upon the Cubans by Spain, thus states the principles on which their revolution is based:

The laborers, animated by the love for their native

* *See* the article SPAIN in the AMERICAN ANNUAL CYCLOPÆDIA for 1868.

land, aspire to the hope of seeing Cuba happy and prosperous by virtue of its own power, and demand the inviolability of individuals, their homes, their families, and the fruits of their labor, which it will have guaranteed by the liberty of conscience, of speech, of the press, by peaceful meetings; in fact, they demand a government of the country for and by the country, free from an army of parasites and soldiers that only serves to consume it and oppress it. And, as nothing of that kind can be obtained from Spain, they intend to fight it with all available means, and drive and uproot its dominion on the face of Cuba. Respecting above all and before all the dignity of man, the association declares that it will not accept slavery as a forced inheritance of the past; however, instead of abolishing it as an arm by which to sink the island into barbarity, as threatened by the Government of Spain, they view abolition as a means of improving the moral and material condition of the working-man, and thereby to place property and wealth in a more just and safe position.

Sons of their times, baptized in the vivid stream of civilization, and, therefore, above preoccupation of nationality, the laborers will respect the neutrality of Spaniards, but among Cubans will distinguish only friends and foes, those that are with them or against them. To the former they offer peace, fraternity, and concord; to the latter, hostility and war—war and hostility that will be more implacable to the traitors to Cuba, where they first saw the day, who turn their arms against them, or offer any asylum or refuge to their tyrants. We, the laborers, ignore the value of nationality, but at the present moment consider it of secondary moment. Before nationality stands liberty, the indisputable condition of existence. We must be a people before becoming a nation. When the Cubans constitute a free people they will receive the nationality that becomes them. Now they have none.

In January, 1869, a proclamation was issued by the Spanish Captain-General, to appease the Cubans. He said:

I will brave every danger, accept every responsibility for your welfare. The revolution has swept away the Bourbon dynasty, tearing up the roots, a plant so poisonous that it putrefied the air we breathe. To the citizen shall be returned his rights, to man his dignity. You will receive all the reforms which you require. Cubans and Spaniards are all brothers. From this day Cuba will be considered as a province of Spain. Freedom of the press, the right of meeting in public, and representation in the national Cortes, the three fundamental principles of true liberty, are granted you.

Cubans and Spaniards! Speaking in the name of our mother, Spain, I adjure you to forget the past, hope for the future, and establish union and fraternity.

The proclamation remained without any effect upon the leaders, of whom at this time the Marquis of Santa Lucia and General Castillo were in the neighborhood of Puerto Principe, while other forces were besieging Gibara, and 2,000 men were holding Colonel Lono in check at Tunas, and General Cespedes, the Provisional President, was near St. Jago de Cuba.

The first reënforcement, in 1869, from Spain, consisted of about 1,500 troops. The Spanish General Valmaseda succeeded in joining Colonel Lono at Tunas, and marched on Bayamo. Meanwhile the Cuban forces, 6,000 strong, under General Quesada, advanced on Puerto Principe, which was defended by Colonel Mena with a garrison of 3,000 men.

Another reënforcement of 1,000 men arrived on February 15th. A decree was issued abolishing the freedom of the press and establishing trials by military commissions. The citizens of Havana were called upon to raise twenty-five millions for the Government. The volunteers continued to create disturbances. This body, originally organized by Lersundi, while energetic in support of the revolution which relieved Spain from Isabella, showed themselves as ready to support the Spanish rule in Cuba. Their seven battalions numbered at this time about 5,000 men. Their demeanor was insolent and overbearing.

In February, 5,000 insurgents, divided into three bodies, between Villa Clara and Cienfuegos, were destroying the railway and cutting the telegraph wires. An engagement took place at San Cristoval, twenty-two leagues west from Havana, with a body of insurgents under Prieto, in which the troops were defeated and obliged to retreat. Another action took place at Quanajay, eleven leagues from Havana, on the north coast, in which twenty Spaniards were wounded. The arrival of reënforcements from Count Valmaseda prevented the Cubans from taking Santiago. The insurgents still held Tunas. Havana was practically in a state of siege, and General Dulce was urged to declare it officially, but was not inclined to do so, and even released Cubans producing American naturalization papers. The Cubans destroyed the telegraph and stopped the mails at Trinidad. Banditti pillaged the plantations in the vicinity of Nuevitas. A body of troops, sent on February 7th to San Miguel, burned the town, but the insurgents held their ground in the vicinity. They also continued to surround Puerto Principe, the inhabitants of which city were suffering for want of provisions. A force of Spanish troops under Quiros advanced to Jiguani, near Bayamo, from Santiago de Cuba, fighting severely all along the route with the insurgents under General Cespedes, in order to join Count Valmaseda, who was at Jiguani with the main body of his forces. The insurgent chiefs were constantly moving from one point to another, thus baffling pursuit and wearying their enemies by long and profitless marches. To deprive the Spaniards of the power of moving, they also continued burning estates and railroad bridges, and destroying roads. On the 14th of February, Colonel Lono's column of Spanish troops arrived at Manzanilla from Bayamo, with about 1,000 refugees. This column was harassed by the insurgents all the way. The latter captured the port of La Guanaja, a small town a few leagues west of Nuevitas, and fortified it with brass guns, manned by Americans. In the middle of February 1,000 chasseurs arrived from Spain, and went, under General Puello, to Cienfuegos. The amnesty proclamation was officially declared to have expired, but the Captain-General proclaimed the benefit of pardon to all insurgents that would surrender themselves, with or without arms, excluding the chiefs of the insurrection, assassins, incen-

diaries, and robbers. To prevent further collusion with American citizens, General Dulce applied to the United States consul for the names of all American residents in Cuba. At La Lujas, five leagues from Cienfuegos, 1,500 insurgents burned, on February 20th, the archives of the police and the uniforms of the civil guards, and took their arms and horses.

The naval expedition from Havana against the insurgents at La Guanaja was successful. The fortifications erected there by the insurgents were first bombarded by the fleet. Troops were then landed, and the works were carried by assault. The rebels withdrew and retreated into the country. A permanent garrison of regulars was left in the town.

Two battalions of troops marched from La Guanaja to the relief of Puerto Principe, on the 23d of February. Captain-General Dulce addressed the sergeants and corporals of the volunteer forces, exhorting them to maintain order and obedience, and discountenance all dangerous agitation.

In several encounters between the Spanish troops and the insurgents near Santa Cruz, in February, the latter were defeated and forced to fly to the mountains. Meanwhile General Lesca, strongly reënforced, was pushing his way into the interior from La Guanaja, and General Puello arrived with his reënforcements at Cienfuegos. An engagement took place at Colonia de St. Domingo, in the province of Sagua la Grande, in which many were killed on both sides. In this gloomy state of affairs the emigration of Cubans increased greatly. There was no prospect of any decision for some time. It was evident that additional reenforcements of troops were needed from Spain to occupy the whole island and drive out the insurgents. The troops actually did no more than hold their own. The people in the country suffered great distress, and thousands left their homes to seek refuge in the cities. Another reënforcement of 1,000 men arrived on March 8d from Spain, and were sent to the interior. General Dulce recruited new battalions of volunteers. To assist the Government by money, the clergy offered it one-sixth of their income. General Letona commenced a vigorous campaign in the district of Cienfuegos, while General Puello divided his command at Santo Espiritu into three flying columns, to scour the country. In the Eastern Department bands were roaming between Holguin and Gibara, and committed great depredations and outrages; they carried the flag of the insurgents, but were disowned by the latter and denounced as bandits. General Lesca advanced from La Guanaja to Puerto Principe. On this march the heaviest engagement since the beginning of the rebellion was fought. General Lesca found the enemy, to the number of 4,000, strongly intrenched on the Sierra de Cubitas. Artillery was brought up and commenced a vigorous fire upon the works. Covered by the batteries, a column of regular troops, 1,500 strong, attacked the enemy's fortifications with the bayonet. Both sides fought with determination. General Lesca reports his loss at thirty-one killed and eighty wounded; other accounts say the Spaniards lost about two hundred men. The loss of the rebels was estimated by the Spaniards at 1,000 killed and wounded.

About this time—March, 1869—the entire available strength of the rebel forces under Quesada was 7,000 men. It was somewhat strengthened by the landing of an expedition under the command of Cisneros on the north side of Cuba, near Mayari, where General Cespedes was waiting for war material by a steamer. This vessel brought about 100 Cubans, all well armed with rifles, revolvers, and swords, several pieces of field artillery, and a number of expert artillerists. In addition to these there were landed 5,000,000 of ball-cartridges and a large assortment of other war material.

General Cespedes was at Mayari with a large force ill supplied with munitions, but very enthusiastic and confident in the success of the cause—free Cuba. He continued the Fabian policy in his war with the Spanish troops until his forces should become better armed, and the disparity in this respect between the two armies should be reduced. Meanwhile irregular bands of insurgents were burning plantations and scattering general destruction in the vicinity of Manzanillo and Santa Cruz.

The insurgent Assembly of Representatives for the Central Department decreed, in March, the absolute abolition of slavery. The patriots were to be indemnified for the loss of their slaves, and the freedmen to become soldiers or to remain cultivators of the soil.

In order to strengthen their cause, the leaders of the Cuban insurrection turned their eyes to the United States, where much sympathy and some help in men and arms had already encouraged them. On the occasion of General Grant's accession to the presidency, the following address was sent to him:

To His Excellency the President of the United States:

SIR: The people of Cuba, by their Grand Supreme Civil Junta and through their General-in-Chief, Señor Cespedes, desire to submit to your Excellency the following, among other reasons, why your Excellency, as President of the United States, should accord to them belligerent rights and a recognition of their independence:

Because from the hearts of nineteen-twentieths of the inhabitants of the island of Cuba go up prayers for the success of the armies of the republic; and from the sole and only want of arms and ammunition these patient people are kept under the tyrannical yoke of Spain. The unanimity of the masses of the people for the republic is ominous.

Because the republic have armies numbering over 70,000 men actually in the field and doing duty. These men are organized and governed on the principles of civilized warfare. The prisoners whom they take—and so far they have taken three times as many as their enemies have from them—are treated in every respect as the prisoners of war are used and treated by the most civilized nations of the earth. In the hope of recognition by the United States, they

have never yet in a single instance retaliated death for death, even in cases of the most provoking nature.

Because the Spanish authorities have almost invariably brutually murdered the soldiers of the armies of the republic who have surrendered to them, and have recently issued an official order requiring their military forces hereafter instantly to kill and murder every prisoner of the republic who surrenders. This is done, the order cheerfully tells us, "to save trouble and vexation to the Spanish civil authorities." This is an outrage the civilized nations of the earth ought not to allow.

Because the United States is the nearest civilized nation to Cuba, whose political institutions strike a responsive chord in the hearts of all Cubans. The commercial and financial interests of the two peoples being largely identical and reciprocal in their natures, Cuba earnestly appeals for the unquestionable right of recognition.

Because the arms and authority of the Republic of Cuba now extend over two-thirds of the entire geographical area of the island, embracing a very great majority of the population in every part of the island.

Because she has a navy in course of construction which will excel in point of numbers and efficiency that heretofore maintained by the Spanish authorities in these waters.

Because these facts plainly show to the world that this is not a movement of a few discontents, but the grand and sublime uprising of a people thirsting for liberty, and determined with this last effort to secure to themselves and their posterity those unquestioned rights—liberty of conscience and freedom of the individual.

Finally, because she is following but in the footsteps of Spain herself in endeavoring to banish tryannical rulers, and in their stead place rulers of her own choice, the people of Cuba having a tenfold more absolute and potent right than Spain had, because Cuba's rulers are sent without her voice or consent by a foreign country, accompanied by and with swarms of officials to fill the various offices created only for their individual comfort, drawing their sustenance and support from the hard earnings of the natives of the soil.

Allow us to add, with the greatest diffidence and sensitiveness, that the difference between the rebellion in the United States and the present revolution in Cuba is simply that in the former a small minority rebelled against laws which they had a voice in making and the privilege of repealing; while in the case of Cuba we are resisting a foreign power in crushing us to the earth, as they have done for centuries, with no appeal but that of arms open to us, and appointing, without our knowledge, voice, advice, or consent, tyrannical citizens of their own country to rule us and eat out our substance.

"Patria y libertad!"

Approved by the Supreme Junta and ordered promulgated by SEÑOR GENERAL CESPEDES,
Commander-in-Chief Republican Forces of Cuba.
HEADQUARTERS IN THE FIELD, *March* 1, 1869.

On March 7th the Spaniards attacked the insurgents intrenched at Macaca and succeeded in dislodging and routing them. General Velosca's column marched toward Mayari against General Cespedes, and to operate in conjunction with Lopez, who entered Mayari after a desperate struggle. The insurgents made an attack on Jiguani, Count Valmaseda's position, but were repulsed and retired to the mountains.

On March 12th, 1,200 additional troops arrived from Spain, who, with the remainder of the Spanish troops, advanced against the rebels in every direction. The rebels who were defeated at Mayari moved toward Holguin.

In the middle of March, Captain-General Dulce issued a proclamation making important changes in taxation. The direct taxes on plantations, cattle, and country real estate, and the war-tax recently imposed on merchants and tradesmen, were reduced fifty per cent., and no government contribution payable within the last quarter of the fiscal year of 1868–'69 was to be collected. To compensate the Treasury for the loss of revenue incurred by these reductions, the following new duties were imposed: On muscovado sugar shipped under the Spanish flag, sixteen cents, and, under a foreign flag, twenty cents per 100 pounds; on every box of sugar under the Spanish flag, seventy-five cents; under foreign flag, eighty-seven cents; on every hogshead of sugar under Spanish flag, one dollar; under foreign flag, one dollar and seventy-five cents: on molasses, fifty cents per hogshead; on rum, one dollar per hogshead.

Meanwhile the insurgents carried out their plan of burning and devastating plantations everywhere. They brought off the slaves and made them soldiers. An engagement took place near Alvarez, on March 18th; the insurgents were routed and divided, one force fleeing toward Macagua and the other toward Jocuri Grande. In another engagement, at Guaracabuya, 186 insurgents were killed (according to official accounts). The number of insurgents in the Sagua and Remedios districts, at this time, was estimated at from 7,000 to 9,000 men, mainly engaged in burning plantations and destroying railroads and telegraphs.

On March 20th a fleet of transports, with about 300 state prisoners on board, sailed for Fernando Po, convoyed by the Spanish frigate Lealtad. An artillery column, under Morales de los Rios, with a squadron of cavalry, came up with 2,000 rebels of Villa Clara, at Potrerillo, under Generals Morales, Villamil, and others, and completely routed them, killing 205, wounding 300, and capturing twenty-one prisoners, some horses, arms, etc. Thirty Spanish were also retaken. The troops lost one lieutenant and one man. According to official accounts, General Letona arrived at Villa Clara on March 14th, after a number of encounters with the rebels, in all of which he is said to have punished them severely. The Government directed the concentration of all its forces in the Villa Clara district, including those under Letona, Pelaz, and Puello, with the artillery column of Colonel Morales de los Rios and a considerable force of cavalry, estimated to number in all 10,000 men. The insurgents, in despite of their inefficiency and the disadvantage of want of organization, arms, and artillery, were fighting with great bravery and desperation.

As yet no regular civil government existed in the districts held by the insurgents, and no formal attempt was made to organize one. In the Central Department General Quesada's authority was respected, while in the East General Cespedes was looked upon as the

leader. There was little communication between the several departments, and no concert of action. The only aim seemed to be war with the Spaniard. The insurgents in the Villa Clara district held their organization distinct from those of Cespedes and Quesada.

On March 20th an engagement took place between 300 troops, some mobilized sharpshooters and other volunteers, and 3,000 rebels, intrenched at Placetas, provided with cannon and a large number of cavalry. An advanced force of 200 rebels was met at Nagareno and driven into their camp. As the troops approached, the rebels opened a heavy fire, which lasted three hours, including artillery, not badly directed. The troops replied with ammunition, and finally charged with the bayonet, dislodging the enemy and capturing their three mountain-pieces. The enemy had 136 killed and many wounded. The troops captured an immense quantity of arms, horses, flags, etc. They lost but one wounded.

In April, representatives from all parts of the island met at Guaimaro, a small town of the Central Department, about twenty leagues east of Puerto Principe. On April 10th General Cespedes resigned his provisional authority as General-in-Chief and Chief of the Government by an address, in which he says:

Now that the House of Representatives, gathered from all parts of the island, has been happily inaugurated in Guaimaro, it becomes from the moment of its organization the supreme and only authority for all Cubans, because it constitutes the depository of the people's will, sovereign of the present and controller of the future. All temporary power and authority ceases to have a rightful voice in Cuba from the very moment in which the wise democratic system, laying its solid foundations beneath the gigantic shadow of the tree of liberty, has come to endow us—after suffering the most iniquitous rule—with the most beautiful and magnificent of human institutions—a republican government.

Unfeigned gratitude I owe to the destiny which afforded me the glory of being the first in Yara to raise the standard of independence, and the still greater, though less merited satisfaction, to see crowded around me my fellow-citizens in demand of liberty, thus sustaining my weak arm and stimulating my poor efforts by their confidence. But another glory was reserved for me, far more grateful to my sentiments and democratic convictions—that of also being the first to render homage to the popular sovereignty.

This duty fulfilled, having given an account to the fatherland in its most genuine representation, of the work which, with the assistance of its own heroic sons, I had the good fortune to have commenced, it still behooves me, fellow-citizens, to fulfil another, not less imperious to my heart, of addressing my gratitude to you—to you, without whom my humble, isolated efforts would not have produced other fruit than that of adding one patriot more to the number of preceding martyrs for independence—to you who, recognizing in me the principle rather than the man, came to stimulate me by your recognition of myself as chief of the provisional government and the liberating army.

Fellow-Citizens of the Eastern Department: Your efforts as initiators of the struggle against tyranny, your constancy, your sufferings, your heroic sacrifices of all descriptions, your privations, the combat without quarter which you have sustained and continue to sustain against an enemy far superior in armament and discipline, and who displays, for want of the valor which a good cause inspires, all the ferocity which is the attribute of tyranny, have been witnessed by myself, and so will remain eternally present to my heart. Ye are the vanguard of the soldiers of our liberties. I commend you to the admiration and to the gratitude of the Cubans. Continue your abnegation of self, your discipline, your valor, and your enthusiasm, which well entitle you to that gratitude and that admiration.

Fellow-Citizens of the Western Department: If it has not been your good fortune to be the first in grasping arms, neither were you among the last in listening to the voice of the fatherland that cried for revolution. Your moral aid and assistance responded from the very onset to the call of your brethren of the Eastern and Central Departments. Many of you hastened to the scene of revolution to share our labors. At this moment, despite the activity displayed by the Spanish Government in your districts, where its resources and the number of their hosts render more difficult the current of the revolution, that same Government trembles before your determined attitude, from the Cinco Villas to Havana, and from Havana to the western boundary, and your first deeds of arms were the presage to you and the brave and worthy sons of the Eastern and Central Departments of new and decisive triumphs.

Fellow-Citizens of all the Island: The blood of the patriots who have fallen during the first onset of the struggle has consecrated our aspirations with a glorious baptism. At this moment, when destiny has been pleased to close the mission of him who was your first leader, swear with him by that generous blood, that in order to render fruitful that great sacrifice you will shed your own, to the very last drop, in furtherance of the consummation of our independence, proclaimed in Yara. Swear with me to give up our lives a thousand times over in sustaining the republic proclaimed in Guaimaro.

Fellow-Citizens: Long live our independence! Long live the popular sovereignty! Long live the Cuban republic! *Patria* and liberty.

CARLOS MANUEL DE CESPEDES.

GUAIMARO, *April* 10, 1869.

The Congress with great unanimity proclaimed "the Republic of Cuba," elected Carlos M. de Cespedes President of the Republic, and General M. Quesada Commander-in-Chief of the Forces. General Cespedes, on assuming the presidency, issued the following proclamation:

TO THE PEOPLE OF CUBA:

Compatriots: The establishment of a free government in Cuba, on the basis of democratic principles, was the most fervent wish of my heart. The effective realization of this wish was, therefore, enough to satisfy my aspirations and amply repay the services which, jointly with you, I may have been able to devote to the cause of Cuban independence. But the will of my compatriots has gone far beyond this, by investing me with the most honored of all duties—the supreme magistracy of the republic.

I am not blind to the great labors required in the exercise of the high functions which you have placed in my charge in these critical moments, notwithstanding the aid that may be derived from other powers of the state. I am not ignorant of the grave responsibility which I assume in accepting the presidency of our new-born republic. I know that my weak powers would be far from being equal to the demand if left to themselves alone.

But this will not occur, and that conviction fills me with faith in the future.

In the act of beginning the struggle with the oppressors, Cuba has assumed the solemn duty to consummate her independence or perish in the attempt; and in giving herself a democratic government she obligates herself to become republican.

This double obligation, contracted in the presence of free America, before the liberal world, and, what is more, before our own conscience, signifies our determination to be heroic and to be virtuous.

Cubans! On your heroism I rely for the consummation of our independence, and on your virtue I count to consolidate the republic.

You may count on my abnegation of self.

CARLOS MANUEL DE CESPEDES.

GRANMARO, *April* 11, 1869.

Two days afterward appeared the following proclamation of General Quesada:

Citizen Chiefs, Officers, and Soldiers of the Liberating Army of Cuba: When I returned to my country to place my sword at its service, fulfilling the most sacred of duties, realizing the most intense aspiration of my life, the vote of the Camagueyans, to my surprise, honored me by conferring on me the command of their army. Notwithstanding my poor merits and capacity, I accepted the post, because I expected to find, and did find, in the Camagueyans civic virtues well established, and this has rendered supportable the charge of the responsibility which I assumed.

Now the legislative power of the republic has filled me with greater surprise, promoting me to the command-in-chief of the liberating army of Cuba. The want of confidence in my own resources naturally moves me anew upon stronger grounds, although it also strengthens the conviction that the patriotism of my brethren will supply the insufficiency of my capacity.

Camagueyans! You have given me undoubted proofs of your virtues. You are models of subordination and enthusiasm. Preserve and extend your discipline.

Soldiers of the East! Initiators of our sacred revolution! Veterans of Cuba! I salute you with sincere affection, counting on your gallant chiefs, in order that they may aid me in realizing the eminent work which we have undertaken, and I hope that union will strengthen our forces.

Soldiers of the villas! You have already struggled with the despot. I felicitate you for the efforts made, and invite you to continue them. You are patriots. You will be victors.

Soldiers of the West! I know your heroic exploits, and venerate them. I am well aware of the disadvantage of the situation in which you find yourselves, in contrast with our oppressors, and it is our purpose to remedy this.

Accept the homage of my admiration and the succor of my arms.

Citizen chiefs, officers, and soldiers of the Cuban army! Union, discipline, and perseverance.

The rapid increase which the glorious revolution of Cuba has taken frightens our oppressors, who now are suffering the pangs of desperation, and carrying on a war of vengeance, not of principles.

The tyrant Valmaseda rambles with the incendiary's torch and the homicidal knife over the fields of Cuba. He has never done otherwise, but now he adds to his crime the still greater one of publishing it by a proclamation, which we can only describe by pronouncing it to be a proclamation worthy of the Spanish Government. Thereby our property is menaced by fire and pillage. This is nothing. It threatens us with death, and this is nothing. But even our mothers, wives, daughters, and sisters, are menaced with resort to violence. * * *

Ferocity is the valor of cowards.

I implore you, sons of Cuba, to recollect at all hours the proclamation of Valmaseda. That document will shorten the time necessary for the triumph of our cause. That document is an additional proof of the character of our enemies. Those beings appear deprived even of those gifts which Nature has conceded to the irrationals—the instinct of foresight and of warning. We have to struggle with tyrants, always such—the very same ones of the Inquisition, of the Conquest, and of Spanish domination in America. In birth and in death they live and succeed the Torquemadas, the Pizarros, the Boves, the Morillos, the Tacons, the Conchas, and the Valmasedas. We have to combat with the assassins of the old women and of children, with the mutilators of the dead, with the idolaters of gold!

Cubans! If you would save your honor and that of your families; if you would conquer forever your liberty—be soldiers. War leads you to peace and to happiness. Inertia precipitates you to misfortune and to dishonor.

Viva Cuba! Viva the President of the Republic! Viva the Liberating Army! Patria and liberty!

MANUEL QUESADA.

GUIAMARO, *April* 13, 1869.

The proclamation of Valmaseda, spoken of so severely in the foregoing address, was issued by him at Bayamo on the 4th of April, and reads as follows:

INHABITANTS OF THE COUNTRY:

The forces which I expected have arrived. With them I will afford protection to the good, and summarily punish all those who still rebel against the government of the metropolis.

Know ye that I have pardoned those who have fought against us, armed; know ye that your wives, mothers, and sisters, have in me found the protection they admired and which you rejected; know, also, that many of the pardoned have turned against me. After all these excesses, after so much ingratitude, and so much villany, it is impossible for me to be the man I was heretofore. Deceptive neutrality is no longer possible. "He that is not with me is against me," and, in order that my soldiers may know how to distinguish you, hearken to the orders given them:

Every man from the age of fifteen upward, found beyond his farm, will be shot, unless a justification for his absence be proven.

Every hut that is found uninhabited will be burned by the troops.

Every hamlet, where a white cloth, in the shape of a flag, is not hoisted in token that its inhabitants desire peace, will be reduced to ashes.

The women who are not found in their respective dwellings, or in those of their relatives, will return to the towns of Jiguani or Bayamo, where they will be duly provided for. Those who fail to do so will be taken by compulsion. These orders will be in force on and after the 14th inst.

COUNT VALMASEDA.

BAYAMO, *April* 4, 1869.

In April the Government concentrated troops to the north and south of Puerto Principe. General Dulce decreed an augmentation of 1,000 "guardian civil," for the better protection of Cardenas, Colon, Sagua, Cienfuegos, Santa Clara, and Remedios. The insurgents, on the other hand, closely besieged Trinidad, and cut off all communication with the town on the land side. They continued burning plantations around Sagua la Grande, Remedios, and Santiago de Cuba. The Government officials continued active in confiscating the property of absentees. To prevent further destruction, detachments of ten men were detailed for each estate. The powerless condition of the Government, as opposed to the volunteers, began to excite grave apprehensions among the more intelligent and wealthy Spaniards. Many sales of establishments were made for half their value. The officers of the regular army, unaccustomed to being ruled by their men,

were much disgusted with the constant insubordination displayed by the volunteers. The mobilized negroes in Nuevitas also refused to serve, as the advanced guard, in attacks upon the insurgents. The area of the rebellion extended to the Western Department. On the 17th of April, 1,800 troops, commanded by Generals Letona and Escalante, arrived at Nuevitas from Villa Clara; they were joined the next day by General Lesca, with 1,200 men, from Puerto Principe. An engagement took place between the Spanish troops, under the command of General Lesca, and the Cuban insurgents, at Altagracia. The report says the rebels offered a more determined resistance than in any previous battle, and acknowledges that the Spaniards lost a colonel and captain and six privates killed and thirty wounded. According to later accounts the Cuban loss was 200, and the Spanish 180 in killed and wounded.

It was the first serious battle in the Cuban revolution, but nothing definite resulted from it. On the 3d of May another battle was fought at Las Minas. According to rebel sources, the Spaniards numbered 1,200 men, under the command of General Lesca. The revolutionary force was commanded by General Quesada. One report says, before the fighting commenced, Quesada posted the native Cubans in front, protected by intrenchments, and placed a force of 400 Dominican and American volunteers in their rear, with orders to fire upon them if they ran. Thus placed between two fires, the Cubans fought with desperation. The Spaniards attacked the intrenchments three times with the bayonet. The first two assaults were repulsed by the Cubans; the third was very determined and severe, and the Cubans began to waver, when Quesada ordered the rear-guard to the front. They advanced, driving the Cubans into the front ranks of the enemy. A hand-to-hand combat ensued, in which the butchery was horrible. The Spaniards finally gave way and retreated, but in good order. Their loss is estimated at 160 killed and 300 wounded; that of the Cubans at 200 killed and a proportionate number wounded. The forces of Quesada after the fight marched to San Miguel and burned the town in sight of the retreating Spaniards.

The proportions of this fight seem, however, to have been exaggerated. With the advance of the hot season both the Spanish and rebel troops suffered from fever. The rebels burned the town of Manicaragua.

An expedition, fitted out in the United States under General Thomas Jordan, landed at Mayari, in May. It brought about 4,000 long-range rifles, 300 Remington rifles, 500 six-barrelled revolvers, twelve splendid pieces of artillery, twelve twenty-four and thirty-two pounders, and a number of cartridges. Moreover, he brought 1,000 lances, 1,000 pairs of shoes, an equal quantity of clothing, two printing presses complete, medicine-chests, plenty of rice, biscuits, salt meat, salt, and flour—in fact, full stores for fitting out 6,000 men. The expedition numbered 300 men. On marching into the interior they were attacked by the Spaniards and an obstinate engagement ensued, during which it is reported that the forces of the Government captured two pieces of artillery. The Spanish loss is stated at 32, and that of the insurgents at 80 men killed and wounded.

Severe fighting took place around Trinidad and Cienfuegos, with heavy losses to both sides. Small bands of both parties raided over the country and robbed the inhabitants.

On the 16th of May a severe engagement took place four miles from Puerto Padre, a small seaport town on the north coast of Cuba in the Eastern Department. The insurgents attacked a force of 1,000 Spaniards conveying provisions to Tunas. The battle took place along the margin of the river, and lasted for several hours, and every attempt of the Spaniards to cross was repulsed with severe loss. They were shot down in the river, dyeing the water with their blood. Finally the Spaniards were driven back with great loss, and compelled to abandon the design of provisioning Tunas. They acknowledged a loss of 34 killed and 100 wounded, but the insurgents claimed that their loss was much heavier.

The Captain-General of Cuba, General Dulce, both on account of ill health and the discouraging state of affairs, in Cuba and in Spain, which rendered him daily more powerless, determined to leave Cuba, but, before he could carry out his design, a mob of volunteers virtually deposed him (June 4th), and installed Espinar in his place. Some of the leaders of the volunteers were supposed to meditate the organization of a Colonial Government; their action, however, was limited to instituting a court of inquiry into the conduct of General Dulce.

The brigade of Brigadier Ferrer, which left Nuevitas on the 25th of May to reënforce the troops at Puerto Padre, had returned in a pitiable condition, the cholera having broken out among them. They secured their object, the convoying of a train from Puerto Padre to Las Tunas, in the interior. They were harassed and finally attacked at La Brenosa. The rebels were repulsed with a loss of 80 men. The Spanish loss was 76 in killed and wounded. The insurgents received credit for bravery and for retiring in good order.

The Home Government, to the great delight of the volunteers, appointed, as successor of General Dulce, General Caballero de Rodas, who, by his dealings with the republican insurgents in Cadiz, had received from the Spanish republicans the surname of "the butcher of Cadiz." The new Captain-General entered vigorously upon the task intrusted to him. In order to prevent further assistance from other countries, he published, on July 7th, the following decree:

The custody and guardianship of the coasts of this island, of the keys adjacent, and the waters appertaining to the territory, being of the greatest importance, in order to suppress the insurgent bands that have hitherto maintained themselves by outside assistance; and determined, as I am, to give a vigorous impulse to the pursuit of them, and with a view of settling the doubts entertained by our cruisers as to the proper interpretation of the decrees promulgated by this superior political government under date of November 9, 1868, February 18th and 26th, and March 24th last, I have decided to amplify and unite the aforesaid orders and substitute for them the following, which, by virtue of the authority vested in me by the nation, I decree:

ARTICLE 1. All ports situated between Cayo Bahia de Cadiz and Point Maysi, on the north side, with the exception of Sagua la Grande, Caibarien, Nuevitas, Gibara, Baracoa, Guantanamo, Santiago de Cuba, Manzanillo, Santa Cruz, Zaza, Trinidad, and Cienfuegos, where there are custom-houses, will continue closed to the import and export trade both by foreign and coasting vessels. Those who may attempt the entry of any closed ports, or to open communication with their coasts, will be pursued, and, on being captured, are to be tried as violators of the law.

ART. 2. Vessels carrying gunpowder, arms, and warlike stores, will likewise be judged in accordance with the law.

ART. 3. The transportation of individuals in the service of the insurrection is by far more serious than that of contraband of war, and will be deemed an act of decided hostility, and the vessel and crew regarded as enemies to the state.

ART. 4. Should the individuals referred to in the foregoing article come armed, this will be regarded *de facto* as proof of their intentions, and they will be regarded as pirates, as will also be the case with the crew of the vessel.

ART. 5. In accordance with the law, vessels captured under an unknown flag, whether armed or unarmed, will also be regarded as pirates.

ART. 6. In free seas adjacent to those of this island the cruisers will limit themselves in their treatment of denounced vessels, or those who render themselves suspicious, to the rights given in the treaties between Spain and the United States in 1795, Great Britain in 1835, and with other nations subsequently; and if, in the exercise of these rights, they should encounter any vessels recognized as enemies of the integrity of the territory, they will carry them into port for legal investigation and judgment accordingly.

CABALLERO DE RODAS.

He announced a vigorous policy by the following decree, which proves that he would not concede that the Cuban forces were made up of thousands of well-armed men, under bold and experienced leaders:

SUPERIOR POLITICAL GOVERNMENT OF THE PROVINCE OF CUBA,
HAVANA, *July* 6, 1869.

The insurrection, in its impotency, being reduced to detached bands, perverted to the watchword of desolation, and daily perpetrating crimes that have no precedent in civilized countries, personal security and the rights of justice, the foremost guarantees of person and property, imperiously demand that said insurrection be hastened to its end, and without consideration toward those who have placed themselves beyond the pale of the law. The culprit will not be deprived of the guarantees of just impartiality in the evidence of his crimes, but without the delay admissible in normal periods, which would procrastinate or paralyze the verdict of the law and its inexorable fulfilment.

As the guardian of the national integrity, the protector of the upright and pacific citizen, fulfilling the duties of my office, and in virtue of the authority conceded to me by the Government of the nation, I hereby decree:

ARTICLE 1. The decrees promulgated by this superior political government, under date of 12th and 18th February last, shall be carried out with vigor.

ART. 2. The crimes of premeditated incendiarism, assassination, and robbery, by armed force and contraband, shall be tried by a council of war.

ART. 3. The courts of justice will continue in the exercise of their attributes, without prejudice, however, of being submitted to me such cases as special circumstances may require.

CABALLERO DE RODAS.

A proclamation followed, addressed to the "Inhabitants of the Island of Cuba," the volunteers, soldiers, and mariners.

In July, General Puello, at the head of 300 Spanish marines, was attacked by a force of patriots near Baga, a small town situated on the same bay as Nuevitas, and not far from that city. The marines were forced to fall back upon Nuevitas, with a loss of 80.

During July the Spanish troops in the insurrectionary districts were reënforced by all the disposable forces of the island. In the Cinco Villas district there were several contests, in which small parties were engaged. It is reported that in these engagements the Spanish loss in killed, wounded, and prisoners, amounted to nearly 400. These reënforcements were sent principally to the district commanded by General Jordan, but, on account of the setting in of the rainy season, both parties were compelled to suspend operations. The Cubans continued to be reënforced by volunteers from the United States. Two hundred and twenty-five, recruited in Indiana, Ohio, and Kentucky, succeeded in landing on the 28th of July, and joining General Quesada's forces. They carried with them arms and ammunition, and a large supply of camp-equipage.

In October the volunteers continued to control the affairs of the island, and the Captain-General seemed powerless to prevent them. A general feeling of insecurity and alarm prevailed, and no foreigner or native felt safe.

The decree of the Constituent Cortes, establishing unrestricted liberty of religion in the colonies of Cuba and Porto Rico, was, on October 25th, promulgated in Cuba, and has gone into effect as the law of the land. The document declares that Spain cannot remain removed from the general movement of Europe and the world, and adds that this consideration is the more powerful for the Antilles, because they lie near a continent where liberty of religion is recognized by law. One clause of the decree provides that no person shall be prevented from holding office under the Government by reason of his religious belief. The decree was received with general satisfaction by the populace.

During the prevalence of cholera in October, which carried off great numbers of Valmaseda's forces, Quesada's 8,000 well-armed and thoroughly-organized men spent their time in going through target-drill. There were, in October (according to Cuban accounts), about

15,000 insurgents in the Cinco Villas district, in addition to about 8,000 under General Ruloff, a Pole. Much depression was felt on account of the failure of most of the expeditions from the United States, as more arms were greatly needed. The most important expedition that reached Cuba was that organized by General Goicuria. The steamship Lillian, which had been lying at New Orleans, went to Cedar Keys, off the Florida coast, where about 600 men and several cannon and a large number of rifles with appropriate ammunition were embarked. The expedition safely arrived, about the 20th of October. Returning, the Lillian put into the harbor of Nassau, where she was seized by the British authorities, but was released after a short detention.

In November the burning of sugar-plantations became quite general. There were over one hundred and sixty large sugar-plantations belonging to Cubans who had fled, which were confiscated by the Spaniards, with the view of getting money out of the crops. To prevent this, the Cubans set fire to the cane on all these plantations. On November 20th the Spanish arms suffered a reverse at Mogote, where an attack upon a fortified position of the insurgents was repulsed with loss. The troops were commanded by Colonel Camara, and the attack commenced by throwing a shell, which was followed by a bayonet-charge. The Cubans stood firm, and after a desperate fight the Spaniards were repulsed. No details of the losses are known, but they were heavy on both sides.

In November, the Cuban Junta in New York City was reorganized. It consisted thenceforth of six members, besides the newly-elected President, Señor Miguel Aldama, of whom three had previously been prominent members of the Havana bar. The others had gained equal distinction in eminent business positions.

The American general, Jordan, who, in the meanwhile, had been appointed Adjutant-General of the Army of Cuba, stated in a letter that the Cuban army numbered 26,800 men, supplied with arms; that it was followed by 40,000 liberated slaves, armed with *machetes*, and that, if the Cubans had 75,000 stands of arms, the war could be ended in 90 days.

In the beginning of the month of December, General Cespedes issued a proclamation calling on all faithful Cubans to destroy their sugar and tobacco crops, in order to deprive the Spaniards of this source of revenue. The operations of the Cubans during the month accordingly were chiefly directed to the burning of crops.

The insurrection, at the end of 1869, had not yet died out; and a report, published in December by the Havana papers, that the Cuban Junta in New York had requested the leaders of the insurgent forces to lay down their arms, was indignantly denied.

From the beginning of their uprising, the Cuban insurgents met with the most cordial sympathy in South America. The Governments of Chili and Peru formally recognized the insurgents. The note of the President of Peru, dated May 13th, to General Cespedes, "Captain-General of the Liberating Army of Cuba," contains the following paragraph: "The President of Peru sympathizes deeply with the noble cause of which your Excellency constitutes himself the worthy champion, and he will do his utmost to mark the interest which that island, so worthy of taking its place with the civilized nations of the world, inspires him with. The Peruvian Government recognizes as belligerents the party which is fighting for the independence of Cuba, and will strive its utmost to secure their recognition as such by other nations; and likewise that the war should be properly regulated in conformity with international usages and laws." The sympathy in all the other republics was equally outspoken, and the Cubans, at the close of the year, were expecting a speedy recognition by all of them.

In the United States, the sympathy of public opinion was at least equally strong, and showed itself in a large number of mass meetings, in resolutions of Congress, and in the fitting out of a number of expeditions. This sympathy was also openly expressed in the message of President Grant, in December, 1869; on the other hand, however, the message took the ground that "the contest had at no time assumed the conditions which amount to a war in the sense of international law, or which would show the existence of a *de facto* political organization of the insurgents sufficient to justify a recognition of belligerency." The President further remarked that the United States had no disposition to interfere with the existing relations between Spain and her colonial possessions on this continent, believing that in due time Spain and other European powers would find their interest in terminating those relations. (On the negotiations between the Governments of the United States and Spain, arising out of the Cuban war, *see* SPAIN.)

D

DELANGLE, CLAUDE ALPHONSE, a French jurist, statesman, and cabinet minister, born at Varzy (Nièvre), France, April 6, 1797; died in Paris, December 21, 1869. He, at first, sought to qualify himself to become a teacher, but subsequently studied law with Dupin the younger, and was admitted to the bar in Paris; was elected member of the council of the order in 1831; succeeded to Philip Dupin as director in 1837–'38. He was appointed advocate-general to

the Court of Cassation in 1840, and in 1847 became *Procureur-Général* to the Royal Court of Paris, and managed several very important political causes in that capacity. At the election of 1846 he was elected a member of the Chamber of Deputies from Cosnes (Nièvre), in spite of a very strong opposition, and in the Chamber ranked as a Conservative. After the revolution of February, 1848, M. Delangle was deprived of his governmental appointments, and returned to the bar. He now embraced the cause of Louis Napoleon, and in 1850 was appointed by him President of the Bureau of Judiciary Assistance to the Court of Cassation. At the time of the *coup d'état* (December 2, 1851), he was a member of the Consultative Commission, and soon after was appointed by Louis Napoleon President of the Section of the Interior, of Public Instruction and Worship in the Council of State. He was also one of the commissioners chosen to represent the Government in the deliberations of the Senate relative to the establishment of the empire. At the beginning of 1852 he was restored to the magistracy, at first, as *Procureur-Général* of the Court of Cassation, in place of M. Dupin, resigned. On the 30th of December, 1852, he was appointed First President of the Imperial Court of Paris, and the next day created a Senator. He became also President of the Municipal and Departmental Commission of the Seine, and member of the Imperial Council of Public Instruction. On the 5th of June, 1858, he was called to succeed General Espinasse in the Ministry of the Interior, from which office the additional duties of Ministry of General Safety were then withdrawn. On the 5th of May, 1859, he passed from this office to the Ministry of Justice, with the title of Keeper of the Seals. He resigned this office June 23, 1863, and in October following succeeded M. Roland as first Vice-President of the Senate. He was elected in March, 1859, a member of the Academy of Moral and Political Sciences. He was made a Grand Cross of the Legion of Honor by the Emperor in 1864. M. Delangle retained his position in the magistracy till his death. He was the author of an able "Treatise on Commercial Societies (2 vols., 8vo, 1843), and of numerous articles on legal topics in the *Gazette of the Tribunals*.

DELAWARE. Public affairs in this State have been quiet in 1869, and little has transpired worthy of record. There has been no political canvass or election held during the year. The Legislature, which meets biennially, was in session from the first Tuesday in January until the 9th of April, when it adjourned, making one of the longest sessions that there has been for many years. A very large proportion of the measures acted upon were not of general importance. The Fifteenth Amendment to the Constitution of the United States having been submitted to the Legislature, its ratification was rejected by a vote of 7 to 2 in the Senate, and 21 to 0 in the House. The most important measure passed at this session was the "Act providing revenue for the State," which was intended to secure means for payment of the interest on the funded debt, and for the support of the State government. The bill imposes the following taxes:

1. On all sales over $1,000 per annum, less commissions, freights, and United States tax, one-tenth of one per cent., payable quarterly.
2. On manufactures, the same rate, with an allowance for the same deductions.
3. On various law processes, recording deeds, registering wills, etc.; various additional fees varying from twenty-five cents to five dollars.
4. On foreign insurance companies, two and a half per cent. on the premiums received, payable quarterly; on home companies, one-half of one per cent., payable yearly.
5. On corporations (except banks, railroad, canal, and insurance companies, and loan associations), one-fourth of one per cent. on the cash value of their capital.
6. On private bankers and brokers, and real-estate agents, two per cent. on their annual receipts for brokerage and commissions.
7. On building and loan associations, one-fourth of one per cent. on gross receipts.
8. On all collateral inheritances, legacies, and distributive shares, over $500, one and a half per cent.
9. On judgments, mortgages, bonds, stocks, in foreign corporations, one-fourth of one per cent.

Provision is made for the appointment by the Governor of an assessor for each county, to assess the tax; and for its collection by the State Treasurer or his deputies. The provisions of the bill occasioned no little dissatisfaction in some parts of the State, and several remonstrances against its enactment were presented to the Legislature, to the effect, that the tax on the manufacturing interests of the State was excessive and would give a great advantage to the manufactures of the adjacent States; that the tax of one-half of one per cent. on bonded and other indebtedness would cause capitalists to seek other markets for investment; and, that the provisions of the bill were unjust, as it did not impose a tax upon the landed interest of the State.

Tax bills were passed imposing upon all railroad and canal companies in the State, "in addition to the tax now imposed upon them," a tax of three per cent. upon their net earnings, inside of the State, one hundred dollars a year for each locomotive, twenty-five dollars for each passenger-car; and ten dollars for each freight-car; also, a tax of one-fourth of one per cent. on the cash value of the stock of banks.

A Woman's Suffrage Convention was held at Wilmington in November, for the purpose of forming a State society, to advocate the principles of this cause. There was a good attendance of men and women, many of whom were

prominent in the movement in favor of woman's rights. The objects and sentiments of the convention were expressed in the following resolutions, which were adopted:

Believing that "governments derive their just powers from the consent of the governed," that "all political power inheres in the people," men and women, and that "taxation without representation is tyranny:" therefore

1. *Resolved*, That we demand suffrage for the women of Delaware on equal terms with men, as their natural right—because women are human beings, capable of rational choice, and tax-paying citizens of a free country entitled to a voice in making the laws they are required to obey.

2. *Resolved*, That the women of Delaware need suffrage in order to reform the unjust laws which now oppress them as wives, mothers, and widows, in order to obtain equal educational and industrial advantages.

3. *Resolved*, That society needs the votes of women, because, as a class, women possess peculiar mental and moral characteristics which should be represented in the Government, and because their votes will promote peace, purity, temperance, economy, and public order.

4. *Resolved*, That we will petition the Legislature to give to the wives of Delaware the right to their own earnings; to the management, use, and enjoyment, of their own property; the right to make a will; an equal share with their husbands in the legal guardianship and control of their children, and, as a security of all rights, the right of suffrage for women.

Believing the foregoing statements to be self-evident, founded in justice, truth, and the revelation of the Divine will, concerning human rights and privileges,

Resolved, That we proceed to form a Delaware State Woman's Suffrage Association, auxiliary to the American Woman's Suffrage Association, under the following rules and regulations:

1. Believing in the natural equality of the two sexes, and that women ought to enjoy the same legal rights and privileges as men; that as long as women are denied the elective franchise they suffer a great wrong, and society a deep and incalculable injury; the undersigned agree to unite in an Association to be called "The Delaware Woman's Suffrage Association."

2. The object of this Association shall be to procure the right of suffrage for women, and to effect such changes in the law as shall place women in all respects on an equal legal footing with men.

3. The officers of the Society shall be a President, Vice-Presidents, a Treasurer, a Corresponding and a Recording Secretary, and an Executive Committee of not exceeding fifteen persons, besides the President, Secretaries, and Treasurer, who shall be members *ex officio*. All the officers shall be chosen at the annual meeting, to continue in office for one year, or until others are chosen in their places.

4. Any person may be a member of the Association, by the payment of an annual contribution to its funds, or a life member by the payment of twenty dollars.

5. The President and other officers shall perform the customary duties of their respective offices.

6. The Executive Committee shall audit the accounts of the Treasurer, and manage the business of the Association; they may elect honorary members, call meetings of the Society, prepare petitions to the Legislature, issue publications, and employ lecturers and agents, and take any measures they think fit to forward the objects of the Association, and may fill all vacancies that occur prior to the annual meeting.

7. The annual meeting of the Association shall be held at such time and place as the Executive Committee may appoint.

The public schools of Delaware are not in a satisfactory condition, and the efforts which have been made to secure a public-school system adequate to the wants of the State have not been successful. At a general convention of those interested in the cause of education, held at Dover, in December, 1867, a committee was appointed to prepare a report upon the needed reforms in the school system. This committee reported in the autumn of 1868, and, among the changes suggested, the appointment of a State Superintendent was urged, as well as that of a superintendent for each county. The committee further recommended a change in the mode of levying school-taxes, which at present depends upon the vote of each school at each spring meeting. The committee were of opinion that this tax should be levied by commissioners in each hundred or town.

It is to be hoped that these and other reforms will be made at an early day, that the rising generation of Delaware may enjoy the advantages of good common schools.

Notwithstanding the influence of public opinion against the pillory and whipping-post, this mode of punishment still exists as one of the institutions of Delaware. A public exhibition of this kind was witnessed at Newcastle, in November of this year, when five colored persons were punished by the lash and the pillory, in presence of a large number of spectators. This institution is condemned by an enlightened public opinion, and it is to be hoped that the day is not far distant when it will be abolished in the only State where it now exists.

There has been a great improvement in the railroad facilities of Delaware during the year, and other important improvements are in contemplation. The Maryland and Delaware Railroad has been completed to the thriving town of Easton, in Talbot County; the Dorchester and Delaware Railroad has been extended from Seaford to Cambridge, in Dorchester County; and a branch road has been constructed from Townsend Station, on the Delaware River, to Massey's Cross-roads, in Maryland. The Junction and Breakwater Railroad has been completed to Lewes, its terminus.

But the most important event in the extension of railroads for the year has been the completion of the Wilmington and Reading Railroad to Coatesville, a point on the Pennsylvania Central Road, and about thirty miles from Wilmington. The construction of this railroad is to be pushed rapidly forward to its terminus.

DENMARK, a kingdom in Europe. King, Christian IX., born on April 8, 1808; succeeded King Frederick VII. on November 15, 1863. Heir, Prince Frederick, born June 3, 1843; married to Princess Louisa of Sweden, on July 28, 1869. Area of Denmark Proper, 14,698 English square miles; of the dependencies, Faroe, Iceland, Danish settlements in Greenland, the islands of St. Croix, St. Thomas,

and St. John, in the West Indies, 40,214 square miles. Minister of the United States in Denmark, George H. Yeaman, appointed in 1865. Minister of Denmark in the United States, F. E. de Bille, appointed in 1867. The population of Denmark, according to the official census of 1860, was 1,608,095; in 1868 it was estimated at 1,753,787. The population of the Danish dependencies, in 1860, was 108,983. In the budget for the year 1869–'70 the revenue is estimated at 22,039,891 rix-dollars; the expenditures at 22,358,024. The public debt, on March 31, 1869, amounted to 119,141,100 rix-dollars. The army,* in 1868, was composed as follows:

	First Call (Line and Reserve).		Second Call.	
	Officers.	Men.	Officers.	Men.
Infantry	730	26,750	235	9,396
Cavalry.....	126	2,122	..	..
Artillery....	139	6,523	23	1,540
Engineers ..	36	580	22	740
Total.....	1,031	35,975	280	11,676

On a war footing the army numbered 49,008.

The fleet, at the close of 1868, consisted of 31 steamers, inclusive of 6 iron-clads, with an aggregate of 312 guns, 2 sailing-vessels, 27 gunboats, and 29 transports.

The movement of shipping in 1867–'68 was as follows:

	Vessels.	Lasts.
Domestic Navigation....	46,864	305,339
Foreign Navigation.....	38,084	535,615

The number of foreign vessels taking part in the domestic navigation was 1,592, or 3.6 per cent., and of those taking part in the foreign navigation 20,216, or 53.1 per cent.

The merchant navy, on March 31, 1868, consisted of 3,132 vessels, together, of 87,777 lasts. The number of steamers, in 1868, was 80.

In November, 1868, both Houses of the Rigsdag adopted a law which permits the establishment of free religious congregations.

On the 11th of January the Landsthing voted the total exemption of the clergy from military duties.

On the 19th of January the Minister of Justice, in reply to an interpellation, stated that nothing in the laws of Denmark forbids Jews from holding a judicial position.

On the 4th of February the Folkething agreed to the bill, already ratified by the Landsthing, to raze the fortress of Nyborg.

The Diet was closed on the 27th of February.

On the 1st of March, the decision of the trial of the Duke of Glucksburg against the state was promulgated. The state government was declared to be obliged to pay every year to the Duke 17,006 thalers, and to his younger brothers 1,006 thalers each from January 1, 1869, from the Ploen "Equivalent money."

* *See* the AMERICAN ANNUAL CYCLOPÆDIA for 1867, for an account of the military law of 1867; the latest statistics of the value of imports and exports; and an account of the present constitution.

On the 4th of July a Scandinavian meeting, attended by upward of ten thousand Swedes, Danes, and Norwegians, took place in the park of the Royal Palace of Fredericksburg, about twelve miles north of Copenhagen. The Scandinavian societies of Denmark and Sweden had sent invitations to all parts of Scandinavia, and the most distant places sent representatives to the meeting. A journalist came from Trondhjem, at the extreme north of Norway, a peasant from a village on the western coast of Jutland, and Schleswig was represented by three well-known Danes from Flensburg. A great number of speeches in Danish, Norwegian, and Swedish, were delivered, in which the necessity of a political union between Sweden and Denmark was dwelt upon as the only means of protecting those countries against the attacks of their powerful neighbors. It was also urged that the greatest possible development should be given to both the military and naval forces of Scandinavia. A Swede spoke warmly in favor of the people of North Schleswig, and one of the delegates from that country declared that the North-Schleswigers would "never cease to appeal to The Treaty of Prague as the guarantee of their rights, and to demand reunion with Denmark, trusting that they would be supported in this demand by their Scandinavian brothers."

DERBY, EDWARD GEOFFREY STANLEY, fourteenth Earl of, K. G., an English statesman and orator, born at Knowsley Park, Lancashire, March 29, 1799; died at Knowsley Park, October 23, 1869. He was educated at Eton, and Christ Church College, Oxford, distinguishing himself at college for his classical attainments, and gaining, in 1819, the Chancellor's prize for Latin verse, his subject being "Syracuse." Immediately after attaining his majority he entered political life, having been returned to Parliament for Stockbridge in 1820. It was not, however, till four years after his first election to the House of Commons that he ventured to address that body; but his maiden speech stamped him at once as an orator of no ordinary powers, its effort eliciting a warm eulogium from that fine scholar, Sir James Mackintosh, then one of the most distinguished members of the House. The second speech, delivered in opposition to a measure of the celebrated economist, Joseph Hume, proposing certain reforms in the Irish Church Establishment, was equally felicitous, and, following it up by several others of like ability, he soon established his fame as one of most accomplished and effective debaters in the British Legislature. His great powers, and the brilliant success he had achieved as parliamentary orator, combined with his high rank, soon won him the post of Under Secretary for the Colonies in the Administration of Lord Goderich. This position did not afford much scope for the exercise of his extraordinary talents; but he turned it to good account in familiarizing himself with the routine work

of the Executive Government. In 1830 he became Chief Secretary for Ireland, and it is from this period that his fame as a statesman dates. Ireland was at that time in a highly-excited state. Only the year before the great measure of Catholic Emancipation had been carried; and Daniel O'Connell, then in the zenith of his fame, had just taken his seat in the House of Commons, flushed with victory, and bent upon accomplishing, if possible, a repeal of the Union. The new secretary found himself confronted by difficulties of the most threatening character; but, according to the principles and policy which then prevailed in the government of Ireland, he proved fully equal to the occasion. He opposed O'Connell's repeal agitation with all his might, the encounters between him and the great Irish orator in the House of Commons, night after night, being often of the most exhausting character; but while he thus showed himself not afraid to offend the national party, of which his distinguished adversary was the idolized leader, he, at the same time, brought forward and succeeded in carrying several measures calculated to give effect to the Catholic Emancipation scheme, while, at the risk of giving mortal offence to the Protestant part of the population of Ireland, he did not hesitate at suppressing the Orange lodges. In the terrible struggle which preceded the passing of the first Parliamentary Reform Bill, in 1832, Mr. Stanley took an active and prominent part, his genius for debate shining forth with dazzling brilliancy in these desperate encounters, between the advocates of the measure and its opponents, which marked the progress of the bill. His brilliant eloquence and his sympathies in this whole struggle were dedicated to the cause of popular liberty, although he was a member of one of the oldest patrician families of England, and the heir not only of a great name, but of the most intensely aristocratic and conservative traditions. But he did not allow the excitement of the Reform movement to distract his attention from his proper work as Secretary for Ireland, and he signalized his administration by two bold measures—one for national education in that part of the kingdom, and another relative to the Irish Church temporalities, which resulted in ten bishoprics being abolished. The grievance of Church rates was also removed, and a graduated tax upon benefices and bishoprics substituted. But another work was before Mr. Stanley, the accomplishment of which must be regarded as constituting by far his best title to an enduring fame. In 1833 he became Secretary of State for the Colonies, as the successor of Lord Glenelg. The question of the emancipation of the slaves in the British West Indies was then agitating the public mind and exercising the national conscience to an extraordinary degree. The antislavery labors of men like Buxton and Clarkson, and the captivating and effective eloquence of Wilberforce, had prepared the way for the performance of a great act of justice on the part of England toward the cruelly-oppressed children of Africa in her colonial possessions; and it fell to Mr. Stanley's lot, as Colonial Minister, to introduce in the House of Commons a measure for the abolition of negro slavery in the British dominions. It is alleged, indeed, by his friends, that he sought a place in the Cabinet and the Colonial secretaryship for the purpose of introducing this measure. It encountered, of course, violent opposition from the West India interest; but, entering with characteristic ardor upon its advocacy, he excelled himself in the oratorical encounters he was called upon to sustain in that House, during the progress of the measure, his great powers never appearing to greater advantage, nor commanding so profound an homage from both friends and foes, as when he put them forth in pleading the cause of the deeply-injured blacks. He succeeded in carrying his bill, which provided for the complete emancipation of the slaves after a short term of years, awarding the planters, at the same time, a compensation of twenty millions sterling for the loss of their human chattels. With the passage of the Emancipation Bill the most stirring and the most distinguished period of the late Earl of Derby's career came to a close. The remembrance of his lineage and the conservative traditions which he had hitherto resisted began to exert their influence over him; he began to feel that he was in danger of going too far in the path of reform, and drew back into the ways and channels of thought and action to which his birth and early associations naturally led him. From the hour of his great triumph, he became more and more wedded to conservatism to the close of his life. It was not long after the memorable triumph which he had gained in the emancipation question, before he separated from the party with which he had steadily acted from his entrance in the political arena. The occasion of this separation was the success of Mr. Ward's motion for appropriating the surplus of the Irish Church temporalities to secular purposes, a measure to which he offered the most determined opposition, withdrawing from the Grey ministry in 1834, in consequence of his hostility to this motion, and refusing, on conservative grounds, to enter Sir Robert Peel's Cabinet, which succeeded that of Earl Grey in 1834. For seven years he remained in opposition, gradually becoming the recognized chief of the Conservative party, to whom his great abilities strongly commended him. In 1841 he accepted the seals of the Colonial Office under the Peel ministry of that date; in September, 1844, he was called to the House of Peers as Baron Stanley of Bickerstaffe. Sir Robert Peel's abandonment of his party on the Corn Law question led to the withdrawal of Lord Stanley from the Cabinet, and he became the leader, in the Lords, of the Protectionists,

Lord George Bentinck and Mr. Disraeli discharging a similar duty in the House of Commons. In 1851, on the death of his father, he succeeded to the earldom, and in 1852, on the resignation of Lord John Russell as Premier, he was called upon by the Queen, for the first time, to form a government, which he did. But he held the reins of power for only ten months, having found it impossible, with a Cabinet so intensely Conservative and Protectionist as that he had constructed, to command a majority in the House of Commons. During this short term of office, however, he was instrumental in carrying those measures of chancery reform which have proved of such signal benefit to the English people, and in forming that alliance between England and France from which such important results to both countries have already flowed. On the fall of the coalition ministry in January, 1855, Lord Derby declined to undertake the duties of Government, on the ground that the only ministry he could have formed would have been dependent for existence on the forbearance of foes. In 1858, upon the resignation of the Palmerston ministry, he again became First Lord of the Treasury; but his Government having been beaten in the House of Commons on a measure of parliamentary reform brought forward by them, he dissolved Parliament, and appealed to the country, only to find the new House more opposed to him than the old one, leaving him no alternative but resignation. As his overthrow in the first instance was brought about principally through his avowed determination to restore the Corn Laws, so this time it was hastened by his apparent sympathy with Austria on the Italian question. Again, however, he signalized his administration by achievements which will live in English history, foremost of which was, this time, the pacification of India after the mutiny, and the reorganization of the government of that vast dependency. After another seven years' exclusion from office, Lord Derby, for the third time, became Prime Minister in June, 1866, after the fall of the Russell-Gladstone Ministry, retaining office till the new Parliament, elected on the issue of the Irish Church Disestablishment question by a decisive majority, sealed the fate of his Government at the commencement of the late session. His third and last term of office will, like the two preceding ones, be memorable for the accomplishment of a great work, destined to exercise a powerful influence on the national fortunes. This time his Government carried a measure establishing household suffrage; not, however, from any sincere desire to see the area of popular rights extended, but in order to prevent a revolution that would have given a rude shock to the English throne. As an orator and debater, Lord Derby stood in the first rank. Lord Macaulay remarked that his knowledge of the science of parliamentary debate, at the very outset of his career, resembled an instinct, and that it would be difficult to name any other debater who had not made himself a master of his art at the expense of his audience. He was of commanding presence and an ardent nature, rapid in speech when excited, impetuous in attack, and with a voice which, when elevated, rang out like the tones of a trumpet. His remarkable classical attainments, which won him such high honors in his university course, were never suffered to become rusty. Many of his most eloquent speeches were garnished with appropriate and beautiful classical allusions, and the great literary labor of his later years was a translation of the "Iliad" in blank verse, published in 1865, and which is admitted by critics generally to be the finest English version of the great epic. In 1852 he was elected Chancellor of the University of Oxford, and devoted much time and thought to the interests of that ancient seat of learning. In his private life the Earl was genial upon occasion, witty and sarcastic, and, though mindful of his aristocratic birth and lineage, considerate and thoughtful in his intercourse with those in inferior station, a good and just landlord in general, though sometimes inclined to be stubborn where he deemed his rights concerned. He was often imperious, sometimes high-handed in his measures, but never mean. He was, indeed, the soul of honor in all the relations of private life.

DIPLOMATIC CORRESPONDENCE AND FOREIGN RELATIONS. The correspondence between the Department of State and our representatives at foreign posts during the year developed but little of general interest. The rejection by the Senate of the text of the treaty on the subject of the Alabama claims, negotiated by Lord Clarendon and Mr. Johnson (*see* AMERICAN ANNUAL CYCLOPÆDIA for 1868, p. 216) led to further correspondence between the representatives of the United States and Great Britain without eliciting any new points, or resulting in any definite arrangement for the settlement of the questions in dispute.

The U. S. Government was frequently approached by agents or alleged ministers acting in behalf of the Cubans, desiring the recognition of belligerent rights; in other words, that they be placed on the same national footing as Spain. The Government was also asked to follow the example of Mexico and Peru, and other South American Republics, and officially encourage the Cubans in their struggle against Spain. The reasons for not acquiescing in such appeals were stated to be based upon the law of nations, the condition of the island not justifying, in the opinion of the Administration, the recognition of the Cuban flag; and no satisfactory evidence being produced to show that there was a *de facto* government of the Cubans possessing the powers essential to its maintenance and character.

The sympathy of the Government was al-

ways with the Cubans; but this, under the peculiar existing circumstances attending the question, could not be distinctly manifested by official acts in connection with movements in the field. It is said, however, that the Government sought to induce Spain to consent to the independence of the island, and thus avoid further bloodshed.

There was not, as has been frequently stated, any offer of "mediation" by Minister Sickles, as the use of that word would imply or suggest the existence of war between equally recognized powers, and was therefore avoided in the correspondence and interviews with the Spanish Government. The "good offices" of the United States were tendered, as they can always be employed between parties, one of whom is not acknowledged by the other, without the implication of any recognition of nationality, or even of belligerency. This offer was refused by Spain in a note stating that, while it was deemed impolitic to entertain the proposition for parting with the Island of Cuba on the terms suggested, the Regent nevertheless expressed his thanks to the United States for the tender of their friendly offices. The tender having been declined, the note was withdrawn, in conformity with diplomatic usage.

Two American citizens, Charles Speakman and Albert Wyeth, having unintentionally become identified with an expeditionary force sailing from the United States to Cuba, in the schooner Grapeshot, they being under the impression that the destination of the vessel was Jamaica, and having embarked for that island, were brutally murdered by the Spanish authorities after having given themselves up. The United States Government demanded of the Spanish Government reparation for the families of Speakman and Wyeth, as far as pecuniary compensation could make reparation for such unjustifiable action, and which reparation was promptly promised.

DOMINION OF CANADA. It will be remembered that, when we last wrote respecting this Confederation, it had not yet reached the extent proposed by its projectors, the Government of Great Britain and Ireland. The Union then consisted of the Provinces of Canada, Nova Scotia, and New Brunswick. The same limits still exist, the efforts made during the past year to extend them not having been at all successful. The Legislature of Newfoundland agreed to certain terms of admission proposed by the Dominion Government, but upon the question being referred to the inhabitants of the island, at a general election in November last, an overwhelming majority decided in the negative. Neither has the Northwest Territory been secured. Negotiations between the Hudson's Bay Company and the Dominion have, with the aid of the Imperial Government, so far succeeded that the former agreed to surrender all its rights, real and assumed, for the sum of $1,200,000; and it was arranged that this amount should be paid, and a legal transfer of the territory made on the 1st day of December, 1869. For reasons that, no doubt, to them seemed good, the authorities of the Dominion resolved that the Lieutenant-Governor of the new territory should be at the seat of his future government in advance of that date, and accordingly the Hon. William McDougall, C. B., the gentleman so appointed, took his departure from the capital of the Dominion early in November last, accompanied by certain officials selected because of their services in Ontario and Quebec, and who, like their chief, would enter the Northwest country utter strangers to its people. It is now generally known that Mr. McDougall was prevented from entering upon the duties assigned to him; that he was almost immediately met by a body of armed men who took possession of a fort which he had entered, and obliged him to fall back upon United States territory; that these insurgents, so called, next seized upon Fort Garry, and finally established a provisional government, which is still in power.

Immediately upon the news of this state of affairs reaching the Dominion Government, the proper authorities in England were commanded by telegraph not to pay the stipulated sum to the Hudson's Bay Company—a proceeding which clashed rather awkwardly with the subsequent act of Mr. McDougall in issuing a proclamation in the name of her Majesty the Queen, making it known: "That we have seen fit by our royal letters patent, bearing date the 29th September, year of our Lord 1869, to appoint the Hon. William McDougall, of the city of Ottawa, in the Province of Ontario, in our Dominion of Canada, and a member of our Privy Council for Canada, and Companion of the most noble order of the Bath, on, from, and after a day to be named by us for the admission of Rupert's Land and our Northwestern Territory aforesaid into the Union of the Dominion of Canada, to wit: on, from, and after the first day of December, in the year of our Lord 1869, to be, during our pleasure, Lieutenant-Governor of the Northwestern Territory."

It has not transpired what measures are in contemplation at Ottawa—whither Mr. McDougall returned after a few weeks—consequent upon this disaster; but so serious is the affair regarded in England, that the London *Times*, in concluding an elaborate article upon it, observes that "the statesmen of the Dominion will have need of all their skill and caution, as well as courage, if they wish to unite the whole of British North America into a single state." With regard to the outlying colonies of British Columbia in the West, and Prince Edward's Island in the East, it is also uncertain how far they are willing to be incorporated.

In the case of the latter colony, a special effort toward conciliation has just been made. On the 14th December, 1869, a report of the Privy Council at Ottawa was approved by his

Excellency the Governor-General, submitting as a basis of admission into the Union not only the several advantages offered to the other Provinces, but also a proposition for relieving the inhabitants from a burdensome and vexatious land tenure, arising from the fact, as stated by the report, "that the lands of the colony had been granted by the Imperial Government in large blocks, and chiefly to persons resident abroad, from whom many of the settlers can only obtain land on lease instead of by purchase, as in the other British North American colonies." The mode of relief is thus stated: "That, in the event of the island becoming part of the Union, the Government of the Dominion will endeavor to secure for the island from the Imperial Government fair compensation for the loss of Crown lands; that, should the Dominion Government fail in their efforts to secure such compensation, they will undertake to raise by loan, guaranteed by the Imperial Government, or upon their own securities should such a guarantee be refused, $800,000, and pay the same to the island government, as a compensation for the loss of such Crown lands, this sum to be in addition to the other sums mentioned in the preceding proposals; that the Dominion Government will also use their influence to secure such legislation as will enable the government of the island to purchase the land now held in large blocks, upon terms just and equitable to all parties concerned."

It is generally felt that the freedom with which a class of writers in England have, of late, discussed the question of a peaceful severance of the British colonies from the parent state has had certain effect in retarding the completion of the Dominion. A sentence from one of them—Mr. Dilke, a member of the Imperial Parliament—in speaking of the peculiar position of British Columbia, is noteworthy: "For purposes of reënforcement, immigration, and supply, at a distance of not less than twenty thousand miles from home, the Pacific colonies can scarcely be considered strong in their allegiance to the Crown." The friends of Confederation are well pleased that discontent has ceased in Nova Scotia; but many able men are of opinion that peace was procured at no less a cost than a slight shock to the Constitution. The terms of reconciliation agreed to by Mr. Howe, and adopted by the Federal Parliament, included an annual subsidy of $80,000 for ten years, to the hitherto recalcitrant Province: the constitutional act, however, states explicitly the conditions upon which each Province is to enter the Union, and, as no express power is given to the local Parliaments, or to either of them, to make alterations, it is contended that the change in favor of Nova Scotia contains the elements of a dangerous precedent. Nor is this the only intimation the Canadians have received that the form of trouble known as "State rights" is inevitable under this new system of government. There has been already more than one case of "disallowance" by the Federal authorities of acts passed by the inferior Legislatures, and hence it may be presumed, from the public announcement we have just read, that in the next session of the Federal Parliament a law will be passed authorizing the establishment of a Superior or Supreme Court for the Dominion.

Socially and materially Canada may be said to be a prosperous country. The public journals told of cases of gross crime committed during the past year, but comparatively it is a moral country. Nowhere do the clergy of all denominations work more faithfully, with less acrimony toward each other, or with better general results; and education, now universally admitted to be the appointed handmaid of religion, is nobly provided for. According to the last official report, there were in the Province of Ontario 4,406 common schools, of which 3,912 are entirely free, while in the remaining 594 the highest charge is 25 cents per month. The expenditure stated in this report—$1,478,188—shows an increase on that of the previous year of $85,955. There are also 106 grammar-schools, where nearly 6,000 pupils are grounded in Latin, Greek and French; arithmetic, algebra, and Euclid; ancient and modern history; the elements of natural history, natural philosophy, and geology; physiology, chemistry, book-keeping, drawing, and vocal music. There is a Normal School at Toronto, in which 800 teachers are annually trained; and, established in various parts of the Province, are 28 private schools and academies, and 16 colleges, including 5 universities. In 1868 the number of college students was 1,931; and, besides fees of $53,000, the institutions had a collective income, from legislative and other sources, of $159,000. The latest official accounts published show that in the Province of Quebec there were 3,902 elementary schools, in which nearly 215,000 pupils were being taught reading, writing, simple and compound arithmetic, book-keeping, geography, history, French and English grammar; three normal schools; two universities, one Catholic and one Protestant, and several minor colleges, the aggregate revenue of which, irrespective of fees, was computed to exceed $200,000 per annum. In the other provinces of the Dominion the provisions for education are known to be proportionately extensive and efficient.

The first financial year of the Dominion ended on the 30th of June, 1868. According to the public accounts of this year, submitted to Parliament in May, 1869 (and then for the first time published), the "ordinary revenue" was $18,716,786.72; "ordinary expenditure," $18,366,490.55. Of the revenue the large figure of $8,624,318.42 was derived from customs duties. The assets of the Dominion are shown to be $93,518,129.12. The liabilities, $94,434,443.74. The first annual statement of the trade and navigation returns of the Do-

minion, and the only one yet published, gives the total volume of trade, for 1867–'68, as $131,027,532—viz.: imports, $73,459,644; exports, $57,567,888. The banking interests of the country are also reported to be in a most satisfactory state. Indeed, money, especially in the West, is accumulating faster than investments can be procured. The rate of interest on mortgages has consequently so much declined, that it is now difficult to obtain more than seven per cent. The paid-up banking capital of the Dominion for 1869 is given as $32,323,739; circulation, $8,832,205; discounts, $56,346,955. There are also not less than $8,000,000 in savings-banks in the several Provinces, besides $1,322,629 savings in charge of building-societies. Many of the savings-banks in Ontario and Quebec were established by and are under the charge of the Government—known as post-office savings-banks.

In the session of the Dominion Parliament which terminated in June, 1869, an attempt was made to effect a fundamental change in the banking and currency system of the country. The general features of the proposed scheme, as stated by the Finance Minister, were: "The compelling of all bills issued by the banks to be secured by a deposit of Government securities, the declaring such bills to be legal tenders, and the compelling of reserves to be held for the security of depositors—the whole being modelled on the American national system." The influence brought to bear upon Parliament by the bankers throughout the Dominion obliged the Government, after a lengthened debate, to withdraw the measure; but, as it is known that the newly-appointed Finance Minister, Sir Francis Hincks—a man of singular energy and ability—entertains precisely the same views on the subject as his predecessor, a renewed effort to secure an essentially Dominion currency is expected by all parties.

The field for legislation open to the Federal Parliament of a confederation such as Canada must necessarily be limited. The fact of the Union being still a dependency at once explains this. Hence, in looking over its printed volume of laws, little more is met with than would emanate from a colonial legislature under the ordinary and more simple form. We notice, however, more than one law ranging somewhat beyond this limit. That for the "enfranchisement of Indians" is not less statesmanlike than humane. It enacts, *inter alia*, that "the Governor in Council may, by letter's patent, grant a life estate to an Indian deemed competent, which he may devise to his children, who, in case of his dying intestate, succeed to the fee simple under the law of the Province in which he resided."

A new law on the death-penalty provides that in future "the sentence shall be executed within the prison walls."

The Legislature of the Province of Ontario continues its liberal encouragement to local improvements and to immigration. A Toronto newspaper designates the year just past as "the railway year," quite a number of charters having been granted, and the likelihood being that work in railway-building has thus been secured for years to come. Prominent among, if not the principal of, these projected railways is the "Toronto and Nipissing," narrow gauge, leading northward from the capital of Ontario to and through the new townships, with the possible intention of in time reaching the Northwest Territory, or at least forming a profitable connection with Northwest travel. Special exertions have been made to induce the English immigrant to partake of the advantages of settlement in Ontario, which include free grants of land and the protection of a homestead law. The official figures of last year do not, however, show much result. The total arrivals at four stations—Ottawa, Kingston, Toronto, Hamilton—was 53,281, of which the very large number of 39,899 passed on to the United States, over 18,000 taking the St. Lawrence route, and more than 21,000 that of New York (*via* the Canada Great Western) to the far West of the Republic.

The Legislature of the Province of Quebec has also passed laws to facilitate the settlement of Crown lands, "and in all this legislation," we are told, "immigrants have been placed upon the same footing as the natives of the country." The construction of "colonization roads" appears to be the chief work accomplished so far; and the removal of settlers from the old, overstocked, French districts to the unsettled lands lying farther north is, no doubt, the chief aim. Mr. Secretary Chauveau, in a report bearing date 11th of June, 1869, says: "There was expended during the past eighteen months on colonization roads nearly $67,000; and there was voted, for the ensuing eighteen months, $262,000." Neither the local government of Nova Scotia nor that of New Brunswick seems disposed to coöperate, at present, with the Dominion authorities, or those of the two sister Provinces, in promoting extensive immigration. The Governor of the former Province, in reply to a communication from the Secretary of State, at Ottawa, states that his Council had informed him that they were unable to do so because "of the present financial condition of the Province;" and his Excellency of New Brunswick replied that "the attention of his government has been more especially directed to the object of retaining the young men of the Province at home."

The estimated population of the Dominion at present is about 4,350,000. A regular census will be taken in 1871. The Intercolonial Railway, to connect the maritime Provinces with the western parts of the Union, is in course of construction, and will probably be completed four years hence. This work is regarded by Canadians with a species of national pride; and, although there is great doubt as to whether it can, in any degree, be a commercial success,

its value as an independent means of outlet to the Dominion is obviously great. The political party by which Confederation was inaugurated still holds power in Canada. It claims to be of moderate conservative hue, and was at the outset somewhat of a coalition character; but the latter feature is gradually disappearing, and the wiser men of both sides seem desirous for the early resumption of party government, *pur et simple*, as being the most constitutional, and therefore the most conducive to public security.

The sojourn of Prince Arthur, the third son of her Majesty Queen Victoria, in the Dominion, attached as a lieutenant to the Rifle Brigade, evidently afforded much gratification to the population at large, and, of course, caused unusual enjoyment in the higher and fashionable circles.

DUFF-GORDON, Lady Lucy (*née* Lucy Austin), an English scholar, translator, author, and traveller, born at Weymouth, England, in 1820; died at Cairo, Egypt, July 13, 1869. She was of a literary parentage, her father being Prof. John Austin, the learned writer on jurisprudence, and her mother, Mrs. Sarah Austin, one of the Taylors of Norwich, and alike remembered for her social brilliancy and for her admirable novels. The daughter was carefully educated under her mother's direction, and became an excellent classical scholar, and very thoroughly familiar with the entire range of German literature. She early attracted attention by her admirable translations from the German, publishing, before her marriage (which took place in 1844), several of Niebuhr's German Legends, and a brilliant translation of "The Amber Witch." Her husband, Sir Alexander Duff-Gordon, was, like herself, a proficient in the languages of the Continent, and aided her in her subsequent translations from the German and French. These were very numerous; among them were "The French in Algiers;" an abridgment of "Feuerbach's Criminal Trials;" "Ranke's History of Prussia;" "Stella and Vanessa," from the French of Leon de Wailly; "Ferdinand and Maximilian," by Ranke; "The Village Doctor," by the Countess d'Arbouville; Moltke's "Russian Campaigns of 1828–'29 on the Danube," etc. Her severe literary labors and her natural delicacy of constitution had led, some years ago, to the failure of her health, and symptoms of the pulmonary disease which eventually terminated her life. She was compelled, on account of her health, to take up her residence, some years since, in Egypt, where she took a great interest in the poorer classes, and made herself very useful to them. She was more beloved by them than any other woman of foreign birth, in modern times at least. She had written but two works since 1863: "Letters from the Cape," where she passed one season, in 1864; and "Letters from Egypt," in 1865. Invalid though she was for many years, her joyousness of spirit never forsook her, and her extensive learning, and her gentle, modest, winning ways made her ever a most agreeable companion. As a writer, her style is a model of graceful composition.

DULCE Y GARAY, Domingo, Marquis of Castelflorite and Marshal of Spain, a Spanish soldier and administrative officer, born in the walled town of Sos (*Sotianum Oppidum*), in 1808; died in Madrid, Spain, November 23, 1869. He was of noble parentage, and received an excellent education. On arriving at manhood he entered the military profession, and took part against the Carlists in the civil war. It was not, however, until 1842 that he had an opportunity of distinguishing himself. He was at that time a captain in the Spanish Army, and commanded the palace garrison, numbering 48 men. In order to obtain possession of the Queen's person and destroy Espartero, General Diego Leon, at the head of 1,000 men, attacked the palace. The suddenness of the assault was a surprise to Dulce; but, rapidly regaining his presence of mind, he gathered his little garrison together on the stairs of the building, and after a severe struggle, in which he acted with conspicuous gallantry, succeeded in repulsing Leon with heavy loss. This defence, which has rarely been surpassed in modern days, made his fortune and established his reputation. He was promoted to the position of gentleman of the bedchamber immediately after, and in 1847 was made a brigadier-general of cavalry. Two years after, Queen Isabella promoted him to the rank of field-marshal for further distinguished services against the Carlists. He was also appointed to numerous positions of prominence and responsibility, such as commandant of the provinces of Seville and Saragossa, etc. In 1845 he conspired with Marshal O'Donnell in the Vicalvaro insurrection. He was then in command of the cavalry at Madrid, and, using his personal influence with the officers and men, he persuaded them to join him in the revolution. His prompt action in sustaining the Vicalvaro *pronunciamiento* was undoubtedly the event that enabled the Union liberal party to triumph. As might be supposed, he was rewarded by the victorious revolutionists in a manner commensurate with the magnitude of the service. Positions of greater trust were bestowed on him, and he was promoted to the rank of Lieutenant-general in the Spanish Army. For six years General Dulce remained in Spain, and during this time Serrano, now Regent of the kingdom, and then at the head of the Government under Queen Isabella, availed himself of the opportunity offered for introducing reforms in Cuba. He selected Dulce to carry out his policy, and appointed him Captain-General of the island, one of the most valuable and coveted appointments in the gift of the Spanish Government. In 1860 General Dulce arrived at Havana. He at once introduced numerous measures of reform, and before he had been on the island many months he had at-

tained a popularity among the Cubans never before won by any of his predecessors, with a single exception. But, while he thus endeared himself to the natives, he incurred the enmity of the Spaniards, whose hatred of the Cubans and advocacy of absolutism caused them to regard with disfavor the tendency of the Captain-General to establish, even in a modified form, an era of constitutional rule. Many of the obnoxious decrees promulgated by former rulers were revoked, the Cubans were admitted to official positions of responsibility and their liberties generally enlarged. The marriage of Dulce to a native Cuban lady of wealth added no little to the esteem in which he was held by the people. But in course of time the inevitable change in the administration of affairs in the Peninsula was wrought. The Liberal Government resigned in 1864, and Narvaez became the ruler. It was not long after this event that General Dulce was recalled, and General Lersundi appointed to succeed him. He returned to Spain, and was for some time quartered at Madrid. While there the cross of San Hermenegildo, bearing a pension of 600 escudos, was conferred upon him. A few months later he was arrested on suspicion of being engaged with Serrano, Zabala, Cordova, and others in a conspiracy to depose the Queen and place her sister, the Duchess of Montpensier, on the throne, but was long not held in durance. The revolution of 1868 restored him to influence and power. One of the first acts of Serrano, on becoming Regent, was to appoint Dulce again Captain-General of Cuba. His commission bore date in December, 1868. When he reached Havana the insurrection on the island was already organized, and there was no probability of a compromise being accepted by the insurgent leaders. Nevertheless, General Dulce at once made efforts to bring about a restoration of tranquillity. On the occasion of his recall, some years previous, he had, in his farewell proclamation, assured the people that, wherever fate called him, he would remain ever a Cuban. Remembering the assurance that he had then given, he endeavored to stay further effusion of blood, which Lersundi could have prevented had he not been hopelessly deaf to every dictate of sound policy. Commissioners were appointed to confer with Cespedes and other leaders, who rejected every compromise short of the independence of Cuba. Finding no other alternative left him, Dulce prosecuted the war, but, because of his desire to deal mercifully by the insurgents taken prisoners, the volunteers of Havana demanded his resignation, and enforced the demand with the most violent threats. His health was thoroughly undermined, and, sick at heart at his ill success, he bade adieu to Cuba forever, in June, 1869, and reached Madrid almost in a dying condition. He lingered for about four months, but without hope, and perhaps without the desire of recovery.

DUNGLISON, ROBLEY, M. D., LL. D., a distinguished medical professor and author, born in Keswick, Cumberland, England, in 1798; died in Philadelphia, April 1, 1869. He received an excellent academical and professional education in England, graduating M. D., in London, in 1819, and in 1824 was invited to the United States to take part in the establishment of Jefferson's favorite project, the University of Virginia. From his connection with the university there ensued an intimate acquaintance with Jefferson, Madison, and other great men of the past generation, which naturalized him at once in his adopted country, and he thenceforth became in all respects thoroughly American. In 1833 he left the University of Virginia for a chair in the University of Maryland; and when, in 1836, the Jefferson Medical College in Philadelphia was reorganized, he was invited to fill the professorship of Institutes of Medicine. Here he remained for more than thirty years, during a large portion of which time he was Dean of the Faculty; and the extraordinary success of the institution was largely owing both to his attractive courses of lectures and to the remarkable tact and practical sagacity with which he administered its affairs. He kept to his post and faithfully discharged its duties for some years after failing health admonished him to seek the repose he so much needed, and he did not retire until the close of the session of 1868. Widely as Dr. Dunglison was known as a teacher, his reputation as a medical writer was even more extensive. He had commenced his career of authorship even before he left England, by a work on the Diseases of Children, and from that time for forty years his pen was rarely idle. Besides the editorship of "Magendie's Formulary" and the "Cyclopædia of Practical Medicine," of Drs. Forbes, Tweedie, and Connolly, and several smaller works, he was the author of the following valuable medical treatises, over one hundred thousand volumes of which have been sold: "Human Physiology," 2 vols., 8vo, 1832 (dedicated to President Madison); "Dictionary of Medical Science and Literature," 2 vols., 8vo, 1833, and many new editions since, his constant additions and revisions having made it two very bulky volumes; "General Therapeutics and Materia Medica," 1836; "New Remedies," 1839, and many editions since; "Elements of Hygiene and Human Health," 1844, and subsequently several smaller works. In a science so rapidly progressive as that of medicine, even the best books speedily grow out of date, but Dr. Dunglison's industry kept his works on a level with the advance of knowledge, and most of them in repeated editions maintained their position for a period far longer than is generally allotted to the life of a scientific book. His "Medical Lexicon," especially, is one which, after more than thirty years, still holds its place with undiminished popularity. For such

a labor as a dictionary of medical science he was particularly fitted by his close and accurate philological culture, the wideness of his scientific acquirements, and the persevering industry which no labor could appall. It has therefore passed through numerous editions, and, as an acknowledged authority wherever the English language is spoken, it is his appropriate literary monument. Yet the sphere of his activity was by no means confined to professional labor. The wide sympathies of his active intellect led him to assume the presidency of the Musical Fund Society of Philadelphia, and the vice-presidency of the Pennsylvania Institution for the Blind. To this latter, much of his attention was directed in later years, and he was very successful in promoting the printing of books in raised letters for the use of the blind. In private life Dr. Dunglison was greatly esteemed. He had few superiors in the attraction of his conversation and the charm of his manners, which were those of a thorough gentleman and man of the world. He received the honorary degree of LL. D. from Yale College in 1825.

DUTTON, HENRY, LL. D., a jurist, and formerly Governor of Connecticut, born in Plymouth, Litchfield Co., Conn., Feb. 12, 1796; died in New Haven, April 26, 1869. He was a grandson of Captain Thomas Dutton, of Revolutionary memory. His youth was spent in the cultivation of his father's farm, and in study. Having by dint of great industry, under unfavorable circumstances, qualified himself for admission to college, he entered the junior class at Yale, and there graduated with honor, in 1818. After leaving college, he studied law with the Hon. R. M. Sherman, at Fairfield, supporting himself in the mean time by teaching in the academy of that town. From 1821 to 1826 he was tutor in Yale College, and at the close of that period he established himself in the practice of his profession at Newtown, Connecticut. After remaining here fourteen years, he removed to Bridgeport, and for ten years occupied a leading position at the bar of Fairfield County, being Attorney for the State. Subsequently he was appointed Professor of Law in Yale College, and removed to New Haven, where he continued to reside until his death. He was five times a member of the House of Representatives, and in 1849 was a member of the State Senate. He was also a Judge of the County Court for one year after his removal to New Haven. In 1854 he was elected Governor of Connecticut, which office he held for one year. In 1861 he was appointed Judge of the Superior Court, and of the Supreme Court of Errors, which position he continued to occupy until 1866, when, by reaching the age of seventy years, he became, under the provisions of the constitution, disqualified from longer retaining it. On his retirement from the bench he resumed his practice at the bar, and continued to prosecute it with great assiduity until his failing health compelled him to withdraw substantially from business. Judge Dutton published, in 1833, an analytical digest of the Connecticut Reports and a revision of Swift's Digest, and was a member of the commissions of 1849 and 1866, to whom the General Assembly, in 1847, intrusted the duty of revising the Statutes of the State, and was chairman of the committee which, in 1854, prepared a new compilation of the Statutes of the State.

DYCE, Rev. ALEXANDER, a learned and industrious critic and commentator on the poetic literature of England, born in Edinburgh, June 30, 1798; died in London, May 15, 1869. He was educated in the high-school of his native city, and afterward at Exeter College, Oxford, where he took the degree of B. A. in 1819. He took orders in 1821, and officiated as curate, first at Lanteglos, Cornwall, and afterward at Nayland, Suffolk. His tastes led him to prefer a literary to a clerical life, and in 1827 he abandoned his rural charge and settled in London, where he devoted himself to literary and critical studies. He had already, even while still an undergraduate, been a contributor to the *Gentleman's Magazine*, and other literary periodicals. One of these contributions, published in the *Gentleman's Magazine*, in February, 1818, had for its subject the "Plagiarisms of Lord Byron." His first work after coming to London was a translation of the continuation of the "Iliad," by Quintus Smyrnæus. But, subsequently turning his attention to the previously undeveloped treasures of early English poetry, he determined to devote himself to a critical review and study of the ancient writers. The results of these studies were given to the world in a succession of volumes, comprising the works of George Peele, Robert Greene, John Webster, Thomas Middleton, Beaumont and Fletcher (1843–'45), Kit Marlowe (1849), John Skelton, Sir Henry Wotton, and Michael Drayton. The preparation of an edition of the plays and poems of James Shirley had been undertaken by Gifford, but was left incomplete. This work was taken in hand by Mr. Dyce, and published complete in 1850. All these works manifest by their acute criticisms of the texts, and their happy elucidations or emendations of doubtful and obscure passages, a vast amount of study, and the possession by the editor of remarkable literary acumen. The whole series is much esteemed in England, and has formed the basis of all subsequent editions of these authors. These works, also, have had a beneficial tendency, apart from their direct influence in awakening public attention to the brilliant poetic genius of the older writers. Mr. Dyce, however, did not neglect the writers of a more recent period, having prepared an excellent edition, in three volumes, of the works of the great scholar, critic, and theologian, Dr. Richard Bentley. For Pickering's famous and elegant edition of the "Aldine Poets," Mr. Dyce furnished revised texts of Pope, Collins, Beattie, and Aken-

side, preparing also, in each case, excellent biographical sketches of these writers. Being a member of the Camden Society, he prepared, at their instance, a reprint of Kemp's "Nine Daies Wonder, performed in a Morrice Daunce from London to Norwich," the production of one of the actors contemporary with Shakespeare, which was extremely rare, if not unique. For the Shakespeare Society he edited, in 1842, the old tragedies of "Timon" and "Sir Thomas More," which had undoubtedly furnished to Shakespeare hints for two of his plays. His zeal in regard to the old poets seemed to acquire fresh impetus from these studies; for, in 1840, he was led, in conjunction with Payne, Collier, Halliwell, Wright, and others like himself, zealous Shakespearians and untiring explorers in the mine of old English poetry, to found the Percy Society, the object of which was the publication of the ancient ballads and plays then almost unknown, except to antiquaries. To this society his most remarkable contribution was a monograph of British sonnets, including a large number of exquisite specimens of this peculiar form of poetic art. He also edited for them "The Pleasant History of the Two Angry Women of Abington," written by Henry Porter in 1599; Michael Drayton's "Harmonie of the Church," and poems by Sir Henry Wotton. As a relaxation from other labors he amused himself with the translation of the lyrical fragments of Athenæus, to which he added an elaborate and learned commentary. All these labors, however, were but as the vestibule of his Shakespearian studies and meditations. Of Shakespeare he could say, as Schlegel had said, "He is a poet to the study of whom I have devoted many years of my life. I should never be able to end were I to say all that I felt and thought on the perusal of his works." Every line—nay, almost every word—in the works of the great bard were to him a treasure of study and reflection. His researches in regard to Shakespeare's life, his minute and careful commentaries on the Shakespearian text, exhibited surprising diligence and acuteness, and placed him in the front rank of critics. As the result of his long and careful examination of the plays and poems, he proposed to issue a revised edition of Shakespeare's works, and in 1850 the publication was begun. For this great work he carefully collated all the earliest editions, made great improvements in the punctuation, and proposed some remarkably ingenious emendations of the text. Mr. Dyce inclined to conservatism in this matter; although he did much to restore and purify doubtful passages, he was not disposed to tamper unnecessarily with the text of the first editions, preferring rather to elucidate and explain the work as it has come down to us. This edition was completed in six volumes, the last of them published in 1858. There has been, however, within the past fifteen or eighteen years, much light thrown on many points in the works of Shakespeare, and no one of his many commentators was better prepared than Mr. Dyce to avail himself of it judiciously. This first edition, therefore, was but just completed when Mr. Dyce prepared to go over the same ground with still greater thoroughness and care, and, though we believe no portion of his new revision has yet been published, it is understood to be nearly ready for the press, and will be comprised in nine volumes. Mr. Dyce was not without his literary controversies upon many points in the Shakespeare text, as his sharp criticisms of the editions of Shakespeare by Payne Collier and Charles Knight abundantly testify. One of his latest works is a volume of notes upon the emendations adopted by Collier from the manuscript corrections discovered by that gentleman in the second folio edition of the immortal dramatist, in which he proved that many of the emendations were no better than corruptions of the text. Nor, on the other hand, was he without his charming literary friendships, as his record of the "Table-talk of Samuel Rogers," the banker-poet, proves. He was a man of genial disposition, a good scholar, an ardent lover of poetry in all its forms, but chiefly as it is found crystallized in the magic pages of Shakespeare. His life was passed in ease, in the peaceful incidents of study, and in the happy environment of friends loving and thinking like himself. His death will awaken sympathy among the studious, the reflective, and, above all, among the admirers of the Swan of Avon in both hemispheres.

E

EASTERN CHURCHES, or ORIENTAL CHURCHES. The collective name given to a number of churches in Eastern Europe, in Asia, and Northern Africa (Greek, Armenian, Nestorian, Jacobite, Coptic, and Abyssinian), which hold to the doctrine of the apostolic succession of the bishops. The statistics of the Eastern Churches, in 1869, were as follows: Europe (Russia, Turkey, Greece, Austria, North-German Confederation), 69,782,000; Asia (Russia, Turkey, India, Persia, China), 8,486,000; Africa (Egypt), 3,200,000; America (United States, chiefly in Alaska), 10,000—total, 81,478,000.

The reply of the Eastern bishops to the Papal invitation to attend the Œcumenical Council was, generally, unfavorable. When the Council opened on the 8th of December, not a single bishop of any of the Eastern Churches had yet arrived. The arrival of a few was, however, expected. The Roman Catholic Church continues to make some inroads into

the territory of the Eastern Churches, especially in Bulgaria, while the Eastern Church is gaining ground at the expense of the Roman Catholic in Russia. The efforts of the High Church party in the Anglican Church to bring about an intercommunion between the Anglican and the Eastern Churches continues to appear to the friends of the movement as highly encouraging. They regard the correspondence between the Archbishop of Canterbury and the Patriarch of Constantinople, which took place in 1869, as the most important fact in the whole history of the intercommunion movements (*see* ANGLICAN CHURCHES and GREEK CHURCH). There are signs of an increase of mutual friendly sentiments between the several Eastern Churches, which make it probable that their number will ere long be reduced by a fusion.

1. *The Greek Church.*—This is by far the most important of the Eastern communions. We devote to it a special article.

2.—*The Armenians.*—In the preceding volume of the AMERICAN ANNUAL CYCLOPÆDIA it was stated that the Armenian Patriarch of Constantinople (Bogos) had replied to the Pope's letter, inviting him to attend the Œcumenical Council, that he could not answer the letter without consulting his Synod. In consequence of this consultation the Patriarch concluded to refer the matter to the head of the Armenian Church, Kevork IV., the Catholicos of Echmiadzin. The following is the reply of the Catholicos. It is dated February 11, 1869, and first appeared in the *Ararat*, Armenian Church paper of Echmiadzin, which is the official organ of the Catholicos:

To the Right Hon. Archbishop Bogos, Patriarch of Constantinople, our dear brother, greeting:

We have received your letter of the 14th of December last, number 1,417, together with the translation of the letter of his Holiness the Pope, Pio IX., which was sent to you by his Vicar-General in your capital. We have read with attention this letter, of which the purport is: that his Holiness has the intention of convoking, on the 8th of December next, at Rome, a Council, to which he invites you.

Chosen, although unworthy, by the inscrutable will of Providence, to be one of the pastors of the Christian flock, we desire, with all our soul, the unity of the Church; and we offer our vows that peace and charity may reign therein, and may banish the spirit of division; for it is the property only of the enemy of mankind to fight against the unity of the Church. But, in attentively considering the letter of his Holiness Pio IX., we have seen with sorrow that the unity which we desire, which the Saviour of the world desires, and for which He prays to His Father, cannot be attained by the approaching Council.

If Rome desires really the unity of the Christian Church, she ought, as a preliminary, to search out what is the cause of the divided state of the Church; why, united in one faith and one love for the Head of the Church, are the members of the Church disunited among themselves, and whence comes the long-lasting hostility which separates Christians? Is not the cause of this separation, as the whole world knows, the aspiration of the See of Rome to a supremacy over the Sees of the East?

In consequence, they, whose object is the truth, would desire to see his Holiness set himself to work in earnest to get rid of the cause of this separation; to follow in the footsteps of the holy Fathers; and, after having agreed, as it behooves him, with the pastors of the Church of the East, in conformity with canonical decisions, to form a distinct plan as to the questions to be submitted to the Council; and, when these questions have been unanimously approved, to fix the time and place of the Council. However, disregarding what might really conduce to the unity of the Church of Christ, the head of the Roman Church has thought it right to publish an initiative letter of invitation, and to address it to the pastors of the Church, thus giving ground for the supposition that he wishes to set himself up as the supreme head of Christianity; and that he does not recognize the pastors of the Church of the East as his equals in the hierarchy, in jurisdiction, and in the succession of the Apostles, to whom yet the Holy Ghost gave equal power and equal gifts. The Pope proclaims aloud the throne of Rome to be the centre of unity—a doctrine which the Holy and Orthodox Armenian Church cannot admit, which, with the other peoples of the Church of the East, recognizes our Lord and Saviour Jesus Christ as the only Head of the Church.

He who urges the unity of the Church, and leaves on one side that which is an indispensable basis of the Council, separates himself gradually more and more, by the assertion of his imaginary personal authority, from the unity of the Catholic Church; and sets out from principles in opposition to those which are the doctrine of the holy Gospel. To hope for the establishment of true unity is not easy. And will not a way be thus opened for new quarrels, for a discord for which there will be no remedy, for relations still more hostile, which will become a scandal for the world, and an occasion for the denial of the holy Christian doctrine?

Consequently, we, who are unceasingly laboring for the spiritual welfare of the people which God hath confided to us, and who seek to preserve peace in our flock—we, who are justly proud of our Apostolic Church, founded by the holy Apostles Thaddæus and Bartholomew, and by the prayers of St. Gregory the Great, against which the gates of hell have not as yet prevailed; we consider that our duty is, of our independent authority, to prescribe to you, our venerable brother, both to refuse this invitation to the Council which has not a legitimate basis, and to forewarn all the Archbishops and Vicar-Generals of our Church in Turkey, not to give place to misunderstandings and discord.

We shall continue to pray from the depth of our heart, as we have ever done, that Christ, the Saviour of all, the Corner-stone and the Head of the holy Church, who has established peace by His blood-shedding and death on the cross, would call men to the one evangelic doctrine, would keep His Church in peace, and preserve the Armenian people from hidden dangers.

The action of Patriarch Bogos, and his personal disposition to accept the invitation of the Pope, excited considerable opposition among his colleagues, in consequence of which he tendered his resignation. It was accepted by the council, upon which five of the members resigned. Among them was Nerès, Bishop of Haskein.

3. *The Nestorians.*—From a learned essay, recently published on this sect (*Revue Catholique*, 1869) we derive the following information.

The Nestorians derive their origin, their name, and their doctrine, from Nestorius, who became Patriarch of Constantinople about the year 427. He denied the personal union of the two natures in Jesus Christ, holding that the union was only a moral one, of dignity and

authority, like that between a sovereign and his ambassador, who, physically two, are held to be morally one. Nestorius was condemned for his heresy by a council held under the direction of Pope Celestin at Rome, in 430. He and his followers were excommunicated by the Council of Ephesus, in 431; and he was deposed from his seat. This vigorous action repressed his doctrines in the Roman Empire, but they were successfully propagated in the East. Nestorianism was taught in the great Persian school at Edessa, till that institution was overthrown under the Emperor Zeno. Another school was founded at Nisiba, to succeed that at Edessa, and had at the end of the sixth century about eight hundred students. Other celebrated schools were founded at Seleucia and at Doskena. The Nestorians were favored by the Kings of Persia, who found them effective auxiliaries against the encroachments of the Emperors of Constantinople. They possessed all the Episcopal sees, and conferred upon that of Seleucia the title of the Patriarchate of the East. They were likewise favored and endowed with powers and offices under the caliphs, but in Babylonia were occasionally subjected to persecution, though raised above other Christians. The faith was widely diffused. Among the countries in which it grew were Chaldea, Persia, Mesopotamia, Armenia, Syria, Arabia, the Island of Socotra, Bactriana, Tartary, India, Ceylon, and even China, there having been at one time an archbishop at Peking. The period of the decay of the Nestorians commenced in the fourteenth century. The early Mongol emperors favored them, or at least did not obstruct them, but under the later ones they suffered severe persecutions. Tamerlane drove them from nearly all the countries to which they had spread, but Assyria. They were considerably weakened also by conversions to the Roman Catholic doctrines. In 1247 their vicar in China gave his adhesion to the Pope. Several archbishops and bishops followed his example. Fifty years later, Jaballaha, the Patriarch, submitted to the Pope. His successors returned to Nestorianism. In the middle of the fifteenth century the Nestorians of the Island of Cyprus, with their metropolitan, joined the union.

In the middle of the sixteenth century a serious schism occurred, resulting in the elevation of two patriarchs, at Kotchannes, in Koordistan, and at Mosul. Soulaka, of Kotchannes, went to Rome, and abjured Nestorianism, and received consecration and the dignity of Patriarch from Pope Julius III. His successors subsequently returned to their old belief. Popo Gregory XIII. effected a union with the Mosul branch, but they fell away again at the close of the seventeenth century. The patriarch of this line, in 1781, effected a union with the Roman Catholic Church, which has continued to this day. The Nestorians who are in communion with Rome are generally called Chaldeans.

The following are the statistics of the two branches:

Statistics of the Chaldean Bishops (1867).

Badger, cutting off a third from the numbers furnished him by the Patriarch of Kotchannes, estimates the number of the Nestorians at 70,000. Joseph Audo, actual Patriarch of the United Chaldeans, raises the number to 200,000. M. d'Avril considers this too large, and fixes it at 130,000 in Turkey, and 10,000 in Persia.

Early in 1867, Joseph Audo, the Chaldean Patriarch, addressed a long and pressing letter of invitation to the Nestorian Patriarch, Simeon, to return to the Roman Catholic unity. The latter replied, refusing, as follows:

We cannot dissimulate the surprise we feel at your persistence in holding with the Pope, after the outrages he has perpetrated upon you, and the indifference with which he has treated your pontifical dignity on the occasion of your last voyage to Rome, as we have learned from persons entitled to credit. With such a condition existing, how can you have the heart to propose to us to subject ourselves to the like outrages, to expose ourselves to similar contempt? In this you certainly have not consulted what is proper. As to the other questions which you have taken pains to expose at length, we have not, for the present, any reply to make to you. We have learned of the excesses and the crimes of every kind that have been committed against those of your nation who are established in the villages of the districts of Zakhou and Gazartha; we are informed that these unfortunate people have been pillaged and reduced to slavery by the Koords of those countries. Now, if you cannot protect the children of your own nation, how can you promise help and advantages to those who are strangers to you? And while you yourselves are groaning under the yoke of the Pope, how do you presume to engage men who are yet free to cast themselves into bonds of slavery? You invite me to humbly kiss the slipper of the Bishop of Rome; but

is he not a man in every respect like yourself? Is his dignity superior to yours? Nevertheless, has he not treated you like a criminal? and has he not, before letting you go, exacted from you the assurance that you would not take part any more in the affairs of those of your children who reside in India (Malabar), and whose ancestors were converted to the true religion by the missionaries of our holy Church? You live under the yoke of the cardinals and the reverend fathers (the Dominicans of Mosul); you have put yourself in their hands, and have delivered to their power your people and all your patriarchate, and shift from yourself to them the care of administering it. You, monseigneur, who know all this and the manner in which it has been done, ought not to have written us a letter so prolix in words and so scant of ideas, for we have quite decided not to abandon the religion which we have received from the holy Apostles to embrace yours, which would be to change pure gold for iron. We will never permit to be introduced into our holy temples of worship images and statues, which are nothing but abominable and impure idols. What! shall we attribute to God a mother, as you dare to do? Away from us such blasphemy! Away from us the detestable heresy of Apollinarius, which holds that Divinity has suffered! These doctrines are contrary to the teachings of the holy books; we cannot admit them. May it please God, monseigneur, that we may see you, laying aside the false religion you profess, return to our ancient and true faith! All this I say with friendly feeling toward you, and to recognize the interest you manifest for me, and not with a heart insensible to the troubles which afflict the Church of Christ through the fault of its chiefs and its Pontiffs. But enough of this for your lordship.

(Signed) SIMEON, Patriarch of the East.

Works on the Nestorians.—A. d'Avril, *Étude sur la Chaldée Chrétienne* (Paris, 1864); P. Martin, *La Chaldée* (Rome, 1867).

4. *The Copts.*—The United Presbyterian missionaries at Osiout, Egypt, relate a significant incident, that the Coptic Bishop of Cairo, who is Patriarch and Metropolitan of Egypt, visiting them, did not hesitate to confess privately that he was at heart a Protestant, but was unwilling to say so publicly. About a dozen leading men of Osiout, who are not willing to wait on the service of the missionaries, meet every night, and on Sunday afternoons, and spend three hours each time in the study of the Bible, under the guidance of a convert of the mission.

5. *The Abyssinians.*—The large number of works which have appeared in 1868 and 1869 on Abyssinia, not only add to our knowledge of the political history and the present condition of that country, but also shed much light on the history and the condition of its church, which has heretofore been almost unknown by the remainder of the Christian world. Thus Dr. H. Blank, one of the released captives, publishes, in his work on Abyssinia, a biography of the late head of the Abyssinian Church (Abuna Salama), who died on the 25th of October, 1867, after a long and painful illness. This biography is of the greater interest, as at the close of the year 1869 his see was again to be filled, and as the time is undoubtedly near when the isolation of the Abyssinian Church from the remainder of Christendom will cease. We give a few extracts from this biography, as an important contribution to the recent history of the Eastern Churches:

Abyssinia had been for years without a bishop. Priests could no more be consecrated, nor new churches dedicated to Christian worship, as the ark could not contain the tabot blessed by the bishop of the land. Ras Ali, although outwardly a Christian, and belonging to a converted family, had still too many connections among the Mussulman Gallas, his true friends and supporters, to care for more than an apparent profession of the state religion, and troubled himself very little about the inconvenience to which the priesthood was subjected by the long-continued vacancy of the bishopric.

Dejatch Oubié was at that time the semi-independent ruler of Tigré. From the position of a simple governor he had gradually risen to power, and now at the head of a large army strove for the title of Ras. Though still on apparent terms of friendship with Ras Ali, even to a certain degree acknowledging him as his superior, he was all the while underhand exerting his influence to overthrow the Ras's power in order to reign in his stead. For these reasons he dispatched some of his chiefs, with Monsignor de Jacobis, an Italian nobleman and Roman Catholic bishop at Massowah, to Egypt, to obtain a bishop for the Abyssinian See; and, in order to secure for himself such a powerful weapon as the support of the priesthood, he incurred the heavy expense required for the consecration of an abouna. De Jacobis made strenuous efforts to have a bishop anointed who would favor the Roman Catholics, but he failed, as the Patriarch chose for that dignity a young man who had received part of his education at an English school at Cairo, and whose views were more in favor of Protestantism than of the Copt's long-standing adversary, the Church of Rome. Andraos, this young priest, was only in his twentieth year. When informed that he must leave his monastery and the companionship of the monks his friends, to proceed to the distant and semi-civilized land of Habesch, he firmly declined the honor proposed for him. He requested his superiors to fix their choice on a worthier man, declaring himself unfit for the dignity so suddenly thrust upon him. His objections were not admitted, and, as he still persisted in his refusal, the superior of the convent put him in irons; wherein he should remain, he was told, until he agreed to obey the head of the Coptic Church.

Andraos gave in; and, having been duly anointed and consecrated Bishop of Abyssinia, under the title of Abouna Salama, with all the pomps and ceremonies proper to the occasion, started shortly afterward in an English man-of-war, reaching Massowah in the beginning of 1841.

Dejatch Oubié received him with great honors, added numerous villages and large districts to those the hereditary possession of the bishops, and made every endeavor to attach the bishop to his cause. He succeeded even beyond his expectations. Abouna Salama, instead of needing the persuasions of Oubié to join him in the overthrow of Ras Ali, proposed the attempt. Through his influence Oubié concluded an alliance with Goscho, the ruler of Godjam. The two chiefs agreed to march on Debra Tabor, attack Ras Ali, wrest from him the power he had usurped, and divide the government of Abyssinia, confirming the bishop's alleged rights to a third of the revenue of the land.

Oublé having been captured by Ras Ali, was pardoned, and allowed to return to Tigré, the bishop being answerable for his fidelity. Ras Ali treated the bishop with all respect, fell at his feet, and implored him not to listen to the calumnies of his enemies, assuring him that the Church had no more faithful son than himself nor any more willing to comply with the holy father's wishes. The bishop, now on friendly terms with all parties, and all but

worshipped by them, soon made his authority felt; and, had not Theodore risen from obscurity, Abouna Salama would, no doubt, have been the Hildebrand of Abyssinia.

During the campaigns of Lij Kassa against the ruler of Godjam, and during that period of revolution ending in the overthrow of Ras Ali, Abouna Salama retired to his property in Tigré, residing there in peace under the protection of his friend Oubié. Ever since his arrival in Abyssinia Abouna Salama had shown the bitterest opposition to the Roman Catholics, an enmity not so much engendered by conviction, perhaps, as inflamed by the fact that some of his property had been seized at Jeddah at the instigation of some Roman Catholic priests, who had, through his influence, been plundered, ill-treated, and expelled from Abyssinia. When the intelligence reached the Abouna that Lij Kassa was marching against Tigré, he publicly excommunicated him, on the ground that Kassa was the friend of the Roman Catholics, protected their bishop, De Jacobis, and wanted to subvert in favor of the creed of Rome the religion of the land. But Kassa was a match for the Abouna; he denied the charge, and at the same time stated "if Abouna Salama could excommunicate, Abouna de Jacobis could remove it." The bishop, alarmed at the influence his enemies might possibly obtain, offered to recall his anathema, on condition that Kassa would expel De Jacobis. These terms having been agreed upon, Abouna Salama shortly afterward consented to place the crown of Abyssinia on the usurper's head, and did so in the very church Oubié had erected for his own coronation, under the name of Theodore the Second. Pleased with the bishop's compliance with his wishes, Theodore showed him the utmost respect. He carried his chair, or walked behind him with a lance and shield as if he was nothing but a follower of his, and on all fit occasions fell down on the ground in his presence and respectfully kissed his hand. Abouna Salama for a time believed that his influence over Theodore was as unbounded as it had been over Ras Ali and Oubié. He mistook Theodore's show of humility for sincere admiration and devotion; and the more Theodore seemed disposed to humility, the more arrogant did the bishop publicly show himself. But he had not quite understood the character of the Emperor he had anointed; and, overrating his own importance, made of Theodore at last an open and relentless enemy. The crisis came when Abouna Salama least expected it. One day Theodore went in state to pay him his respects. Arrived at the Abouna's tent, he informed him of his visit; the bishop sent word that he would receive him when convenient, and meanwhile bade him remain without. Theodore complied, but, as time passed and the bishop made no appearance, Theodore walked away, the enemy of his prelate, and burning for revenge.

For years afterward they lived in open enmity, or enmity slightly masked. Each worked hard at the destruction of the other. If Theodore's reign had been a peaceful one, the Abouna would have won the day; but, surrounded as the Emperor was by a large army of devoted followers, he found ready listeners to his descriptions of the bishop's character. Abouna Salama was never very popular; he was, without being a miser, far from liberal. Friendship in Abyssinia means presents; it is accepted as such by all; and every chief, every man of note, who courts popularity, squanders with an unsparing hand. The King naturally took advantage of this want of liberality in the bishop's character, to contrast it with his own generosity. He insinuated that he was only a merchant at heart; that, instead of selling the tribute he received in kind to the people of the country, as was formerly the custom, he sent it by caravans to Massowah, trafficked with the Turks, and hoarded all his money in Egypt. Little by little Theodore worked on the minds of his people, impressing them with the idea that, after all, the Abouna was only a man like themselves; and at least in Theodore's camp the Abouna had already lost much of his prestige, when the Emperor spread the report that his honor had been assailed by the bishop they all worshipped.

Dr. Blank heard from Theodore himself the details of his grievance, which was no less than the seduction of his wife by the Abouna, a story which, in the opinion of Dr. Blank, was an abominable invention.

Abouna Salama lost credit, though, perhaps, few people believed the Emperor's assertion. In public Theodore always still treated him with respect, though not with such a great show of humility as before; but he evidently, for the sake of his people, made a distinction between the official character of the Abouna, respecting it on account of his Christian faith, and his private one, for which he expressed the greatest scorn.

For a long while the question of the Church lands was a great deal discussed between them. Theodore could not tolerate any power in the state but his own. When he thought the occasion favorable to do away entirely with his power and influence, he confiscated all the Church lands and revenues—some of the bishop's hereditary property by the same stroke—and placed himself virtually at the head of the Church. The Abouna's anger knew no bounds. Naturally of a violent temper, he grossly abused Theodore on every occasion. Some of their quarrels were most unbecoming—the intense hatred burning in the prelate's heart showing itself in expressions that ought never to have fallen from his lips. The Bishop of Abyssinia was never tolerant. I have mentioned that toward Roman Catholics he was most intolerant. He persecuted them at every opportunity, and even when himself a prisoner at Magdala he never moved to obtain the release of an unfortunate Abyssinian who had been years before cast into chains at his instigation, for the sole reason that he had visited Rome, and had become a convert there. Toward Protestants he was better inclined; still, he would not hear of "conversions." Missionaries might instruct, but they had to stop there; and when, as it happened, some Jews were made by the teachings of the missionaries to accept Christianity, they had to be baptized and received as members of the Abyssinian Church.

The Abouna left Axazoo with the King's camp after the rainy season of 1864. A serious rebellion had broken out in Shoa, and Theodore was greatly annoyed at the bishop's refusal to accompany him. The Shoa people are of all Abyssinians the most bigoted, and have the greatest regard for their Abouna. With him in his camp many of the opposing chiefs would at once have laid down their arms and returned to their allegiance. But the bishop, who had in view his fertile districts in Tigré, proposed to accompany Theodore first to that province; and, after the rebellion had been put down in that part of the kingdom, proceed with him to Shoa. Their interview on that occasion was very stormy, and Theodore must have had great command over himself to have refrained from extremities. Abouna Salama remained at Magdala, according to his desire, but a prisoner. He was never put in chains, though it is said that Theodore had several times resolved it should be done, and had even the fetters prepared. However, he was always restrained by dread of the effect that measure might have on his people. The bishop was allowed to go as far as the church, should he desire it, but at night a small guard always watched outside his house; sometimes even some of the soldiers passed the night in the Abouna's apartment. Almost all his servants were spies of the King. He could trust no one, except a few of his slaves—young Gallas given to him in former days by Theodore—and a Copt, who, with some priests, had accompanied the Patriarch David on his visit to Abyssinia.

After the bishop's reconciliation with Samuel, our relations with him were more frequent and intimate. He was at all times willing to help us to the best of

his ability, lent us a few dollars when we were hard pressed for money, wrote to the rebels to protect our messengers, invited them to come to our release, promising to the successful one his support, and, I believe, would even have accepted a reconciliation with the man from whom he had received so many injuries, solely for our sake.

Disappointed in his ambition, deprived of his property, insulted, degraded, without power, without liberty, Abouna Salama did not remember that sobriety in all respects was essential to his health, and that over-indulgence at table was not consistent with his forced seclusion. Constant annoyances, added to intemperate habits, could but bring on sickness. During our first winter I attended him through Alaka Zenab, our friend and his, and under my care he recovered. Unfortunately, he only listened to my advice and obeyed my injunctions for a short time, and soon missing the stimulants he had for years been accustomed to, gradually felt the want of their cheering influence, and again resorted to them. During the rainy season of 1867 he had a more serious attack. For a while his health improved; but he was even more unreasonable than formerly, and hardly was he convalescent than several times a day he sent to inquire if he could drink some arrack, take a little opium, or indulge in some of his more favorite dishes. It is not astonishing that relapse quickly followed, and, though I showed him the danger of the course he was pursuing, he persisted in it.

In the beginning of October the bishop's condition became so critical that he applied to the Ras and chiefs to allow me to visit him. They met in consultation, and decided on refusing his request, though they consented to the attendance of the cow-doctor. With the Abouna we lost a stanch ally, a good friend, nay, the only one we had in the country. Had a rebel succeeded in making himself master of the amba, his protection would have been invaluable. Not that I believe his influence would have been sufficient to insure our release, but still, with him, we should have met at the hands of any of the great rebel chiefs nothing but good treatment and courteous demeanor.

ECUADOR,* a republic in South America. President for the term from 1869 to 1875, Garcia Moreno. Area, 218,984 square miles; population, 1,300,000. The value of exports from the port of Guayaquil (exclusive of precious metals) amounted, in 1868, to 3,156,334 piastres (that of cacao alone 2,077,550). The foreign debt was, in 1866, 9,390,554 piastres, and the home debt, 3,692,955 piastres. There is neither a standing army nor a fleet.

At the beginning of 1869, Dr. Xavier Espinosa was President. The Government was overthrown by a revolution on the 16th of January, at the capital, Quito, headed by the ex-President, Gabriel Garcia Moreno. Although a good deal of excitement existed for a time, there was, fortunately, no loss of blood, and Moreno was allowed to install himself quietly in the presidential chair. It seems that the principal object of Garcia Moreno in overthrowing Espinosa was to prevent his old enemy, Urbina, from getting into power again, and Espinosa appeared to be too inert to oppose him.

The following persons were banished from the country: Don Pedro Carbo, chief of the liberal party in Ecuador and president of a political society known as Sociedad Liberal de Guayas; D. Miguel Ristrio, President of the Supreme Court; Señor José Avilés, President of the Municipal Council; Colonel Francisco Bolaña, Vice-President of the Council; Señor Marcos Aguirre, Governor of the Canton of Guayaquil; Señor J. M. Noboa, editor of *La Libertad*, and Señor J. M. Lacey, member of the municipality.

On the 10th of March President Garcia Moreno issued a decree, ordaining that all persons who, directly or indirectly, should aid in any way in getting up revolutions or disturbing the public peace, should be held responsible for the military expenses incurred in preserving or restoring the peace.

On the 19th of March a revolt occurred at Guayaquil, but was promptly suppressed by the troops. Soon after, a general amnesty was declared to all the military, from private to lieutenant inclusive, who were engaged in the revolution, and also to all civilians, provided they surrendered their arms and gave evidence of repentance.

The dictator Moreno followed, true to his antecedents, a reactionary policy. Thus it was reported that he ordered all the public schools to be closed except those under the control of Jesuits.

On the 13th of May Moreno issued a decree declaring the republic no longer in a state of war, and allowing all political prisoners, or refugees, the liberty to return to their homes, except certain military men engaged in the March revolt; but the terms were such that few, it was thought, would demean themselves by accepting them. Imprisonment for debt was abolished, except in certain cases. A decree was also issued, establishing punishment for the breach of public morality.

The National Convention was installed on the 16th of May, at the capital, Dr. Rafael Carvajal being elected President of the republic and Dr. Elias Lasso, Vice-president; Rafael Borja and Victor Lasso, Secretaries. On the same day a decree was issued, that Señors Garcia Moreno and Aseásubi, President and Vice-President, should continue acting until the constitution of the new government could be organized; but, Moreno having insisted on resigning, the convention accepted his resignation, leaving Señor Aseásubi at the head of the administration. Dr. Pablo Herrera was appointed Secretary of State and Foreign Affairs, and Dr. Gabriel Garcia Moreno Secretary of the Treasury.

At the new presidential election, Moreno was chosen President for the term of six years.

EGYPT, a dependency of Turkey, in Northern Africa. The ruler bears the official title of Khedive, the Arabic equivalent for Viceroy. This dignity is now hereditary in the family of Mehemet Ali. In 1866 the Sublime Porte accorded to the Viceroy the right of succession in a direct line. Egypt has (since 1866) an Assembly of Representatives, holding annual sessions. The present Pacha of Egypt is Ismaïl

* For latest financial and shipping news, *see* AMERICAN ANNUAL CYCLOPÆDIA for 1868.

(born 1816), who followed, on January 18, 1863, his brother Said as the fifth Viceroy of Egypt. A Council of State (created in 1856) is at the head of the administration. The area of Egypt is 659,000 English square miles. It has 7,465,000 inhabitants, 4,306,691 inhabiting Egypt proper. The chief cities are—Cairo, 282,348 inhabitants; Alexandria, 180,796; Damietta, 57,000; Tantah, 55,000.

The Khedive, in 1869, called Prof. Brugsch, of the University of Berlin, to Egypt, to establish an Egyptian university at Cairo, and to be the president of the department of Egyptian Language and Literature. A preparatory school and a polytechnic school have already been opened. Thus far the university consists of five departments, besides the two already mentioned, of a law-school, a school of drawing, and a commercial school. A sixth department, a school of Egyptology, was soon to be added. The latter school will admit twenty-four pupils, who will find in the house of the director lodging and superintendence. Foreign students are received on condition that, after completing their studies, they remain for several years in the service of the Egyptian Government. The whole of the university is under the management of the learned Aali Pacha Mubarek, the son of a fellah in Upper Egypt, who, at the same time, is at the head of the whole department of public instruction.

The total receipts for the year ending September 9, 1866, according to the official budget, amounted to 1,458,112 purses, and the total expenditure to 941,227 purses (500 piastres = 1 purse, 20 piastres = 1 American dollar). The public debt amounted in October, 1869, to £29,000,000 sterling. The value of the commerce of Alexandria with foreign countries was, in 1868: imports, 531,600,000 piastres, (225,800,000 from Great Britain); exports, 930,700,000 (707,400,000 to Great Britain and 111,700,000 to France). There entered in Alexandria, in 1868, 2,616 vessels with a tonnage of 1,483,585; 948 of which vessels were steamers; passengers, 43,538. The length of telegraphs is about 2,000 English miles.

The relations of Egypt to Turkey, in 1869, were any thing but friendly. The Sultan is the nominal sovereign of the country, but without real influence upon its Government. The Turkish Government is alarmed at the growing power of the Khedive, while the latter strives to obtain unlimited sovereignty. The immense importance of the Suez Canal has increased the illy-concealed aspirations of the Viceroy and aroused the suspicions, jealousy, and fears of the Porte. The Turkish Government took particular offence at the journey made in 1869 by the Viceroy to the courts of the European princes, to invite them to attend the opening of the Suez Canal. At Constantinople they were of opinion that the Viceroy had no right to issue the invitations in his own name, but that he was, on the contrary, bound first to invite the Sultan, and to send through him the invitations to other monarchs. The step of the Viceroy was regarded as a proof of his suspected intention to establish the entire independence of Egypt. The *Turquie* of Constantinople (an official organ) remarked that the Viceroy "gave himself the airs of an independent sovereign," and that he "contemptuously ignored" the suzerain rights of the Porte. Alluding to the report that the object of the Viceroy's European tour was to induce "one of the great powers" to raise its consulate in Egypt to the rank of a legation, and to negotiate with the other signers of the Treaty of Paris for the purpose of obtaining the neutralization of the Suez Canal, the *Turquie* said that this would be "an act of treason which would nullify all the privileges given to Egypt by the Sultans, as well as the concessions which its governors only owed to the generosity of their suzerains."

In August, the Grand-Vizier addressed, in the name of the Sultan, a letter to the Viceroy, fully detailing the complaints of Turkey. It was as follows:

Your Highness is aware of all the various rumors and apprehensions to which the object and chief aim of your journey to Europe have given rise both in the press and in the cabinets. At the moment when these rumors were everywhere circulating, it appeared to us that a frank and loyal explanation would be the sole means to remove all doubts and difficulties to which they might give rise. By order of our august master, therefore, I avail myself of your Highness's return to Egypt to address to you what follows. The high confidence and benevolence of his Imperial Majesty toward your Highness have been shown by too many visible and material proofs to render it necessary for me to dilate thereupon. At a moment when it was in the midst of the gravest political complications, the Imperial Government, while modifying them, did not refuse to grant the various demands which you addressed to it, though in the eyes of the world these demands did not seem to harmonize with the sentiments of loyalty which our august master had a right to expect from you.

This circumstance and the strange conduct of the Egyptian troops on their arrival and at the commencement of their stay in Crete, on the occasion of the last insurrection in that island, and the precipitation with which they were withdrawn, together with other similar incidents, had been almost forgotten by his Imperial Majesty the Sultan, with the sole view of giving your Highness yet another proof of the benevolence with which he did not cease to be animated toward you. Thus your Highness will admit that not only did his Majesty show no desire to trammel the continuance of your power within its designated limits, but that he has also spared neither aid nor facility in your interest. The great country of Egypt, which is placed under the administration of your Highness, being one of the most important territorial possessions of his Imperial Majesty, the well-being and prosperity of its inhabitants are naturally the object of his most lively solicitude. In consequence and in virtue of his right as sovereign of the country, our august master would be entitled to exercise a supervision over the expenditure which weighs so heavily on the present as on the future of Egypt. If this supervision has not been exercised, if the other rights and duties specified by the imperial firmans which conferred the hereditary administration upon your family have not been invoked, it has been not because his Majesty meant for a moment to renounce any one of either his rights or his duties,

but solely because his Majesty was convinced that your Highness, in your wisdom, would not abuse this abstinence, and that, appreciating rightly the benefits of which you have been the object, you would never diverge from the path of loyalty and devotion.

It was at a moment when this conviction existed in all its strength, and when the benevolence of his Imperial Majesty the Sultan toward you continued and was daily increasing, that the scheme of your intended journey to Europe was announced to me. Although your Highness had been good enough to apprise us of your departure, you did not deem it incumbent on you to afford us the least information as to the motives assigned by public report for your voyage, nor to give any answer whatever to the requests for explanation which were officially addressed to you. Though greatly astonished at this silence, we still thought it right to await the moment which would throw light upon these facts. It was during this interval that we received information of your visit direct from Alexandria to Corfu, made to his Majesty the King of the Hellenes, and of the invitation which you gave to that sovereign to be present at the opening of the Suez Canal. The news of similar invitations to the other sovereigns whom you next visited followed this piece of information. It is needless to say that our august master would feel great pleasure in seeing the sovereigns of Europe, if it so pleased them, attending the inauguration of a great public work, accomplished in a portion of his dominion, and honoring with their benevolence one of the chief members of his government, placed at the head of the Egyptian administration. Only your Highness is too enlightened to render it necessary to remind you that the invitation of an independent sovereign to a foreign country should be made by the independent sovereign of the country. The contrary infringes alike upon the dignity of the invited and the rights of the territorial sovereign. Thus, the form adopted in this question by your Highness is in all points contrary, both to the respect due to the sacred rights of our sovereign and to the consideration necessary for the august princes whom you proposed to invite. On another point, it was the duty of the representatives of the Sublime Porte abroad to place themselves at the disposition of your Highness as one of the greatest dignitaries of our empire. Your Highness's official relations required to be carried on through their instrumentality. It would appear, nevertheless, that their solicitude in the fulfilment of this duty, far from having been agreeable to your Highness, had no other effect than that of displeasing you; and it is with pain that we have learned of all the reserve with which you thought proper to mark your intercourse with them.

Your Highness knows better than any one, and it is, moreover, expressly stipulated in the imperial firmans, that, with the exception of a few privileges established in her favor, Egypt differs in nothing from the other provinces, and that its administration cannot direct official relations with other powers. The treaties which exist between the Sublime Porte and other states, as well as the fundamental laws of the empire, must have the same force and vigor there. Notwithstanding these fundamental principles the continental journeys to Europe of the personage who takes the name and title of Minister for Foreign Affairs of Egypt, with the view of making efforts to obtain in favor of the latter a change of those treaties and to enter with the powers into direct negotiations on this subject; the great care which he takes in concealing from our representatives more than any one else the object of his mission, and his abstaining from all association with them, constitute so many facts which infringe as much on the rights of the Sublime Porte as they are contrary to your obligations, which can no longer be tolerated. For it has become evident to the eyes of our august master that if the powers, with whom respect for rights and treaties is an immutable principle, had shown the least favorable disposition, the abolition of our treaties, their replacement by others, the suppression, in a word, of the contents of the firmans which serve as the basis of the existence and continuance of the actual administration of Egypt, was the aim which was sought to be attained. At home, also, the incalculable and crushing expenses occasioned by orders given for iron-clads, fire-arms, and the like, subject the inhabitants of that part of the empire to burdens far beyond their means, and inspire them with discontent against the administration. As has been said above, and we cannor repeat it too often, his Majesty the Sultan, our august sovereign, animated by the liveliest solicitude for the welfare and prosperity of Egypt, and desirous to see that province enjoy its privileges within their legitimate limits, can never consent to see the ties weakened which attach it to his empire. Placed as it is under the principle of the safeguard of the integrity of the empire, it is impossible to conceive the reasons which can impose upon the administration of that country the obligation of depleting the public treasury for the purchase of iron-clad vessels and arms of all kinds. As the people can in no respect long support the burden of such expenses, his Majesty the Sultan, who is the legitimate sovereign of the country, cannot permit it. It is a truth everywhere recognized, that luxury being not the cause but the effect of civilization, true progress consists in the accomplishment of the reforms which produce that civilization. The just and enlightened mind of your Highness renders it superfluous for us to point out the disastrous consequences to which those expose themselves who, neglecting the fundamental basis, begin with objects which ought only to be their effects. The aim of these frank and sincere explanations is to call the serious attention of your Highness to facts the continuance of which, as also a persistence in the path followed, can be reconciled neither with the rightly-understood interests of the imperial province, the good administration of which is confided to you, nor with the maintenance of the acknowledged rights of his Imperial Majesty, which it is essential, above all, to preserve from all infringement. We do not doubt that your Highness, in your high wisdom, taking into serious consideration all the preceding observations, will see fit to desist from all that oversteps the limits of your privileges and your obligations, and that, from gratitude for the great benefits of which you have been the object on the part of our august master, you will henceforth concentrate all your efforts upon the development of the prosperity of Egypt and of the security of the lives and property of its inhabitants. In proportion as your Highness confines yourself within the limits of the conditions attached to your privileges, the good-will which our august master does not cease to feel toward you will extend and be redoubled. These conditions, set forth at length in the firmans above mentioned, it were here superfluous to recapitulate. As it would be impossible for the Imperial Government to desist from a single one of the provisions contained in these firmans, it would be under the necessity, though with regret, of recurring to them whenever it should become a question of taking measures for restoring within their limits and repressing any contrary acts which might arise, and for safeguarding acts and traditions. Consequently, and by order of his Imperial Majesty the Sultan, our august master, I hereby communicate to your Highness, without the least evasion and in all frankness, the real state of affairs, and await a clear and categorical reply, offering all necessary guarantees for the future, and which cannot be allowed to remain as a dead letter.

A'ALI.

The difficulties threatened to gravitate into an open breach of the peace; but neither party felt disposed to go further, the Porte having just come out of a protracted and expensive

civil war in Candia, and her finances being in a bad condition, while the Viceroy could not make a loan for a war which would jeopard his own position, and his naval force was too small. The Viceroy considered it, therefore, best to yield, and to this end addressed, in September, a letter to the Sultan (through the Grand-Vizier), which he concluded thus:

In addition, having received from persons worthy of confidence the news that I should not be obliged to submit my budget to the Porte, I am rejoiced to be able to hope that the report is exact. Besides, your Highness having deigned to give me the gratifying assurance that his Majesty was disposed to maintain the privileges successively accorded by imperial decrees since 1841, my hope becomes confirmed, and is converted into certitude.

One sole point now remains—that of the authorization of loans. I have the firm conviction that this will be equally resolved by recourse to the formal terms of the firmans, with the perfect equity which every one recognizes in your Highness.

In fact, if the matter is attentively considered, how injurious this subordination would be in all the affairs, small or great, of the province of Egypt, the administration of which has been confided to me solely by the benevolence of the Sultan, the fact is evident that the last firman accorded would be valueless. If matters had not been thus situated, I should have had no other duty, I am aware, than to submit to a simple indication from you. Feeling confident that all the communications from you have been inspired by the most perfect sincerity, and the most entire purity of intention, I, on my side, speak to you with all honesty and trust, relying on the pleasing assurance that his Majesty has no wish to lessen the privileges accorded by his imperial munificence, as well as on the perfect equity and high sagacity which so eminently distinguish your Highness.

I hope that, in also accepting this point in the way above explained, you will deign to employ your good offices to obtain an augmentation in my favor of the great and fecund benevolence of his Majesty, more precious to me than the whole world and all that it contains.

Negotiations concerning several points were, however, continued unto the end of the year, when it was announced that all the difficulties had been settled.

A discovery was made on April 2d of an attempt to assassinate the Viceroy. An explosive machine, with a powder-train leading to the door, and attached by a tube to a gas-pipe, was found under the seat of the viceregal box in the theatre at Cairo. The Viceroy was apprised of the projected attempt on his life, and stayed away. The perpetrators were unknown, but several persons were arrested on suspicion. The Viceroy received the congratulations of the foreign ministers and Egyptian functionaries on his escape.

An important event in the political progress of Egypt is the institution of a Parliament, the session of which, in 1869, was opened with a highly-interesting speech of the Viceroy. After congratulating the members on the general prosperity of the country, regretting the imperfect rising of the Nile, and announcing that a commission had been appointed to devise means by which irrigation might be effected independently of a favorable rising, the Viceroy adverted to the Suez Canal. "Eight millions of pounds have," he said, "been paid to the Suez Canal Company. It is indisputable that the canal works have been a burden on our population; but I trust that the country will soon be compensated for the outlay, since it has been solemnly promised that the canal is to be opened in October* of the current year. As the Government holds nearly half of the bonds of the company, and is, further, to have 15 per cent. of the profits of the enterprise, we shall soon have, in the opening of the canal, a new source of revenue." The Viceroy then went on to justify the excess of debt by referring to the important works which had been accomplished; 850 additional miles of railroad had been laid down, also 207 bridges, 40 canals, 25 aqueducts, 5 locks, 30 sluice-gates, 1 floating bridge, and 4 stone quays. Civil and military schools had been founded and maintained, and the reorganization of the land and sea forces had justified a large expenditure. "On my accession," the Viceroy continued, "the army hardly comprised 3,000 effective troops, and the fleet consisted of three or four ships only. Since my accession our war material has been entirely renewed, and a large supply of muskets of a new model have been ordered. Workshops for making military equipments and material have been established. Men-of-war and transports, such as steam-frigates, iron-clad corvettes, and sailing-vessels, to the number of twenty-two, have been constructed or purchased, and are at our disposal in the Mediterranean and the Red Sea. Thanks be to God, our army and navy are now on such a regular and respectable footing that we are fully capable of providing for the security of the country." On the important topic of the meditated change in the present jurisdiction of foreigners resident in Egypt, the Viceroy said: "I have the satisfaction to announce to you that I have obtained the adhesion of most of the great powers to the principle of the judiciary reform; and I trust soon to obtain that of the French Government, which has always shown so much sympathy for the progress of our country. I have reason to believe that a special commission will shortly be formed to construct the bases of the new jurisdiction, and to define its powers."

The Viceroy, while thus endeavoring to strengthen his power by reforms and the aid of competent advisers, seems also intent upon increasing his power by extending his territory. Great political results are expected from the expedition to Central Africa, which the Egyptian Government directed to be organized under the superintendence of Sir Samuel Baker. It is anticipated that it will lead to the conquest of very extensive and wealthy territories for the Viceroy. Sir Samuel was given the rank of Bey, and engaged to remain for four years in the Egyptian service. The force

* This month was originally fixed upon for the opening of the canal, but it was subsequently changed to November.

at his disposal is to consist of 1,500 men, selected from the Viceroy's best troops in Soudan, and placed under the command of an experienced officer. Hostile operations were to commence in the country of the Bari tribe, which, though nominally under the Egyptian rule, has hitherto refused to recognize it. Five iron river steamers were ordered by Baker Bey in England. The Egyptian Government spared no expense in order to secure the success of the expedition, the cost of the preliminary outfits, etc., amounting to £25,000. This expenditure, however, was expected to be recovered in the first year of the expedition.

By far the most important event in the history of Egypt, during the year 1869, was the opening of the Suez Canal. The canal commences at Port Said, 140 miles from Alexandria, is about 120 miles long, and runs to Suez through Lakes Menzaleh, Timsah, and Amer. The waters of the Mediterranean were admitted into the Bitter Lakes with complete success, on March 18th. The Viceroy of Egypt was present, and expressed his thorough confidence in the speedy completion of the canal. In September a steamer, with M. de Lesseps on board, made the passage along the whole length of the canal in fifteen hours. Thus was the practicability of the great work, which so many scientific men and politicians have labored to prove the most costly and extravagant of chimeras, conclusively established.

According to soundings, taken all the way through the canal in October, the least depth in it was twenty feet, and the remaining obstacles were being rapidly removed. The work was so vigorously pushed, that, in the beginning of November, 1869, only 1½ million cubic metres of earth remained to be dredged from the bed of the canal to give it the maximum depth of 8 metres (=26¼ feet). In fact, M. Lesseps gave formal notice that the Suez Canal would be opened throughout to navigation on November 17, 1869. For this occasion an invitation had been extended to crowned heads. The Sultan declined the invitation, but France was represented by the Empress, Austria by the Emperor, Prussia by the crown-prince, Italy by Prince Amadeus. The preliminaries commenced at Port Said on November 15th. The Emperor of Austria landed at noon, and was received by the Khedive with great ceremony and a magnificent military and civic display. The houses were decorated, arches were raised over the principal streets, hundreds of flags were flying, and salutes were exchanged between the fleet and the shore. At night the town and harbor were ablaze with fireworks and illuminations. The rigging of the men-of-war and the shipping in the harbor were hung with lanterns of every color, and showers of rockets were rising and falling. The Khedive gave a grand ball on board of his yacht. It was attended by the Emperor, Francis Joseph, and all the distinguished guests assembled at Port Said. On November 16th the Empress Eugenie arrived at Alexandria, and was received by the Viceroy and the Austrian Emperor, and landed amid the thundering of the cannon and the acclamations of the multitudes which lined the shore. On November 17th, the French imperial yacht Aigle, with the Empress Eugenie on board, and followed by forty vessels, anchored at Ismailia, having passed through the first part of the Suez Canal. The trip of the first detachment of the fleet with visitors was made from Port Said to Ismailia in eight and a half hours; they were met by four steamers from Suez, the southern terminus of the canal. On November 18th thirty-four steamers arrived at Ismailia, with an average tonnage of one thousand tons each. The buildings in Ismailia were filled with guests, and the surrounding plains covered with the tents of the native tribes, which were assembled there in immense numbers. On the morning of the 19th of November, the fleet of steamers sailed for Suez, the imperial yacht Aigle, bearing the Empress Eugenie, taking the lead. In the evening they arrived at the light-house in the Bitter Lakes, and anchored there for the night. On November 21st, the canal-inauguration fleet, consisting of forty-five steamers, arrived at Suez, reaching the Red Sea. None were obliged to employ pilots. The only difficulty they had was owing to their numbers. Some were crowded on the banks of the canal several times, but they got off without trouble, the sandy bottom neither holding nor hurting them. On leaving Ismailia several steamers fouled with each other, but no serious damage was done. The water in the canal between Suez and Ismailia is full twenty feet deep at the shallowest spot, and in several parts it is not less than twenty-five feet in depth; but at all these points the canal can easily be deepened. Steamers drawing fifteen feet can navigate the canal from Port Said to Suez with ease, in fifteen hours. The water does not wash away the banks as much as was apprehended. The complete success of the work exceeded all expectations. The imperial yacht Aigle, with the Empress on board, and the entire fleet left Suez on November 22d, and reached the Mediterranean on the next day. The success of the inauguration was complete.

The following table will show the saving effected in distance by the canal over the Cape route between the ports named and Point de Galle, Ceylon, which is chosen as representing a point of mean distance in the Eastern seas:

CITIES.	Distance in Geographical Miles.		Per Cent. of Saving.
	By Cape.	By Suez.	
London	14,340	7,300	49
Marseilles	14,500	5,490	62
Trieste	15,480	5,220	65
New York	15,500	9,400	40

M. de Lesseps estimates that from 2,000,000 to 3,000,000 tons will pass through the canal during 1870, and that this amount will be

doubled the following year. The English and the French will, for some time at least, be the largest customers of the canal company, their rival steamship lines, the Peninsular and Oriental and Messageries Imperiales, furnishing now the chief mediums of communication between Europe and the East. But in this respect, as in many others, this new highway must effect a radical and permanent change. If permanently successful, it must practically cut off Alexandria, Marseilles, and Southampton from the monopoly they have so long held of the Mediterranean trade with Egypt and the East, and open the field to successful competition.

Brindisi and other ports on the eastern coast of Italy, by reason of their greater proximity to Port Said, will share largely in the rich trade of Marseilles and Southampton. Trieste also will become a formidable competitor for the trade of Central Europe. The Austrian Lloyd's line of steamers from the latter port is doing a steadily-increasing business, and already giving evidence that it feels the stimulus. So far as the passenger, mail, and fast-freight traffic with the East is concerned, it seems wellnigh certain that these two ports will supplant their older and wealthier rivals altogether.

The following are the official regulations for the navigation of the Suez Canal:

1. Navigation on the Suez Maritime Canal is permitted to all vessels, whatever their nationality, provided they do not draw more than seven metres and a half of water; the canal being eight metres deep. Steam-vessels may navigate by means of their own steam-power. Sailing-vessels, about fifty tons' burden, must be towed by the service established for this purpose by the company. Steamers requiring to be towed will arrange by special contract. Every vessel towed will provide its own tow-line.

2. The maximum speed of vessels on the canal is provisionally fixed at ten kilometres an hour.

3. Every ship exceeding 100 tons' burden must take a pilot employed by the company, who is bound to furnish every information as to the route to be followed, the captain remaining responsible for the conduct and handling of the vessel.

4. When a vessel requiring to pass the canal has taken up her moorings at Port Said or at Suez, the captain is to enter his vessel at the office and to pay the passage dues, as well as the pilotage fees, towing and harbor fees, when due. A receipt will be given him, which will be available in case of need. He will be bound to furnish the following particulars: Name and nationality of the vessel, name of the captain, names of the owners and charterers, port whence sailed and destination, draught of water, number of passengers, tonnage of the ship according to legal measurement, certified by official documents.

5. In the formation of trains, the captain, furnished with a number according to his receipt, serving as a way-bill, and after having received the pilot on board, will take up the position assigned to him.

6. Every vessel about to enter the canal is to have her yards braced up and booms topped. She must have two anchors—one forward and one aft—to allow of anchoring at the first order of the pilot.

7. (1.) Every vessel must have, during the passage of the canal, a boat in tow with a hawser ready, in order in case of need to carry out her hawser to one of the mooring-piles placed along the two banks of the canal. (2.) The captain is bound to keep watches on deck both night and day, to be ready to cast off or cut the tow-lines at the first order. (3.) During the night, vessels will keep lights burning according to regulation, and a lookout forward. (4.) Every steam-tug or other steamer will whistle at the passage of curves, at the approach of vessels which are to be passed or crossed, and at the approach of dredging or other engines which they may meet. (5.) When two vessels, proceeding in opposite directions, come in sight, they are to slacken speed, each keeping the starboard bank, or stop, according to the order of the pilot. (6.) When a vessel requires to pass another going in the same direction, warning must be given by signal. The vessel going at least speed is to keep close to the starboard bank and to slacken speed as much as possible.

8. (1.) Vessels, which for any cause whatever are obliged to stop in the canal, are, as soon as possible, to place themselves on the windward bank, and moor fore and aft. (2.) In case of necessary stoppage, and when it is impossible to reach a siding, which is always to be done, if possible, the captain must immediately give notice by signals by day and by lamps by night, fore and aft. (3.) In case of grounding, the agents of the company will have the right to direct the means of getting the vessel off, and, if necessary, of unloading—the whole at the expense of whoever may have caused the grounding.

9. Captains are forbidden (1.) to anchor in the canal, except in case of absolute necessity, and not without the pilot's consent. (2.) To throw into the canal earth, ashes, cinders, or any other materials. (3.) In case of any thing falling into the canal, a declaration is to be made to the pilot, who is bound to transmit it to the agent at the nearest station. (4.) The captain is forbidden to fish up any thing fallen into the canal, except under the direction of the company's agents. (5.) The salvage of all objects fallen into the canal is at the expense of the captain, to whom they will be restored on payment of these expenses.

10. Captains will bind themselves, on receiving a copy of these regulations, to obey every order for the purpose of carrying them out.

11. The dues to be paid are calculated on the actual tonnage of the vessel, both as to the transit dues and the towing and harbor dues. This tonnage is determined (until further orders) by the official papers on board. The transit due from one sea to the other is ten francs per ton burden, and ten francs per passenger, payable at the entrance at Port Said or Suez. The towage dues are fixed at two francs per ton; the harbor dues for anchoring at Port Said, at Ismailia, and before the platform at Suez, after remaining twenty-four hours, for twenty days at the utmost, five centimes per ton per day, at the place assigned by the captain of the port.

The pilotage dues for the passage of the canal are fixed according to the draught of water, as follows: Up to three metres, five francs per decimetre; from three to four and a half metres, ten francs; from four and a half to six metres, fifteen francs; from six to seven and a half metres, twenty francs. Every decimetre to be paid for proportionally according to the category to which the vessel belongs.

The pilot kept on board, in case of anchorage, will be paid twenty francs per day. Vessels towed will be entitled to a reduction of twenty-five per cent. on the pilotage dues.

FERD. DE LESSEPS, President Director.

The opening of the Canal has raised the question of its neutralization. The powers were said to be very actively occupied with this question; for, if it is not declared neutral, it runs the risk of becoming the theatre of rivalries and struggles between the great

nations. Austria is understood to be in favor of that step, but would not be in a hurry to pronounce. Prussia is reported to be completely in accord with England, who ardently desires the neutralization. Italy, who sees her Eastern commerce increasing, is strongly disposed to support the project. France and Russia are of a contrary opinion. The former, as the principal promoter of the now completed works, is supposed to hope to obtain certain privileges for the French ships which may wish to make use of the canal; and the latter, who regards with a distrustful eye every road which is opened toward the East, and of which she is not mistress, is believed to entertain the project—if this channel is really accessible to large steam-vessels—of asking for a modification of the treaties which regulate navigation in the Bosporus and the Dardanelles.

ELECTRICITY. *Electro-magnetic Induction Machines.*—Mr. H. Wilde's invention has been somewhat improved during the year by his own efforts and those of others. One of the practical difficulties in the use of his apparatus was the generation of high internal heat in large electro-magnetic machines by the rapid magnetization and demagnetization of the armatures. By means of a current of water circulating in the hollow brass segments which form part of the magnet-cylinder, this heat is now so far reduced as to permit the machines to be worked, for days and nights together, without intermission, and without any sensible diminution of the power of the current. It has also been found that the current from one small magneto-electric or electro-magnetic machine is sufficient to excite simultaneously the electro-magnets of several small machines. In a number of 3½-inch machines constructed for the electro-deposition of copper on a large scale, the currents from two of them are made to excite the electro-magnets of twenty similar machines to a degree sufficient to bring out the maximum dynamic effect of each machine. Mr. Wilde has ascertained that it is not necessary to clutch the armatures together, for it is a property of the current to make them revolve synchronously.

In a paper read before the Manchester Literary and Philosophical Society, Mr. Wilde mentioned the following as some of the results obtained from the quantity armature of a 10-inch machine. The dimensions of the coil of this armature may be represented by a bar of pure copper 67 feet long, and having a sectional area of 1.6 square inches, so that the resistance which this circuit presents to the passage of a current, when compared with that of the liquids in a voltaic battery, is practically null. When the coil is in full action, it will melt 15 inches of iron wire .035 inches in diameter, or the same length of ¼-inch iron rod with equal certainty; and will electrolyze acidulated water in at least 16 voltametres in series; so that the resistance outside of the circuit, whether estimated by the 15 inches of thin wire melted, or by the number of electrolyzing cells in series, is more than 100 times greater than that of the coil in which the current is generated.

New Forms of Batteries.—M. Ney has introduced a battery composed of the ordinary copper and zinc elements, but placed in different solutions from those of the Daniell cell. An amalgamated plate of zinc is put in a vessel filled with a solution of chloride of ammonium; in this vessel is the porous cylinder containing the copper plate, immersed in a solution of carbonate of copper. It is claimed that this battery can be kept a long time in active operation if the liquid ammonia is replenished, which is easily done by dropping in solid chloride of ammonium. The natural carbonate of copper can be used, and sand impregnated with the ammoniacal solution can be employed instead of the solution itself.

M. Rondet finds that his cyanide of potassium battery possesses a magnetic force as compared with a Bunsen of 81 to 93. He gives the following comparisons between various forms of battery: Bunsen, 933; chloride of potassium and chloro-hydrate of ammonia, 601; Marié-Davy, 548; Daniell, 384.

A battery invented by Abbé Martin has been found to have great electro-motive force and peculiar constancy. The exterior jar, having its lower part non-porous and well varnished, contains the liquid amalgam of zinc; above this it is principally porous. Contact is made with the zinc by a gutta-percha insulated wire, whose extremity is bare; this end immediately on entering the liquid amalgam becomes amalgamated and establishes a thoroughly good contact. This interior cell consists of a porous jar not resting on the amalgam, but supported by the upper edge of the outer vessel. Its porosity only extends to the lower half, to prevent the exciting liquids mixing. The negative element consists of a copper plate or a plate of lead, carbon, platinum, or any platinized metal, the exciting liquid depending upon the metal, and being either sulphate of copper, or salts of lead, mercury, silver, etc. The exterior vessel is charged with dilute sulphuric acid, and, by means of the porous portion of the outer vessel, the sulphate of zinc is eliminated, attaching itself to the side of the vessel.

A New Frictional Machine.—M. Ferdinand Carré has recently constructed a new frictional machine for the laboratory of the Sorbonne in Paris. On the same axis are mounted two disks of non-conducting materials. The first, of gutta-percha, passes between two friction cushions, and is provided with a brass conductor furnished with combs. The second disk is larger than the first, but is not provided with cushions—only with a conductor and combs. The action in the second is that of induction, and in turning the handle powerful results are obtained; so much so, that, with disks from 14 in. to 19 in. in diameter, sparks are elicited varying in length from 5 to 7 in.

New Thermo-electric Pile. — MM. Mure and Clamond describe a new pile in which galena forms the negative element and iron the positive. The galena is cut into bars forty millimetres long and eight millimetres thick, and thin sheet-iron plates fifty-five millimetres long and eight millimetres wide are connected. A series of these is arranged so as to form a hollow cylinder, in which a gas-burner is placed. The insulations are formed with thin plates of mica. About forty of these couples produce the intensity of one Bunsen's cell; but it is doubted whether the result affords the electric equivalent of the heat employed.

Whale-catching by Electricity. — Messrs. Bennett and Ward, London, have patented a method of capturing whales by the agency of electricity, galvanism, or magnetic electricity. A galvanic battery with its coils and necessary accompaniments, or other electrical apparatus of the required intensity, is placed in the boat, or whaling-vessel. Properly-insulated wires are put in connection with, and pass from, the opposite poles or terminals of the battery and along the lines by which the harpoons are secured to the boat. The ends of these wires are continued to the points of the harpoons, so that the points shall be in direct communication with the poles of the battery. When practicable, two harpoons are thrown at the whale at the same or nearly the same time, and when the battery is charged the electric current will pass along the wires to the points of the harpoons, and through the body of the whale, thus completing the electric current. The whale (if the battery and accompaniments are sufficiently powerful) will be paralyzed by the shocks, and will lie at or near the surface of the water, without the slightest motion, so that the boat can approach near enough to spear and capture him without danger. Two harpoons may be bound together, so as to form a single harpoon with two separate barbed points parallel to each other, the two component parts of which are insulated from each other, the wire from each pole of the battery passing down or through either part of the compound-harpoon to the point, thus forming the electric circuit. It is not absolutely necessary that the instrument should enter the body of the whale, the same effect being produced if the poles of the battery are in communication with his skin. In the same way electricity may be employed to capture seals, and many other fish and sea or river animals.

Electro-magnetic Engines on Ship-board.— Mr. John Tawse communicates the following statement to *The Engineer:*

Some years ago, when in India, I had a boat on one of the salt lakes of the Coromandel coast, and from experiments I then made I became impressed with the idea that there was an immense mechanical power lying dormant in the simple and natural *galvanic action of salt water on the sheathing of vessels.* Electro-magnetism has hitherto failed as a motive power on the score of economy only. The form of battery used is too expensive, owing to the use of strong acids acting upon a comparatively small surface. Also in this case the electric current is deficient in quantity for mechanical purposes. What seemed to be wanted was a very large area of metallic surface, acted upon by an excitant strong enough to evolve a powerful current, yet not sufficiently so to wear or corrode the plates in a very perceptible degree. I have since published the idea which this gave birth to, in several of our scientific journals. But as I have now worked it out to completion, both by calculation and experiment, I detail it herein for the information of your readers.

A vessel, to be fitted with an electro-magnetic engine attached to an ordinary shaft, is sheathed on one side with copper, and on the other side with zinc. The sheathing is laid on over sheets of gutta-percha, in order to insulate it from the wood-work of the vessel. The nails necessary for this purpose are driven in such a manner that they are nowhere in metallic contact with any part of the sheathing. The two sections of copper and zinc sheathing thus form a battery, acted upon and excited by salt water alone. If any one acquainted with the subject will calculate the result of galvanic action on so large a surface as the area of immersion of a floating vessel, he will perceive that it is the right application of it alone that is wanted to convert it into a powerful mechanical force.

The vessel being so sheathed, a wire from each section of course conducts the current to the electro-magnetic engine. In my first experiments I had a large magnet to work a keeper in connection with a crank in the usual way. Since then I have adopted a mode of multiplying the power enormously. Thus the wires are connected with a thick, small-sized electro-magnet in the first instance. In front of its two poles an armature is made to rotate with great velocity, and the augmented current thus produced is carried to an arrangement of two very large magnets working reciprocally in such a way that the keeper, or soft iron beam between them, which works the crank axle of the screw, flows the current into each separately at every stroke, charging it just before the moment of contact. As regards the wear of the plates, it would be no greater than in the case of ordinary sheathing, with this advantage, that no sea-weed or barnacles would adhere to the sheathing, in constant galvanic activity; ordinary copper sheathing would be quite free from them if the galvanic circle were complete. In fitting the above engine to a vessel the rotating armature working before the first magnet would have to be driven by a small steam-engine.

Electric Alarums for Variation of Temperature.—MM. Besson and Kneider have invented an apparatus to indicate a fall of temperature in hot-houses and other places where it is important to have a steady degree of heat. It consists of a spirit-thermometer, the bulb of which is placed above, and the tube curved in a U shape. A platinum wire in connection with a battery and ball is carried into the bulb and down to the degree of heat it is desired to notify. Below this minimum the curvature is filled with mercury, which is in free communication with a second platinum wire. As the alcohol contracts with the cold, the mercury will, of course, rise, and, reaching the first platinum wire, complete the circuit, and give the warning. This instrument is intended to be used in connection with what is called the maximum thermometer alarum, which is made by carrying one platinum wire, connected with a battery and bell, into the bulb of a mercurial thermometer, and another wire down the tube to the degree of heat it is not desired

to exceed. When the mercury rises to this point the circuit is completed, and notice is given by the ringing of the bell. The same battery and bell will serve for the two instruments, but it will be necessary to interpose a commutator to ascertain through which circuit the current is passing, and whether a rise or fall is indicated when the bell is rung.

Electric Beacons.—Experiments have been conducted by Mr. Thomas Stevenson, of Edinburgh, with a view of testing the practicability of illuminating beacons and buoys at sea with the electric light, produced by means of a battery on shore. A submarine cable, fully half a mile long, was laid between the East breakwater of Granton Harbor and the chain pier at Trinity. The operator occupied a station near the centre of the breakwater, and the light was shown at the point of the pier, in front of an ordinary light-house reflector, producing a most brilliant flash. The flashes were emitted with great rapidity; as many as 500 can be transmitted in a minute, but the machine can be regulated to send one every second, or at any other desired interval. The experiments were witnessed by gentlemen connected with the Board of Trade and Trinity House, and gave them great satisfaction.

A Phono-electroscope.—This is the name of an instrument invented by Mr. Edwin Smith, of England, to illustrate the heating power of the voltaic current. It consists of a rectangular wooden box, ten inches by five, two steel or platinum wires stretched from end to end, a small spindle carrying two quill plectra, and an eccentric wheel for making and breaking the current through one of the wires. The wheel turns under a brass spring, which plays upon a button. The spring is connected with one electrode of the battery, the button with the wire nearest to it, and this wire with the other electrode. To exhibit the use of the instrument: First, tighten the wires, by means of the milled-headed screws, to unison, to about the pitch of middle C.; then turn the spindle so as to sound the two notes in succession *before* the eccentric wheel makes the circuit. After these have sounded in unison, turn the spindle a little more; the circuit is made by wheel and spring, and presently the plectra play a second time on the wires, which now sound, with an interval of a tone or more, according to the quantity of electricity which has passed through one of them. By regulating the time between the instant when the wires sound in unison and the instant when they sound again, and noticing the musical interval caused by one of them becoming flat, we have an audible measure of the expansion of the connected wire, of the temperature to which it has been raised, and of the quantity of electricity which has traversed it to produce that effect. By continuing the movement, the interval between the notes will increase, and, at last, the wire operated on will become too slack to sound at all. If connection with the battery be now broken, and the heated wire be allowed to cool, its note will be heard to rise by degrees to its original pitch. With a single pair of plates, the phono-electroscope answers well. The experiment is a striking one in a lecture-room, very instructive, and easily managed. The apparatus is so simple that any one almost may make it for himself.

Electro-deposition of Copper and Brass.—An invention has been patented by Mr. W. H. Walenn, of England, to make electro-deposits of copper and brass upon iron, or other substances, with less battery power, and greater economy, than formerly. A solution for depositing brass is made as follows: crystallized sulphate of zinc (1 part by weight), and crystallized nitrate of copper (2 parts), are dissolved in the smallest quantity of water that is possible. Sufficient strong ammonia-water is added to precipitate, and then fully redissolve the oxides. The purple tint of this solution is removed by a standard solution of cyanide of potassium. The resulting solution should be left to stand for a day or two, and may then be worked with from one to three battery-cells, using heat if a brass anode be employed. Or porous cell-arrangements may be introduced, the hydrated oxides of copper and zinc being from time to time supplied, and, if necessary, ammoniuret of copper being added. Ammonia-water and a standard solution of cyanide of potassium should be added occasionally to the depositing liquid, in order to keep the salts of copper and zinc well in solution. The hydrated oxides of the metals are mixed and thoroughly incorporated in the proportion of two parts by weight of the copper oxide to one part of the zinc oxide before going into the solution. During working, little or no hydrogen should be evolved. Various modifications of the process are described by the inventor, but the one already mentioned appears to be the simplest. An electro-deposit of copper is made by charging the solvent solution with about one part of sulphate of zinc to ten or twenty parts of sulphate of copper. The addition of sulphate of zinc to acid solutions for depositing copper has long been known to improve the quality of the deposit—the zinc toughening the copper as deposited. Mr. Walenn has also discovered that the addition of a small quantity of bisulphide of carbon to a solution containing one lb. of sulphate of copper to the gallon, and an ounce or two of sulphate of zinc to the gallon, imparts a silky and bright appearance to the cupreous deposit.

The Electric Light for photographing with the Microscope.—A Washington correspondent of the Philadelphia *Press* gives an interesting account of experiments made by Dr. Woodward, of the Army Medical Museum, to procure magnified photographs of objects by means of the electric light. The writer says:

> For the production of the electric light he uses the Duboscq lamp, moved by a battery of fifty small Grove's elements. In this way he finds, not only that

photographs can be taken with any power given by sunlight, but also that the exaggeration of light and shadow, which has prevented the electric light from being generally adopted as a source of illumination in the preparation of ordinary photographs of the natural size or less, proved of infinite advantage in the reproduction of feeble, microscopical images of highly-magnified objects.

The microscopical pictures are clearer and more defined than those produced by sunlight. The electric light is much more manageable than sunlight, and readily arranged to produce negatives with shorter exposures. The magnesium light, though sharing these qualities, is found to be less adapted to the higher powers.

The electric light is considered to be the best. Grove's battery, already spoken of, is placed in a closet just outside the operating-room. The battery used by the doctor is the compact form of the Grove's battery employed by Prof. Tyndall in his celebrated lectures on heat and sound. It was made, we understand, by Mr. Ladd, of London, who manufactures the apparatus used by Prof. Tyndall.

The chief point about this battery is its compactness. It occupies, when set up, a space of a little more than two feet square, and the cells are so small that a little over seven pounds of nitric and three of sulphuric acid, costing altogether much less than one dollar, is sufficient to charge the fifty elements and run the battery for a day's work. The wires from the battery are connected with the Duboscq lamp, which is the one that was exhibited by that ingenious maker at the recent Universal Exposition in Paris. This lamp is provided with a clock-work, regulated by a magnet, and keeps the carbon-points perfectly steady. The light from the burning carbon-points, which approximates in brilliancy the brightness of the sun, is concentrated by a pair of condensing lenses on the achromatic condenser of the microscope, passes thus through the object and the object-glass of the microscope, and projects the image on the sensitive plate, which is placed at a few feet distance. The photograph is then taken by precisely the same chemical process by which portraits are photographed.

This lamp may be substituted for the electric clock and battery in the above process with similar results, but requires somewhat longer exposures. It is not so well adapted to taking pictures with high powers, and at the present price of the magnesium ribbon, which is two dollars and one-half per ounce, is more costly than the electric light.

We are inclined to believe that the above new applications of the electric and magnesium lights will prove of great practical value, by enabling microscopists, laboring in the various branches of medical and scientific research, to reproduce the results of their investigations in such form as to make them instructive to the world.

Dr. Woodward showed us during a recent visit photographs of sections of cancers, tumors, and other morbid tissues, in which the most minute structural points were faithfully reproduced, with powers ranging from 350 to 1,000 diameters; and also of a great variety of test-objects, some of which were magnified as highly as 2,500 diameters. We can readily understand how by the exchange of such pictures microscopists, working at distant points, could cooperate and assist in each other's labors. And we are therefore glad to learn that it is probable that the surgeon-general will publish at an early day a full account of those experiments, which will render the process available for any microscopist of ordinary industry. It is not necessary for the microscopist to be a practical photographer, as any ordinary portrait photographer can be employed by him for the purpose.

We understand that the magnesium and electric lights have both been used for copying maps and drawings, and no doubt much can be done to render this application more economical and simple than hitherto. But it is not likely that these lights will be generally introduced as sources of illumination in taking ordinary photographs, for which they are unfitted by the violence of the contrasts of the light and shade which they produce.

Vegetable Electro-motors.—Mr. Edwin Smith contributes to the London *Chemical News* the results of experiments to determine the electric relations between vegetable substances of a nature to act chemically on each other—an alkaloid and an organic acid, for example. He deemed it probable that, whenever two flavors are habitually conjoined in eating, the reason why they mutually improve each other is because a certain amount of electric action is set up between the substances employed to produce them, and that the *rationale* of the right blending of flavors might be found partly in galvanism as well as in chemistry. He says:

Pursuing this idea, I tried pairs of eatables which generally go together, such as pepper and salt, coffee and sugar, almonds and raisins, and the like, and found that a voltaic current more or less strong was excited in every instance which I tested. Bitters and sweets, pungents and salts, or bitters and acids, generally appear to furnish true voltaic couples, doubtless in consequence of the mutual action of some alkaloid salt and an acid or its equivalent. As others may like to repeat or extend the experiments, I will describe shortly my mode of procedure: Cut two pieces of platinum-foil about five inches by two and a half inches, and a number of pieces of filter-paper a trifle larger. Well-washed linen is sometimes more convenient than filter-paper. Have a small wooden board near the mercury-cups of the galvanometer, and let a short copper or platinum wire, dipping into one of the cups, rest on the board. The substances to be tried must be brought to a state of solution, the stronger the better, by infusion, decoction, or otherwise. Suppose coffee and sugar are to be operated upon: solutions of both having been prepared, dip into each a slip of filter-paper; place one slip on one of the pieces of platinum-foil, and the other on the second piece. Next lay the first slip and its foil on the board, with the metal touching the copper wire before mentioned. Lay the second slip with its platinum upward, so that the coffee and sugar come into even contact with slight pressure, and immediately connect this upper slip, through a bit of copper wire, insulated from the touch, with the other terminal of the galvanometer. Deflection occurs instantaneously, and may be increased to a considerable vibration by breaking and making circuit at the right swing of the needle. After a few distinct vibrations, it is well to turn over the whole pile of slips just as they are, and connect opposite ends with the galvanometer, so as to reverse the current. This is desirable for the sake of confirming your previous observation, and of correcting any slight disturbing cause arising from the wire and mercury-connectors, temperature of the hand, etc. It will be found that coffee and sugar have the same electrical relation to each other as zinc and platinum. Coffee, in fact, is the positive, sugar the negative element. I subjoin a table of the results of numerous experiments, conducted in the manner above described.

Electro-positive.	Electro-negative.
Coffee	Sugar (loaf).
Tea (black)	"
Cocoa	"
Nutmeg	"
Cloves	"
Cinnamon	"
Mace	"
Vanilla	"
Almonds	"

Electro-positive.	Electro-negative.
Rhubarb (tincture)	Sugar (loaf).
Starch	"
Starch-caramel	"
Gum-caramel	"
Cane-sugar caramel	"
Milk-sugar	"
Gum	"
Almonds	Raisins.
Horseradish	Beet-root.
Onion	"
Horseradish	Table salt.
Mustard	"
Pepper (white)	"
Mustard	Tartaric acid.
Ginger	"
Cayenne pepper	"
Pepper (white)	"
Tea (black)	"
Tobacco	"
Quinine (Howard's)	"
Gentian-root	"
Lemon-juice	"
Horehound	"
Lavender-water	"
Quassia	"
Peppermint	"
Raw potato	Lemon-juice.
Rind of lemon	"
Peruvian bark	"
Camphor (tincture)	"
Laudanum	"
Arnica (tincture)	Dilute sulphuric acid.
Peruvian bark	" "
Quinine (Howard's)	" "
Iodine (tincture)	Turpentine.
Caustic potash	"
Starch	"
Starch	Iodine (tincture).
Caustic potash	Neat's-foot oil.

It is somewhat difficult to eliminate from these experiments all error arising from difference of temperature, if the galvanometer is tolerably sensitive. Care must be taken to bring the pair of solutions operated upon to the same temperature before testing them; otherwise a thermo-electric current from the hotter to the colder liquid may affect the needle, and mask the true electrical relation between the two, so far as it depends upon their chemical nature.

Accumulated Magnetic Power.—Experiments recently made by M. Jamin prove that magnetic power may, like electricity, be accumulated. The author had a large horseshoe magnet made, consisting of ten laminæ of perfectly homogeneous steel, each weighing ten kilogrammes. This magnet he suspended to a hook attached to a strong beam, and, having wound copper round each of the legs, which were turned downward, he put the latter into communication with a battery of fifty of Bunsen's elements, by which means the horseshoe might be magnetized either positively or negatively, at pleasure. The variations were indicated by a small horizontal needle situated in the plane of the poles. There was, further, a series of iron plates, which could be separately applied to each of the laminæ. Before attaching any of the latter, the electric current was driven through the apparatus for a few minutes, and then interrupted, whereby the magnet acquired its first degree of saturation, marked by a certain deviation of the needle. One of the iron plates (usually called "contacts") was put on, and supported a weight of 140 kilogrammes. The current having passed through again a few seconds, it was found that the horseshoe would support 300 kilogrammes. The number of contacts was then increased to five, which together, in the natural state, supported 120 kilogrammes, but, after the passage of the current, they sustained 680 kilogrammes, and continued to do so for a full week. No sooner, however, were the contacts taken off, than the horseshoe returned to its usual permanent strength of 140 kilogrammes. This tends to show that magnetism may be condensed, like electricity, for a short period.

Magnetism and the Casting of Iron.—M. Treves has recently experimented to ascertain the effect of magnetism upon the casting of iron. Two small moulds were made to receive equal quantities of precisely similar molten iron, but under different conditions; one was placed so as to be entirely removed from any magnetic influence, while the other was placed in the axis of a powerful electro-magnet, actuated by twelve of Bunsen's elements. The moulds were filled with the molten metal, and, after they had cooled, the two moulds were broken up, when no difference was observed in the crystallization of the iron, but the iron exposed to the magnetic influence had become magnetic, and it remained feebly so.

Electro-capillary Actions.—In his sixth memoir on electro-capillary actions, M. Becquerel describes a process for obtaining a great number of hydrated oxides in the crystalline state. In a vessel containing a solution of nitrate of copper, a smaller vessel, one side of which was composed of parchment-paper, was placed, containing aluminate of potash. Nitrate of potash was produced, but in the place of aluminate of copper; in the porous vessel crystals of hydrated alumina presented themselves, and on the outside crystals of hydrated oxide of copper formed. By replacing the aluminate of potash by silicates, M. Becquerel obtained hydrated silica sufficiently hard to scratch glass.

Experiments with a Great Induction Coil.—Mr. J. H. Pepper details in the London *Chemical News* some remarkable experiments made with the great induction coil at the Royal Polytechnic, London. The following are extracts from his papers:

The length of the coil from end to end is 9 feet 10 inches, and the diameter 2 feet; the whole is cased in ebonite; it stands on two strong pillars covered with ebonite, the feet of the pillars being a diameter of 22 inches. The ebonite tubes, etc., are the largest ever constructed by the Silver Town Works.

The total weight of the great coil is 15 cwt., that of the ebonite alone being 477 lbs.

The primary wire is made of copper, of the highest conductivity, and weighs 145 lbs.; the diameter of this wire is 0.0925 of an inch, and the length 3,770 yards. The number of revolutions of the primary wire round the core of soft iron is 6,000, its arrangement being 3, 6, and 12 strands.

The total resistance of the primary is 2,201,400 British Association units, and the resistances of the primary conductors are respectively—for three strands, 0.733800 B. A. U.; six, 0.366945 B. A. U; twelve, 0.1834725 B. A. U.

The primary core consists of extremely soft straight iron wires, 3 feet in length, and each wire is 0.0625 of an inch in diameter. The diameter of the combined wires is 4 inches, and the weight of the core is 123 lbs.

The secondary wire is 150 miles in length; it is

covered with silk throughout, and the average diameter is 0.015 of an inch.

The total weight of the wire is 606 lbs., and the resistance 33,560 B. A. units. The length of the secondary coil is 50 inches, and the insulation throughout is calculated to be 95 per cent. beyond that required. The secondary wire is insulated from the primary by means of an ebonite tube of one-half an inch in thickness and 8 feet in length.

The length of the secondary coil is 54 inches, the diameter is 19 inches, and without the internal ebonite tube containing the primary wire and iron core it is a cylinder 19 inches in diameter and 6 inches thick.

The condenser, made in the usual manner with sheets of varnished paper and tinfoil, is arranged in six parts, each containing 125 superficial feet, or 750 square feet of tinfoil in the whole.

A large and substantially-made contact-breaker, detached from the great coil and worked by an independent electro-magnet, was constructed and worked very well with a comparatively moderate power of 10 or 20 large Bunsen's cells; when, however, the battery was increased to 30 or 40 cells, it became unmanageable.

The Bunsen's battery used in the experiments was made with the largest porous cells that could be obtained, and each cell contained about one pint of nitric acid.

Some experiments were tried with the battery arranged for intensity, and used with the complete condenser of 750 square feet of tinfoil, and 1,500 square feet of paper. At first five cells were used, and these gave a spark 12 inches in length. The number of cells was gradually increased until 50 were in operation, when a spark from 28 to 29 inches in length was obtained.

Experiments were now tried to ascertain whether any increase in the length of the spark could be obtained by arranging the battery and the primary coil for *quantity*, but no material advantage was obtained by this arrangement: even where three groups of cells were connected, a decrease in the length of the spark is observed when compared with the 45 or 50 cells arranged for intensity, the difference being as 20 to 28.

The spark obtained from the large coil is thick and flame-like in its appearance, and therefore it will be alluded to as the "flaming spark."

When the discharging point and circular plate are brought within 6 or 7 inches of each other, the flaming nature of the spark becomes still more apparent.

Two light-yellow flames, curving upward, appear to connect the opposite poles. If a blast of air from powerful bellows is directed against a flaming spark, the flaming portion can be blown away and increased in area, and thin wiry sparks are now seen darting through it, sometimes in one continuous stream, at another time divided into three or more sparks, all following the direction in which the flame is blown.

The flaming spark is very hot, and, if passed through an asbestos (supported on an insulating pillar), quickly causes the latter to become red-hot.

The flaming spark has been ascribed by some experienced observers to the incandescence of the dust in the air, and especially sodium chloride.

To ascertain whether the "flaming spark" could be obtained with a small number of cells, the large Bunsen's battery was reduced to three cells, and it was found that no appreciable spark could be produced when the whole primary wire was used with less than five cells.

By reducing the length of the primary wire, and using the four divisions separately, with five cells the spark was wiry, and varied from 4½ inches to 6½ inches; with ten cells it was wiry, and varied from 8½ to 9½; in the latter the spark was slightly flaming. With fifteen cells the spark was slightly flaming, and varied from 10 inches to 11½ inches. With 20 cells a flaming spark varying from 11½ inches to 12½ inches was obtained.

When the two wires from the secondary coil are placed in water no spark is perceptible, even when the wire was brought very close together, until they touched.

If the negative wire is passed through a cork, on which a glass tube (a lamp-glass) is fixed containing a depth of 5 inches of water, and the positive wire is brought within half an inch of the surface of the water in the tube, it becomes red-hot, and if drawn further away from the surface the upper part of the tube is filled with a peculiar glow or light abounding in Stokes's rays.

The experiments with the vacuum-tube, and especially Gassiot's cascade, are, as might be expected, very beautiful. When a coal-gas vacuum-tube of considerable diameter, and conveying the full discharge from the secondary coil, is supported over a powerful electro-magnet axially, the discharge is condensed and heat is produced.

If placed equatorially, the heat increases greatly, and when the discharge is condensed, and impinges upon the sides of the glass tube, it becomes too hot to touch, and if the experiment was continued too long the tube would crack.

The enormous quantity of electricity of high tension which the coil evolves, when connected with a battery of forty cells, is shown by the rapidity with which it will charge a Leyden battery.

Under favorable circumstances, three contacts with the mercurial break will charge forty square feet of glass.

On one occasion a series of twelve large Leyden jars arranged in cascade were discharged; the noise was great; and each time the spark (which was very condensed and brilliant) struck the metallic disk, and the latter emitted a ringing sound, as if it had received a sharp blow from a small hammer.

The discharges were made from a point to a metallic disk; and, when the former was positive, the dense spark measured from 18½ to 18¾ inches, and fell to 8½ inches when the metallic plate was positive and the point negative.

Variations of the Leyden-jar experiments were tried by connecting the coil-work by a quantity battery of 25 + 25 cells with six Leyden jars arranged in cascade, and the spark obtained measured 8½ inches.

The same six jars connected with the coil, when the fifty cells were arranged continuously for intensity, gave a spark of 12 inches of very great density and brilliancy.

The Duration of an Electric Discharge.—The *American Journal of Science* for September contains a valuable paper, by Prof. Ogden N. Rood, of Columbia College, on the "Nature and Duration of the Discharge of a Leyden Jar connected with an Induction Coil," originally read before the National Academy of Sciences. The following are the more important portions of the paper:

In the year 1835, Wheatstone published in the Philosophical Transactions, Part II., page 583, an account of his celebrated experiment on the duration of the discharge of a Leyden jar charged by a common frictional machine. The light from the spark was received directly on a plane mirror revolving at rates between 30 and 800 times in a second; the mirror was driven by a set of multiplying wheels connected *by strings*. This apparatus was constructed by Mr. Saxton, of Washington, who at that time was residing in London. The eye of the observer was placed near the mirror, and as the image of the spark was not sensibly drawn out by the rotation of the mirror, Wheatstone concluded that its duration was less than the one millionth of a second, a result which was accepted by the scientific world for about a quarter of a century, passing unquestioned till the publication in 1858 of the first of an admirable series of investigations of this subject by Feddersen (Pogg.

Annalen, Bd. 103, Seite 69). This physicist employed a concave mirror with a radius of half a meter, driven by a train of *toothed wheels*, and obtained as high a rate of rotation as one hundred per second; the spark was generated in one of the conjugate foci of the mirror, and its image, formed at the other conjugate focus on a plate of ground glass, was in a condition to be conveniently seen and measured by the naked eye or to be photographed. It was found that the image of the spark was drawn out by the revolving mirror into a whitish streak, from 20 to 30 millimetres long, which, when a large amount of electricity was employed, was still further lengthened by the addition of a red tail of about the same dimensions, this latter being due to the gradual cooling of the heated particles. With a jar of 2.2 feet inner coating, the distance of the copper balls which served as electrodes being 1.5 millimetres, and all the connections as short as possible, the duration of the discharge exclusive of the red tail was .00004 of a second. It was also found by him, that an increase in the size of the coating of the jar or of the "striking distance" prolonged the duration of the discharge; so, for example with a spark 3.75 millimetres long, the duration of the whitish portion was .00007 of a second.

A series of observations detailed at the end of this article will point out a probable explanation of the great discrepancy existing between the results of Feddersen, which are undoubtedly correct, and those of Wheatstone. Finally, Feddersen in the course of his investigation found abundant proof of the oscillatory nature of the electric discharge, which had been predicted from the results of a set of experiments by Prof. Joseph Henry as far back as 1842.

I arranged in the first place an apparatus like that of Feddersen, but it was soon found that, to attain a rotation of one hundred per second, it was necessary in my case to employ a weight of 200 pounds, and in addition, when using this form, I labored under the disadvantage of not being able to vary the size or curvature of the mirror readily; in short, it was found to lack *flexibility*, a quality more necessary in the present case than in the investigation which engaged the attention of the German physicist. On this account I decided to employ a plane revolving mirror with a stationary achromatic lens. The addition of an extra wheel, with a few other mechanical changes, converted the train of wheels, furnished by Duboscq for Becquerel's phosphoroscope, into an admirable means for driving the revolving mirror, and, with a weight of 30 pounds, 300 rotations per second were readily obtained, the motion being smooth and sufficiently uniform. In order to measure the rate of rotation, the cylinder on the lowest wheel was made to wind up a fillet of paper, upon which dots were made by an electro-magnetic apparatus regulated by a seconds pendulum, when a simple calculation furnished the rate of the wheel to which the mirror was attached. By this method it became possible to put to a sharp test the regularity of the rate of the train, which was found in all cases to be considerably greater than was at all necessary. These determinations were afterward made with a watch having large second-spaces, the dots being made by hand, as the refinement of a seconds pendulum and battery was found for my purpose to be superfluous.

The mirrors employed were always plane, being sometimes silvered at the back, while for the most delicate observations the rear surface was painted with black varnish, so as to destroy the second reflection. They varied in size from 1.5 inches square, down to .2 by .5 in., and were used sometimes double on the axis back to back, and at other times four mirrors were employed together.

When brass points were used as electrodes, the following were the results of experiments to determine the total duration of the discharge, including both the yellow and white portions of the electric spark:

Rate of rotation per second.	No. of observations.	Distance of electrodes in millimetres.	Duration in seconds.
100	10	1	.000025
48	10	1	.000028

When platinum-points were used as electrodes, with a striking distance of three millimetres, the duration, as obtained, varied between .00004 and .00014 of a second. The duration of the yellow portion alone, with a rotation of 206 per second, was found to vary from .000003 to .000007 of a second.

Prof. Rood's greatest difficulty was to ascertain the duration of the white band or portion of the spark, in which a large proportion of its light resides, its superior brightness being to some extent isolated from the rest of the spark when points (instead of balls) are used as electrodes. His plan for effecting the object, and the conclusions at which he arrived, are thus detailed:

A small piece of cardboard was ruled with two black lines; their distance apart was .0067 inches, and they were separated by a space exactly equal to the width of a single line. A small dividing engine was used for their production; they were tested with a microscope. These lines were illuminated by the spark, and their image examined by an eye-piece magnifying five diameters. The breadth of the image of a single line on the ground glass was .011 inches; that is, each line subtended an angle of 2′ 24″, reckoning from the mirror. With a velocity of 223 per second the mirror is able to move the reflected image through 2′ 24″ in the .00000024 of a second. If now this first discharge had actually lasted this minute portion of time, it is evident that the motion of the mirror would just have carried the image of one of the black lines forward, so that, at the end of this infinitesmal period, it would have occupied the space where just before the white line had been traced: hence, owing to the retention of impressions by the retina the white central line would have been obliterated, and, in place of three lines, a gray band would have been seen. On the other hand, if the duration had been only one-tenth or one-fifth of the above-mentioned interval, the white line, not having been much encroached on, would still have remained visible. The correctness of the above reasoning can be experimentally proved, by means of a revolving disk of cardboard with a single slit cut in it, lines being drawn on its white side, and viewed by reflection with a mirror through the slit, the blackened side of the disk being turned toward the eye.

To facilitate matters, *three sets* of these lines were drawn on the small cardboard at considerable distances apart to prevent confusion, and while illuminated by the electric spark were examined with increasing velocities. With low rates they were quite unchanged in appearance, with a velocity as high as 102 per second, a duration of the first discharge of .00000052 seconds would just have obliterated them; they were, however, perfectly distinct, though more faintly traced: the rate of rotation was then by degrees carried up to 223 per second, when the lines were still distinctly visible, though of course with less contrast between the white and black than was the case with low velocities or a stationary mirror.

This experiment proves, then, that the duration of the light accompanying the first discharge is considerably less than .00000024 of a second, probably less than half this period, or less than one ten millionth of a second of time.

Electric Conductivity of Liquids.—Experiments have been made at the Sorbonne to

determine the electric conductivity of liquids, hitherto supposed to be insulators. Some of the results were as follows: Alcohol was easily decomposed, considerable quantities of hydrogen, mixed with some oxygen, being disengaged. Oil of turpentine is a far worse conductor, requiring twice the number of Bunsen's elements to decompose it as alcohol. Rectified petroleum is decomposed with great ease. The gas collected is inflammable, and during its combustion it deposits carbon on the sides of the bell-jar in which it is contained. This deposit may be due to the presence of petroleum vapor in the liberated gas. By the application of resisting coils and the rheostat the comparative conductivity of the various liquids experimented on could be accurately recorded. The following are some of the numbers obtained:

LIQUIDS.	Turns of Rheostat.	Conductivity.
Water	55	1,000
Petroleum	765	72
Sulphide of Carbon	1,000	55
Alcohol	1,130	49
Ether	1,375	40
Oil of Turpentine	2,380	23
Benzole	3,480	16

An Explanation of Polar Auroras and some Lightning Phenomena.—In *Comptes Rendus*, for May 31, 1869, is found a note by M. Le Roux, suggesting an explanation of certain meteorological phenomena. He had studied the luminous effects produced by electrostatic induction in rarefied gases, where the vessels containing them were formed of a continuous insulating material, and devoid of all metallic communication with the exterior, and he regards those effects as manifested by true currents which illuminate the gaseous masses in the body of which they are propagated. The same causes operating on the large scale of Nature, he thinks, must produce the luminous manifestations of the electricity of the globe to which is given the name of polar auroras; and he attributes the diffused part of the glows which constitute them to an electrostatical induction seated in the highest strata of the atmosphere under the influence of the discharges of the aurora. On the same hypothesis he explains a remarkable circumstance which often accompanies the lustre of the lightning-discharge. When the lightning strikes, it produces an illumination which surrounds the perfectly-serene regions of the sky, when there are any. This he supposes to be a manifestation of the return-shock which must take place in the higher regions of the atmosphere at the moment when, through the effect of the discharge which constitutes the lightning, the clouds revert to their neutral condition. As to heat-lightning, so called, which is observed in a clear sky at a certain height above the horizon, he has no doubt that it is due to the same cause—the propagation of electric currents through strata of rarefied air.

ELLIOTT, CHARLES, D. D., LL. D., a Methodist clergyman, editor, author, and college president, born in Killybegs, County Donegal, Ireland, May 6, 1792; died in Mount Pleasant, Iowa, January 6, 1869. He became connected with the Wesleyans very early, and, having resolved to enter the ministry in that connection, commenced a course of study, and in 1815 applied for admission to the University of Dublin, but was refused, because he could not conscientiously take the prescribed test. By the aid of some of the eminent scholars connected with the university, however, he succeeded in obtaining an education fully equivalent to that afforded in its regular course. He emigrated to America early in 1818, and was at once received into the travelling connection of the Ohio Conference. For the first four years he endured with cheerfulness the hardships of the itinerancy in a new country, travelling over extensive circuits, and experiencing all the privations of pioneer life. In 1822 he was appointed superintendent of the mission among the Wyandot Indians, at Upper Sandusky, and was about the same time appointed presiding elder of the Ohio District. In 1827 he was elected Professor of Languages in Madison College, Uniontown, Pa., where he remained four years. In 1831 he was stationed at Pittsburg, Pa., and soon after appointed presiding elder of that district. In 1833 he became editor of the *Pittsburg Conference Journal*, one of the official organs of the Methodist Episcopal Church, and after some years was transferred to the editorship of the *Western Christian Advocate*, at Cincinnati, in which post he remained till 1848. He then entered again upon the regular work of the clergy, but in 1852 was reëlected editor, this time of the *Central Christian Advocate* of St. Louis, and manifested the same ability which had rendered him so popular as an editor in his previous labors in that field of effort. In 1856 he was chosen president of the Wesleyan University at Mount Pleasant, Iowa, and served in that capacity till 1860, when he resigned, to complete an historical work on which he was engaged. In 1864 he was again elected president of the university, and served till 1867, when, feeling the infirmities of age, he asked to be put upon the superannuated-list. Besides his editorial labors, Dr. Elliott wrote a "Treatise on Baptism," 1834; "Reminiscences of the Wyandot Mission;" "Life of Bishop Roberts;" "Delineation of Roman Catholicism," 2 vols., 8vo, 1851; "History of the Great Secession from the Methodist Episcopal Church," 1855; "Political Romanism," 1858; "History of the Methodist Episcopal Church in the South and West from 1844 to 1866," 1868. A thorough scholar, with a vigorous and comprehensive intellect, a powerful and forcible rather than a remarkably graceful writer, and a man who did well whatever he undertook to do, Dr. Elliott has left behind him an enviable reputation.

ELLIS, Sir HENRY, K. H., LL. D., F. R. S., F. S. A., an English bibliographer, antiquarian, and author, for fifty-six years connected with the British Museum, born in London, November 29, 1777; died there, November 15, 1869. He was educated at the Merchant Tailors' School, and at St. John's College, Oxford, where he graduated A. B., in 1799, and B. C. L., 1802; was assistant-librarian of the Bodleian Library, at Oxford, in 1797 and till 1800; in 1800 he was temporarily employed as an assistant at the British Museum; in 1805 he was appointed Assistant-Librarian; in 1806, Keeper of the Printed Books; in 1812 transferred to the Department of Manuscripts; and in 1814 appointed Secretary. In 1827 he was made Principal Librarian of the Museum, and continued in that position till 1856, when he resigned. From 1849 to 1856 he also served as Secretary of the Museum. He was Secretary of the Society of Antiquaries from 1813 to 1854, and Director of the Society from 1854 to 1858, and edited their annual volumes of *Archæologia*, collecting valuable documents for it, and occasionally, though rarely, adding some important essays of his own. Aside from this labor, Sir Henry was, during his long career, constantly engaged in literary labors, mostly rather in the way of editing and compiling than in the production of original works. He edited in this way, with many valuable annotations, and prefaces, and memoirs, three of the fifteen volumes quarto of "Old English Chronicles;" two volumes quarto of "Brand's Observations on Popular Antiquities;" a "General Introduction," in two volumes, 8vo, to "Domesday Book;" a very elaborate edition of Dugdale's "*Monasticum Anglicanum*," in eight quarto volumes; Dugdale's "History of St. Paul's Cathedral," with large additions, in one volume; twelve volumes of "Original Letters Illustrative of English History," the letters being selected with excellent judgment by Sir Henry; four volumes for the "Library of Entertaining Knowledge," on the Elgin, Phigalean and Townley Marbles in the British Museum; seven or eight volumes, and parts of volumes, for the Camden Society, and the "Latin Chronicle of John of Oxenedes," for the Master of the Rolls. He received the Hanoverian Guelphic Order of Knighthood from William IV., in 1833; was elected a Fellow of the Society of Antiquaries in 1807, and of the Royal Society in 1811. He was also a Fellow of the Geological Society, Vice-President of the Royal Literary Fund, and member of most of the learned and antiquarian societies of the Continent of Europe.

EUROPE. During the year 1869 affairs in Europe were of a more peaceful character than in 1868. In Spain, the political excitement attending the reconstruction of the country led several times to violent outbreaks. The majority of the Cortes, in union with the Government, showed themselves bent upon restoring the monarchical form of government, while the Republican party, being apparently a minority of the people, but fully controlling most of the large cities and several provinces, showed itself determined to leave no means, including even an appeal to arms, untried to secure to the country the most popular form of self-government, through the establishment of republican institutions. These attempts were, however, unsuccessful; the Government made its authority respected by prompt and energetic action, and came at length to the understanding with the majority of the Cortes that the most suitable candidate for the throne would be the Duke of Genoa, nephew of King Victor Emmanuel of Italy. At the end of the year no election had, however, been held. (*See* SPAIN.)

The Spanish Government remained unwavering in its determination to subdue the revolution in Cuba, continued throughout the year to send reënforcements of troops to the island, and declined to enter into any diplomatic negotiations concerning it with other powers. At the close of the year the war was not ended. (*See* CUBA.)

In France, new elections took place for the Corps Législatif, which proved that the Opposition was gaining a little more ground, and a great deal more courage. The city of Paris elected many of the most violent Republicans of France, adding, to those who were in the Legislative body before, such men as Bancel, Gambetta, Raspail, Rochefort, Emmanuel Arago, and others. In a number of large cities, tumults occurred at the elections, all of which were easily quelled. The Emperor was, however, induced by these movements to make, on opening the Chambers in November, far-going promises of liberal reforms, inviting an abandonment of the principle of personal, and a restoration of constitutional or parliamentary government. This change of government satisfied moderate Liberals, like Ollivier, while the more advanced Radicals will be satisfied with nothing short of the reëstablishment of the republic. (*See* FRANCE.)

In Great Britain, the Liberal Ministry of Gladstone carried one of the greatest reform measures in the history of the country during the present century, the disestablishment of the Anglican Church in Ireland, to a successful end. The House of Lords made a faint attempt to use its power and interpose its veto, but the threat of the Government, that in such a case it would appeal to the country, made the Lords at once recede from their position. The next great question, which is likely to engage the attention of Parliament during the coming year, is the land reform. (*See* GREAT BRITAIN.)

The Liberal Ministry of Austria continues to grapple courageously with the immense difficulties which obstruct the reconstruction and consolidation of the empire. Hungary is fully reconciled, for she obtained all she wanted; but two other powerful nationalities of the

empire, the Czechs of Bohemia and Moravia, and the Poles of Gallicia, are now demanding the same semi-independent administration, and the division of the empire into four autonomous parts. The government, though it has not yet made up its mind to grant these demands, again declared in 1869 its readiness to grant far-reaching concessions, which, of course, will strengthen instead of arresting the decentralizing movement. A serious outbreak, which took place in the latter part of the year among the Slavi of Dalmatia, arose in the first place from an obnoxious military law, not from the nationality question; but the avowed sympathy of the Slavi of Russia and Turkey with the movement must have again convinced the statesmen of Austria that, as long as they do not succeed in bringing the nationality difficulty to a satisfactory close, they must expect serious troubles from every new complication. (*See* AUSTRIA.)

Prussia is still satisfied with the beginning that has been made in the consolidation of Germany, and is quietly awaiting the steps which the South-German Governments may take toward joining the union. In the Grand-duchy of Baden, the government and people are in full accord in desiring to hasten the entrance of Baden into the union as much as possible; but, in Bavaria, the Catholic party is at present master of the situation, and the last elections held in November gave to the uncompromising opponents of union a decided majority in the Second Chamber.

The principal features in the policy of Russia were, again, the efforts to destroy wholly the Polish nationality, and to strengthen and enlarge its conquests in Central Asia. The cruelty with which the former design is carried out has but few parallels in modern history; but none of the great powers found it in their interest to interfere. In the other question, that of Central Asia, Russia is advancing with great caution, in order to allay as much as possible the suspicions of England; but this caution barely conceals the tenacity with which she pursues the traditional policy of establishing Russian ascendency in Asiatic politics. (*See* RUSSIA.)

The Government of Turkey had, in 1869, less than its usual measure of trouble. The insurrection of Candia was, at the beginning of the year, wholly subdued, and no revolutionary movements of importance occurred in any other part of the empire. Serious difficulties arose, however, on the one hand with Persia, and on the other with Egypt. Both, though threatening immediate wars, were diplomatically adjusted, but are certain to appear again. (*See* TURKEY; EGYPT.)

At the close of the year 1869, according to the official censuses, or calculations published at that time, the population of the countries of Europe, in all about 294,500,000, was as follows (the countries being arranged in order of the population):

COUNTRIES.	Population.	Year of Census, or of official Calculation.	Per cent. of Total Population of Europe.
Russia	68,200,000	1863-'65	23.2
France	38,192,064	1866	13.0
Austro-Hungarian Monarchy	35,553,000	1865	12.2
Great Britain and Ireland	30,260,000	1868	10.3
North-German Confederat'n	29,906,092	1867	10.2
Italy	25,527,915	1867	8.7
Spain	16,046,217	1864	5.5
Turkey	10,510,000	(estimated)	3.6
South-German States	8,608,446	1867	3.0
Sweden and Norway	5,815,897	1865	2.0
Belgium	4,897,794	1867	1.7
Rumania	4,605,510	1865	1.5
Portugal	3,984,045	1863	1.4
Netherlands (& Luxemburg)	3,898,000	1867-'68	1.3
Switzerland	2,510,494	1868	0.8
Denmark	1,753,787	1868	0.6
Greece	1,348,522	1861-'65	0.5
Servia	1,222,000	1865	0.4
Papal States	722,121	1863	0.2
Montenegro	100,000	(estimated)	
Andorra	12,000	(estimated)	
Liechtenstein	8,330	1867	0.1
San Marino	7,303	1869	
Monaco	8,127	1865	

The following table exhibits the countries of Europe in order of their extent, together with the percentage each constitutes of the total area of Europe, which is about 3,781,000 square miles:

COUNTRIES.	Square Miles.	Per cent. of total area of Europe.
Russia (European)	2,050,313	54.8
Sweden and Norway	290,930	7.7
Austro-Hungarian Monarchy	240,381	6.3
France	209,428	5.5
Spain	195,607	5.1
North-German Confederation	160,207	4.2
Turkey (European)	133,980	3.5
Great Britain and Ireland	121,115	3.2
Italy	109,837	2.9
Rumania	46,700	1.2
South-German States	44,423	1.2
Portugal	37,977	0.9
Greece	19,353	0.5
Servia	16,816	0.4
Switzerland	15,722	0.4
Denmark	14,732	0.4
Netherlands (and Luxemburg)	12,680	0.4
Belgium	11,373	0.3
Papal States	4,552	0.1
Montenegro	1,700	...
Andorra	149	...
Liechtenstein	62	...
San Marino	21	...
Monaco	5	...

EXETER, Right Rev. HENRY PHILLPOTTS, D. D., Lord Bishop of, an English prelate, author, and controversialist, born in Bridgwater, Somersetshire, May 6, 1778; died at Bishopstowe, near Torquay, September 18, 1869. While he was yet a child, his father removed to Gloucester, and became the landlord of the Bell Inn, of that city. The son received his early education at the Cathedral School of Gloucester, and at the age of thirteen competed successfully for a scholarship at Corpus Christi College, Oxford, where he graduated B. A. in June, 1795, and, a few weeks later, while but

seventeen years old, was elected to a Somersetshire Fellowship at Magdalen College. Under the influence of Dr. Routh, principal of Magdalen College, he commenced the study of theology and of the works of the early fathers, but did not receive deacon's orders till 1802, having previously been elected Prælector of Moral Philosophy, and one of the public examiners of the candidates for honors. In 1804 he was ordained priest, and married the same year to Miss Surtees, a niece of Lady Eldon. He was offered the next year (1805) the principalship of Hertford College, but declined it. He was presented to two livings by the Crown (through Lord Eldon's influence), both sinecures. In 1806 he added to his other appointments that of chaplain to the Bishop of Durham, and defended his patron, in some brilliant pamphlets, against the strictures of Lingard, the Roman Catholic historian. Further preferments awaited him; he was appointed Vicar of Bishop's Middleham, near Durham, in 1806; Rector of Gateshead, and master of King James Hospital there, in 1808; assigned to a prebendal stall in Durham Cathedral in 1809; appointed incumbent of St. Margaret's Chapel, Durham, in 1810; and in 1814 another, and far richer, prebendal stall in Durham Cathedral was conferred on him. Thus, at thirty-six years of age, and when he had been in priest's orders but ten years, he was holding five livings and two prebendal stalls, and, soon after, was offered, but declined, the Irish bishopric of Clogher. Mr. Phillpotts was emphatically High Church in his religious views, and almost necessarily intensely conservative in his political opinions; and with these sentiments he combined a bitter and argumentative hostility to Roman Catholicism. It is not matter of surprise, then, that his earlier as well as his later publications should have been devoted either to the defense of the Conservative Government and its measures, the support of old practices and abuses, or to vigorous, though not always very temperate, assaults on Catholicism. In 1820 the valuable living of Stanhope fell vacant, and was conferred at once by the Bishop of Durham upon Mr. Phillpotts. Here he lived in baronial style, and, being county magistrate as well as clergyman, managed to have some controversy on his hands most of the time. His nature was so combative that he could not rest without some conflict, religious, political, or dogmatical on hand, and, for the next eight years, he bombarded the nation with pamphlets on all these topics, and made himself feared by his opponents. To this period also belongs one of the ablest of his controversial works; and one which, for its exceptional fairness, justice, and logical power, will always be regarded as his greatest contribution to polemic literature—"Letters to Charles Butler, Esq., on his Book of the Roman Catholic Church." A supplementary letter, in a small volume, was published the next year (1826). It is, perhaps, the highest compliment that can be paid to these "Letters," to say that they resulted in cementing a warm personal friendship between Mr. Butler and his able antagonist, which continued through their lives, notwithstanding their widely diverse opinions. In 1827 Dr. Phillpotts discussed in another volume the question, then a vitally important one in English parties, how far it would be safe to concede the Roman Catholic claims? And, while his hostility to the Catholics was in no whit abated, and he vigorously opposed any concessions to them without sufficient guarantees, he yet differed from most of his conservative friends, in avowing his belief that they could give guarantees which ought to be regarded as sufficient, without violating their consciences. He opposed, however, the measures proposed by Canning, then premier, and the bills brought forward by Mr. Stanley (afterward Earl of Derby), (*see* DERBY, in this volume), and persisted that they did not require sufficient assurances of the national safety. In 1828 the Duke of Wellington, then premier, nominated Dr. Phillpotts to the deanery of Chester, and his enemies insisted, most unwarrantably, the duke himself being witness, that this promotion and that to the bishopric of Exeter, which followed in 1830, were the price paid to him for his abandonment of his anti-Catholic prejudices. His subsequent career showed that these charges were utterly unfounded. He was consecrated bishop, January 2, 1831, and the following autumn made several able speeches in the House of Lords, where he soon proved himself one of the readiest and soundest debaters in that body. In these he took, as heretofore, a high conservative position, and opposed the Catholics with all his old vigor. He was, for more than thirty sessions, a very constant attendant upon the sittings of the House of Lords, and was the most active and spirited debater among the lords spiritual. In his diocese he was an active tractarian and ritualist, sustaining with all his old force the Oxford Anglo-Catholic views, and putting the tractarians into the livings of the diocese wherever he could. He had almost always a controversy on hand with some recusant clergyman, and it was a common saying that the peace of the Church was more continually broken in Devonshire and Cornwall than throughout the whole of the rest of the kingdom. Of this fondness for controversy, as well as the extent to which he would carry it, the Gorham case, which made a great stir in its day was a conspicuous example. Mr. Gorham, already an old man, and an incumbent in the Diocese of Exeter, was preferred to the living of Bramford Speke. He was not tractarian nor High Church, and Bishop Phillpotts went out of his way to examine him, pronounced him unsound in the faith, and refused to institute him into the new living. Mr. Gorham appealed to the Privy Council, which gave judgment against the bishop; but he still refused to act. Archbishop Sumner (the Archbishop of Canterbury) hereupon very quietly

instituted Mr. Gorham in the living, over the bishop's head; whereupon that fiery prelate anathematized the archbishop. Mr. Gorham, however, lived and died Vicar of Bramford Speke, and even became reconciled to his diocesan. Archbishop Sumner survived the anathema of Bishop Phillpotts, and he did not venture upon carrying out his denunciations to their legitimate conclusion, by throwing up his see like the non-juring bishops of James II.'s time. The Bishop of Exeter was a most voluminous writer; the titles of his books and pamphlets fill nearly thirty pages of the British-Museum Catalogue; but they are mostly controversial, and comparatively few of them will survive their author.

F

FELT, Rev. Joseph Barlow, LL. D., one of the most industrious and learned antiquarian writers and scholars in America, born in Salem, Mass., in 1789; died there, September 8, 1869. He was educated in Salem and at Dartmouth College, N. H., where he graduated in 1813; studied theology under the Rev. Samuel Worcester, D. D., and was licensed to preach in 1815. He was pastor at Sharon, Mass., from 1821 to 1824, and at Hamilton, Mass., from 1825 to 1834. But his largest usefulness was in labors outside of the ministry. Hardly any other man in New England had made himself so thoroughly acquainted with New England history as he. His tastes and habits of thought were those of an antiquarian. Many evidences of his patient labor are among the State archives of Massachusetts. In April, 1836, he was commissioned by Governor Everett to arrange the ancient State papers, which were in almost hopeless confusion. They are now comprised in several scores of carefully-classified volumes. In 1839 he was appointed to visit England to search for duplicate records, the originals of which had been lost. The British authorities declined, however, to allow Americans to have access to their offices at that time, fearing they might find evidence bearing upon the north-eastern boundary question, then pending. Dr. Felt accordingly postponed his visit until 1845, when he spent six weeks in England with successful results. He then returned, and finally completed his labor on the State archives in 1846. Of his published works, the principal are, the "Annals of Salem;" the "History of Ipswich, Essex, and Hamilton," in which are numerous biographies; the "Ecclesiastical History of New England," with various shorter biographical sketches and historical essays. In 1857 he received the degree of LL. D. from Dartmouth; and he bore many honorary titles from various antiquarian and historical societies.

FESSENDEN, William Pitt, LL. D., an American statesman, financier, and Senator, born in Boscawen, N. H., October 16, 1806; died in Portland, Me., September 8, 1869. His father was Samuel Fessenden, a distinguished lawyer in Maine, who preceded him to the tomb but a few months. He graduated at Bowdoin College in 1823, studied law, was admitted to the bar in 1827, opened an office in Bridgton, Cumberland County, Me., and in 1829 removed to Portland. In 1831 he was elected to the State Legislature, and, though the youngest member, he soon acquired marked distinction as a debater. From 1832 to 1839 Mr. Fessenden devoted himself exclusively to his profession, in which he very soon rose to the first rank, both as a counsellor and advocate. In 1838 he declined to become a candidate for Congress. The next year he was again in the State Legislature, and, although a Whig in a Democratic body, he was made chairman of the House Committee to revise the Statutes of the State. In 1840 he was nominated by acclamation as the Whig candidate for Congress, and was elected, outrunning the strength of his party. Although he was then but thirty-five years of age, he made a very favorable impression by his speeches on the Loan Bill, Bankrupt Act, Appropriation Bill, and other measures. He declined a renomination in 1843, and returned to his profession. In the same year he received the votes of his party in the Legislature for a vacant seat in the United States Senate. For the two years following he served in the Legislature. While a member, in 1845, he again received the votes of the Whigs of the Legislature for a seat in the United States Senate. From 1845 to 1852 he was in private life, devoting himself to his profession with a constantly-extending practice and reputation. During this period he attracted great attention in legal circles by his argument before the Supreme Court at Washington, by which he succeeded in reversing a decision by Judge Story. In 1850, in a contest for Congress, into which he had been unwillingly constrained, the seat was given to his competitor, but he declined to contest the decision, although his claims were believed to be valid. He was elected a member of the National Convention which nominated General Harrison for the presidency in 1840; was a member of the Convention of 1848, which nominated General Taylor, in which he supported the claims of Mr. Webster; and a member of the Convention of 1852, which nominated General Scott. In 1853 he was chosen United States Senator by one branch of the State Legislature, but, as a concurrent vote was required, there was no choice. In the succeeding year (1854) Mr. Fessenden was again a member of the Legislature, which was Democratic in both branches.

The Kansas-Nebraska question operating as a disturbing element, Mr. Fessenden was now chosen Senator by both branches on the first ballot by a union of the Whigs and Free-soil Democrats. This signalized the formation of the Republican party in Maine, in which Mr. Fessenden remained ever afterward a leading exponent. He took his seat in the Senate on the 23d of February, 1854, and on the night of March 3d made one of the most eloquent and effective speeches delivered against the Nebraska Bill. He reviewed the whole history of the bill, showed its bearings and necessary results, claiming that the South already received her full dues, and the whole cause of dissension was a desire on the part of the South to rob the North of the little left her. This effort made him at once a leading member of the Senate, and his voice was heard whenever any important question was in order. Thus we find him introducing the French Spoliation Bill; opposing a bill to increase the army; discussing a bill to protect United States officers; speaking on the relations with England, on Kansas affairs, on the Iowa Senatorial election, etc., etc. He reviewed President Buchanan's message on the Kansas question in the most severe manner, charging not only that its tone was partisan and partial, but that it ignored well-known facts, and stated things that could not be true. During all this time he was doing his share of the business of the Senate, and was a leading member of the Finance Committee. Returned to the Senate for six years, in 1859, and that without the formality of a previous nomination, he was at once made chairman of the Finance and Library Committees, and appointed a Regent of the Smithsonian Institution. Bowdoin College had conferred on him the degree of LL. D., in 1858, and Harvard paid him the same compliment in 1864. He was one of the members of the Peace Conference which met in February, 1861. Throughout the war, Mr. Fessenden, in his character of Senator, was a firm friend and ally of the Union cause, giving it the assistance of his logic, eloquence, and counsel, and, as chairman of the Finance Committee, aiding the Secretary of the Treasury in maintaining the national credit. Mr. Chase resigned his secretaryship on the 30th of June, 1864. An instant panic ensued, and gold, that subtle index of public feeling, rose from 90 premium on June 30th to 185 premium on July 11th. The new secretary would be expected to quiet this storm, and Mr. Fessenden was chosen by President Lincoln as the new secretary. He hesitated to accept. His health was delicate, and the responsibility difficult and overwhelming. Senators and Cabinet officers urged, however, and he entered on his duties on the 5th of July. The whole country looked to him for aid. The paper dollar was worth only thirty-four cents. The sale of new loans had been provided for, but they found comparatively few purchasers. Germany, Holland, and Switzerland, were our only foreign markets, and national bankruptcy seemed at least possible. Mr. Fessenden then found it his duty, and a duty as imperative as it was arduous, to raise at once the large sums necessary for carrying on the war, and at the same time to enhance the value of the securities already afloat. What were needed to effect this were victories. Who had faith in victories to come? The people. To them, then, would the secretary appeal, and to them were offered the renowned seven-thirties. The people only needed an opportunity to attest their faith in the future, and the subscriptions poured in by millions every day. By withholding any further immediate issue of greenbacks, the State banks were induced to adopt the national system. So successful had been Mr. Fessenden's policy, that, on resigning his chair to return to the Senate on the 4th of March, 1865, gold had fallen to 99 premium, and on the 11th of May following it stood at 30. Another part of the secretary's policy was urging on Congress the necessity and possibility of a more comprehensive and effective system of taxation. During this time he had been reëlected to the Senate for six years. In the spring of 1868 the trial of President Johnson occupied the attention of Congress. Mr. Fessenden, in his capacity as Senator, was an *ex-officio* juror. As the days passed, now bringing tidings of the close of evidence, the tedious summing up, and the delay of preparing for the question, it became rumored about that certain Republican Senators would vote for the President's acquittal, and among them was named Mr. Fessenden. He had, it was true, voted for the passage of the Tenure-of-office Act over the President's veto; his whole congressional record had been above reproach; and during his secretaryship his judgment had been severely tested. Still, the rumor proved correct, and Senator Fessenden's vote was given on the side of acquittal. For this he gave his reasons. After going over the case at length, he said:

> In the case of an elective Chief Magistrate of a great and powerful people, living under a written Constitution, there is much more at stake in such a proceeding than the fate of the individual. The office of President is one of the great coördinate branches of the Government, having its defined powers, privileges, and duties; as essential to the very framework of the Government as any other, and to be touched with as careful a hand. Any thing which conduces to weaken its hold upon the respect of the people, to break down the barriers which surround it, to make it the mere sport of temporary majorities, tends to the great injury of our Government, and inflicts a wound upon constitutional liberty. It is evident, then, as it seems to me, that the offence for which a Chief Magistrate is removed from office, and the power intrusted to him by the people transferred to other hands, and especially where the hands which receive it are to be the same which take it from him, should be of such a character as to commend itself at once to the minds of all right-thinking men as beyond all question an adequate cause. It should be free from the taint of party; leave no reasonable ground of suspicion upon the motives of those who inflict the

penalty, and address itself to the country and the civilized world as a measure justly called for by the gravity of the crime and the necessity for its punishment.

The power of impeachment is conferred by the Constitution in terms so general as to occasion great diversity of opinion with regard to the nature of offences which may be held to constitute crimes or misdemeanors, within its intent and meaning (some contending that only such crimes are intended as are subject to punishment as a violation of a known law; others claiming that the judges may decide as to what is the crime).

To the suggestion that popular opinion demands the conviction of the President on these charges, I reply, that he is not now on trial before the people, but before the Senate. In the words of Lord Eldon, upon the trial of the Queen, "I take no notice of what is passing out of doors, because I am supposed constitutionally not to be acquainted with it." And again, "It is the duty of those on whom a judicial task is imposed to meet reproach, and not court popularity." The people have not heard the evidence as we have heard it. The responsibility is not upon them, but upon us. They have not taken an oath to "do impartial justice according to the Constitution and the laws." I have taken that oath. I cannot render judgment upon their convictions, nor can they transfer to themselves my punishment if I violate my own. And I should consider myself undeserving the confidence of that just and intelligent people who imposed upon me this great responsibility, and unworthy a place among honorable men, if, for any fear of public reprobation, and for the sake of securing popular favor, I should disregard the conviction of my judgment and my conscience.

His vote was cast in accordance with these opinions, and he endured its effect. For the time he was everywhere condemned, and it seemed that the hold he had so long possessed on the affections of the people of his own State was finally broken. As the months went by, and especially after his active efforts in behalf of the election of General Grant, Mr. Fessenden began to regain his former position; and during the last session of Congress little of the intense bitterness which followed the first announcement of the verdict on impeachment was longer visible, either in the conduct of his fellow-Senators or in his general treatment at the capital and in his own State. In some respects Mr. Fessenden was the foremost Senator during his long time of service. In many critical stages of legislation his word was decisive, and few are the measures adopted by Congress during the last fifteen years which do not bear the marks of his acute intellect and his steady devotion to the public interests. This honorable distinction is not due so much to his learning or to any striking originality of genius, as to the singular harmony of his powers for the legislative arena. He was equally quick and cool; no assault could disturb his equanimity, and his attack was as adroit as it was vigorous. He had a great faculty of condensation, of going straight to the point, of using none but the most direct and lucid English. In his arguments at the bar he rarely exceeded three-fourths of an hour in speaking, and when he was transferred to the Senate he was the best follower that Webster ever had there in clear and compact statement. But what particularly gave force to his words was, the high character of the man. Mr. Fessenden had long suffered from chronic dyspepsia—had been, in fact, for many years, to a greater or less degree, a constant invalid.

FINANCES OF THE UNITED STATES. In the general system of finance adopted by the Federal Government, no change took place during the year. In its administration there was an improvement arising from the more rigid responsibility to which officers of the Treasury Department were held, and from the application of a portion of the receipts to a reduction of the debt. The effect has been to improve the condition of the Treasury, and to rouse the confidence of the public in the value of its obligations.

In the annual report of the Secretary of the Treasury, made December, 1868, there was presented a statement of the receipts and expenditures of the Government for the first quarter of the fiscal year ending June 30, 1869, and an estimate of the same for the remaining three-quarters of the year. The receipts and expenditures of the first quarter above mentioned, ending on September 30, 1868, were as follows:

The receipts from customs	$49,676,594	
The receipts from lands	714,895	
The receipts from direct tax	15,536	
The receipts from internal revenue,	38,735,663	
The receipts from miscellaneous sources (of which amount there was received, from premium on bonds sold to redeem Treasury notes, the sum of $587,725)	6,949,979	
Total receipts, exclusive of loans		$95,892,867
Expenditures for the civil service (of which amount there was paid, as premium on purchase of Treasury notes prior to maturity, $300,000)	$21,227,106	
Expenditures for pensions and Indians	12,356,647	
Expenditures for War Department	27,219,117	
Expenditures for Navy Department	5,604,785	
Expenditures for interest on public debt	38,742,814	
Total expenditures, exclusive of principal of public debt		$105,152,479

The estimated receipts and expenditures of the remaining three-quarters of the same year—ending June 30, 1869—were as follows:

From customs	$125,000,000 00
From lands	1,000,000 00
From internal revenue	100,000,000 00
From miscellaneous sources	20,000,000 00
Receipts	$246,000,000 00

The estimated expenditures for the same period, if there was no reduction of the army, were—

For the civil service	$40,000,000 00
For pensions and Indians	18,000,000 00
For War Department, including $6,000,000 bounties	66,000,000 00
For Navy Department	16,000,000 00
For interest on public debt	91,000,000 00
Expenditures	$231,000,000 00
Thus making an estimated surplus of $15,000,000.	

The actual receipts and expenditures, however, of the fiscal year ending June 30, 1869, were as follows:

Receipts from customs	$180,048,426 63
" " internal revenue	158,356,460 86
" " lands	4,030,344 34
" " direct tax	765,985 61
" " miscellaneous	27,752,889 77
Total, exclusive of loans	$370,943,747 21
Expenditures for civil service and miscellaneous	$56,474,061 53
Expenditures for pensions and indians	35,519,544 84
" " War Department	78,501,990 61
" " Navy Department	20,000,757 97
" " interest on public debt	130,694,942 80
" " premium on 7-30 notes	300,000 00
Total, exclusive of loans	$321,490,597 75
Receipts in excess of expenditures	$49,453,149 46

The receipts and expenditures for the quarter ending September 30, 1869, which is the first quarter of the fiscal year ending in 1870, were as follows:

RECEIPTS.

Customs	$52,598,991 96
Internal revenue	47,926,852 51
Lands	806,864 08
Miscellaneous sources	7,412,483 57
Total, exclusive of loans	$108,831,632 02

EXPENDITURES,

After deducting the amount of repayments by disbursing officers and others:

Civil service and miscellaneous	$15,102,202 05	
Indians and pensions	13,547,942 79	
War Department	13,595,468 05	
Navy Department	5,782,630 96	
Interest on the public debt	37,452,270 74	
Total, exclusive of loans		85,480,514 59
Receipts in excess of expenditures		$23,351,107 43

The estimated receipts and expenditures for the three remaining quarters of the fiscal year ending June 30, 1870, were as follows:

RECEIPTS.

Customs	$135,000,000 00
Internal revenue	127,000,000 00
Lands	4,000,000 00
Miscellaneous sources	20,000,000 00
Total	$286,000,000 00

EXPENDITURES.

Civil service and miscellaneous	$40,000,000 00	
Pensions and Indians	21,000,000 00	
War Department	40,500,000 00	
Navy Department	14,000,000 00	
Interest on the public debt	93,750,000 00	
Total		$209,250,000 00
Estimated receipts in excess of expenditures		$76,750,000 00

The amount of the public debt at different periods of the year, as stated by the Secretary, has been as follows:

June 30, 1868		$2,636,390,964
November 1, 1868 (less cash)		2,527,129,552
March 1, 1869	"	2,525,453,260
June 30, 1869	"	.....
December 1, 1869,	"	2,453,559,735

This statement shows a decrease from March to December of $71,903,524. The bonds issued by the United States in aid of railroads, amounting to $62,625,320, being in the nature of a loan, have not been included by the Secretary in the statement of the total amount of the debt.

During the fiscal year ending June 30, 1869, there was an excess of receipts over expenditures, including interest on the public debt, of $49,453,149.46. Of this excess, about $12,992,370.03 arose previous to March 1st, and the remainder, $36,460,779.43, between that time and July 1st. This excess of receipts was used from time to time to purchase five-twenty bonds. These purchases have amounted in the aggregate to $75,476,800, up to December 1st. This excess of receipts came from both the direct taxes and the duties on imports, which latter were paid in gold. The amount of coin on hand becoming thus very large, sales of gold have been made from time to time, and the proceeds applied to the purchase of bonds as aforesaid. The average premium on the gold thus sold, subsequent to March 1st, was $32\frac{6}{11}$ per cent., and the average premium paid for bonds during the same time was $16\frac{35}{100}$ per cent. Upon this basis of the sales of gold and the purchase of bonds, the average price paid for bonds in coin was $88\frac{11}{1007}$ per cent.

As early as February, 1862, among the first measures adopted by Congress to provide for the expenses of the war, an act was passed which required that the coin received for duties on imported goods should be annually set apart as a sinking fund to the extent of one per centum of the entire debt of the United States. No action had been taken by the Treasury Department in obedience to this statute, previous to March, 1869. The Secretary reported to Congress, in December, that of the $75,476,800 of bonds which he had purchased, he regarded the amount of $20,044,800 as belonging to the sinking fund, and purchased in conformity with the act of Congress. The remainder, amounting to $55,432,000, he held as a special fund, subject to the action of Congress, and he recommended that it be added to the sinking fund, and that any future purchases that he might make should be likewise so added, until the gross amount shall constitute a fund equal to that which would have been created if there had been no delay in the execution of the law.

While the receipts of the Government continued very favorable, and the debt was somewhat diminished during the year, the currency or Government notes still continued depreciated. This was ascribed by the Secretary to an excessive issue, and to a want of faith in the Government. The extent of this overissue

cannot, in his opinion, be accurately determined until the credit of the Government shall be so improved, at home and abroad, that holders of bonds are disposed to retain them, even when the public mind is excited upon financial subjects. Since the close of the war the wants of the States of the South have increased, and consequently a large amount of currency has been withdrawn from other sections to supply the demand there created. This demand is likely to increase during the next two years. It is likely that not less than thirty millions will be required to meet the substitution of paper for coin by the people on the Pacific coast. It is thought by the Secretary that the coin will thereby be increased on the Atlantic coast, and the difference between paper and coin be diminished.

In this condition of the debt, the revenue and the currency issued, the most important public consideration arose respecting the views and purposes of the Government in its future financial policy. The restoration of a sound currency, and the prompt payment of principal and interest of the debt, with a due regard to the welfare and prosperity of the country, were duties which could be neither avoided nor postponed. How should they be discharged, was the question of the day. The Secretary did not propose an immediate return to specie payments. In his opinion the ability of the country to resume these payments did not depend on any special legislation, but on the condition of its industries and its financial relations to other countries. The argument of the Treasury on this important point is embraced in these words:

"The fundamental condition for the payment of over-due or irredeemable paper is, undoubtedly, that the debtor shall have wherewith to pay. The necessity that the products of industry for export should approach an equality in value with those imported, in order to prevent a demand for specie, is equally true." But there are influences operating an increase or a diminution of the products of industry which seem to be overlooked by the Secretary. Paper money itself exerts a deleterious influence on importations, while excessive taxation is depressing to labor, and, by diminishing ability to consume, reduces the demand for production.

The Secretary, however, considers that one of the most efficient means of strengthening the country in its financial relations with other countries is the development of the commercial marine; that is, the increase of the means for the transportation of merchandise on water. Having done this, and thereby become able to carry exports and imports which are now taken in foreign ships, the country would earn the freight which is now paid to these foreign carriers, and which amounts to forty-seven millions annually. A portion of this amount would be payable to American citizens in foreign countries, and add so much to the ability to pay for the goods imported from those countries. This item thus obtained would undoubtedly add something to the ability of the country. But the development of the commercial marine of the country is a work of years, and requires an entire modification of some of the revenue laws of Congress. So conscious is the Secretary of the little immediate aid to be derived from this source, that he declares such a delay in the resumption of specie payments is not anticipated to be necessary. But he expressly indicates his opinion, that it will not be wise to resume specie payments while so large a part of the interest-bearing debt of the country is represented by five-twenty bonds, and held by European merchants, bankers, and manufacturers. He thinks that from seven to nine hundred millions of these bonds are now held in Europe, and to a considerable extent by persons who retain them for speculative purposes, with the design to put them upon the market whenever the advance shall furnish a sufficient inducement, or when political or financial disturbances may create a demand for other purposes. The view of the Government is, that resumption in itself is a simple matter, but the important point to be gained is, a resumption under such circumstances that the position can be maintained, not only in times of tranquillity, but also in periods of excitement and peril.

Entertaining these views of the circumstances which exist, it becomes a matter of interest to learn the measures by which the Secretary proposes to obviate them. To his view the path into the future opens very plainly. He sees that every measure of the Government bearing upon the subject should tend to appreciate the value of the paper currency, and, as some decrease in the volume of paper may be ultimately necessary, the Secretary should be clothed with authority to reduce the circulation of United States notes about two millions of dollars per month. The effect of this will be to bring the country gradually ($356,113,258 outstanding) into a condition when resumption may be made easy.

With regard to the debt of the country, it presents the following features, which are to be taken into the account in any plan for its adjustment. On December 1, 1869, the principal of the public debt of the United States, not deducting bonds and cash on hand, amounted to $2,605,286,789.82. Of this amount, the sum of $356,113,258.50 was represented by United States notes not bearing interest. A large part of this is needed for circulation, but the amount can be reduced, from the ordinary revenue of the country. The fractional currency in circulation was $38,885,564.68. There were outstanding, also, certificates for gold deposited in the Treasury to the amount of $36,862,940. These certificates are redeemable on presentation. These three items amount in the aggregate to $431,861,763.18, and in making provision for the public debt they are not necessarily to be considered.

Of the loan of January 1, 1861, the sum of $7,022,000 is outstanding, and payable on the 1st of January, 1871. The loan of 1858, of $20,000,000, is payable in 1873. The bonds known as ten-forties, amounting to $194,567,300, are not payable until 1874. The six per cent. bonds, payable in 1881, amount to $283,677,600. The bonds known as eighty-ones and ten-forties, amounting in the aggregate to $478,244,900, are not payable and cannot be paid previous to 1874 and 1881. The five-twenty bonds, amounting in the aggregate to $1,602,671,100, are either payable or will soon become payable, and it is to this class of the public debt alone that attention should be directed.

Of this amount, the sum of $75,477,800 has been purchased since March last, and the bonds are now held by the Government. Before any measure for funding the five-twenty bonds can be consummated, the Government will be able to purchase, at least, $75,000,000 more. There will then remain, on the 1st of July, 1870, about $1,450,000,000 of the five-twenty bonds in the hands of the public creditors. Of the entire indebtedness of the United States only the unimportant sum of $27,000,000, will be payable previous to 1874. It is the funding of the whole amount of these five-twenty bonds, except about $250,000,000, which the Secretary recommends to be done. The amount thus excepted might, in his opinion, be purchased or redeemed previous to 1874. Between 1874 and 1881, the ten-forty bonds could be paid and provision made for the redemption of the bonds payable in 1881. Supposing the proposed loan is for an amount not exceeding $1,200,000,000, he would offer it in three classes of $400,000,000 each, of which the first class should be paid in twenty years, the second class in twenty-five years, and the third class in thirty years. The conditions of the loan should be, that the principal and interest shall be made payable in coin; that the bonds known as five-twenties shall be received in exchange for the new bonds; that the principal shall be payable in the United States, and interest payable either here or in Europe; that the rate of interest shall not exceed four and a half per cent. per annum; that the subscribers in Europe shall receive their interest at London, Paris, Berlin, or Frankfort; that the bonds, both principal and interest, shall be free from all taxes, deductions, or abatements of any sort, unless it shall be thought wise to subject citizens of the United States to such tax upon income from the bonds as is imposed by the laws of the United States upon income derived from other money investments.

In the opinion of the Secretary of the Treasury, the success of his proposed loan depends upon the continuance of the existing revenue system as an essential condition. The magnitude of the national revenue will furnish such a certainty that these bonds are soon to be redeemed, as to induce holders of the five-twenty bonds to surrender them and receive a bond upon a longer time and at a lower rate of interest. The reduction of the revenue is regarded as a measure to take place after this funding of the debt shall have been completed; then also will be the time to enter upon the work of reducing the taxation, which, at the earliest moment, may be at the commencement of another session of Congress.

The three per cent. certificates, of which there were outstanding, on December 1, $49,716,150, are largely held by the banks as a portion of their reserve, and form a substitute, to a considerable extent, for United States notes. These should be redeemed, in the opinion of the Secretary, and an addition of $35,000,000 made to the circulation of the banks in those States where the circulation is less than the share to which they may be entitled.

Such are the views of the Secretary relative to the more immediate arrangement and management of the public debt, but there are other aspects of the subject looking to its future payment, which are dependent on the national resources, the industry and commerce of the country, and which should not be overlooked.

As previously stated, the receipts of the year exceeded the disbursements $49,453,149. The excess of receipts over expenditures since the close of the war has been as follows:

1865-'66	$37,281,679 58
1866-'67	143,905,880 94
1867-'68	28,297,798 46
1868-'69	49,453,149 46

The amount of the public debt on September 1, 1865, less the cash in the Treasury, was $2,757,689,571.43. On December 1, 1869, the public debt, less the cash in the Treasury, was $2,453,559,785.23, making a total reduction since September 1, 1865, of $304,129,886.20, and for the calendar year of $87,147,466.02.

Since the close of the war, the population of the country has shown a general and rapid increase. Its minimum rate is estimated at 1,100,000 per annum. The alien immigration into the country since the close of the war, or during the five years ending June 30, 1869, has been 1,514,816. The course of the Chinese immigration for a series of years has been as follows:

1856	4,733	1863	7,214
1857	5,944	1864	2,975
1858	5,128	1865	2,942
1859	3,457	1866	2,385
1860	5,467	1867	3,863
1861	7,518	1868	10,684
1862	3,633	1869	12,874
Total in fourteen years			78,817

The increase in the construction of railroads during the year 1869, throughout the country, is estimated to reach about 5,000 miles, making the total construction, since the close of the war, about 13,000 miles. The facilities afforded by this additional construction are regarded as reaching an extent of country of 390,000 square miles, which, for the purposes

of general production, may be regarded as new territory. The extension of the telegraph system during the year was greater than in any previous year, and was equal to 7,000 miles.

The great improvement of the country since the close of the war has taken place chiefly in the Southern States. With every industrial interest entirely prostrated in 1865, the first efforts of the people to improve their condition were in the highest degree discouraging. During 1866 and 1867, the crops both of cotton and grain were, to a very great extent, failures. The freedmen were not disposed to work for hire, demanded excessive wages, and too often rendered poor service. In 1868, there was an improvement. The harvest was so abundant as to furnish the people with cheap food, and with a large surplus for the future and for export, while the sale of the exports of that year in the form of cotton, grain, sugar, tobacco, and naval stores, amounted to an aggregate of at least $800,000,000 in currency. Such a result has brought to the people of the South a large degree of strength and prosperity. It has restored the broken lines of railway communication, and is creating new ones; it is enriching the soil and increasing the quality and quantity of the great staple per acre, through the use of fertilizers and improved tools. This evidence of the capacity of the country to repair its waste and extend its production is highly satisfactory, but in connection therewith is a matter of vital interest, which consists not in the mere ascertainment and enumeration of the aggregates of production, but rather the existing relations between national production and national consumption or expenditure; also the determination of the question whether the resources of the country have been utilized to the best advantage. These are questions more especially considered by the Special Commissioner of Revenue, in the examination of which a very complete view is presented of the present and future financial ability of the country.

The present valuation of the property in the United States is estimated at $23,400,000,000, or an increase of 65.8 per cent. since the census was taken in 1860. This estimate is based upon the comparative results of different periods, the average wealth of individuals, and the ratios presented in other countries. In a similar manner the gross value of the annual product of the United States is estimated at $6,825,000,000, which is a *per capita* average of $175 currency to a population of 39,000,000. An important inquiry arises here as to the proportion of the annual aggregate product of the nation which results from the labor of the persons engaged in the various industrial occupations productive of direct wealth. Thus, of the occupations specified in the census of 1860, forty-one per cent. of the individuals, exclusive of slaves, are found to be engaged in the pursuit of agriculture; and probably of the whole number of persons who are in receipt of income from some industrial pursuit, or the investment of capital, one-half are agriculturists. It is considered that the *per capita* product must be sufficient to make up an amount composed of wages, $275; subsistence, $125; waste in animals, etc., $50; interest on capital, $60; total, $510. This sum, multiplied by the number of agriculturists, would give $3,282,000,000 as the proportion of their contribution of the total gross value of the annual national product.

A statement contained in the report of the Special Commissioner of the Revenue presents an estimate in detail of the value of the leading agricultural products of the country for the last year, as tending to assist in forming a judgment in regard to the total annual value of the product of this department of industry. It is as follows:

Cotton, 2,700,000 bales, 450 pounds each, at 25 cents	$303,750,000
Corn, 900,000,000 bushels, at 50 cents	450,000,000
Wheat, 300,000,000 bushels, at $1.25	375,000,000
Oats, 275,000,000 bushels, at 50 cents	137,500,000
Wool, 177,000,000 pounds (estimated clip of 1868), at 42½ cents	75,225,000
Tobacco, 225,000,000 pounds, at 16½ cents	37,125,000
Barley, 25,000,000 bushels, at $1.20	30,000,000
Hay, 25,000,000 tons, at $10	250,000,000
Rye, 25,000,000 bushels, at $1.10	27,500,000
Hides, 6,700,000, at $5.50	36,850,000
Potatoes, 150,000,000 bushels, at 60 cents	90,000,000
Buckwheat, 20,000,000 bushels, at $1	20,000,000
Flesh of animals, deducting value of hay and grain consumed	400,000,000
Dairy products, deducting value consumed of farm products previously enumerated	400,000,000
All other products of agriculture, including the annual increase in the value of cattle and horses, the value of fruits, seeds, and garden products, the annual addition to the value of farms and farm buildings, and implements made by farm labor not classed as mechanical (fences, drainage, etc., etc.)	660,000,000
Total	$3,283,950,000

In respect to the other wealth-producing industries, the statistics of the manufacture of cotton, wool, iron, boots and shoes, and paper, are sufficiently available and exact to allow of the very accurate determination of the increased value which accrues from the labor employed in these several departments:

MANUFACTURE OF COTTON.

Estimated number of spindles in the United States, from the latest returns to the Cotton Manufacturers' Association		6,930,346
Capital represented, at an average of $20 per spindle		$138,606,920
Estimated capacity of cotton, in pounds, per annum		450,000,000
Average number of yarn		28
Product of cloth, allowing one-sixth for waste, pounds		375,000,000
Value of product, on basis of twenty-five cents per pound for cotton:		
Cotton	$112,500,000	
Supplies and repairs	21,000,000	
Labor	42,000,000	
Profits on capital, say	8,500,000	
		$184,000,000
Estimated expenses of transportation and distribution		31,415,000
Hands employed, mostly female, estimated		125,000
Value added to material by each hand		404
Value of the manufactured product ready for transportation and distribution, exclusive of cost of raw cotton		71,500,000

MANUFACTURES OF WOOL.

Estimated amount of machinery in carding and combing, equivalent to 6,000 sets of cards. Estimated consumption of wool and substitutes, 1868, in condition, as marketed, pounds		225,000,000
Equivalent in pounds of scoured wool		125,000,000
Value of product:		
Wool	$90,000,000	
Supplies and repairs	25,000,000	
Labor	35,000,000	
Profits on capital, 1868-'69, estimated at six per cent.	6,000,000	
		$156,000,000
Estimated expense of transportation and distribution		$25,000,000
Number of hands employed, mostly males, at fifteen to each set of cards		90,000
Value added to material by each hand		$455

PIG AND BAR IRON.

Present annual product of pig-iron, tons	1,725,000
Value at furnace, at $36 per ton	$62,100,000
Present annual product of rolling-mills and bloomeries, tons	1,222,000
Value of product of rolling-mills, 1,200,000 tons, at $90	$108,000,000
Deducting value at rolling-mills of pig and scrap iron used as raw material, say 1,416,000 tons, at $37.50	53,100,000
Added value of rolling-mill industry	$54,900,000
Product of bloomeries, 22,000 tons, at $130	$3,960,000
Deduct value of pig-metal used as raw material, say 26,400 tons, at $38	1,003,200
Added value of bloomery industry	$2,956,800

RECAPITULATION.

Pig-metal	$62,100,000
Rolling-mill industry, added value	54,900,000
Bloomeries, added value	2,956,800
Total	$119,956,800

The following is an estimate of the number of hands employed in the primary production of iron, viz., pig and bar iron, as returned by the Secretary of the American Iron and Steel Association:

At blast-furnaces	12,500
Preparation of ore and fuel	42,000
At forges and bloomeries	2,500
In rolling-mills	58,000
Total	115,000

There are no accessible data for estimating the royalty paid for ores, or the cost of the transportation of ores to the coal, or *vice versa*. It may also be noted that the profits of iron production, be they large or small, are included in this sum of $119,956,800. If it be all credited to the actual laborers, the value of the work of each hand is $1,043; but a fair deduction for labor of persons not enumerated, and for profits above six per cent., would probably reduce this average to $700 or $750.

LEATHER MANUFACTURES.

Value of leather tanned and dressed in the United States		$124,760,069
Deducting value of hides and skins used as raw material		66,531,114
Value added by labor		$58,228,955
Value of boots and shoes produced		$246,252,000
Deduct value of all materials used, including leather		130,169,608
Added value of boot and shoe industry		$116,082,392
Value of other manufactures of leather, harness, hose, belting, bags, portemonnaies, etc		$63,300,000
Deduct value of materials, including leather		15,000,000
Added value of above industries		$48,300,000
Number of hands employed in the manufacture of leather		30,000
Employed in manufacture of boots and shoes		131,333
Employed in other manufactures from leather		19,000
		180,333

RECAPITULATION.

Value added to hides and skins in the manufacture of leather	$58,228,955
Value added in manufacture of boots and shoes	116,082,392
Value added in other manufactures from leather	48,300,000
	$222,611,347

The total value of product in the manufacture of leather is apportioned as follows:

Raw material	$66,531,114
Supplies and repairs	24,328,955
Labor	30,000,000
Capital	13,900,000
	$124,760,069
Value added to material by each hand (excluding cost of "supplies and repairs")	$1,190
Average wages	6,660

The total value of the product of the boot and shoe industry is apportioned as follows:

Raw material	$130,169,608
Supplies and repairs	9,373,959
Capital	24,625,000
Labor	82,083,433
	$246,250,000
Value added to material by each hand	$812
Average wages	625

MANUFACTURES OF PAPER.

The quantity annually manufactured in the United States is estimated for the Commissioner, by the trade, at 780,000,000 pounds, valued at	$72,000,000
Number of hands employed	25,000

The Commissioner, however, has not the data requisite for separating the value of the labor from the material used.

The addition made to the annual product of the country, through the service rendered by capital and labor employed in railway transportation, has recently been shown by competent authority to be at the rate of about $360,000,000, on an investment of capital of nearly $1,800,000,000.

Unfortunately, and almost inexcusably, the products of the national fisheries have never been enumerated with any such completeness as to enable an estimate of the annual value of the production of this industry to be made with any great degree of assurance or satisfaction. But a recent canvass of certain fishing-fields justifies the conclusion that the value of all the fisheries of the country—including seacoast, lake, and river fisheries—is not less than $100,000,000 per annum.

RECAPITULATION.

A summary statement of the values created by the leading industries of the country would therefore appear to be substantially as follows:

Agriculture	$3,282,950,000
Cotton manufacture	71,500,000
Woollen manufacture	66,000,000
Iron production, pig and bar	119,950,000
Leather manufactures	222,600,000
Railway service	360,000,000
Fisheries	100,000,000
Total	$4,223,000,000

This aggregate, deducted from the estimated gross product of the country, viz., $6,825,000,000, gives $2,602,000,000 as the product of all the industrial classes remaining unenumerated. If we suppose the classes enumerated to embrace 7,165,000 producers (6,435,000 agriculturists and 730,000 engaged in railway service, fisheries, and the manufactures specified), this will leave a product of $2,602,000,000, divided among 5,705,000 producers (the total number of producers having been taken at 12,870,000), giving an average value of the labor of each one of $455 per annum. This large body of producers includes persons of the most various occupations and the most diverse character as regards the capacity of production, embracing as it does many highly-skilled and highly-paid artisans, as well as all the distributors of the country, and also great numbers of domestic servants, women and children, contributing in but a small degree to production, and receiving minimum wages.

The excess of production over expenditure is regarded at the present time as being about eight per cent. of the gross annual product, or $546,000,000 per annum.

All these statements, however, of the valuation, annual product, and annual surplus of the country, present the results merely of the information that is at present available on these subjects. An exact statement would require data which are not at present attainable.

There are still exact and positive data in certain departments bearing upon the subject of the amount and increase of the national wealth, which, although local and limited in their nature, yet, within their limits, indicate a less flattering aspect of national prosperity than is generally entertained. The following table, for instance, presents a statement of the assessed value of real and personal property in six States, at different periods within the last ten years, by which it appears that there has been an advance in only two of the States enumerated equal to the assumed premium on gold, while, had the exact average of the gold premium for 1868 (39.6) been taken for comparison, only one (Rhode Island) of the six States would have been found to make good the gold values of 1861. The calculation has been made without regard to any increase that may have taken place in population during that period. If this were taken into account, probably not one of the States would have exhibited an increase in assessed values:

STATES.	Total value of real and personal property, by assessment of 1861.	Total value of real and personal property, by assessment of 1865.	Total value of real and personal property, by assessment of 1868.	Increase. Per cent. of value in 1861.	Gold premium taken.
Rhode Island	$121,118,126	.....	$187,697,591	55	35
Connecticut	294,962,514	.....	312,574,406	29	35
Ohio	892,850,084	.....	1,143,461,386	28	35
Indiana	441,562,339	.....	587,970,549	33	35
Pennsylvania	569,049,867	$595,591,994	.....	4⅔	35
New York	1,441,769,420	.....	1,766,089,140	22½	35

Again, there is a large amount of American securities held in foreign countries. These consist of United States bonds, State bonds, railway bonds and shares, municipal bonds, and shares of canal and mining companies. The most approved estimates represent the amounts as follows:

NATIONAL SECURITIES.

Fives of 1871 and 1874	$15,000,000
Sixes of 1881	90,000,000
Five-twenties of 1862	380,000,000
Five-twenties of 1864	30,000,000
Five-twenties of 1865, May and November	120,000,000
Five-twenties of 1865, January and July	200,000,000
Five-twenties of 1867	120,000,000
Ten-forties	25,000,000
Registered bonds of all issues	20,000,000
Total	$1,000,000,000

As substantiating the accuracy of the above estimate, it is to be noted that the earlier issues of United States securities have almost entirely disappeared from the American market, and that transactions are now limited mainly to the issues of July, 1865, 1867, and 1868.

STATE SECURITIES.

The following amounts are returned as positively known to the State authorities:

Alabama	$1,468,260
Georgia	72,000
Illinois	1,400,000
Louisiana	5,265,983
Massachusetts	12,277,500
Michigan	800,000
Missouri	1,500,000
New York	2,440,989
Ohio	3,500,000
Pennsylvania	9,458,600
Virginia	7,593,500
Total	$45,691,732

This amount, it is to be noted, only includes those issues which have been "placed" abroad originally through distinct State agencies. To it must be added the larger amount which has been from year to year purchased in the American market, and either sent abroad or held here on foreign account.

Of railway bonds and shares held abroad or on foreign account, the investigations indicate a total of $130,000,000 of bonds and $113,000,000 of shares.

Of the amount of bonds specified, an aggregate of $61,350,349 has been positively reported in behalf of fourteen companies.

Of the amount of railway stocks specified, 7 companies return an aggregate of $83,449,800.

For the companies which have not reported the amount of their stocks and bonds held abroad, estimates have been carefully prepared by the best authorities on this subject. The character of these statements and the representations which accompanied them is such as to show that the aggregate given above, namely, $243,000,000 of stocks and bonds, is not an over-estimate.

MISCELLANEOUS SECURITIES (PARTIALLY KNOWN AND PARTIALLY ESTIMATED).

Municipal bonds	$7,500,000
Canal bonds	5,068,967
Mining shares and bonds	10,000,000

A careful estimate of other forms of foreign indebtedness on November 1, 1869, gives the following additional elements:

Capital lying in the United States in consequence of the comparatively low rate of interest in Europe—credits, bills of exchange, etc	$50,000,000
Cuban moneys temporarily transferred in consequence of the revolution	25,000,000
Foreign capital invested in mortgages of real estate, etc	25,000,000

RECAPITULATION.

State bonds	$100,000,000
Railway bonds	130,000,000
Railway shares	118,000,000
Mining bonds and shares	10,000,000
Municipal bonds	7,500,000
Miscellaneous bonds and shares	5,000,000
Capital temporarily invested	50,000,000
Cuban moneys	25,000,000
Real-estate mortgages, etc	25,000,000
Total	$465,500,000

Adding $1,000,000,000 of Federal securities held abroad, as before estimated, we have, as the total of the present foreign indebtedness of the United States, the sum of $1,465,500,000; on which, at an average of 6 per cent., an annual payment of interest accrues to the amount of $87,930,000; and of which $80,000,000 may be estimated as paid regularly.

But enormous as is this sum, the process of incurring indebtedness still continues as actively as ever. The account of the United States with foreign countries for the fiscal year ending June 30, 1869, may be exhibited substantially as an adverse foreign balance for 1868–'69, as follows:

Imports of merchandise, gold value		$417,371,765
Exports (gold values)	$275,611,591	
Reëxports, etc	10,907,753	
		286,519,344
		$130,852,421
Less excess of foreign goods, in bond, 1869 over 1868		14,702,079
Adverse balance 1868–'69, merchandise account		$116,150,342

MOVEMENT OF SPECIE AND BULLION.

Exports	$42,915,966
Reëxports	14,292,414
Total	$57,188,380
Imports	19,654,776
Loss of specie and bullion	$37,483,604

If we suppose the excess of specie and bullion exports to have been devoted exclusively to the liquidation of balances incurred on the merchandise account, the remaining balance on this account to be settled for in some other manner would be $78,666,738.

To this sum must be added the following other items:

Obligations for interest (paid), estimated	$80,000,000
Excess of freights carried in foreign bottoms	24,000,000
Expenditures of Americans in foreign countries	25,000,000

The following table exhibits the proportions of the total trade of the country for each year, 1859–1869, inclusive, carried in American and in foreign vessels, respectively, with the gain to the United States or to foreign nations from the excess of freights carried in each year:

YEAR.	IMPORTS, EXPORTS, AND REËXPORTS.				
	Total Trade.	American vessels.	Foreign vessels.	Preponderance of foreign.	Gain to foreigners, calculated at 8 per cent. on gross excess.
1859	$695,557,592	$465,741,381	$229,816,311	* $235,925,170	‡ $18,874,014
1860	762,288,550	507,247,757	255,040,793	* 252,206,964	‡ 20,176,557
1861	530,569,412	350,827,256	179,742,156	* 171,085,100	‡ 13,686,808
1862	435,710,714	217,695,418	218,015,296	319,878	25,590
1863	584,928,502	241,872,471	343,056,031	101,183,560	8,094,685
1864	669,855,034	184,061,486	485,793,548	301,732,062	24,138,565
1865	571,131,290	146,067,245	425,064,045	278,996,800	22,319,744
1866	1,003,066,748	324,141,463	678,925,285	354,783,822	28,382,705
1867	673,064,840	† 296,120,912	† 576,943,928	280,823,016	22,465,841
1868	648,537,647	297,981,573	550,546,074	252,564,501	20,205,160
1869	876,864,060	288,916,927	587,447,133	298,530,206	23,882,416
				$1,868,933,845	$149,514,706

Assuming that the sums chargeable to smuggling and undervaluation of imports are counterbalanced by the undervaluation of exports, the sum total of the adverse balance of indebtedness of the United States to foreign countries will, at the present time, probably average about $210,000,000 per annum.

To meet and settle this constantly-increasing and adverse balance, there would seem to be, under the present condition of prices and cost of production in the United States, but one resource, viz., to remit certificates of indebted-

* Excess of American over foreign. † Partly estimated. ‡ American gain.

ness—national, State, or corporate. And this process is undoubtedly adopted, and goes on, month after month, and year after year, without occasioning thus far any marked disturbance in the trade and commerce of the country.

On this subject the Commissioner remarks: "Now, whether so great an exchange of evidences of indebtedness for foreign commodities or foreign services is advantageous to the country at large, or how long such a method of liquidating balances can continue, are questions which it is not necessary to immediately consider, inasmuch as we would rather direct attention at this point to the fact that, while before the war we were able to wholly pay for our foreign imports and services with the products of our own industry, including, after the discovery of California, and up to the beginning of the war, such a proportion only of our product of gold as it would have been practically useless and even mischievous for us to retain, we are not now so doing; and this latter circumstance would seem to prove beyond question that the aggregate of national production does not maintain the same proportion as formerly to the aggregate of national consumption.

"It must not be forgotten, furthermore, that by the remittance of bonds we have simply deferred payment, and must hereafter export products to meet these obligations; and, whenever such export of products in payment for past imports shall be made, it will of necessity be in addition to the export then made to pay for current imports. Product for product is the absolute condition on which alone commerce is possible."

To show the effects of an excessive inflation of the currency to disturb the ratio that formerly existed between national production and consumption, it is asserted that, during the last few years, large numbers of the population, under the influence and example of high profits realized in trading during the period of monetary expansion, have abandoned pursuits directly productive of national wealth, and sought employments connected with commerce, trading, or speculation. As a consequence, there are everywhere large additions to the population of the commercial cities, an increase in the number and cost of buildings devoted to banking, brokerage, insurance, commission business, and agencies of all kinds, the spirit of trading and speculation pervading the whole community, as distinguished from the spirit of production, and all the external appearances of healthful activity. These things, however, are not to be regarded as the legitimate growth of a really sound commerce, but rather as the results of influences which have originated almost exclusively in currency inflation.

The following statements, showing that a degree of disorganization in the labor of the country exists, are made in the report of the Special Commissioner of the Revenue, and are too important to be overlooked:

But, be the cause what it may, one thing is certain, viz., that national production has suffered in consequence; *directly* by the withdrawal of labor from productive to unproductive or less productive employment, and *indirectly* by infusing a spirit of discontent among those who, by the force of circumstances, are compelled to earn subsistence in agriculture or the mechanic arts, thereby impairing both the quantity and quality of the products of their industry. A most intelligent observer, the superintendent of one of the largest manufacturing establishments in the Middle States, thus writes to the Commissioner:

> Those who observe the laborer find that he shows less and less interest in the work he performs, his only anxiety being to hear the bell announce the hour of his discharge from labor.

Another, superintendent of an extensive manufacturing company, in answer to a question as to the comparative amount of work performed by mechanics and laborers in 1860 and 1869, submits the following statement:

> *October* 1, 1869.
>
> In reply to your favor of the 29th, I would say that I now employ seventy-eight men as mechanics, some of them in building (new machinery), but most of them in the way of ordinary repairs. It is impossible for me to state accurately the quantity of work done by them as compared with what would have been accomplished by an equal number of mechanics in 1860, but I think it quite safe to say it is *twenty-five* per cent. less. This difference is occasioned in part by a feeling that they are less favored regarding the hours of labor than mechanics who are employed by the Government, but chiefly because many of them are not really mechanics, having never served as apprentices, and lack the skill which would have secured such employment when help was more abundant.

With a view of obtaining further information concerning the relative product of labor in 1869, as compared with 1860, the following question was appended to a circular (relative to wages) extensively forwarded by the Commissioner to the largest and most intelligent employers of labor in different sections of the country: "Please state whether, in your opinion, mechanics and laborers perform as much work in a day now as formerly."

The following is an abstract of the answers returned, the names of the parties or firms making the same being omitted:

Maine, Portland.—"No, surely;" "and yet they do all they get pay for"—"the row the mechanic now hoes is a hard one."

New Hampshire, Manchester.—"Only about two-thirds as much."

Connecticut, Bridgeport.—"Mechanics perform more, on account of the improved machinery, and laborers less."

Massachusetts, Worcester.—"I think we don't get as much work as formerly by fifteen per cent." *Milford.*—"I think five men did more work in 1860 than six men do now." "Good hands more scarce now than at that time."

New York, New York City.—"I think they perform from one-fourth to one-third less work since than before the war." *Buffalo.*—"Twenty-five per cent. discount." *Troy.*—"No, not by fifteen per cent. in the average." *Albany.*—"Three stone-masons or bricklayers will not do as much as two did formerly."

New Jersey, Jersey City.—"They do not perform more than two-thirds as much as formerly."

Pennsylvania, Lancaster.—"As much as before, since the ten-hour system has begun." *Philadelphia.*—"Three men do the work of two."

Ohio, Cleveland.—Three responded in the negative, and one to this effect: "We think they do now, but there was a time, for two to six years, when they did not." *Cincinnati.*—"No." *Dayton.*—"No."

Missouri, St. Louis.—"No, by fifteen to twenty per cent."

Illinois, Chicago.—"One-eighth less."

The Commissioner would further add, that of the answers received, as above, about one in nine indicated that the amount of work performed in a given time, in 1869, compared favorably with that performed at former periods.

The following statement, furnished to the Commissioner by the proprietor of the Morgan Iron Works of the city of New York, also indicates a change in the productiveness of labor in this department of industry which it is to be hoped is somewhat exceptional. Thus, in 1858, a marine engine was built at the above works, at a cost of $23,000 (including profit to the builder), which required 2,323 days' labor. In 1869 another engine, precisely similar as respects pattern and weight, was constructed at the same works on contract, for $40,000. The result was a loss to the builder of $5,000, and a necessary expenditure of 3,538 days' labor, or 1,215 more days' labor than was required for the performance of the same work eleven years previously.

Here, then, are certain facts which the Commissioner, in the discharge of his duty, is bound to make public. The laborer appears to be less worthy of his hire than heretofore, and to have lost his interest in his work. If an explanation of the cause is demanded of the Commissioner, he can return but this general answer: because a vicious currency and unequal taxation take from the laborer a portion of the result of his work, and give him no return. The laborer feels this, but knows not the cause, and seeks in strikes, in eight-hour laws, and trades' unions, the artificial remedy, where the natural remedy would be simply to restore to him good money, an honest measure of value, and such laws as will secure an equal distribution of the surplus of annual wealth which results from the excess of production over expenditure.

Again, the general result of the business of the last fiscal year to the merchants and manufacturers of the country is thus expressed by a recognized industrial authority:

Those who, at the end of the fiscal year, have made a living, and have their capital unimpaired, should be content, for they will be doing better than the majority.—*Iron Age, June 24, 1869.*

The undoubted decrease in farm stock and animal products in certain sections of the country also indicates a change, to at least a limited extent, in the relations which production formerly sustained to consumption and population. Thus, in the State of Ohio, for whose domestic statistics a greater degree of accuracy has been claimed than for those of any other State, the official report for 1869 states that, comparing this latter year with 1868, the whole number of sheep has decreased 1,416,205, or from 7,688,845 to 6,272,640; the hogs 356,629, or from 1,812,572 to 1,455,943; the cattle from 1,512,666 to 1,492,581; and the mules from 25,411 to 25,020. In respect to sheep generally, extensive returns, published by the Department of Agriculture, conclusively prove a very large decrease in almost every section of the country. This decrease for the year 1868–'69 is estimated by the Bureau at not less than 4,000,000; while others, competent to judge, report to the Commissioner that the reduction in the whole number of sheep in the United States within the last two years has been at least twenty-five per cent. In one of the leading wool-growing States of the West, the wool-clip for 1869 is estimated at thirty-five per cent. less than that of the previous year, 1868.

Other considerations exist, which might be taken into account for a complete view of the probable surplus of national industry, which there is not space here to notice.

The operation of the internal revenue system has been to yield the Treasury, during the fiscal year, the sum of $160,039,344. The receipts for the first six months of 1868 and 1869 were:

From July to December, 1869	$67,296,388
" " " " 1868	66,110,030
Total gain for six months	$1,186,358

The following tables shows the aggregate receipts from the same general sources of revenue for the first and last six months of each of the fiscal years ending June 30, 1868 and 1869; and also the gain or loss per cent. of those in the latter over those in the former period.

SOURCES OF REVENUE.	RECEIPTS FOR THE FIRST SIX MONTHS OF THE FISCAL YEAR.		Gain.	Loss.
	1868.	1869.		
Spirits	$9,537,940	$19,124,462	$9,586,522	.....
Tobacco	10,059,456	9,991,224	.....	$68,232
Fermented liquors	3,035,575	3,088,311	52,836	.....
Gross receipts	3,246,659	3,216,675	.....	29,984
Sales	2,264,589	3,930,693	1,666,104	.....
Income, including salaries	21,801,114	13,053,615	.....	8,747,499
Banks and bankers	1,494,376	1,339,065	.....	155,311
Special taxes not elsewhere enumerated	5,109,985	3,674,366	.....	1,435,619
Legacies	653,624	546,220	.....	107,404
Successions	511,577	484,054	.....	27,523
Articles in Schedule A	576,394	341,628	.....	234,766
Passports	20,365	13,040	.....	7,325
Gas	773,878	853,116	79,238	.....
Penalties	483,271	491,227	6,956	.....
Net receipts from stamps	6,540,327	7,148,692	608,365	.....
Total	$66,110,030	$67,296,388	$12,000,021	$10,813,663
Total gain for the above period	.....	.....	$1,186,358	

During this period the amount gained on spirits is $9,586,522
The amount gained on stamps is 608,365
The amount gained on sales is 1,666,104
The greatest loss from any one source of taxation for this period was upon incomes, which amounts to 8,747,499
In special taxes, not included under spirits, tobacco, etc., the loss was 1,435,619

SOURCES OF REVENUE.	RECEIPTS FOR THE LAST SIX MONTHS OF THE FISCAL YEAR.			
	1868.	1869.	Gain.	Loss.
Spirits	$2,917,691	$25,901,940	$16,784,249	.....
Tobacco	8,670,639	13,439,483	4,768,844	.....
Fermented liquors	2,920,394	3,011,568	91,174	.....
Gross receipts	3,030,507	3,084,324	53,817	.....
Sales	2,331,089	4,276,146	1,945,057	.....
Income, including salaries	19,654,484	21,738,241	2,083,757	.....
Banks and bankers	1,862,753	1,996,451	133,698	.....
Special taxes not elsewhere enumerated	5,289,180	5,127,089	.....	$162,091
Legacies	864,764	698,617	.....	166,147
Successions	793,447	705,702	.....	87,745
Articles in Schedule A	529,985	541,233	11,248	.....
Passports	7,915	16,413	8,498	.....
Gas	1,128,203	1,261,890	134,687	.....
Penalties	772,611	385,862	.....	386,749
Net receipts from stamps	7,506,286	8,356,301	850,515	.....
Total	$64,479,948	$90,542,760	$26,865,544	$802,732
Total gain for the above period	$26,062,812			

It will be observed that the gain on distilled spirits during this period of comparison is	$16,784,249
On tobacco	4,768,844
On fermented liquors	91,174
On incomes	2,083,757
On stamps	850,515
From gas companies	134,687
From banks and bankers	133,698

The only articles on which a loss was sustained are legacies, successions, and penalties—special taxes not included under spirits, etc.—and these aggregate only $802,732.

The following statement of the receipts from the several general sources of revenue for the first quarter of the present and last fiscal years includes the returns of twenty out of the twenty-six districts. The receipts of the following districts only are, therefore, not included in the receipts for the year 1870: Third Mississippi and Ninth Kentucky, for the month of July; Third Mississippi, for August; Eleventh New York, Sixth Tennessee, and Fourth Texas, for September:

SOURCES OF REVENUE.	RECEIPTS FOR FIRST QUARTER OF FISCAL YEARS.	
	1869.	1870.
Spirits	$8,465,443	$10,017,081
Tobacco	4,295,674	8,131,298
Fermented liquors	1,790,602	1,739,609
Banks and bankers	886,078	1,246,286
Gross receipts	1,514,750	1,727,206
Sales	1,739,513	1,961,888
Special taxes not elsewhere enumerated	2,969,427	3,244,684
Income, including salaries	11,201,809	13,278,504
Legacies	278,590	340,861
Successions	254,065	265,287
Articles in Schedule A	300,843	317,984
Passports	8,695	2,583
Gas	341,128	400,577
Sources not otherwise herein specially enumerated. Articles now exempt from taxation	874,431	126,338
Net receipts from stamps	3,393,472	3,685,078
Penalties	306,402	156,111
Total	$38,620,898	$46,641,415

Total gain, $8,020,517, or 20.8 per cent.

It will be seen that the gain on tobacco during this period of comparison is increased, and that on stamps is sustained, while that on spirits is fully sustained. The gain on tax of banks and bankers is likewise more than sustained by this comparison, and the entire table affords ample promise of satisfactory future results.

The expenses of collecting the revenue have been as follows:

There were paid for expenses incident to the collection of the revenue for 1868		$8,776,814
For 1869	$7,894,895	
Deduct the amount paid to storekeepers, act of July 20, 1868	608,918	
Leaving for this year on the basis of the account for 1868		6,785,477
Decrease in favor of 1869		$1,991,337

The following statistics of this department present a summary of the magnitude and importance of its labors:

Number of seizures for violation of law for the fiscal year 1869	1,744
Number of seizures for violation of law for the first quarter of 1870	1,021
Number of cases compromised during the fiscal year 1869	152
Amount received as tax thereon	$156,004 86
Assessed penalties fixed by law	$44,130 63
In lieu of fines, penalties, and forfeitures	$125,169 98
Number of cases compromised during the first quarter of 1870	144
Amount received as tax thereon	$79,227 39
Assessed penalties fixed by law	$10,611 06
In lieu of fines, penalties, and forfeitures	$58,817 08
Number of compromise opinions prepared from March 11 to September 30, 1869	304
Number of suits brought in Federal Courts during the fiscal year 1869	4,578
Of these, the number of proceedings *in rem*	844
Number of indictments found	2,552
Number of other proceedings *in personam*	1,182
Number of judgments in proceedings for forfeiture	719
Number of convictions on indictments	1,020
Number of acquittals	207
Number of suits decided in favor of the United States	2,166
Number of suits decided against the United States	432
Number of suits settled or dismissed	1,359
Number of suits pending July 1, 1869	4,007

Amount of judgments in suits *in personam*	$994,531 48
Amount collected and paid into courts	$114,791 01
Amount of forfeitures paid into courts	$480,796 89
Number of suits and proceedings begun in the United States Courts during the first quarter of 1870, as reported by United States District Attorneys, *in rem*, 276; *in personam*, 460; total	736
Number of claims for abatement considered during the fiscal year 1869	82,115
Number of claims for refunding considered	3,173
Amount rejected of same	$320,156 08
Number of refunding claims considered first quarter of 1870	548
Amount refunded for same time	$53,597 00
Amount rejected	$91,096 93
Number of accounts examined and passed during the fiscal year 1869	51,566
For the first quarter of 1870	8,897
Certificates of deposits received, examined, and entered for 1869	65,870
For the first quarter of 1870	13,067
Orders received for internal revenue stamps for 1869	11,278
For the first quarter of 1870	3,487
Number of stamps received from printers during 1869	578,109,811
Value thereof	$89,098,161 86
Number for the first quarter of 1870	180,532,387
Value thereof	$49,228,728 38
Number of internal revenue stamps issued for the year 1869	575,415,263
Value thereof	$78,090,298 11
For the first quarter of 1870	174,640,302
Value thereof	$30,783,465 50
Value of tobacco-stamps received for the first quarter of 1870	$15,730,289 74
Value of tobacco-stamps issued for the same time	$10,906,428 81
Value of beer-stamps received for the first quarter of 1870	$2,820,042 25
Value of beer-stamps issued for same time	$1,884,150 00
Value of stamps for distilled spirits received for the same time	$17,232,925 00
Value of same issued for the same time	$6,892,750 00
Number of stamp-agents' bonds examined	850
Number of claims for refunding stamps unnecessarily used	650
Number of instruments examined for photograph companies	800
Number of letters received and registered for the fiscal year 1869	60,898
For the first quarter of 1870	17,329
Number written and recorded for 1869	46,652
For the first quarter of 1870	17,270
Number of blanks prepared and sent out for 1869	8,046,360
For the first quarter of 1870	1,695,741
Number of distilleries registered	864
Number of officers connected with the internal revenue service who report to this bureau	6,003

The following tables show the price of gold for each day of the year, and the highest and lowest prices of shares at the N. Y. Stock Exchange in each month the same period. By reference to the table of prices of gold, it will be seen that there are no reports of sales on September 25th, 27th, 28th, and 29th. This was the period since known as the "gold panic," which was made a subject of investigation at the ensuing session of Congress.

DAILY PRICE OF GOLD IN 1869.

The following Table will show the highest and lowest prices of Gold each day during the Year 1869.

FITZPATRICK, BENJAMIN, a Southern statesman and political leader, born in Greene County, Ga., June 20, 1802; died in Autauga County, Ala., November 25, 1869. Left an orphan at an early age, he emigrated, in 1815, in company with an elder brother, to Alabama (then Mississippi Territory), and settled in what is now Autauga County. Here, by assiduous study, without teachers, he acquired a fair education, and in 1821 obtained a license to practise law. Soon after, before he had quite attained his majority, he was elected solicitor of his judicial circuit, and, by reëlection, continued to exercise its duties till 1829, when his declining health forced him to abandon his profession. From 1829 until 1840 he lived the life of a retired farmer in Autauga County, but in the fall of 1840 he stumped the State as a candidate for elector for the State at large, was elected, and voted for Martin Van Buren. In 1841 he was nominated by the Democratic party for Governor, and, after a spirited contest, defeated his opponent by a majority of more than 10,000 votes. In 1843 he was reëlected without a contest, and at the close of his term, in 1845, received from the State Legislature a vote of thanks for the able manner in which he had administered the affairs of the State. In 1848 he was appointed United States Senator to fill the unexpired term of Dixon H. Lewis, and again, in 1853, to fill the vacancy occasioned by the election of the late William R. King to the vice-presidency. The latter appointment was ratified by the next ensuing Legislature, which elected him to serve out the remainder of Mr. King's term. In November, 1855, he was reëlected for a full term of six years, and in 1860 received and declined the nomination for Vice-President of the United States on the same ticket with Mr. Douglas. While in the Senate he served for several sessions as president *pro tem.* of that body. In 1861 he left the United States Senate, to take part in the secession movement. About the time of his withdrawal, viz., January 19, 1861, he united with S. R. Mallory and John Slidell, in entering into a correspondence with President Buchanan in relation to the demand of South Carolina for the surrender of Fort Sumter. Governor Fitzpatrick was active in his support of the Confederacy during the war, and did what he could for the Confederate soldiers. After the close of the war, he retired to his farm, and had not since appeared in public, except at the Philadelphia "National Union Convention" of 1866, to which he was a delegate.

FLETCHER, RICHARD, LL. D., a learned and accomplished jurist of Massachusetts, born in Cavendish, Vt., January 8, 1788; died in Boston, Mass., June 21, 1869. He graduated at Dartmouth College, in 1806, at the early age of eighteen, and studied law in the office of Daniel Webster, at Portsmouth. He was called to the bar in 1809, and settled at Salisbury, N. H., where he remained until about 1825, when he removed to Boston. He at once took a high rank among the leaders of the bar, and within two or three years was retained as leading counsel for the Warren Bridge proprietors in the famous case of the Charles River Bridge against them. His associate was the late William C. Aylwin; the opposing counsel being Daniel Webster and Lemuel Shaw. The Supreme Court of Massachusetts were equally divided on the main question involved; Justices Wilde and Morton adjudging that the charter of the Warren Bridge was constitutional, and Chief-Justice Parker and Mr. Justice Putnam holding that it was a violation of the charter of the Charles River Bridge, and therefore unconstitutional. The case was taken by writ of error to the Supreme Court of the United States, where the constitutionality of the Warren Bridge charter was sustained by a majority of the court. The volumes of Pickering's and of Metcalf's Reports from this time prove the extent of Mr. Fletcher's practice and the importance of the cases in which he was engaged. His practice in the United States Courts was also very large. He was for many years the peer and associate of such men as Justice Samuel Hubbard, Prof. Simon Greenleaf, Peleg Sprague, Franklin Dexter, Rufus Choate, and Charles G. Loring. Among these eminent men few equalled and none surpassed Judge Fletcher in professional ability. He was repeatedly retained against Mr. Webster and Mr. Mason, and showed himself no unworthy antagonist of them; while veteran lawyers have declared that, for general legal and especially for *nisi prius* business, he had but one equal, and that was Mr. Choate. He was a formidable opponent before a jury, and was equally eminent in arguing questions of law in bank. His range of learning and practice extended over all the branches of the law—real estate, commercial, criminal, admiralty, and maritime. Although he practised for many years in the country, he was distinguished in commercial and maritime law, and particularly in the law of marine insurance. Mr. Fletcher had been a member of the Massachusetts Legislature, and in 1837 he was elected to Congress, but resigned his seat at the end of one session. In 1848 he accepted a seat on the Supreme bench, which had more than once been offered him before. He gained much reputation here throughout the country by his able judgments, but the position was not much to his taste, and he resigned it in 1853. He returned for a short time to practice, from which he finally retired in 1858. He was for very many years a trustee of Brown University, and for a short time an overseer of Harvard College. He received the degree of LL. D. from Dartmouth in 1846, and from Harvard in 1849. Judge Fletcher was never married. In his religious life he was not only exemplary but active in all good words and works. In the sabbath-school, in the church, in missionary and other benevolent enterprises, he was always active and ready to

give his personal service as well as the necessary pecuniary aid. He left in his will a bequest of $100,000 to Dartmouth College.

FLORIDA. The second regular session of the Legislature, under the new constitution, was convened on the 5th of January. The question of the impeachment of Governor Reed was still pending. A committee was appointed by the Assembly, on the second day of the session, to investigate the charges against the Executive. On the 26th of January, this committee, having concluded their investigation, submitted a report containing the testimony taken before them. Having listened to the reading of the testimony, the Assembly, on the following day, made a final disposition of the impeachment matter by passing the following resolution by a vote of 43 to 5:

Whereas, The committee appointed on the 6th day of January, to inquire into and investigate the conduct, acts, and doings of Harrison Reed, Governor of Florida, have, pursuant to instructions, reported the results of their investigations to this body, accompanied with the testimony taken in the said matter: therefore, be it

Resolved by the Assembly of Florida, That the said Assembly finds nothing in said report or testimony justifying an impeachment of Harrison Reed, Governor of Florida.

Prior, however, to the announcement of this result, Lieutenant-Governor Gleason, who had vacated the office during the impeachment proceedings, on the 9th of January, formally resigned his position as presiding officer of the Senate.

The question of the right of Mr. Mobley, who had been elected a Senator from the Twenty-second District, to retain his seat in the Senate, came up in that body, and caused no little discussion. This gentleman, after his election and qualification as Senator, had accepted an appointment as State Attorney. It was claimed that no person could legally hold both of these offices at the same time, and that whoever accepted one became for the time being ineligible to the other. The question came before the Senate on the 9th of January, when it was decided, by a vote of 11 to 9, that Mr. Mobley was ineligible as a Senator, and his seat was declared vacant. The Senate then passed a resolution calling upon the Executive to issue a proclamation ordering a special election in the Twenty-second District to fill the vacancy.

Efforts were made at this session of the Legislature to unseat Senator Gilbert, who had been elected to the United States Senate for the term of six years from the 4th of March, 1869, by the Legislature which was in session in the summer of 1868. Mr. Gilbert's election at that time, it was claimed, was invalid, on the ground that there was no vacancy in the office. Failing to establish the illegality of Mr. Gilbert's election, efforts were then made to secure the election of another Senator for the same seat, and leave it to Congress to decide the claims of the two contestants. This movement also failed, and Senator Gilbert was admitted to his seat in the United States Senate on the 4th of March.

The act passed at this session, "to establish a uniform system of common schools and a university," reflects great honor upon the State, as being a liberal and comprehensive system of instruction, adapted not only to the present needs of the State but looking also to its future growth and advancement. The bill provides for the appointment of a State Superintendent, and a State Board of Education, consisting of the State Superintendent, the Secretary of State, and the Attorney-General, and also a County Superintendent, and a Board of Public Instruction in each county. All persons between the ages of six and twenty-one years are entitled to the advantages of free instruction, in support of which provision is made for the levying of a tax not to exceed one per cent. The bill has in view the future establishment of a State University on a broad and liberal basis, the object of which will be to afford instruction in the various professions, sciences, and languages.

Having provided for the establishment of a Bureau of Immigration as a means for the dissemination of information intended to encourage immigration to the State, the Legislature adjourned on the 1st of February.

In the early part of January, the commissioners (Messrs. J. L. Pennington, A. J. Walker, and Charles A. Miller) who had been appointed by the Executive of Alabama, pursuant to a resolution of the Legislature of that State, passed in December, 1868, "to negotiate with the State government of Florida for the annexation to the State of Alabama of that portion of Florida lying west of the Choctawhatchie River," arrived at Tallahassee, for the purpose of opening negotiations in reference to the proposed transfer. In the communication addressed to Governor Reed, of Florida, stating the object of their mission, the commissioners took occasion to set forth some of the motives that had induced the Legislature of Alabama to make the proposition for the annexation:

"The idea of making West Florida a part of Alabama," they said, "has long been cherished, and a glance at the map suggests it. The regularity of geometrical figure which it would give to Alabama; the improvement which it would make in the outlines of Florida; the fact that West Florida is traversed by streams, some of them having their origin in Alabama, and some of them their upward limits of navigation in that State; the facility and frequency of communication and trade between West Florida and Alabama, and the homogeneity of tastes, sentiment, and interests, between their peoples, combine to afford arguments for a political connection so obvious, that they have long been generally recognized. We venture to say, and we do so with the utmost respect, that the people of West Florida have

far more identity of interest and feeling with the people of Alabama than with the people of Middle, East, or South Florida. This is the result of natural causes, which it would be unreasonable and unjust to make a ground of personal censure. But, high as these arguments are in favor of the inclusion of West Florida in Alabama, they are not the arguments which have led to our present mission. In Central Alabama we have the finest deposits of coal and iron upon the American Continent. We think we are justified in making this assertion, after an examination into the subject of the value of like mineral resources in Pennsylvania. Pensacola must be the handmaid in the development of those immense coal and iron interests, unless our own Mobile should be able to improve its harbor. The coal and iron of Alabama are destined to supply the demands of the South and of the steam marine floating upon the Gulf of Mexico and the Caribbean Sea. The supply will be afforded through the port of Pensacola, if it is an Alabama city. If the legislation hereafter as to the port of Pensacola can be directed in reference to its ancillary influence upon the development of the mineral interests of Central Alabama, it will become a great city—probably the Birmingham of America—and Alabama will make it the gateway through which prosperity shall flow in upon its people and spread throughout its borders."

This communication was immediately submitted by Governor Reed to the Legislature, with the recommendation "that a commission be appointed to receive and consider, in behalf of the State of Florida, any propositions which may be presented in behalf of Alabama." Messrs. C. E. Dyke, W. J. Purman, and N. H. Moragne were appointed by the Legislature to act in behalf of Florida in the negotiations. These gentlemen subsequently had a conference with the Alabama commissioners, and agreed upon the terms of transfer. In pursuance of the provision requiring the question to be submitted to a popular vote in the district proposed to be transferred, Governor Reed, on the 25th of June, issued a proclamation for an election in West Florida, in which were embodied the terms of the agreement made by the commissioners. These stipulated that the assent of Congress should be obtained, and that a consideration of one million dollars be paid by Alabama.

At the election on the 2d of November, the result was as follows:

Whole number of votes cast	1,823
Number of votes cast for annexation	1,162
Number of votes cast against annexation	661
Majority in favor of annexation	501

In Jackson County no election was held. Had there been an election in this county, it is believed that the vote would have been much larger in favor of annexation.

The Governor, in his message to the Legislature in January, 1870, reports the vote on the proposed cession to Alabama, and quietly remarks that he presumes no very considerable portion of the people of the State, or their representatives, seriously entertain the idea of ceding one-fifth of their territory and population, and the finest harbor on the gulf, to the jurisdiction of another State, almost without consideration.

Pursuant to the call of the Executive for an extra session of the Legislature, that body met on the 8th of June. Although the session was short, several measures closely allied with the welfare of the State were passed. One of the most important of these was the bill effecting a complete and much-needed revision of the revenue and tax laws. The system of taxation and revenue had been in a very defective condition, from which the State had suffered heavy losses. The revenue was inadequate to meet the necessary expenditures of the government. In some parts of the State property of great value had escaped taxation entirely, either through the negligence of the assessors or their fraudulent returns. In one county it was reported that property, which, many years ago, was valued at eighty cents per acre, had been uniformly assessed according to that standard, although its increased value was from ten to twenty dollars per acre. In calling the attention of the Legislature to these evils, the Executive said: "In connection with this subject, I would remark further, that it cannot be doubted that, under the present system, a very large amount of property is not taxed, and the system of assessment is so radically defective, that the assessor is really able to know but little of it. A proper system for the assessment of all the taxable property in the State, at a fair cash value, will result in great relief to that portion of our citizens who have heretofore borne the burden and expense of maintaining the State government. Immense tracts of land, owned by non-residents and others, some of which lands are among the most valuable and productive, have either escaped taxation altogether, or been charged so slightly that they have been withheld from market and from cultivation, thus impeding immigration and the increase of population, and throwing the burden of maintaining the government, the improvement of roads and bridges, and opening the avenues of commerce and agriculture, upon the property of others, and upon individual industry and enterprise."

Not only was the system defective in regard to the assessment of taxes, but the State had suffered heavy losses through the neglect of collectors or their default in making returns to the treasury. To remedy these and other evils it was necessary thoroughly to revise the revenue and tax laws. It is believed that the bill passed by the legislature at this session will introduce an equitable and efficient system of taxation which will yield a revenue adequate to the needs of the State.

The legislation in behalf of the railroad interest seems to have been made necessary by the reduced condition of the roads, the facilities of which were by no means such as the demands and welfare of the people required. The "Railroad Bill" grants to certain companies State aid in the form of loans to the extent of $14,000 per mile. A company is also incorporated to construct a railroad across the upper part of Florida "between Jacksonville on the Atlantic coast and Pensacola on the Gulf coast and Mobile in Alabama," to be known as the Jacksonville, Pensacola, and Mobile Railroad. The bill provides that this road shall be completed within three years from June, 1869.

Governor Reed had previously memoralized Congress to grant to the State certain lands for railroad and canal purposes, and there is little doubt but that the efforts made and the inducements held out will attract capitalists to the State to build up its internal improvements.

The Fifteenth Amendment to the Constitution of the United States was ratified in the House on the 11th of June, by a vote of 26 to 13, and in the Senate on the 16th of June, by a vote of 18 to 8.

After passing the homestead law and other measures of a local nature, the Legislature adjourned on the 24th of June.

As there were no general elections during the year, there was no political canvass. A convention of Republicans assembled at Tallahassee on the 27th of October, for the purpose of adopting measures for the better organization of the Republican party in Florida. Although the call for this convention was not issued by the State Republican Committee, about seventy delegates, representing fifteen counties, were present, and organized with Mr. Josiah T. Walls as president of the convention. In reference to the organization of the Republican party, it was

Resolved, That the State Executive Committee be called upon to organize the Republicans of this State, and call upon this committee to appoint county executive committees in the several counties of the State, for the purpose of a thorough organization of the Republican party.

There were loud complaints, in the convention, of outrages that had been committed in various parts of the State, in gross violation of law; and, also of the discriminations made in public conveyances and public inns against colored citizens.

In reporting upon the condition of Florida, the committee said:

Your committee beg leave to report, that they find existing, in the counties of Jackson, Hamilton, and Madison, a condition of things much to be deplored. They have reliable information of the murder of peaceable men, women, and children, and these outrages have prevailed to such an extent in the county of Jackson that, in the opinion of your committee, this convention should recommend and most earnestly urge upon the Governor that martial law be immediately proclaimed in that county, and that the expenses thus incurred in the protection of the lives of the inhabitants, and restoring order and obedience to the laws, be collected from the taxable property of the county, under the supervision of the officer commanding the troops; and also that, in all other counties where the officers of the law are threatened and defied, the same remedy should be applied; and that this convention pledge its hearty support to the Governor in carrying out these measures, and protecting all our citizens in the right of life, liberty, and property, and the pursuit of happiness.

The platform adopted by the convention was as follows:

Whereas, All permanent peace and welfare of a State must be based upon the recognition and security of the "inalienable right to life, liberty, and the pursuit of happiness" of every individual, this convention, by the sentiment of justice which it represents, and by every broad consideration of duty, would make this avowal of its principles and purposes:

1. We indorse the platform of principles enunciated by the Republican Convention at Chicago, May 20, 1868.

2. We heartily indorse the Administration of President Grant and the financial policy of his Administration, and approve of his vigorous efforts to secure the retrenchment of the expenses of the Federal Government.

3. We favor the adoption of the Fifteenth Amendment to the United States Constitution as indispensable to the lasting peace and security of the country.

4. We congratulate the country on the success of the Republican party in the late elections in the Northern States.

We most deeply deplore the alienation and divisions in the ranks of the Republican party in this State, as indicating disaster to our common cause, and we call upon all Republicans to discard selfish schemes, and the blind support of *individual men*, regardless of consideration of that unity of party action and harmony in which only consists our strength.

In view of the outrages upon human rights and human life in Jackson County, we do most earnestly urge upon the Governor the absolute necessity of declaring martial law in that county, as a protection to its citizens and a vindication of the authority of the State government.

We call the attention of the Executive to similar outrages in Hamilton, Madison, and other counties, and we recommend the same remedy in these counties.

We also urge the propriety of the citizens of such counties being taxed to bear the expenses of such necessary vindication of law and justice in those counties, and that such tax be assessed and collected under control of the military authorities in charge.

Resolutions were passed by the convention in favor of "urging upon the Legislature at its next regular session the necessity of enacting such laws as will secure, to the colored citizens as well as to the white, equal and exact privileges upon all railroads, steamboats, and other public conveyances running, plying, and doing business throughout this State, and at all public inns."

After listening to an address by Governor Reed, the convention adjourned.

The complaints of the delegates to this convention, in reference to outrages that had been committed, were not without foundation. These disorders, however, were not general throughout the State, but were mostly confined to Jackson County, which was the scene of a series of assassinations as mysteri-

ous as they were horrible, in which the victims were in several instances colored citizens. The first of these assassinations, following closely upon a serious affray that had just taken place between United States soldiers at Jacksonville and colored citizens, occurred on the 26th of February, at Marianna, in Jackson County, when Mr. W. J. Purman, a prominent Republican politician, and a member of the State Senate, and Dr. J. L. Finlayson, the Clerk of the Circuit Court, while peaceably returning to their homes, were fired upon by concealed assailants. Dr. Finlayson was killed, and Senator Purman seriously wounded. It was believed that the motives which prompted the assassination were purely political. This same locality, in the latter part of September, was the scene of other mysterious tragedies. On three different occasions, in different parts of the county, persons were fired upon by assailants concealed in the woods. During one week no less than five persons were killed and several wounded—victims of the assassin's bullet. As might have been expected, these occurrences caused much indignation on the part of the citizens, who formed themselves into organizations, and every effort was made to bring the offenders to justice.

The action of the convention above-mentioned was not without its effect, for, a month later, on the 25th of November, the Republican State Executive Committee, seeing the need of a more complete organization of the Republican party throughout the State, held a meeting at Tallahassee for the purpose of taking some action with reference to that object. At this meeting, it was decided to issue an address calling upon the Republicans of the State to meet in county conventions or mass meetings in their respective counties, "and in all the counties upon the same day, to consider the principles and policy of the Republican party, and to determine upon its present and future course of action in the State." It was the opinion of the committee that a State Convention should not be called until after the assembling of the county conventions.

The address of the committee was issued on the 28th of November, and the 20th of December was fixed upon as the day for holding the various county conventions. The address reaffirms the leading and commonly-accepted principles of the Republican party, announces the importance of united and harmonious action on the part of the Republicans, and appeals to the Republicans of the State "to unite in urging the Legislature and the Executive to the adoption of all proper measures, and to the use of all available means, to secure such an enforcement of existing laws, and such additional legislation, as will insure to all *in fact* that absolute equality of right before the law, and that entire and equal security of person and property, which, guaranteed *in theory*, is the first and paramount duty of a truly Republican party to secure." The position of the party on the important questions before the people of Florida was also defined.

In accordance with the suggestions contained in the address, conventions or mass meetings were held in the various counties on the appointed day, and much interest and enthusiasm were manifest in the proceedings. There was a general determination on the part of the people assembled to take a more active share in public affairs in the future, and to make the organization of the Republican party of Florida more thorough and effective.

The first instance of the admission of a negro to the practice of the law in Florida occurred during this year, when Harvey S. Harmon was admitted to the bar at a term of the Alachua Circuit Court, held by Judge J. H. Gross.

The condition of the various public institutions of the State is becoming more favorable every year.

The State debt, at the close of the year 1869, was represented to be $1,011,756.20, which was composed of the following items:

Bonded debt of January 1, 1869		$578,045 08
Viz.: seven per cent. bonds, 1856,	$220,000 00	
Seven per cent. bonds in school and seminary fund	262,045 08	
Seven per cent. bonds in internal improvement fund	66,000 00	
Eight per cent. bonds Constitutional Convention	30,000 00	—$578,045 08
Of this there was paid, bonds of 1867, the past year		25,000 00
Leaving of bonded debt of 1869		$553,045 08
Accumulated interest on the $220,000 seven per cent. bonds of 1856		122,500 00
Interest on Convention bonds one year, at eight per cent		2,400 00
New bonds sold		76,000 00
Amount of outstanding treasury warrants and certificates		151,825 32
Amount due on hypothecated bonds		105,985 80
Total State debt		$1,011,756 20

The payments to be made during the year 1870 are stated (upon the basis that all past dues are to be met) as follows:

Accumulated interest as above stated	$122,500 00
Warrants and certificates outstanding	151,825 32
To redeem hypothecated bonds	105,985 80
Convention bonds and interest	32,400 00
Interest on $553,045 08 bonds, at seven per cent	38,713 15
Interest on $76,000 bonds, at six per cent	4,560 00
Total floating debt	$455,984 27
Expenses for State government and contingencies	200,000 00
Repairs on Capitol, and addition to Penitentiary	50,000 00
Total	$705,984 27

To meet this amount, the total resources are estimated to be $545,100. In regard to the remaining $160,884.27, Governor Reed, in his last message to the Legislature, suggested that "the further issue of warrants and treasury certificates should cease, and a cash basis be established. If this cannot be done, a temporary issue of treasury notes for general circulation, if admissible under the Federal Constitution, may be resorted to. An issue of $100,000, or perhaps $200,000, for circulation

in the State, would be a local convenience, and a relief to the treasury; but it should be well guarded, and under such restrictions as will preclude fraud and corruption."

Much time was lost in inaugurating the new system of common schools; but, during the latter half of 1869, the people became much interested in the subject, and more than two hundred schools were organized, and about seven thousand pupils admitted. Valuable aid has been received from the Freedmen's Bureau at Washington, which has built many fine school-houses, and furnished many competent teachers.

At the close of the year there were ninety-four convicts in the Penitentiary. The Board of Public Institutions have contracted for the labor of about fifty of these for three years at a price deemed advantageous. The organization of the Penitentiary, as a military institution, is reported to be an unwise system, as it requires a heavy guard, and escape is comparatively easy; and it is recommended that cells and proper safeguards be introduced, in order to make the institution self-sustaining, and secure the confinement of criminals.

As there are many good citizens who are of opinion that the further disfranchisement of those who participated in the rebellion is unnecessary, Governor Reed has recommended to the Legislature that "Congress be asked to pass a bill relieving all citizens of this State from disability on account of participation in the rebellion, upon their filing with the Secretary of State an application for such relief."

FOLSOM, GEORGE, a diplomatist, antiquarian, and author, born in Kennebunk, Me., May 23, 1802; died in Rome, Italy, March 27, 1869. He was fitted for college at Phillips Academy, Andover, and entered Harvard College in 1818, graduating in 1822. After leaving college, he studied law in Saco, Me. On his admission to the bar, he established himself in practice in Framingham, Mass. From Framingham he removed to Worcester, where he continued in the practice of his profession, and where he soon became associated with the American Antiquarian Society, and, as chairman of the committee of publication, edited the second volume of its Transactions. About the year 1837 he removed to New York, and became a member of the New York Historical Society. He was soon elected its librarian, and took a leading part in the restoration of that society to its original activity and usefulness. He was the principal, if not the exclusive, editor, in 1841, of a volume of collections devoted to the Dutch annals of the State, upon which a very high value was placed by historical students. His next publication was a translation of the dispatches of Hernando Cortez, written in 1520 and 1526, and sent to the court of Spain, from the seat of war in Mexico, with a valuable introduction and elaborate notes. This was the first translation of these dispatches into English. Following upon this, he prepared for the press a small volume, "The Political Condition of Mexico." Mr. Folsom was elected to the Senate of New York in 1844, and thus became a member, *ex officio*, of the Court of Errors of that State, in whose discussions and decisions his early legal training was turned to the best account. In 1850 he was appointed by General Taylor *chargé d'affaires* at the Hague, where he remained until 1854, discharging the duties and administering the hospitalities of his mission to the entire satisfaction of his own Government, and of the country to which he was accredited. After travelling in Europe two years, he returned to New York and renewed his relations with the various literary and charitable associations with which he had been previously connected. He was a director of the New York Institution for the Deaf and Dumb, President of the Citizens' Savings Bank, and President of the American Ethnological Society. The state of his health, however, had incapacitated him of late for any active pursuit of literary or historical studies, and he had repeatedly sought restoration in tours to Europe. His large and valuable library was a great consolation to him in his failing health.

FRANCE, an empire in Europe. Emperor, Louis Napoleon (Napoleon III.), born April 20, 1808; chosen hereditary Emperor by the *plébiscite* of November 21 and November 22, 1852. Heir-apparent, Napoleon Eugene Louis Jean Joseph, born March 16, 1856. The area amounts to 209,428 square miles.

The new ministry, appointed on July 17, 1869, consisted of the following members: Keeper of the Seal, Minister of Justice and of Worship, J. B. M. Duvergier; Minister of Foreign Affairs, Prince de la Tour d'Auvergne-Lauraguais; Minister of the Interior, De Forcade la Roquette; Minister of Finance, Magne, Senator; Minister of the Navy and of the Colonies, Admiral Rigault de Genouilly; Minister of Public Instruction, L. O. Bourbeau, Deputy; Minister of Public Works, Gressier; Minister of Agriculture and Commerce, Le Roux, vice-president of the Corps Législatif; Minister of the Imperial House and Fine Arts, Marshal Vaillant, Senator (July, 1869); President of the Council of State, Marquis J. N. S. P. Chasseloup-Laubat, Senator; Minister of War, Le Bœuf, General of Division (August 21, 1869).

President of the Senate, Rouher, appointed 1869; first vice-president, Boudet, appointed December 23, 1865. The president and vice-president of the Legislative Body are now (since 1869) elected by the Legislative Body, and no longer, as before, appointed by the Emperor.

At the head of the French Army were, in 1869, eight marshals of France, namely: Count J. B. P. Vaillant (December 11, 1851); Count A. Baraguey d'Hilliers (August 28, 1854); Count J. L. C. A. Randon (March 18, 1856); F. C. Canrobert (March 18, 1856); Count A. M. E. Regnault de St. Jean d'Angely (June 5, 1859);

M. E. P. M. McMahon, Duke of Magenta (June 5, 1859); C. F. Forey (July 2, 1863); F. A. Bazaine (September 5, 1864). All the marshals are members of the Senate.

The army is divided into seven army corps. The district of an army corps is called an *arrondissement militaire*. The arrondissements are divided into divisions and subdivisions. The total number of divisions is 25; the number of subdivisions equals that of the departments. The headquarters of the army corps are as follows: 1. Paris; Commander-in-chief, Marshal Canrobert. 2. Lille; Commander-in-chief, General of Division, De Ladmirault, Senator. 3. Nancy; Commander-in-chief, Marshal Bazaine. 4. Lyons; General of Division, Cousin Montauban, Count de Palikao. 5. Tours; Commander-in-chief, Marshal Count Baraguey d'Hilliers. 6. Toulouse; Commander-in-chief —vacant. 7. Algiers; Commander-in-chief, Marshal McMahon, Duke of Magenta.

Minister of the United States in France, E. B. Washburne, appointed May 23, 1869; minister of France in the United States, J. Berthemy, appointed December 5, 1866.

The population of France, according to the census of 1866, was (exclusive of 125,000 soldiers stationed outside of France) 38,067,064, of which 11,595,348 (or 30.5 per cent.) lived in towns, and 26,471,716 (or 69.5 per cent.) in the country. In the following departments more than 70 per cent. of the total populations lived in the towns: Seine (98.9), Loire-inférieure (72.4), Boucher-du-Rhône (85.7), Rhône (70.4); while, on the other hand, less than 20 per cent. inhabited towns in the following departments: Oise (19.4), Meuse (17.9), Haute-Marne (16.9), Haute-Saône (19.6), Savoie (18.4), Ozère (17.2), Hautes-Alpes (15.1), Dordogne (19.7), Hautes-Pyrenées (18.7).

The religious statistics of France, in 1866 (inclusive of the military), are given in the official *Statistique de la France*, as follows:

	Population.	Per ct.	Algeria.
Catholics	37,107,212	97.48	211,195
Protestants			
Reformed Church... 515,759			
Confess. of Augsburg. 286,506	846,619	2.23	5,022
Other Prot. denom... 44,354			
Israelites	89,040	0.23	35,737
Other non-Christian sects	1,400	0.06	17,232
Religion unknown	22,786		
Mohammedans	.....	....	2,688,746

Forty-eight of the 89 departments have a Protestant population of less than 2,000. The largest Protestant population is in the departments—Gard, 123,179 (35.78 per cent.); Bas Rhin, 181,213 (31.25 per cent.), and Seine, 46,591 (3.20 per cent.).

As regards nationality, the *Statistique de la France* numbers 37,412,028 Frenchmen (98.33 per cent.) and 635,495 resident foreigners (1.67 per cent.); 19,541 remaining unaccounted for. Among the foreigners were 275,888 Belgians, 106,606 Germans, 99,624 Italians, 42,270 Swiss, 32,550 Spaniards, 29,856 Englishmen. The difference of language among the natives of France has never been the subject of an official census. It is estimated that about 1,200,000 of the population (Alsace and Lorraine) speak German as their native tongue, 200,000 Flemish, 1,800,000 Walloon, 1,100,000 Breton.

The population of the colonial possessions of France was, in 1868, reported as follows:

ASIA.—India—Pondicherry, Karikal, Mahe, Yanaon, Chandernagor (1866)	253,171
Cochin China—the three old provinces.	502,116
" the three new provinces (Vinhilong, Chaudoc, and Hatien)	477,000
Possessions in Asia	1,232,287
AFRICA.—Senegambia	607,398
Gold Coast	133
Gaboon	186,000
Island of Réunion (1866)	208,336
Islands of Mayotti and Mossi-Be (1865).	20,717
Island of St. Marie (1865)	6,110
Possessions in Africa exclusive of Algeria	1,028,694
OCEANICA.—New Caledonia	29,000
Loyalty Islands	15,000
Marquesas Islands	10,000
Possessions in Oceanica	54,000
AMERICA.—St. Pierre and Miquelon (1866).	2,924
Martinique (1866)	154,358
Gaudaloupe and dependencies (1866)	151,741
Guiana (1866)	25,174
Possessions in America	334,697
Total of French colonies	2,649,678

Under the protectorate of France are the kingdoms of Cambodia (1,000,000 inhabitants); Porto Novo, on the Gold Coast in Africa; Tahiti, Gambier, and other islands in Oceanica, together with a population of 1,043,897. The aggregate population of colonies and countries under the protectorate amounts to 3,693,575.

In the "Definite Budget for 1869" (exclusive of the "Special Budget") the revenue appears as 1,755,843,203 francs; expenditures, 1,751,241,931 francs; surplus, 4,601,272 francs. The budget for 1870, as voted by the Senate and Legislative Body, is as follows: Regular receipts, 1,738,467,393; specie budget, 280,298,910; extraordinary budget, 124,841,311; total receipts, 2,056,022,969; total of expenditures, 2,054,588,469; surplus, 1,434,500. The public debt, in 1869, amounted to 12,923,718,073 francs.

The army,* according to the new law of February 1, 1868, consists of the active army and the reserve, each numbering 400,000 men. A "Garde Nationale Mobile," which will number about 550,000, was to coöperate for the defence of fortresses, coasts, and frontiers. The National Guard has a military organization, and is placed under the Minister of War. It comprises 250 battalions, having each eight companies of 2,000 men, and 125 batteries of 200 men. Together, the active army, the reserve, and the National Guard, number 1,350,000 men.

* The composition of the active army is given in the AMERICAN ANNUAL CYCLOPÆDIA for 1868.

The fleet on January 1, 1869, was composed as follows:

VESSELS.	AFLOAT.		IN COURSE OF CONSTRUCTION.	
	Number.	Guns.	Number.	Guns.
Screw-steamers—iron-clad..	55	1,082	8	68
" " non-iron-clad..	233	2,618	23	144
Wheel-steamers	51	116	.....	.....
Sailing-vessels	100	914	.....	.....
Total	189	4,680	31	212

At the head of the marine force, which altogether consisted, in 1869, of 72,446 men, there were two admirals, C. Rigauld de Genouilly (January, 1864); F. T. Trehouart (February, 1869); 16 active vice-admirals (besides 10 in reserve); 30 active counter-admirals (and 19 in reserve). The number of marine and colonial troops amounted to 28,882.

The special commerce* of France with America and some European countries was, in 1867, as follows (value expressed in francs):

COUNTRIES.	Imports.	Exports.
AMERICA—		
United States	140,990,000	156,800,000
Mexico and Central America	4,000,000	12,100,000
Hayti	22,900,000	4,900,000
Spanish Colonies	31,800,000	18,100,000
Brazil	46,600,000	64,400,000
Argentine Republic and Uruguay	129,900,000	111,900,000
Chili	14,400,000	30,500,000
Peru and Ecuador	45,600,000	25,500,000
U. S. of Colombia and Venezuela	16,500,000	23,400,000
Other American States	4,300,000	9,700,000
Total America	456,600,000	456,100,000
EUROPE—		
Great Britain	551,800,000	896,900,000
Belgium	380,900,000	255,000,000
Zollverein	257,600,000	212,900,000
Switzerland	106,900,000	232,900,000
Italy	318,700,000	179,700,000
Turkey	135,500,000	56,100,000
Spain	90,000,000	103,300,000
Total Europe	2,176,500,000	2,110,800,000
AFRICA	91,800,000	54,900,000
ASIA	129,100,000	28,000,000
OCEANICA	3,000,000	4,600,000
ALGERIA, and other Colonies	169,500,000	177,000,000
Total	3,026,500,000	2,825,900,000

The following is a summary of the movement of commerce from 1858 to 1867 (value expressed in millions of francs):

YEARS.	SPECIAL COMMERCE.		SPECIE AND PRECIOUS METALS.	
	Imports.	Exports.	Imports.	Exp'ts.
1867.	3,026.5	2,825.9	849	253
1866.	2,793.5	3,180.6	1,065	554
Annual average, 1863-'67.	2,663.3	2,983.3	768	496
1858-'62.	1,948.3	2,119.9	643	444
1853-'57.	1,588.9	1,654.4	553	427

* By special commerce those imports are understood which are intended for consumption in France, and those exports which are produced in France.

The movement of shipping in 1867 was as follows:

FLAG.	ARRIVALS.		CLEARANCES.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
French	11,607	2,266,418	68,470	1,880,005
Foreign	20,989	4,080,288	13,416	2,265,893
Total	32,596	6,366,706	21,890	4,125,898

The merchant navy, on December 31, 1867, comprised:

Sailing-vessels	15,189	915,831
Steamers	420	132,158
Total	15,603	1,048,679
Coasting-vessels	8,892	67,077

The railroads of France are private property, which, after the expiration of their term of concession, will become the property of the state, which grants to the companies aid for the construction of the roads. On the 1st of January, 1869, the total length of railroads which were in operation was 2,188.5 geographical miles (1 geographical mile = 1.153 English miles); besides permission had been granted for the construction of 794.3 miles. The postal statistics, in 1868, were as follow:

	All France.	Paris alone.
Private letters	354,185,000	88,687,830
Official correspondence	121,000,000	9,543,868
Newspapers and printed matter	230,552,000	228,098,004
Money letters	5,230,000	891,753

The total length of telegraphic lines, in 1868, was 5,137.7 geographical miles.

A new legislative session was opened by the Emperor on the 18th of January.

Messieurs les Sénateurs, Messieurs les Députés: The speech which I address to you every year at the opening of the session is the sincere expression of the thoughts which guide my conduct. To explain frankly to the nation, before the great bodies of the state, the progress of the Government, is the duty of the responsible chief of a free country. The task which we have undertaken together is arduous. It is not, indeed, without difficulty that, on a soil shaken by so many revolutions, a Government is founded sufficiently impressed with the wants of the age to adopt all the benefits of liberty, and sufficiently strong to bear even its excesses. The two laws which you passed during the last session, and the object of which was the development of the principle of free discussion, have produced two opposite effects, which it may be useful to point out. On the one hand, the press and public meetings have created in a certain quarter a factious agitation, and have caused the reappearance of ideas and passions which were believed to be extinguished; but, on the other hand, the nation, remaining insensible to the most violent incitement, and relying upon my firmness for the maintenance of order, has not felt its faith in the future shaken.

Remarkable coincidence! The more adventurous and subversive minds sought to disturb public tranquillity, so much the more profound became the peace of the country; commercial transactions reassumed a fruitful activity, the public revenues increased considerably, the public interests were reassured, and the greater part of the recent elections gave a new support to my Government. The army

law and the subsidies granted by your patriotism have contributed to strengthen the confidence of the country, and in the just consciousness of its pride it experienced a real satisfaction the moment it learned that it was in a position to confront every eventuality. The land and sea forces, strongly constituted, are upon a peace footing. The effective strength of the active army does not exceed that which existed under former systems, but our armament rendered perfect, our arsenals and our magazines filled, our reserves well trained, the National Garde Mobile in course of organization, our fleet reconstructed, and our strongholds in good condition, give to our power a development which was indispensable.

The constant object of my efforts is attained, and the military resources of France are henceforward on a level with its destiny in the world. In this position we can loudly proclaim our desire to maintain peace. There is no weakness in our saying so when we are ready to defend the honor and the independence of our country.

Our relations with foreign powers are most friendly. The revolution which has broken out beyond the Pyrenees has not altered our good relations with Spain, and the Conference, to stifle a threatening conflict in the East, is a great act of which we should appreciate the importance. This Conference approaches its termination, and all the plenipotentiaries have agreed upon the principles calculated to bring about a reconciliation between Greece and Turkey. If, therefore, as I firmly hope, nothing shall arise to disturb general harmony, it will be our fortune to realize many projected improvements, and we shall endeavor to solve all the practical questions raised by the agricultural investigations.

Public works have been sufficiently endowed; parochial roads are being constructed. Education of all classes continues to be successfully developed, and, thanks to the periodical increase of the revenue, we shall soon be able to devote all our solicitude to the diminution of public burdens. The moment is drawing nigh when, for the third time since the establishment of the empire, the Legislative Body will be constituted afresh by a general election, and each time it will have attained the limit of its legal duration—a thing hitherto unknown. This regularity is due to the harmony which has always existed between us, and to the confidence which I feel in the sincere exercise of universal suffrage. The popular masses are stanch in their faith as in their affections, and, if noble passions are able to rouse them, sophism and calumny scarce ruffle the surface. Sustained by your approbation and your concurrence, I am thoroughly resolved to persevere in the course which I have laid down—that is to say, to adopt all real progress, but also to maintain, without discussion, the essential bases of the Constitution which the national vote has placed under shelter from all attacks. 'A good tree is known by the fruits it bears,' says the Gospel.

Well, if we cast a glance at the past, which is the Government that has given to France seventeen years of ever-increasing quiet and prosperity? Certainly, every government is liable to error, and Fortune does not smile upon all enterprises; but that which constitutes my strength is the fact that the nation does not ignore that for twenty years I have not had a single thought, I have not done a single deed, of which the motive was other than the interest and greatness of France. Nor is it ignorant of the circumstance that I was the first to desire a rigorous control over the conduct of affairs; that I with this object increased the powers of the deliberative Assemblies, persuaded that the real support of a government is to be found in the independence and patriotism of the great bodies of the state. This session will add fresh services to those you have already rendered to the country. Soon the nation, called together in its *comitia*, will sanction the policy which we have pursued. It will once more proclaim by its votes that it does not desire revolution, but wishes to rest the destinies of France upon the intimate alliance of power with liberty.

The session of the Legislative Body was terminated on April 26th by President Schneider, who thanked the Chamber for its sympathetic coöperation, and praised its enlightened and patriotic devotion. He added:

The legislation of this session will make its mark in history. We have advanced with a firm step in the liberal development of our institutions, asserting our control without impeding the progress of legislation, and constantly seconding, at the same time, the initiative of the sovereign in the development of our public liberties under a power which gives effectual protection to order and security. In concert with the sovereign we have realized a solid and durable progress favorable to the moral and material prosperity of France. I hope that the next Chamber will manifest similar sentiments of duty toward the country, and of respect and gratitude toward the Emperor.

Among the changes in the administration which were effected in the beginning of the year, was the abolition of the *livrets* or service-books of working-men. The Emperor, on the 24th of February, delivered on this subject the following address in the Council of State:

GENTLEMEN: I have felt anxious to preside this day over the Council of State, in order to explain to you in what order of ideas I had placed myself in inviting the ministers to submit to you a bill relative to the suppression of workmen's livrets.

Society in our time, all must admit, comprises many opposite elements. Do we not see, in fact, on one side, certain legitimate aspirations and just desires of improvement, and on the other subversive theories and blamable cupidities? The duty of the Government is to resolutely satisfy the first, and to firmly repudiate the second.

When the present state of the greatest number is compared with what it was in the last century, there can be only congratulation on the progress obtained, on the abuses destroyed, and on the improvement in public manners. Nevertheless, if the social plagues of the most flourishing populations be probed, there will be discovered, under the appearances of prosperity, many unmerited grievances which call for the sympathies of all generous hearts, and many unsolved problems which solicit the coöperation of all intelligent minds.

It is with such feelings that laws have been elaborated by you and adopted by the Legislative Body, some entirely philanthropical, like those of public assistance, mutual aid and insurance in case of accident or death; others authorizing the workmen to unite their savings, to oppose the solidarity of wages to that of capital, allowing them at the same time to discuss their own interests at public meetings, and, in fine, accrediting their testimony in the courts of justice.

The suppression of the livrets—an act demanded above all as a moral satisfaction in order to relieve the workmen from vexatious formalities—will complete the series of measures which place such persons within the sphere of the common right, and exalt them in their own estimation.

I do not suppose that in following that policy I shall dissipate all prejudices, disarm all animosities, or augment my own popularity. But of one thing I am well convinced—that I shall derive from it a fresh energy for resisting evil passions.

When all useful ameliorations have been accepted, when every thing that is right and just has been done, order is maintained with the more authority, that

force, in such a case, finds its support in the fact of reason and conscience being fully satisfied.

The text of the bill which was approved of by the Council of State, on the 23d of March, was as follows:

ARTICLE 1. The law of June 22, 1854, and all other provisions relative to workmen's service-books, are and remain abrogated. The contract between the directors of manufacturing establishments and their men is subjected to the enactments of the common law, and the terms may be stated in a book for the purpose. A regulation of the public administration will determine the conditions on which that document may serve as a passport.

ART. 2. However, the provisions of the law of March 18, 1806, relative to the service-books acquired by the Lyons trade, will continue to be executed, as well as the act of March 22, 1841, on the labor of children in factories, and that of March 7, 1850, on the account-books for weaving and spinning.

The proposed transfer of a Belgian railway to the (French) Eastern Company led, in consequence of the prompt opposition of the Belgian Chambers (*see* BELGIUM), to unpleasant relations with Belgium, which, for a time, assumed a threatening character. Belgium showed itself willing to facilitate in every possible manner a closer commercial intercourse between the two countries, but remained inflexibly firm in refusing to transfer to a French company rights which appeared to be fraught with dangers to the independence of the country. In April, the Belgian minister, Frère-Orban, went to Paris, to confer with the French ministers, and succeeded in effecting a peaceable settlement of the controversy. On the 27th of April a protocol was signed, instituting a joint commission to draw up the basis of new treaties between the French and Belgian railways. This commission finished its work on the 9th of July, by declaring: "The commissioners convinced that the aim to be attained was to substitute for the treaties drawn by the Eastern Company, the Grand Luxembourg Company, and the company for the working of the Dutch and Liegeois Luxembourg Railways, new combinations to facilitate the development of the commercial relations between Belgium, Holland, and France; moreover, inspiring themselves with the feeling of conciliation that dictated the protocol of the 27th of April last, they have carefully discussed and admitted, by a common accord, the dispositions which, in their opinion, offered mutual advantages to the economical interests of both countries. Thus those dispositions stipulate the organization of transit direct services between the Antwerp port and Basel on the one side, and between the Dutch frontier and Basel on the other. The last service can, with the Dutch Government's sanction, be extended to Rotterdam and Utrecht. The commissioners have formulated in the two documents stipulations which lay down the bases of the treaties to be intervened between the Eastern Company, with the administration of the railways belonging to the Belgian Government on the one side, and with the company for the working of Dutch railways and Liegeois-Limburg line on the other."

A new election of the Legislative Body took place on the 23d and 27th of May, amid great excitement, which led to tumults in Angers, Lille, Amiens, Toulouse, St. Etienne, Dijon, Calais, Toulon, and other places. The opposition again carried the large cities, as Paris, Lyons, Marseilles, and others, though the Government, on the whole, obtained a complete victory. The opposition gained, however, many new members; as, in addition to the former leaders of the democratic opposition, such as Simon, Favre, Thiers, a number of ultra-radicals—as Gambetta, a young lawyer of great promise; Bancel, who, in 1851, as a defender of the republic against Louis Napoleon, had been exiled; Raspail, a lifelong leader in all republican conspiracies—were elected. Henry Rochefort, the editor of the *Lanterne*, and later of the *Marseillaise*, was defeated at the supplementary elections, held in those districts, in which no candidate has obtained an absolute majority; but when, in November, new elections were held in a few districts, in consequence of some of the members having been elected in two places, Rochefort was elected in one of the Paris districts, and with him Emmanuel Arago, and Cremieux. Emile Ollivier, who had forfeited the confidence of the Liberal party, was defeated in Paris, but elected in a country district. A semi-official paper, *La France*, gave the following statistics of the votes cast at the election of May: Total number of votes registered, 10,315,523; actual votes, 8,098,566; of which were cast: 1. For the official candidates of the Government, 4,455,287; 2. For the third party and other adherents of the imperial dynasty who were not official candidates, 1,124,598: 3. For the candidates of the monarchical opposition, such as Orleanists, Catholic party, Legitimists, etc., 786,020; 4. For Democratic candidates, but who are not Radicals, 1,507,648; 5. For Radical Democrats, 153,263; 6. Scattered votes, 71,742. The votes of the first and second classes, representing the combined strength of the adherents of the Napoleonic dynasty, together number 5,579,885; those of the third, fourth, and fifth classes, representing the combined strength of the opponents of imperialism, number 2,446,931. As regards, however, the principle of "personal" in opposition to "constitutional" government which had hitherto been the guide of the imperial administration, the votes of the second class were no less in opposition to the former policy of Napoleon than those of the three following classes; and in this sense the aggregate vote of the opposition reached the large figure of 3,648,271, against 4,455,287 votes cast for the imperial policy.

This partial success of the opposition at the elections in May, and at the first supplementary elections in June, called forth very excited and

riotous demonstrations in Paris and in other cities. On the 7th and 8th of June the crowds at various central points, especially in the Boulevard St. Michel, in the Latin quarter, at the Hôtel de Ville, and in the Boulevard Montmartre, displayed their feelings in *vivas* for Rochefort, the republic, and cries of "Down with the police!" but they were easily dispersed by the sergents de ville, who were out in great force, without any serious injury to the populace. On the 9th of June the crowds assembled again in increased strength at these centres, and a decidedly revolutionary tendency was displayed. Tens of thousands of people had assembled in the Boulevard Montmartre at an early hour, and speedily interrupted the traffic in that main thoroughfare of Paris. The police were again out in great force, powerfully supported by regiments of the Gardes de Paris, massed in the side streets ready for service, and aided by companies of the mounted police. At midnight, the crowd having become denser and bolder, and the sound of the "Marseillaise" chanted by hundreds of voices filling the air, mingled with cries of "Down with the Emperor!" "To the Tuileries!" and other seditious cries, the Gardes de Paris made a charge and dispersed the crowd, not before it had smashed all the lamps on the streets, sacked several *cafés* and crushed in all the glass in the various *kiosks* on the boulevard, besides doing a great deal of bodily damage to the police, whom they showered with stones, iron chains, and any kind of missiles that they could lay their hands on. In this affair several police were killed and many of the mob, and an immense number of arrests were made. A like disturbance occurred near the Bastile, where the mob was defiant and bellicose. The troops were compelled to use their bayonets in order to clear the streets, and several of them were seriously wounded by gunshots and stones. In the Boulevard St. Michel the mounted police charged the crowd, and, after great efforts, dispersed it. The most serious disturbance was caused by a body of workmen wearing blouses, who marched from Bellville to the Boulevard du Temple armed with iron rails wrested from the fence of the market, with which they battered down every lamp post on the entire route, destroyed all the kiosks, and sacked a number of cafés and stores, besides overturning all the omnibuses and carriages that they came across. At one point they attempted to raise a barricade with a couple of omnibuses which they had overturned, but the mounted patrol were on the spot quick enough to prevent an act that might have been very serious in its results. This band got down as far as the Boulevard du Temple, leaving its path strewn with wrecks of carriages, cafés, lamps, kiosks, signs, and every thing that could be reached by the mob, when the cavalry charged it and put it to flight. The loss of life was somewhat serious, but it is difficult to obtain the figures. Hundreds of arrests were made, and by two o'clock the city had resumed its wonted quiet and tranquillity. On the 10th of June there was another demonstration in the Boulevard Montmartre, which was still more serious than any preceding one. At half-past eight o'clock the Boulevard was literally crammed with people, some singing the "Marseillaise" and uttering seditious cries, and all more or less excited. Before nine o'clock all the omnibuses and carriages were turned off the boulevard to make their way as best they could by the side streets. The police were soon on the ground, more than 2,000 strong. Several companies of Gardes de Paris were also brought up, while the mounted police were stationed in the side streets in full strength. The police attempted to keep the street open by pushing through strong bodies of sergents de ville *en masse*, but they only infuriated the crowd, and made matters still worse. The demonstrative portions of the crowd were made up of blouses and black coats, about equally divided. They were exceedingly noisy. They sung the "Marseillaise," hurrahed for Rochefort, cried "Down with Napoleon!" and shouted all sorts of seditious calls. The cafés and stores were closed long before ten o'clock, and the aspect of affairs was accordingly gloomy. About midnight there was a tremendous charge of troops, on foot and mounted, and the crowd was slowly dispersed, not without dashing off into side streets and wreaking their vengeance upon lamp-posts, kiosks, and every breakable window. The damage to public and private property was very considerable, and will long be manifest. All the theatres were emptied at an early hour by the revolutionary cries of the mob, although strong detachments of soldiers were stationed at every entrance. Until two o'clock of the morning of the 11th of June the mob was at its work of destruction, and the police were engaged in making arrests. More than 1,000 persons were arrested during the night, but it did not seem to affect the spirits of the balance of the mob in the least. Several persons were killed and a great many wounded by cavalry and infantry charges. The police and soldiers suffered considerably from flying stones and gunshots, though the latter were very few. In the Faubourg St. Antoine, about the Bastile, the situation was exceedingly threatening. Large masses of people had assembled in the quarter near the Bastile. Charges of cavalry were required to disperse the crowd around the Column of July, and many were wounded in the affair, that threatened to become very serious at one time, but which passed away before the vigorous action of the authorities. In all that part of the city the excitement was intense, and many bands of workmen and roughs circulated through the streets and pillaged many shops and cafés. On the evening of the 11th new disturbances broke out, which again required the employment of cavalry. Similar tumults

took place in the cities of Nantes and Bordeaux, which had likewise to be put down by the troops. On the 16th of June there was a bloody encounter between the troops and the miners of St. Etienne. On the 24th of June, the Emperor, on visiting the camp of Chalons, made a speech to the soldiers, in which he said he was pleased to see that they had not forgotten the great cause for which they fought ten years ago. The Emperor continued as follows: "Preserve the remembrance of the battles fought by your fathers and yourselves; for our victories are the history of the progress of civilization. You will thus maintain the military spirit, which is the triumph of noble over vulgar passions; it is fidelity to the flag, devotion to country. Continue in the same course, and you will always be worthy of so great a nation."

On the 28th of June, the Legislative Body met for the "verification of powers" of the newly-elected deputies. The Minister of State, Rouher, read the following address:

Messieurs les Députés: In accordance with the Constitution, the Legislative Body is convoked within the six months following the dissolution. The longest delay for your meeting is the 26th of October, but it would have been impossible at that date to lay before you the projects of law on the finances and those concerning other affairs of state. An extraordinary session of the Legislative Body was, therefore, thought necessary. In this situation the Government of the Emperor considered it wise and politic to proceed immediately to the verification of your powers, and thus to put an end to all uncertainty as to the validity of the electoral operations in each district. In the opinion of the Government the present session has no other object. The renewal of the Legislative Body by universal suffrage is the supreme occasion for the nation to manifest its thoughts, its aspirations, and its requirements. The study of the political results of that manifestation should not be precipitate. During the ordinary session it will submit to the high consideration of the public powers the resolutions and the projects which may have appeared to it best calculated to realize the wishes of the country. In the name of the Emperor I declare the extraordinary session of the Legislative Body open.

To the surprise of the Government, a very large portion of the Legislative Body (116 members), embracing a number of stanch adherents of the dynasty, expressed a wish to be made at once acquainted with the reforms which the Government intended to introduce. The Emperor yielded to this pressure, and, on the 12th of July, the Minister of State read the following imperial message announcing the basis of the proposed reforms:

Messieurs les Députés: On the 18th of June my Government informed you that on the opening of the next ordinary session it would place before the representatives of the people the resolutions and projects which it considered capable of answering the wishes of the country.

But the Corps Législatif appears to be anxious to know immediately the reforms decided on by my Government.

I therefore think it necessary to anticipate its aspirations.

The Corps Législatif must be convinced that my firm intention is to give to its attributes the extension compatible with the fundamental basis of the constitution, and I hereby make public the determination I have decided on in council.

The Senate will be convoked as soon as possible, to examine the following questions:

1. Right of the Corps Législatif to make its own rules and elect its own committees.
2. Simplification of the mode of proposing and examining amendments.
3. That the Government be obliged to submit to Legislative approval the tariff modifications which in future may be stipulated in international treaties.
4. Voting of the budget by headings, in order to render the control of the Chamber more effective.
5. Abrogation of the constitutional enactment which at present disqualifies a deputy from becoming a minister of the crown, and fulfilling certain other public functions.
6. Extension of the right of interpellation.

My Government will also examine the questions which concern the attributes of the Senate.

The more efficacious solidarity which will establish between my Government and the Chambers the faculty of exercising at the same time the functions of minister and deputy, the presence of all the ministers in the Chamber, the examination in council of the affairs of the state, and a loyal understanding with the majority, constitute for the country all the guarantees which we in our common solicitude consider necessary.

I have already shown you several times how, for the good of the public, I am disposed to give up certain prerogatives which belong to me. The modifications which I have decided on proposing are the natural development of those which have successively been made in the institutions of the empire; they must, however, leave intact the prerogatives which the people have more explicitly confided to my care, and which are the essential conditions of a power which protects order and society ("Hear, hear," cheers, and cries of "Vive l'Empereur!").

Done at the palace of St. Cloud, this 11th day of July, 1869. NAPOLEON.

This message was followed by the dismissal of Rouher as Minister of State, and the formation of a ministry of transition from personal to parliamentary government;* but, in order to escape the threatened interpellation concerning the reform question, the Legislative Body was prorogued even before having finished the verification of the elections. A serious sickness of the Emperor, more serious than at any preceding time, which even prevented him from celebrating the centenary birthday of the first Napoleon in the camp of Chalons, spread considerable alarm. An amnesty for political offences brought back to France a number of implacable enemies of the empire, and added fuel to the flame. Amid this excitement the Senate, in which Prince Napoleon made a vigorous speech in favor of liberal changes, deliberated on the reforms which had been promised by the Emperor, and on the 8th of September it adopted a *senatus consultum* embodying them. The *senatus consultum* gives to the Emperor and the Corps Législatif the initiative in making laws. Cabinet ministers can be members of the Senate or Corps Législatif; the sittings of the Senate are to be public; each body is to make its own internal

* The names of the ministers have been given above.

regulations; the members of both Chambers have the right to address interpellations to the Government. No amendment to a law is to be adopted unless it has been previously referred to a committee, charged with the duty of examining the project and of communicating it to the Government; if the latter does not accept it, the Council of State will advise the Corps, which will then pronounce definitely on the subject. The budget is to be submitted by chapters and articles. Modifications of the tariff and postal service by international treaties are to be made obligatory only by laws enacted for that purpose.

As the regular session of the Legislative Body was not convoked by the Government within the six months following the dissolution (which time expired on the 26th of October), the idea was thrown out, and violently applauded by the radical population of the capital, that the deputies of the opposition should, on the 26th of October, proceed to the chamber of the Legislative Body, for the purpose of opening the session themselves. The deputies of the left regarded, however, such a course as injudicious, and at a meeting held on the 18th of October, at the residence of Jules Favre, agreed upon issuing the following manifesto:

To our Fellow-Citizens: We are asked from various quarters if we intend to repair to the Chamber on October 26th. We will not do so, and for the following reasons: In proceeding there we should of necessity provoke a manifestation of which no one could, in present circumstances, regulate the march and the extent. But we have no right to deliver up to chance the fate of liberty, now reviving. When a great revolution—one eminently pacific—has been commenced, when day by day its inevitable *dénouement* is more clearly perceived, there would be a great want of tact in furnishing to the Government any pretext whatever to regain strength from a riot. If the authorities trample under foot the constitutional rules which it has itself traced out, the Democracy has for the moment only one thing to do—to take note of such conduct. That constitution, which the Government thinks fit to undo with its own hands, we have been obliged to submit to, and we ought not to attempt to restore it by taking up its defence. In this situation we have resolved to wait for the actual opening of the next session. Then we shall call the Executive to account for this new insult to the nation; then we shall show, by the very experiment which has been made during the last three months, that the personal power, while pretending to give way in presence of the public reprobation, has never ceased to act and speak in the character of a master. Then we shall pursue on the ground of universal suffrage and national sovereignty—the only one that can henceforth subsist—the work of democratic and radical reform, the flag of which has been placed by the people in our hands.

The imperial decree, making, in execution of the *senatus consultum*, certain modifications in the relations between the Government and the Senate and the Legislative Body, was published on the 8th of November, and is as follows:

ARTICLE 1. The bills (*senatus consulta*) and regulations of public administration, prepared by the different ministerial departments, are submitted to the Emperor, who delivers them, or has them forwarded by the minister whom they concern, to the minister presiding over the Council of State.

ART. 2. The orders of the day for the sittings of the Council of State are sent beforehand to the different ministers, and the minister presiding over the Council of State sees that the head of each department is always informed in good time of every thing relating to the examination or discussions of bills, *senatus consulta*, or regulations of public administration, sent for the consideration of the council.

ART. 3. The bills, or *senatus consulta*, after being examined by the Council of State, in conformity with article fifty of the constitution, are delivered to the Emperor by the minister presiding over that body, and who joins the names of the Government Commissioners, whom he proposes to support them, in the discussion before the Legislative body and Senate.

ART. 4. A decree of the Emperor orders the presentation of the bill to the Legislative Body, of the *senatus consultum* to the Senate, and appoints the Councillors of State or Government Commissioners charged to defend them conjointly with the ministers, and the vice-presidents and presidents of section in the Council of State.

ART. 5. This decree is countersigned by the minister presiding over the Council of State, and the minister to whose department the measure refers. A copy of the decree is transmitted by that minister, with the bill, or *senatus consultum*, to the Legislative Body or Senate.

ART. 6. In all deliberations of the Senate or Legislative Body, the Government is represented by the ministers, the vice-president or presidents of section in the Council of State, or by Councillors of State and Government Commissioners delegated by special decrees.

RELATIONS OF THE GOVERNMENT WITH THE SENATE.

ART. 7. The bills adopted by the Legislative body are, with the decrees which name the Councillors of State and the Government Commissioners charged to support them in the discussion, transmitted to the president of the Senate by the minister whose department the measure concerns.

ART. 8. The result of the deliberations in the Senate is transmitted by the president of that body to the minister to whose attributions the law belongs.

ART. 9. The *senatus consulta* proposed by the Government are carried to the Senate by the minister appointed for the purpose by the Emperor.

ART. 10. *Senatus consulta* created by the initiative of the Senate, as well as proposals for modifications of the constitution made in conformity with article thirty of the fundamental law, are, immediately after being deposited, transmitted by the president of the Senate to the Minister of Justice.

ART. 11. The result of the deliberations on *senatus consulta* and proposed modifications of the constitution is communicated to the Emperor by the president of the Senate.

ART. 12. Any proposal of a Senator, with the object, within the terms of article thirty of the constitution, of presenting to the Emperor a report laying down the bases of a bill, is transmitted by the president of the Senate to the competent minister. The draft of the report by the committee, and subsequently the report itself, if adopted, are also sent to him by the president of the Senate.

ART. 13. When an act is deferred by the Government to the Senate as unconstitutional, the decree which submits the question to that body, and which appoints the Councillors of State to take part in the discussion, is transmitted by the Minister of Justice to the president of the Senate.

ART. 14. If the unconstitutional nature of the act is denounced by a petition, the president of the Senate informs the minister whose department it concerns. In all cases the decision of the Senate is transmitted by the president to that minister, as well as to the Minister of Justice.

ART. 15. The register of petitions is always communicated beforehand to the ministers. If the decision is taken to refer to a petition to the minister whom it concerns, a copy of it and an extract of the deliberations are, by order of the president of the Senate, transmitted to that minister and to the Minister of Justice.

ART. 16. At the commencement of each session the report to the Emperor on the results of the petitions sent by the Senate to the different ministers, during the preceding session, is distributed to all the members of the Senate.

RELATIONS OF THE GOVERNMENT WITH THE LEGISLATIVE BODY.

ART. 17. The bills presented by the Government are, with the decrees appointing the Councillors of State and Government Commissioners, charged to support them in the discussion, communicated and read to the Legislative Body by the ministers designated in the decree of presentation, or are transmitted to the president of the Legislative Body, who reads them in a public sitting.

ART. 18. The amendments on which the Council of State is called to give its opinion, in conformity with article eight of the *senatus consultum* of September 8, 1869, are transmitted directly by the president of the Legislative Body to the minister presiding over the Council of State, who informs the minister whose department they concern. The Council of State is immediately convoked, and its opinion is addressed to the president of the Legislative Body, and to the competent minister by the minister presiding over the Council of State.

ART. 19. Every bill proposed by a deputy is immediately transmitted by the president of the Legislative Body to the minister whose department it concerns, and to the Minister of Justice.

ART. 20. The minutes of the bills adopted by the Legislative Body are signed by the president and secretaries and deposited in the archives. A copy, bearing the same signatures, is communicated to the Emperor by the president.

ART. 21. The president of the Legislative Body transmits to the Minister of the Interior an account of every deliberation by which the Legislative Body invalidates an election. Resignations by deputies are also addressed by the president of the Legislative body to the Minister of the Interior.

RELATIONS BETWEEN THE SENATE AND THE LEGISLATIVE BODY.

ART. 22. The bills introduced by the initiative of the Legislative Body are transmitted direct by the President to the president of the Senate. A copy is sent by the president of the Legislative Body to the minister whom the measure concerns.

ART. 23. When the Senate, by the terms of article five, of the *senatus consultum* of the 8th of September, 1869, decides that the law shall be sent back to the Legislative body for a fresh deliberation, the president of the Senate transmits direct to the president of the Legislative Body the law with indications provided for by the said article. A copy is sent by the president of the Senate to the minister to whose department the measure relates. In case the Senate should not send it to the Legislative Body for reconsideration, the president communicates to the president of the latter assembly the result of the deliberations.

ART. 24. Our ministers are charged, each in what concerns him, with the execution of the present decree.

Given at our palace of Compiègne this 8th day of November, 1869. NAPOLEON.

Countersigned, DUVERGIER, Minister of Justice.

On the 20th of November, the Emperor Napoleon in person opened the legislative session by delivering the following speech from the throne:

Messieurs les Sénateurs, Messieurs les Députés: It is not easy to establish in France the regular and peaceful exercise of liberty. Some months back society seemed to be menaced by subversive passions, and liberty to have been compromised by excesses committed by the public journals and at public meetings. Every one was asking how far the Government would push its policy of long-suffering, but already the good sense of the public reacts against culpable exaggerations. Impotent attacks have only had the effect of showing the solidity of the edifice founded by universal suffrage; nevertheless, the uncertainty and disquietude which exist in the minds of the people cannot last, and the situation requires more than ever frankness and decision. We must speak without any circumlocution, and declare loudly what is the will of the country.

France desires liberty, but liberty united with order. For order I will answer; aid me, gentlemen to save liberty, and, to attain this object, let us keep at an equal distance from reaction and revolutionary theories. Between those who pretend to preserve every thing without change, and those who aspire to overthrow every thing, there is a glorious ground to take up. When I proposed the *senatus consultum* of last September as the logical sequence of previous reforms, and of the declaration made in my name by the Minister of State on the 28th of June, I meant resolutely to inaugurate a new era of conciliation and progress. In seconding me in this path, you have been unwilling to be renegades to the past, disarm power, or overthrow the empire.

The measures which the ministers will submit for your approbation all bear a sincerely liberal character. If you adopt them, the following improvements will be realized: The mayors will be selected from among the municipal councils, excepting in special cases, for which provision will be made by the proposed enactment. At Lyons as well as in the suburban communes of Paris, the formation of these councils will be committed to universal suffrage. In Paris itself, where the interests of the city are linked with those of the whole of France, the municipal council will be elected by the Legislative Body, which is already invested with the right of settling the extraordinary budget of the capital. Cantonal councils will be instituted, principally with the object of uniting the communal power, and of directing its employment. Fresh prerogatives will be granted to the general councils; even the colonies will participate in this movement of decentralization; and, lastly, a bill, enlarging the circle in which universal suffrage works, will determine the public functions compatible with a seat in the Chamber. To these administrative and political reforms will be added legislative measures of more immediate interest for the people, viz., the more rapid development of gratuitous primary instruction; the decreasing of legal expenses; the removal of the demidecime war-tax, which weighs heavily upon the registration duty in matters of succession; the affording greater facilities of access to the saving banks, and the placing them within the reach of the inhabitants of rural districts through the aid of treasury agents; a more humane regulation of infant labor in manufactories, and an increase of the salaries of subordinate officials.

Other important questions, no solution of which is as yet ready, are being considered. The agricultural inquiry is concluded, and useful propositions will emanate from it so soon as the superior commission shall have given in its report. Another inquiry has been commenced in reference to the *octrois*. A customs bill will be submitted to you, reproducing those general tariffs to which no serious objection has been taken. As regards those tariffs which have evoked loud complaint from certain branches of industry, the Government will not bring forward any scheme until it has surrounded itself with the enlightenment of all the sources of information calculated to assist your deliberations. The statement of the situation of the empire presents satisfactory results. Commerce is not at a stand-still, and the indirect reve-

nues, whose national increase is a sign of prosperity and confidence, have produced, up to the present, 30,000,000 francs more than last year. The current budgets show notable surplusages, and the budget for 1871 will allow of our undertaking to effect an improvement in several branches of the public service, and to make suitable grants for public works. But it is not enough to propose reform, to introduce savings in the finances, and to administer affairs in an effective manner; it is also necessary that, by a clear and firm attitude, the public bodies, in accordance with the Government, should show that the more we widen the paths of liberty the more we are determined to preserve the interests of society and the principles of the constitution intact and superior to all acts of violence. It is the duty and within the power of the Government, which is the legitimate expression of the national will, to cause that will to be respected—for it has right and might upon its side.

From home affairs, if I gaze beyond our frontier I congratulate myself on seeing foreign powers maintaining with us friendly relations. Sovereigns and nations desire peace, and they are engaged in advancing civilization. Whatever reproaches may be made against our century, we have, certainly, many reasons to be proud of it. The New World suppresses slavery, Russia liberates her serfs, England does justice to Ireland, the littoral countries of the Mediterranean seem to be once more calling to mind their ancient splendor, and from the assembled Catholic bishops at Rome we need only expect a work of wisdom and conciliation.

The progress of science brings nations together. While America joins the Pacific with the Atlantic Ocean by a railroad one thousand leagues in length, and in all parts capitalists and intellects agree to unite by electric communication the most distant countries of the globe, France and Italy are about to clasp hands through the tunnel of the Alps, and the waters of the Mediterranean and the Red Sea mingle already by means of the Suez Canal. All Europe was represented in Egypt at the inauguration of this gigantic enterprise, and if the Empress is not here to-day at the opening of the Chamber, it is because I have been desirous that by her presence in a country, where our arms were once rendered illustrious, she might testify to the sympathy of France toward a work due to the perseverance and genius of a Frenchman.

You are about to resume the extraordinary session interrupted by the presentation of the *senatus consultum*. After the verification of the elections the ordinary session will immediately commence. The great bodies of the state, closely united, will come to an understanding to apply faithfully the latest modification made in the constitution.

The more direct participation of the country in its own affairs will constitute for the empire a fresh source of strength, and the Representative Assemblies will have henceforth a larger share of responsibility. Let them use it for the benefit of the greatness and prosperity of the nation. May the various shades of opinion disappear when required by the general interest, and let the Chambers prove equally by their enlightenment and their patriotism that France, without again falling into deplorable excesses, is capable of supporting those free institutions which are the honor of civilized countries.

As it was known that the Emperor regarded it as necessary to relinquish the principle of personal government, and to introduce, gradually, that of constitutional government, there was, of course, a considerable modification in the position of the several political parties in the Legislative Body. Even the most fanatical adherents of the empire, the "Extreme Right," with Baron Jerome David at its head, and which now number about thirty members, could not, in view of the imperial declarations, defend the whole of the personal-government theory; but the members of this section, as well as those of the "Right" having, as chief, M. de Benoist, and numbering about twenty members, appeared to regard the imminence of the radical change with considerable distrust, and showed a disposition, not to support a ministry which would make too great concessions to liberalism. The chief support to the new policy was expected from the "Right Centre," numbering about 120 members, of whom M. Emile Ollivier was the most prominent, and who defined their position by the following programme:

Considering that the duties of the representatives of the nation is to set forth the wishes of public opinion; considering that in the first rank among such aspirations is the sincere application of the parliamentary system, which is the necessary form of the government of the country by itself under a monarchy; considering that such a *régime* implies a free press and untrammelled elections, a homogeneous and responsible ministry, and a compact majority around principles clearly marked out and agreed to; the undersigned deputies, without intending to reject new reforms when the necessity of them is demonstrated, declare that for the present they are in accord to require:

Abroad, peace. At home, the abrogation of the law of public safety. Interdiction to receive large salaries for more than one employment. The examination of a system of decentralization which may constitute on the largest possible basis the autonomy of the commune, canton, and departments, and the obligatory nomination of the mayor from among the members of the Municipal Council. An electoral reform effected before renewal of the Legislative Body, having for its object, particularly to determine, by a law, the number and extent of the circumscriptions, and to protect freedom of election. The modification of article seventy-five of the constitution of the year eight, in electoral matters, or when personal liberty is concerned, or an illegal violation of a private dwelling has been made. The application of the jury to political offences committed by the press. The suppression of the stamp-duty on newspapers, and its replacement by a postage-charge. The suppression of the privilege accorded to the prefects to designate the journals which are to receive judicial advertisements. Liberty of superior instruction. A parliamentary inquiry into the working of the commercial treaty. And lastly, a constant endeavor to find out means to improve the moral, intellectual, and physical situation of the greatest number.

A shade more liberal is the Left Centre, under the leadership of the Marquis d'Andelarre, which numbered about 41 members, who accepted the following report of their leader as a programme of their political conduct:

Gentlemen: We had undertaken the work which you had intrusted to us, and this task was rendered easy by your previous deliberations, when we received a programme drawn up and signed by a great number of our colleagues. The analogy between that document and the one which, presented by one of those acting with us, had more particularly fixed your attention, is such that, in analyzing the two, paragraph by paragraph, we were able to prove that they contained for the most part almost identical features. We can, therefore, only regard with entire satisfaction so great a number of our colleagues affirming the principle of parliamentary government

—one which has always been our own, and we shall be happy to pursue with them its sincere and complete application. Nevertheless, our brother deputies will have observed that the execution of this plan, notably in the case of reforms which relate to the electoral circumscriptions and to the nomination of mayors, cannot take place without changes in the constitution, and they desire, without doubt, as we do, to demand from the Government to use its initiative to make the country henceforth participate by means of the representatives in all the constitutional modifications which may be thought necessary. They will think with us, doubtless, that the provisional solution indicated in their proposal for the nomination of mayors will not give to the communes an adequate participation in the choice of those magistrates; and that without law, otherwise so necessary on communal, cantonal, and departmental organization, there is a great necessity to provide for so great an interest by special law.

In laying these reservations before you your committee is inspired by your resolutions and your previous votes. It is acting again under the same influence when it affirms in conclusion that its most serious care and most active solicitude are directed to the necessity of union and accord between all the elements of the liberal and conservative parties. The conclusions of this report have been adopted unanimously by those present. (Here follow the signatures.)

The "Left," embracing men like Jules Favre, Jules Simon, Gambetta, and Bancel, numbered 27 members, while Raspail and Rochefort were classed as "Extreme Left," or "Radicals."

On the 28th of December, the *Journal Officiel* announced the resignation of the ministry and the Emperor's determination to accept the same. It also contained a letter from the Emperor to M. Emile Ollivier, requesting him to name persons who would, associated with himself, form a homogeneous Cabinet, faithfully representing the legislative majority, and resolved to apply, in letter and spirit, the *Senatus Consultum* of September 8th. The Emperor counted on the devotion of the Corps Législatif to the great interests of the country, no less than on that of M. Ollivier, to aid him in the task he had undertaken, of putting into successful operation a constitutional *régime*.

The Emperor's letter was generally regarded as the close of the personal government in France, and as the first chapter in the history of the constitutional empire. The construction of the new ministry by Ollivier was not completed before January, 1870; it consisted of members of the Right and Left Centres, the combined support of which it was hoped would give to the new ministry a decided majority in the Legislative Body.

The verification of the election returns being completed, the extraordinary session of the Legislative Body was closed, and a new (the regular) session began. The Legislative Body, for the first time exercising the right of choosing its President, reëlected M. Schneider, by 190 to 40 votes.

The French "Yellow-Book," composed of diplomatic documents, and the "Blue-Book," containing the annual statement of the situation of the empire, were distributed to the members of the Senate and of the Legislative Body on the 11th of December. The former compilation, which is the thirteenth of the series, has 115 pages. Fourteen are devoted to general considerations on political affairs, and thirteen to commercial matters.

The *exposé* of the political and commercial affairs in the "Yellow-Book," thus refers to the most important foreign questions of the year:

The situation of the North-German Confederation and the Southern States has not been sensibly modified. We have not seen in the questions which have arisen in the course of the year any reason to depart from the reserve we had observed in presence of the transformations which have occurred beyond the Rhine. Our relations with Germany have not ceased to be very friendly.

Under favor of the tranquillity which prevails in the States of the Church the bishops of the whole world are about to assemble in Rome. The Pope has convoked at the Vatican an Œcumenical Council. The affairs which will be discussed there are, as a rule, beyond the competence of the political powers of our days, and under this aspect the situation differs materially from that which existed in past centuries. Also, the Emperor's Government, renouncing the use of a prerogative which the sovereigns of France had always exercised without protest, has resolved not to interfere in the deliberations of the Council by sending an accredited ambassador. It has considered not only that this determination was most in accordance with the spirit of our times and the relations between Church and State, but that such a course was most suitable to free the French executive from all responsibility in any decisions which may be taken. The Holy Father himself, moreover, seems to have recognized the value of the considerations which guide us, since he has abstained from inviting the Christian princes to send representatives to this meeting of prelates. However, we have no intention of remaining indifferent to acts which might exercise a great influence on the Catholic populations of all countries. His Majesty's Government would find, in case of necessity, in the laws of the country the powers requisite to maintain *the public rights free from all deterioration*. We have, besides, too much confidence in the prudence of the prelates in whose hands are placed the interests of Catholicity not to believe that they will know how to take account of the necessities of the period in which we live.

At the moment when the European Cabinets were discussing the question of Eastern difficulty with the Sultan and the Khédive, a work essentially peaceful in its character, and of a nature to inspire all states with thoughts of union and concord, was completed in Egypt itself. The Suez Canal definitively opened up the Red Sea and the extreme East to the direct commerce of Europe. France followed with patriotic sympathy the sovereign who went in its name, by the side of the august representatives of powerful nations, to applaud on distant shores the realization of this grand idea.

The increasing development of our intercourse with Egypt gives particular interest to the question of judicial organization raised two years ago by the Viceroy. A special commission, composed of French jurisconsults and of agents who have lived in the East, was intrusted by the Emperor's Government with the examination of the proposals of the Egyptian authorities, and it has set down in a memorandum which was communicated to the various powers interested, the result of its labors. At the conclusion of this first inquiry the Government of Egypt thought fit to demand that the question should be studied in the places themselves by an international commission. We acceded to these overtures, on the sole condition that the report of the French commissioners should

be taken as the starting-point for any new investigations. This conference met at Alexandria, where it has been sitting for a month. Invested with a purely consultative character, it will judge of the legitimacy of the complaints which have been made to us and of the value of the reforms suggested. The powers have, nevertheless, reserved to themselves entire liberty as regards their ultimate determinations. The Emperor's advisers are too conscious of the grave responsibility which attaches to the settlement of this important question, not to act with all the prudence and circumspection, called for by the complex interests involved. In concert with the English Cabinet, we have, besides, made known at Constantinople that, in consenting to the inquest proposed by the Khédive, we had no intention of concluding any arrangement independently of the Turkish authorities, or in opposition to the Sultan's rights.

FRIENDS, a religious denomination, commonly called *Quakers*. This epithet was given to the Friends "in derision, because they often trembled under an awful sense of the infinite purity and majesty of God." The name has been submitted to rather than accepted by them. Their proper designation is the "Religious Society of Friends." From the time of the settlement of William Penn in Pennsylvania, in 1680, the spread of the society in North America was rapid. Before that, in 1672, George Fox found an established colony of Friends in Perquimans County, N. C., which was the beginning of one of the largest and most influential yearly meetings in the United States. It has constantly borne testimony against slavery and war, and for the freeness of the Gospel, often at the cost of persecution and loss of substance. During the late war the members firmly maintained the consistency of their testimony by refusal to bear arms.

The organization of the society in essential matters is the work of George Fox. "The yearly meetings," says Mr. Allinson, "are in a sense diocesan, having each a defined territorial jurisdiction, and independent of each other in their government and law-making powers, while by a sort of common law there are principles of discipline sacred to all, and membership in any meeting involves a connection with the society wherever existing, and may be transferred by certificate when the person claiming such credential is not liable to church censure." The transaction of the business of these meetings is regarded as the Lord's work, and it is held to be necessary in them for all minds to be turned to Him. In the ministry of the word no Friend is expected to speak "without feeling a direct call and movement of the Holy Spirit for the service." It is the duty of the elders "to counsel, foster, and aid the ministers," and encourage or restrain them according as they are or are not believed to be called of God. They admit no system of theological training. Favoring education, they regard it "as the exclusive province of the Holy Spirit to select His own ministers and instruct them what they shall say." The study of the Holy Scriptures is, however, enforced with great stress. The privilege and duty of prayer, both secret and vocal, are regarded as of the highest importance. They consider, however, a reverent spirit as an essential quality in all cases, and believe that vocal prayer should not be offered without a direct movement of the Holy Spirit; that it ought not to be "formal or customary" in style; and that many words, repetitions, and reiterations of the name of God or His attributes should be avoided.

1. AMERICA.—The great division in American Friends which took place in 1827 rested upon differences of opinion respecting the divine character of Christ, like those which distinguish the Trinitarian and Unitarian denominations. Both divisions claim and use the simple title of Friends, the terms orthodox and Hicksite not being recognized officially, but only used as a means of popular definition.

The orthodox Friends, while they avoid the use of the word Trinity, claim to be in accord with the orthodox churches on the general points of Christian doctrine. They "reverently believe in the Holy Three; the Father, the Lord Jesus Christ, the only-begotten of the Father, by whom are all things, who is the mediator between God and man; and the Holy Spirit, who proceedeth from the Father and the Son—ONE GOD, blessed for ever. They accept in its fulness the testimony of Holy Scripture with regard to the nature and offices of Christ, as the promised Messiah, the Word made flesh, the atonement for sin, the Saviour and Redeemer of the world. They have no reliance on any other name, no hope of salvation that is not based upon His meritorious death on the cross. "They so fully believe in the Holy Spirit of Christ, that without the inward revelation thereof they feel that they can do nothing to God's glory, or to further the salvation of their own souls. They believe that baptism is only of the spirit, and hold it impossible that an outward ablution should wash from the spirit of man the stains of sin." It is also by the spirit that the true Supper of the Lord is to be partaken. They believe also fully in the resurrection of the dead, and in the final judgment.

The Hicksite Quakers, as the other branch are currently denominated, believe also in the authenticity and divine authority of the Holy Scriptures, acknowledging them as the only fit outward test of Christian doctrines, and assigning to them "all the authority they claim for themselves." They likewise believe in the immediate communion of the Holy Spirit, that "there can be no saving knowledge of Christ but from immediate revelation." Their views on the original and present state of man, according to Samuel L. Janney, author of the "History of the Friends," are that—

It is a Scriptural doctrine that neither righteousness nor unrighteousness can be transmitted by inheritance, but every man shall be judged according to his deeds. When man presumed to set up his own will, and to be governed by it in opposition to the Divine will, he assumed the place of God, and, having thus turned away from the Holy Spirit, he ceased to partake of

"the tree of life," and consequently died a spiritual death. Animal propensities may be transmitted from parents to children, but the Scriptures do not teach that we inherit any guilt from Adam, or from any of our ancestors; nor do we feel any compunction for their sins.

Other distinctive doctrines are:

The unity, omnipresence, omnipotence, and omniscience of God, the only fountain of wisdom and goodness, are fully set forth in the Scriptures of both the Old and New Testament. That spiritual influence or medium by which the Most High communicates His will to man, is called His Word, and the same term is applied to His creative power, by which all things were made. The most full and glorious manifestation of the Divine Word, or Logos, was in Jesus Christ, the immaculate Son of God, who was miraculously conceived and born of a virgin. In Him the manhood or son of man was entirely subject to the Divinity. The doctrine that God cannot or will not forgive sins without a compensation or satisfaction, and that man, not being able to make this satisfaction, it was made by Jesus Christ, who was appointed or given up to be killed for this purpose, is so inconsistent with the Divine character, that it cannot be reconciled with the teachings of the Son of God. When the sinful nature in man is slain by the power of God being raised into dominion in us, then is Divine justice satisfied, for there is nothing vindictive in the character of the Deity. He does not afflict His creatures for any other purpose than their own reformation or purification, and, when that purpose is accomplished, He is ready to pardon His repenting children. The "washing of regeneration and renewing of the Holy Ghost" is the only baptism essential to salvation. We have no grounds to believe that "the passover" which Jesus ate with His disciples was intended to be perpetuated in the Christian Church; nor does it appear that He instituted a new ceremony on that occasion. The author of Christianity has prescribed no set form of worship, enjoining only that it must be in spirit and in truth. Friends have adopted silence as the basis of public worship, believing that it is free from the objections that exist against all prescribed forms; that it gives to each worshipper an opportunity for self-examination and secret prayer, with the benefit that results from the sympathy of other minds present; and that it affords the best preparation for the exercise of spiritual gifts in preaching, prayer, or praise. The Christian ministry can be rightly exercised by those only who have received a call and qualification from the Head of the Church.

There are twelve independent yearly meetings of the Religious Society of Friends (Orthodox), of which the oldest is that of London, of which records exist as far back as 1672. The settlements of Friends in France, Germany, Norway, and Australasia, report to the London meeting. There is a yearly meeting in Ireland and in Canada, and there are nine in the United States. Those in the United States are the New England, New York, Philadelphia, Baltimore, North Carolina, Ohio, Indiana, Western Indiana, and Iowa. The increase of membership in the Western States is very rapid. The total number in the society is estimated at 80,000. The first-day schools connected with all the yearly meetings are conducted with energy and efficiency, and are numerously attended. A normal first-day school has been established by the North Carolina yearly meeting. The Orthodox Friends in the United States have three colleges, viz.: Haverford College, Pa.; Earlham College, Richmond, Ind.; and Whittier College, Salem, Iowa; besides several large boarding-schools.

The Hicksite Friends count six independent yearly meetings, with an aggregate membership of about 35,000. They have several literary institutions, among which is Swarthmore College, near Philadelphia. It was projected nearly four years ago, and was formally opened on the 10th of Novembr, 1869. It is designed to accommodate 400 pupils. One hundred and eighty-nine were in attendance on the day of the opening.

The *Society of Progressive Friends* originated in a secession from the Kennett (Chester County, Pennsylvania) monthly meeting of Hicksite Friends, of members who were dissatisfied with the passive attitude of the society in relation to the temperance, antislavery, and other movements, which took place in 1853. It opens its doors to all who recognize the equal brotherhood of the human family, without regard to sex, color, or condition, and who acknowledge the duty of defining and illustrating their faith in God, not by assent to a creed, but by lives of personal purity, and works of beneficence and charity. It disavowed any intention or expectation of binding its members together by agreement as to theological opinions, and declared that it would seek its bond of union in "identity of object, oneness of spirit in respect to the practical duties of life, the communion of soul with soul in a common love of the beautiful and true, and a common aspiration after moral excellence." It enforces no discipline, forms, or ceremonies, sets forth no dogmas, and has no ministers distinguished as such. The division effected by this body extended through all the yearly meetings to a greater or less degree. The sixteenth yearly meeting was held at Longwood, Chester County, Pa., on the 4th of June, 1869. The attendance was very large. Testimonies were adopted on intemperance, tobacco, and opium, the freedmen, women's rights, the ballot to the black man, treatment of criminals, capital and labor, the Indians, with a memorial to Congress in their behalf, and a letter to the tribes, and on peace.

The "Friends of Human Progress," a society of sympathizing views, held their twenty-first anniversary at Waterloo, New York, on the 12th of June, 1869.

2. CANADA.—The number of members in the *Canada Yearly Meeting* is 15,154. There are fourteen first-day schools, with 72 teachers and 500 pupils.

3. GREAT BRITAIN AND IRELAND.—The *London Yearly Meeting* was held on the 20th of May, 1869. A notable feature was the address of John Bright on the peace question, on which he expressed hopeful views, notwithstanding the large standing armies which are still maintained. The number of members is 13,815, of whom 6,525 are male, and 7,290 female. The net increase for the year was forty-eight, affording a pleasant contrast to the features of

the first half of the century, in which a yearly loss of from one to two hundred was reported. There are 327 settled meetings, and 265 recorded ministers, and about 400 unrecorded. At the annual meeting of the Friends' first-day school-teachers from all parts of the United Kingdom, it appeared that there were seventy-seven such schools, with 12,474 scholars, and 1,095 teachers.

The following are the literary institutions of the Friends in Great Britain:

Bedford Institute, Spitalfields; founded 1865. Sunday-schools, Sunday evening and week-day service, Workingmen's Club, and library.

Friends Institute, London.

Flaunders's College, Ackworth; founded in 1848, by Benjamin Flaunders. Endowment, £40,000. For the training of young men for teachers in Friends' educational establishments and families.

Ackworth School. Endowment, £87,000. Pupils, 300 girls and boys. Other boarding-schools are at Croydon, endowment, £30,000; Sidcot, £15,000; Wigton, £12,000; Rawden, £5,000; Ayton, £14,000; Newton, Waterford; Mountmellick, £9,000; Lisburn, £11,000; Brookfield, £8,000.

Friends' Provident Institution, Bradford; annual income, £9,500; reserved fund, £800,000.

A descriptive catalogue of Friends' books, lately published in England, gives in two volumes, of over 2,000 closely-printed pages, the complete bibliography of the society from its origin to the present time. The Leominster auxiliary of the Friends' Tract Society issued within the year 286,600 tracts.

The number of Friends in *Ireland* is 2,898, of whom 1,320 are males, and 1,578 females; net increase during the year, 21.

4. NORWAY. — The yearly meeting of the Friends of *Norway* was numerously attended by members, some of whom had travelled long distances over the difficult routes of that country. Much interest was added to the meeting by the presence of Mado Larsen, a young Friend, of Denmark, who had been the means of converting many in his own country, and had gone to Norway on a missionary visit. Most of the Norwegian Quakers are in humble circumstances, peasants or fishermen. They evince much attachment to their sect and its principles, which they show in readiness to make personal sacrifice.

5. MADAGASCAR. — The Friends' principal mission is in Madagascar. The accounts from it are very flattering. The missionaries find themselves well received by the natives wherever they go in their long journeys, and their teachings attentively listened to.

6. AUSTRALIA AND TASMANIA.—The Friends in Australia and Tasmania held their first attempt at a general representative meeting of their community in those regions in 1869. There are members of the society in New South Wales, Queensland, Victoria, South Australia, Tasmania, and New Zealand. Most of these are, however, located in the neighborhood of the five cities of Melbourne, Hobart Town, Sydney, Ballarat, and Adelaide. Regular Quaker meetings are held at Melbourne and Ballarat, in Victoria; at Adelaide and Mount Barker, in South Australia; at Brisbane, in Queensland; at Sydney, in New South Wales; and at Hobart Town and Swan Port, in Tasmania. Of these, the congregation at Melbourne is the largest, and numbers about seventy. The number in the society is about 300. They were contemplating establishing a boarding-school for the especial education of their own people.

FUAD, MEHMED, Pacha, a Turkish statesman and author, born in Constantinople in 1814; died at Nice, France, February 12, 1869. He was a son of the celebrated Turkish poet, Izzeb-Effendi Kitchegizade, better known under the name of Izzeb-Mollah, and nephew of Leila Khatoun, one of the very few Ottoman poetesses. He spent his early youth first in cultivating literature, and afterward in studying medicine, which profession he adopted, serving for a short time in the Turkish Navy. Upon quitting the service, he entered the interpreter's office of the Government, in which he spent several years qualifying himself for the duties of diplomacy by the study of history, the modern languages, international law, and political economy. He began his diplomatic career in 1840, as first secretary to a special mission sent by the Sublime Porte to England, in which capacity he gave such evidence of ability of a very high order that, in 1843, he was sent on a special mission to Spain to congratulate Isabella II. on her accession to the throne, being at the same time intrusted with a mission to the court of Portugal. Again he gave complete satisfaction, and returned home decorated with Spanish and Portuguese orders. In 1848 he was Ottoman commissioner to the Principalities during the troubles which followed the Revolution of 1848, and he was subsequently employed on special missions to St. Petersburg and Egypt. He was appointed for the first time Minister of Foreign Affairs in 1852, and the events which, during the following year, led to the Crimean War, brought his name more prominently than ever before the world. In the question of the Holy Places, which led to that war, Fuad Pacha took very high ground, resisting the pretensions of Russia, and publishing a pamphlet entitled "The Truth upon the Question of the Holy Places," which excited the indignation of Prince Menschikoff to such a degree that he openly insulted the Turkish minister by refusing to show him certain tokens of respect required by etiquette, and charging him in the presence of a large concourse of people with being guilty of several acts of bad faith toward Russia. Fuad Pacha immediately tendered his resignation, which he could not be induced to withdraw, and, not long after, the Crimean War commenced, the ex-minister having successfully employed his abilities in

securing the alliance between Turkey, France, and England, against Russia. In the first year of the war he was commissioner at the headquarters of Omar Pacha. In 1855 he was reappointed to the office of Minister of Foreign Affairs, discharging its duties to the close of the war with signal ability; in 1850 he was intrusted with the task of putting an end to the outrages committed by the Druses against the Christians, in Syria, which he speedily accomplished; and, although he was designated, by the Paris Conference of that year, Governor-General of Syria, he preferred to return to Constantinople, where he was shortly after placed at the head of the Council of Justice, and a few months later appointed Grand-Vizier, with the entire control of the finances of the empire. In 1863 he resigned as Grand-Vizier, and was made War Minister, which office he subsequently relinquished for his old post of Foreign Minister. He represented the Porte at the late Paris Conference for the settlement of the recent troubles between Turkey and Greece. Fuad Pacha was an honorable exception to Turkish statesmen, his views being remarkably enlightened and liberal, both as regards religion and politics. His policy as Foreign Minister has contributed largely to strengthen the amicable relations of the Porte with foreign powers, and in regard to the internal administration of the affairs of the empire he was always in favor of a conciliatory course of action toward the Christian population of Turkey. The existence of telegraph lines and light-houses in Turkey, and other evidences of material progress in that country, are owing in a great measure to his patriotism. He was possessed of superior literary attainments, proof of which he has left behind in an Ottoman Grammar, and a poem entitled "The Alhambra," embodying his recollections of Spain during his mission to that country.

G

GARDNER, Colonel CHARLES K., U. S. A., a brave and gallant army officer, civilian, and author, born in New Jersey in 1787; died in Washington, D. C., November 1, 1869. He entered the army as ensign of the Sixth U. S. Infantry in May, 1808. He subsequently served as captain in the Third U. S. Artillery, and major of the Twenty-third U. S. Infantry. In the War of 1812 he was especially prominent and efficient as adjutant-general of the Division of the North, under Major-General Brown. He participated in the battles of Chrystler's Fields, Chippewa, and Niagara, and at the siege and defence of Fort Erie. At the battle of Niagara, when General Scott was severely wounded, Colonel Gardner carried him off the battle-field. At the end of the war he was appointed adjutant-general of the army, which office he held until his resignation from the army in 1818. During the eight years of President Jackson's Administration, he held the office of First Assistant Postmaster-General, and was Auditor of the Treasury for the Post-Office Department under President Van Buren. During the Administration of President Polk, Colonel Gardner was Postmaster of the city of Washington, and he was Surveyor-General of Oregon under President Pierce's Administration, after which he was transferred to an office in the Treasury Department, which he held until the autumn of 1867, when advanced age and bodily infirmity made his resignation necessary. Colonel Gardner was the author of several military works: "Permanent Designation of Companies and Company Books by the first letters of the Alphabet never to be changed;" "Compend of Infantry Tactics," and "Dictionary of the Army."

GEOGRAPHICAL EXPLORATIONS AND DISCOVERIES IN 1869. The field of geographical discovery and research has been so much expanded of late years, and the number of observers and explorers so greatly increased, that, in one portion of the globe or another, we are sure of some results each year, which will gratify our thirst for knowledge of the hitherto unknown, and partially satisfy our desires for that thorough mastery of the great problems of geography, which at times seems so unattainable. The year 1869 was not destined to witness the full solution of the questions which have, for some years past, been uppermost in the minds of the lovers of geographical science. The ultimate source from whence the Nile derives its waters is as yet unknown, or if Livingstone, in his long and perilous journeyings, has ascertained it, remains his secret, until he shall, as we hope and believe he will, find his way out from those lands of savage beasts and more savage men, and return to civilized life. The North Pole has not yet been discovered, and we do not even know the extent of that "open Polar Sea" which some of our explorers have sighted from afar. There is still a broad tract of unknown land in the heart of the Australian continent, another in the centre of Africa, a third in those lofty plateaus which constitute the region which we call Soongaria or Chinese Toorkistan. Aside from these, there are other smaller, yet considerable, regions of which our knowledge is very slight. Two of these have been explored with considerable care and minuteness by parties whose journeyings were either begun or terminated in the year just closed. The French expedition up the Mekong or Cambodia River, after eighteen months of severe toil and peril, and the loss of its chief, completed its labors by penetrating into Southwestern China, and descending the Yang-tse-Kiang on its way

homeward in the closing months of 1868, and the full report of its discoveries comes into 1869. Our own gallant countryman, Captain Powell, perilling his own life and the lives of his companions for the sake of science, descended the great cañon of the Colorado River, and explored for five hundred miles its dark and terrible passages.

Other hitherto unknown fields, in other portions of the globe, have been visited, and light thrown upon many dark places during the year, so that, though it has not been one marked by very great discoveries, yet the sum total of human knowledge has been sensibly increased.

The number of martyrs to geographical science has been less numerous than in former years. Of Viscount Strangford's death, though occurring during the earlier days of 1869, mention was made in the volume of the ANNUAL CYCLOPÆDIA for 1868, and a more full biographical sketch is given elsewhere in the present volume (see STRANGFORD, Viscount). Miss Tinné, a young lady of rank from Holland, who had most heroically devoted herself to geographical exploration for six or seven years past, first in the Nile explorations (in which she lost her mother, her aunt, and some of her travelling-companions), and subsequently in the attempt to penetrate the Soudan from Tripoli, was cruelly murdered on the 1st of August by the Tüaricks and Arabs whom she had hired as attendants, near Taharet on the Sahara Desert. The reports of Dr. Livingstone's murder have been renewed at several times during the past year, and the long delay in his return, and the very unsatisfactory advices received from him, have given a certain currency to these reports. The latest of them was that he had been burned as a wizard, or poisoned, and his body burned, at a point ninety-five days' journey in the interior from St. Paul de Loando, but when carefully scanned this story is seen to be untruthful, inasmuch as the date when it was told to the Portuguese trader who reported it at St. Paul was from the 15th to the 25th of June, 1868, as he says; but even if it was June, 1869, it had occurred, his informant said, some time before he left a town ninety-five days' journey distant, so that nearly or quite four months must have elapsed between the time of the alleged murder and his report of it, bringing it back to February, 1868, or 1869. But Sir Roderick Murchison had received two letters from Dr. Livingstone, dated since February, 1869, one of them bearing date May 30, 1869. The story may, therefore, be set down, like many of these stories, as a fabrication of some of the Portuguese traders.

1. We begin with our own explorers. Captain C. F. Hall returned in September, 1869, from a five-years' exploring tour in the Arctic regions, mainly spent in the search after the remains of Sir John Franklin's expedition. In this research he had been remarkably successful; having ascertained the localities in which the different parties of that expedition perished, learned where their vessels were, and obtained about one hundred and fifty relics of the ill-fated expedition. He ascertained the important fact that, the same year that the Erebus and Terror were abandoned, one of these vessels made the great Northwest passage, having five men on board, and the vessel was in perfect order when abandoned by the crew, and found by the Esquimaux in the spring of 1849. It had been frozen in near O'Reilly Island, latitude 68° 30′ north, longitude 99° 8′ west. The skeletons of Sir John Franklin's men were scattered over King William's Land, and Captain Hall says that the Esquimaux of that region, who are very different in character and disposition from those of Repulse Bay, refused to give them any assistance, when they were able to have saved their lives, and not only suffered them to perish from starvation and scurvy, but plundered them of every thing that they could make use of, and suffered their dogs to feed on their bodies after their death. Captain Hall believes that the records of the expedition are still in existence, and that they are in a vault a little way inland or eastward of Cape Victory. He was unable to reach this point in consequence of a war between the native tribes, but believes that they can be recovered. Captain Hall made no attempt at Polar discoveries, and indeed does not seem to have gone above the parallel of 70° north latitude, but he explored, pretty thoroughly, Melville Peninsula, the Fury and Hecla Straits, Pelly Bay, Boothia Peninsula and Gulf, Neitchille, and part of King William's Land, and connected these with the explorations of his previous expedition. Since his return he has been engaged in the effort of persuading the Government to undertake the expense of a voyage of exploration to the North Pole direct, which he believes that his long experience in the Arctic regions has qualified him to lead.

Dr. I. I. Hayes, so well known as an Arctic explorer, made a short exploring trip to the Arctic regions in the summer of 1869, preliminary to a more extensive and protracted expediton which he purposes to undertake in the summer of 1870. In company with Mr. Bradford, the artist, and a small corps of photographers, hunters, etc., he sailed from St. John's, Newfoundland, July 8d in the screw-steamer Panther, chartered at that port, and returned there September 28th. In this twelve-weeks' trip they penetrated as far north as latitude 75°, in the middle of Melville Sound or Bay, and were in serious peril of being nipped by the newly-forming ice in August. They ran down six polar bears, driving them from ice-field to ice-field with their powerful steamer, and finally capturing them. Visiting Upernavik, the northernmost settlement of Europeans in Greenland, latitude 72° 40′ N., they were very cordially received, and Dr. Hayes made provision for the gathering together there of dogs, furs, and hunters,

for his expedition of 1870. The principal interest of the expedition, however, was in its artistic and archæological discoveries and investigations. They visited several of the largest of the Greenland glaciers, and took sketches and photographs of them from different points, once narrowly escaping destruction from the discharge of several large icebergs into Baffin's Bay from the glacier they were examining. They also visited and explored very thoroughly the old Norse ruins at Krakatok, or Gardar, near Julianshaab, at the southern extremity of Greenland, about latitude 61°. This was once the seat of a prosperous Norwegian colony, founded A. D. 986; and the See of Gardar, the cathedral of which is yet standing and in tolerable preservation, was occupied by seventeen successive Norwegian bishops. Thorwald, the son of the founder of this colony, is said to have discovered Newfoundland in 1001. The party found conclusive evidence that the temperature of this region was much colder now than at the date of the Norwegian settlement. For ten successive days of their voyage the explorers saw the sun at midnight, and during two months they never had occasion to light their lamps. The mosquitoes and stinging flies, Dr. Hayes says, were more numerous and tormenting in south Greenland than anywhere else in the world. In his expedition of 1870, Dr. Hayes proposes to attempt to penetrate to the North Pole by way of Wellington Channel and Grinnell-land. This route has never been explored above the 77th parallel. The question of the best route to the Pole cannot be said to be settled. The preponderance of opinion, so far as routes from the north of this continent are concerned, seems to be through Smith's Sound. The highest point yet attained within the Arctic Circle, Cape Union, near latitude 83° N., was reached by this route. Of those north of the Eastern Continent, the route by the east coast of Greenland, that north of Spitzbergen, and that north of Nova Zembla, have been attempted unsuccessfully by the German, Swedish, and English expeditions, in 1868 and 1869; and so marked has been the failure, that they will hardly be tried again. There were seven distinct expeditions to the Polar regions from Europe in 1869, all well conducted and several of them rich in scientific results; but none of them have been successful thus far in attaining so high a latitude as was reached in 1868.

The Swedish expedition of 1868, under the direction of Prof. Nordenskiold, had made, on the 19th of September of that year, the latitude of 81° 42′, and explored very thoroughly the geology, botany, mineralogy, and meteorology of the western portion of the Spitzbergen Islands. Another expedition was sent from Sweden in 1869, but its results have not yet transpired. The expedition fitted out in 1868, under the efforts of Dr. Augustus Petermann, of Gotha, having failed to accomplish all that it was hoped it would, Dr. Petermann exerted himself anew in the winter of 1868–'69 to send out another on a larger scale. The little screw-steamer Germania, which Captain Koldewey had commanded in 1868, was again sent out, and with her the Hansa, a sailing-vessel of 242 tons. The Hansa was commanded by Captain Koldewey, and Captain Hegemann was commander of the Germania. The whole number of persons in both vessels was thirty-one, including a corps of six scientific men. The two vessels sailed from Bremerhaven, June 15, 1869, with the intention, as in the previous voyage, of keeping as near as possible to the east coast of Greenland, and, if possible, of entering by that route the region near the Pole. The vessels were provisioned for two years. Up to August 1, 1869, the success of the expedition had not been satisfactory. The highest point they had been able to make was 74° 59′ north latitude, due east of Shannon Island, and 11° 14′ west longitude from Greenwich, or almost 400 miles east of the Greenland coast. The line of firm ice continued to be maintained at this distance from the coast, and gradually extended farther eastward, so that they were forced southward, till on the 1st of August, 1869, they were in latitude 72° 50′, but had reached 16° west longitude. Of their subsequent progress we have no knowledge. It is probable, however, that they succeeded later in the season in entering the open water inside the ice-pack, and perhaps may have reached a higher latitude than any previous explorers on the east coast of Greenland.

M. A. Rosenthal, a wealthy merchant of Bremen, fitted out at his own expense two expeditions, both well supplied with scientific corps and all needful apparatus, and dispatched them to the Polar region, north of Nova Zembla. They were expected to bring home such a cargo of whale oil and bone, seal oil and skins, and other furs, as could be secured, lightening thereby the very heavy cost of the two expeditions. The first of Mr. Rosenthal's expeditions was in the screw-steamer Bienenkorb (Beehive), 400 tons, 120 horse-power, commanded by Captain Hagens, provisioned for eight to twelve months, and having fifty-five men on board, the scientific corps headed by Dr. J. S. Dorst, the eminent astronomer and physicist of Jülich. Its destination was to the sea between Spitzbergen and Greenland, with orders to penetrate to Gillis-land, the unknown region east of Spitzbergen, if possible, and to go and return by way of the eastern coast of Greenland. This vessel sailed from Bremerhaven, February 21st, and returned to that port on the 31st of August. The captain had found in the winter and spring the ice-border extending below 71°, and as far east as 12° east longitude from Greenwich, and, following the border southwest to the vicinity of Jan Mayen Island, latitude 70° 10′, longitude about 6° west of Greenwich, began in May to move northward; from this point the ice

boundary receded westward to about 12° west from Greenwich, but in latitude 73° 15′ he was again forced eastward by it. Running north, he succeeded in reaching, in June, latitude 79°, very near the meridian of Greenwich, and having taken what observations he could, and finding no prospect of attaining a higher latitude, the physicist of the expedition, Dr. Dorst, reluctantly turned his face homeward, finding the open-water channel comparatively free from ice, at about 17° 30′ west longitude, after the 17th of August.

M. Rosenthal's other screw-steamer, the Albert, a vessel of 700 tons, and 420 horse-power, was commanded by Captain Hashagen, and provisioned for fifteen months. Its crew numbered fifty-four persons, including a scientific corps under Dr. Emil Bessels, an eminent Heidelberg professor. This steamer sailed from Bremerhaven, May 23d, having for its destination the north of Spitzbergen, Gillis-land, the sea between Spitzbergen and Nova Zembla, and the attainment of as high a latitude as possible. It returned to Bremerhaven on the 22d of September, being absent but four months. Like their predecessors, they found the ice-border stretching eastward all through the summer months; but on the 20th of June attained to latitude 80° 14′ north, in longitude 9° 52′ east from Greenwich, northwest of the Island of West Spitzbergen. All their efforts to pass the northern shore of the island or the northeast land proved unavailing; and though they ran southward as far as 70° 30′ south of South Cape, and then returned in July northward, they were unable to go above 80° 5′ north latitude, and, finding all advance in that direction blocked, again turned southward, and, passing below the Spitzbergen Islands, ran east along the ice-border, past Hope Island toward Cape Nassau, the northernmost point of Nova Zembla. This is in latitude 76° 50′ and longitude 56° east of Greenwich. After taking careful observations in the vicinity of the cape, and securing what seals and other furs they could, they left the Siberian Sea on the 22d of August.

Another expedition, the result of private enterprise, was that of J. Lamont, Esq., M. P. for Buteshire, who fitted up his own steam-yacht at an expense of between $40,000 and $50,000 for an exploring expedition in the region north of Nova Zembla, and sailed from the Caledonian Canal the last of April, 1869, reaching Tromsö, Norway, about May 1st. His yacht was of 250 tons' burden, rigged as a three-masted schooner, strong and moderately fast. Mr. Lamont, and his surgeon as well as five or six of his crew, had had large experience in Arctic exploration. He returned to Dundee on the 6th of October, having reached Nova Zembla the last of May, and, like all the other explorers, having been prevented from attaining a very high latitude by the unusual accumulation of thick, heavy ice. He did succeed, however, in going to the 80th parallel, which is higher than any other explorer had gone in the longitude of Nova Zembla. He had been more successful in his pursuit of furs and oil than most of the others, bringing home a cargo which would go far toward paying expenses.

Another exploring enterprise, known as the Palliser expedition, the leader being an English gentleman, Captain Palliser, who had spent three months on Spitzbergen, in hunting, in 1868, sailed from Vadsö, Norway, in June, with a Norwegian commander and crew, intending to pass northward along Gillis-land, between Spitzbergen and Nova Zembla. No news has been received from this expedition. It must have encountered the same difficulties with the ice as the others.

Aside from this long list of exploring expeditions, there were two others belonging to the year, and sent out by a nation which has done much for geographical science. One was that of the Russian merchant, Sidoroff, who, having obtained from his Government a twenty years' monopoly of the trade of the Obi and Yenisei Rivers, proposed to mingle science and trade, and sailed from Stockholm in a large screw-steamer on the 17th of June, with a Norwegian crew, for the mouth of the Obi, taking with him a small scientific corps. He had arrived at his destination in September, and was busily exploring the lower portions of that river, or rather, its estuary. Mr. Sidoroff has no special ambition to reach the North Pole, but he may do good service to geographical science by the investigation of the almost unknown rivers which discharge their waters into the Polar Sea.

A land expedition for the exploration of the northeastern portion of Siberia and its coasts bordering on the Polar Sea, the land of the Tchuktches, a branch of the Esquimaux race, has been for some years in progress under the direction of Baron Maidel and the patronage of the Russian Geographical Society. The baron commenced his labors in 1866, and has been prosecuting them steadily ever since. His party wintered at Nijne Kolymsk Fort, latitude 69°, longitude 159° east from Greenwich, in 1868–'69, and during the spring, summer, and autumn of 1869 were engaged in exploring the valleys of the Anyui and Anadyr Rivers, and the coast eastward to Behring's Straits. For the spring of 1870 they were preparing to move westward and explore the valley of the Lazeya and the mountains adjacent, making their headquarters at the fort of Sredne Kolymsk, latitude 68° north and longitude about east 153° of Greenwich, and terminating their explorations in August, 1870.

Mr. Robert Brown, an English naturalist, who was one of a party of explorers in *Greenland* and northwestern America, in 1866–1868, has furnished to the Zoological Society of London several papers on the *fauna* of Greenland. He enumerates 30 species of mammals which he had found there. Of these, 16 belonged to the *whale*

family, including the different genera and species of what the whalemen call the "right whale," the black fish, the white fish, the humpback, and the various dolphins and porpoises; seven were *pinnipedes* or members of the *seal* family, including the walrus and the great seal or sea-lion; two (the musk-ox and the reindeer) were *ruminants;* two (the lemming and the Arctic hare) were *rodents*, and three (the Polar bear, the Arctic fox, and the Esquimaux dog) were *carnivora*. The birds are numerous, though the aquatic birds, dovekies, wild geese, ducks, and occasionally swans, predominate. Mr. Brown's notes on the other classes of animals have not yet been published.

2. There has been very little geographical exploration in BRITISH AMERICA within the past year or two. The proposed confederation seems to be distasteful to the remoter provinces, Newfoundland, Prince Edward's Island, British Columbia, and the newly-constructed Province of Winnipeg, purchased from the Hudson's Bay Company. In this last, toward the close of the year, an insurrection broke out, with a demand for independence, or, in default of that, equality of representation in the Dominion Parliament, and the right to manage their local affairs by a local government. The insurrection, so far from being readily quelled, was assuming enlarged proportions in the spring of 1870.

British Columbia, though not disposed to revolt, has protested to the British Government against being united with Canada, and has asked with great unanimity to be permitted to annex itself to the United States. In the *Dominion of Canada* there is a large and constantly-increasing party in favor of independence.

In 1866, Mr. Robert Brown, the zoologist of whom we have already spoken, explored the Queen Charlotte Islands, off the coast of British Columbia; and in 1869 reported the results of his explorations to the Royal Geographical Society. The group of islands lie from 80 to 100 miles from the coast, and the archipelago is about 170 miles in length and 100 in breadth. The soil is poor, though there are supposed to be veins of gold-bearing quartz, and some lead and copper on several of the islands. The climate is mild, but very moist, 89 inches of rain having fallen in a single year. The inhabitants are a tribe of Indians, called Hydahs, very peculiar in their character, and, judging from their *physique*, their language, and their customs, seem to be of a different race from the other Indians of the Northern Pacific coast. They are hated by all the other Indian tribes, and never come to any part of the main-land where there are other tribes, without a conflict following. They are, physically, the finest aboriginal race on the North American Continent, tall, muscular, and straight, of a much lighter complexion than the other Indians, and their women are remarkably good-looking. They are, however, very dissolute and depraved in morals, the women as much so as the men, cruel, vindictive, and bloodthirsty. Their chiefs have coats-of-arms engraved on copper, which they value very highly. They possess remarkable artistic skill, and with the poorest tools will execute engravings, and sculpture (in *petto*), and ornaments, which would do no discredit to our most skilful artists. Their language is entirely distinct from that of any other Indian tribe of North America, in construction and sounds. The following are their numerals: Squānsĕn, one; Sting, two; Squnun, three; Stunsick, four; Klathel, five; Klunuthl, six; 'Cesqua, seven; Sting-suna, eight; Klathen-swansego, nine; Klath, ten; Klath-en-squansen, eleven; Klath-e-sting, twenty; Klath-e-klath, one hundred; Lugwa-klath, a thousand. An analysis of these numerals shows that they practise multiplication and division of numbers, an achievement in mathematics to which no other Indian tribe in their aboriginal condition have ever attained. The Hydahs are rapidly diminishing in numbers. In 1840 they had on all the islands a population of about 10,000. They do not now exceed 5,000. War, disease, debauchery, drunkenness, and general decay, have greatly diminished their numbers. That their immorality has greatly increased since their contact with the whites, is the testimony of the old traders as well as of the Hydahs themselves; but they are naturally a more licentious race than the other Indians.

During the past year Mr. Brown has also furnished to *Illustrated Travels* a popular account of his exploration of Vancouver's Island in 1866, but, as he adds no new geographical facts to those already given, we do not deem it necessary to repeat any portion of it.

3. UNITED STATES.—The Territory of *Alaska*, notwithstanding the efforts made to give it a good reputation, seems but a sorry tract of country. Its revenue the past year was $21,000, and the expenditure necessary to collect it $396,000. It may possess some value, eventually, for its furs and fisheries, but it is so thoroughly dreary and desolate a region that it can hardly ever support any very considerable population, and probably never raise enough vegetable food to supply the few who do make it a home.

Proceeding down the Pacific coast, we find that a new gold-district has been discovered in the vicinity of San Diego, *California*. Lassen's Peak, one of the newly-discovered volcanoes of the Sierra Nevada, within the limits of California, has a maximum height of 10,577 feet, and three summits, only one of which, the southwestern, has been active within any very recent period. The completion of the Pacific Railroad and the junction of the Union and Central Pacific roads at Promontory, and afterward at Ogden, in May, 1869, were important geographical events, bringing, as it must, the commerce of China and Japan with Europe and America across the American Continent,

and opening for settlement, with extraordinary rapidity, the whole region lying between the Missouri River and the Pacific coast. This vast region must soon become densely populated, and its mineral wealth and its agricultural facilities developed. A Northern Pacific Railway following the valleys of the Upper Missouri and the Columbia, and a Southern Pacific beginning at Memphis, taking possession of some roads already constructed, passing through El Paso, and finally terminating at San Diego on the Pacific, are already in progress, and will be hurried forward as rapidly as possible. With these varied routes, and the additional advantages of the Panama Railroad and the Darien Canal, soon to be constructed, the trade of Eastern Asia and of Western South America must be ours beyond all possibility of competition. The Rio Colorado, or Red River of the West, the only stream which drains the great Central North American basin, and discharges its water through the Gulf of California into the Pacific, has been explored during the year 1869 by a daring and energetic corps, under the command of Captain J. W. Powell. It is, in some respects, the most remarkable river in the world. Its sources are in the Rocky Mountains, one of them far up in Idaho, above Fort Bonneville; the other in Colorado, not far from Denver. Its two principal tributaries, the Green River and the Grand River, as well as the smaller yet considerable affluents, the San Juan and the Little Colorado, very soon begin to cut their way through the mountain-ridges, at a very considerable depth below the surface of the plateau. The Green River, whose gorges and cañons are deepest, first enters the Uintah Mountains in the extreme northwest corner of Colorado, at the point named by the explorers, Flaming Gorge, from the brilliant colors of the sandstone walls of the gorge, and just below this the walls of the cañon are nearly fifteen hundred feet high. The stream is rapid, the descent, aside from the cataracts and minor falls, being near twenty feet to the mile in many places. Frequent falls, rapids, and cataracts were met with, and though, for the most part, there was, on one side or the other, a narrow strip of land forming the valley of the river, there were considerable distances where the walls, perpendicular, dark, and frowning, came to the edge of the water, and reared their grim, dark walls 5,000, 6,000, or even, at one point, 6,500 feet above the surface of the river. At several points the explorers were able to land, and, by dint of vigorous climbing, reach the surface of the plateau above; but these points were on the Green River, above its junction with the Grand River. Below this point, in the fearful black cañon, there was no chance of escape, except by going forward through the dark and terrible gorge. They could not turn back. No mortal arm could stem the swift-flowing current, and the cataracts below were untried, except by the two or three parties who had attempted their descent, and of whom but one man, and he almost by a miracle, had escaped with life. Still the brave-hearted company went forward. Stopping at landings when they could find them, lowering the boats carefully over the falls, after unpacking them, at last, late in July, the end of the Black Cañon was reached at Callville, and thenceforward navigation was easy. The extent of these frightful cañons is over five hundred miles, and from their termination at Callville to the mouth of the Colorado is more than five hundred miles more. The entire length of the river to the source of its most northern affluent is about one thousand six hundred miles. The expedition measured the height of the plateau above them at many points, collected sets of the strata, and surveyed very carefully the course and descent of the river. Prof. J. S. Newberry, of the Columbia School of Mines, and formerly one of the scientific corps employed by the Government in what were known as the Colorado and San Juan Expeditions, in 1858–'61, has given to the public, in a lecture, his observations of this Colorado region, to which some allusion was made in the AMERICAN ANNUAL CYCLOPÆDIA for 1868. He ascended the river from its mouth to the entrance of the Black Cañon, and the party then ascended to the plateau, and traversed it in the two expeditions for a distance of many hundred miles. They attempted to cross the Little Colorado at its junction with the Colorado, but, after descending about four thousand feet, they came to a perpendicular wall of rock, still one thousand five hundred feet above the surface of the river. They were compelled to make a detour of about two hundred miles, and cross the Little Colorado above the falls, near San Francisco Mountain, in Central Arizona. From this point they travelled on the plateau about sixty miles, and visited the villages of the Moqui Indians, on buttes (elevated bluffs of moderate extent), five hundred feet above the plain. They found them living in walled towns, and in appearance, language, customs, manufactures, and religion, entirely distinct from either the Pueblos or the wandering tribes, Apaches, Navajos, etc. The professor believes these Moquis to be the descendants of the Toltecs, the race which preceded the Aztecs in their conquest of Western North America. Penetrating, in the second of these expeditions, to the vicinity of the San Juan, an affluent of the Colorado flowing through Northwestern New Mexico and Southeastern Utah, they found its banks lined with ruins of large towns, and evidence that, within a short distance, a hundred thousand people had found homes and plenty, where now was only utter desolation and a waterless desert.

Dr. William A. Bell, an English surgeon and physicist, who had accompanied an exploring expedition, sent out in 1867–'68 by the Union Pacific Railroad Company, Western Division, to explore a feasible route for a railway through

New Mexico, Arizona, etc., since his return to England, has communicated several papers to the Geographical Society, on Arizona and New Mexico, and has a volume of travels in that region now ready for publication. He describes with great vividness the condition of these elevated plateaus and the ruins of great towns. He visited Zuni, a fortified town built upon one of the small but lofty table-lands of that region, and which was carried by the Spaniards by assault, though with heavy loss, at the time they first invaded this region. Its inhabitants were then, as now, Pueblo Indians, or Aztecs. The town or fortress is, he says, one vast building with massive walls, six stories high, and contains hundreds of rooms. The first story is lighted only from within, presenting on its external face only blank walls. The second story is reached by ladders, which can be readily withdrawn, and the inhabitants descend to the floor of the first story by openings and steps from the floor of the second story.

The valleys of the Missouri and Mississippi Rivers have been explored at various points in the interests of science during the last two years. The head-waters of the Missouri in Montana have been traced, and are found to be in a region of great mineral wealth. Around the small streams which form the sources of this magnificent river are found numerous lodes of gold and silver, copper and lead; and mineral waters, chalybeate, sulphurous, and magnesian, hot, warm, and cold, as well as geysers of great beauty and power, are found in that hitherto unknown region. Within less than a mile of one of these ultimate sources of the great river, a small stream is found flowing westward, though by a devious route. This is one of the sources of the Columbia, and its waters flow into the Pacific Ocean.

A most valuable contribution to our knowledge of the physical geography of the United States was made in 1869, by the publication of "The Mississippi Valley: its Physical Geography, including Sketches of the Topography, Botany, Climate, Geology, and Mineral Resources; and of the Progress of Development in Population and Material Wealth. By J. W. Foster, LL. D., President of the American Association for the Advancement of Science," etc., etc.* Dr. Foster is well known as one of our ablest geologists, and in this work he has not confined himself to the Valley of the Mississippi, but has brought together a vast number of facts in the physical geography of the whole North American Continent, which cannot fail to be of great value to all who are interested in geognostic and geographical studies. We annex two tables compiled by Dr. Foster, and found on pp. 207 and 208 of his work, which are of great interest in its bearing upon the climate of various portions of North America.

Dr. Foster has considered at some length the mounds scattered over almost all portions of the Mississippi Valley, and in an essay of great beauty sums up the conclusions to which explorers have been led by their examinations in regard to the race which reared these vast structures. From various data he concludes that they must have been built at least a thousand years ago, and by a race of different physical characteristics, and a very much higher civilization, than any of the tribes of roving Indians now found in the United States. Their implements, and the substances found in some of the mounds, indicate that they were an agricultural and horticultural people, yet they could not have had the assistance of any of the domestic animals in their agriculture. The horse, the ox, the goat, and the llama, were alike unknown to them, and the buffalo, or bison, which, with all the appliances of modern times, has never been domesticated, was not more submissive to them. They had implements of stone and of copper, but, lacking tin, they could not make bronze, and consequently could not make the copper (which they do not seem to have smelted, but only hammered) into cutting-instruments. They were familiar with the plastic arts, and had even made some progress in the manufacture of fictile ornaments, and in sculpture. Their clothing was not made of skins, but was woven by hand in a slow and painful way, from a textile fibre analogous to hemp, and they had perforated gauges of chlorite slate or soapstone, to determine the size of the threads which they spun. Their principal food was maize, with perhaps the occasional addition of the flesh of wild animals, and fish; but of the maize they made a variety of dishes, among others a thin and wafer-like bread, of which the Indian tribes of our time have no knowledge. In selecting sites for their mounds and structures, they showed an intelligent and cultivated taste, the localities being in almost every case those which our own people have chosen as most advantageous for the planting of large towns. Cincinnati, St. Louis, Marietta, Circleville, Chillicothe, Newark (Ohio), Chattanooga, Beloit, and other large towns and cities, are all built where the mound-builders had previously reared their structures.

The following table, for which we are indebted to Colton's *Journal of Geography*, fur-

nishes with great accuracy and minuteness information in regard to the exact location of our principal towns throughout the United States, which has not heretofore been accessible. The column of *Time from Greenwich* will be found of great value in any calculations in regard to the latitude and longitude of any intermediate places:

4. In Mexico.—The volcano of Colima, near the southwest coast, 12,000 feet in height, which had been quiet since 1818, gave indications, on the 13th of June, 1869, of renewed activity. There were rumblings, mutterings, quick detonations, and a cloud of light-colored smoke, rising from the top of the mountain. These premonitory symptoms were followed, on the 15th of June, by an eruption of flame, ashes, molten stone and metal, estimated at 275 feet in height, and the crater was about three miles in circumference. The eruption continued throughout June, and the column of flame and scoriæ maintained an altitude of 80 or 90 feet, and by the last of that month had made a river of lava down the slope of the mountain about nine miles in length.

5. In Central America.—M. Paul Levy, an enterprising French naturalist, explored, in the summer of 1869, the west coast, from Panama to Managua, the present capital of the republic of Nicaragua, and in a journey of thirty-two days on horseback passed over much territory which is new to Europeans, or to citizens of the United States. He traversed Chiriqui, and, though the Indians were not very friendly, he was not annoyed by them. He speaks of the country as remarkably beautiful in its scenery, and as capable of sustaining a large population.

6. The West Indies.—There have been no changes in the physical geography of these islands during 1869, and no earthquakes of importance. An ocean-cable has been ordered to connect Havana with Honduras, but in the present state of anarchy in Cuba it is doubtful whether it will be laid at present. The political changes and revolutions, not all as yet complete, will greatly influence the future of these islands. Cuba is yet in a state of revolution, and the end of the domination of Spain over the island cannot be far off. Hayti has passed through another revolution, has dethroned and executed its late President, Salnave, and installed the successful leader of the revolution, Nissage Saget, in his stead. The President of San Domingo—the other, and formerly Spanish, moiety of the island—has been endeavoring to negotiate a treaty of annexation to the United States, but the ratification of the treaty by the United States Senate is hardly probable. Our Government has leased the Bay of Samana for fifty years at $150,000 a year, and this lease may be confirmed. The treaty for the purchase of St. Thomas has been rejected by the United States.

7. In South America.—Passing across the Caribbean Sea, we find several items of interest. The Orinoco gold-fields, or rather those of Caratal, on the Yuruari, an affluent of the Orinoco, were visited in the autumn and winter of 1868–'69 by Mr. C. Le Neve Foster, an English geologist and mining engineer, and very thoroughly explored. The region is Raleigh's "El Dorado," and there is unquestionably an abundance of gold there in quartz lodes, and considerable yet remaining in placers. The processes used in extracting it are, except in the case of an American company which had recently established itself there, the rudest and least effective possible. Almost the whole extraction was done by hand, pounding the gold-bearing quartz in a wooden mortar with an iron pestle, washing it in a bowl, amalgamating it by stirring up the powdered stone with water and quicksilver with a stick, squeezing it out, and then volatilizing the quicksilver by the heat of a fire of sticks. In this rude

way somewhat more than a half million dollars' worth of gold was extracted in a year. Gambling, drunkenness, and lawlessness, were common, as in all gold-mining regions, and human life was not remarkably safe.

Mr. A. Goering, an English artist and geographer, has explored Venezuela very thoroughly in 1868 and 1869, and gives some interesting details of the Guajiro Indians who occupy the borders of the lake or *laguna* of Maracaibo. These Indians seem to be the existing representatives of the extinct lake-dwellers of Switzerland and Northern Italy. They build their dwellings with considerable art and intelligence, on piles, driven into the shallow flats of the *laguna*, raising them on platforms fifteen or twenty feet above the surface of the water. These dwellings are in groups, connected by bridges, and have pent roofs, each house consisting of two apartments, the front a kitchen and living-room, and the rear their place for sleeping. They sleep in hammocks, and live mostly on fish and mollusks, but are, unlike most of the Indian tribes, scrupulously neat and cleanly. They are athletic, finely formed, rather fond of dress and ornaments, their finery being, however, worn usually only on holidays and special occasions. They come occasionally to the small Venezuelan towns on the shores of the lake, but seldom allow visitors to their villages. They are sharp on a bargain, and have a habit of selling their children to the whites, for education and service, while they are too young to have much remembrance of their homes.

Brazil has not been able, from the great expense of her protracted war with Paraguay, to make any geographical explorations by her citizens, but several of the European and American geographers have devoted much labor and time to the exploration of her, as yet, little-known territory. The Abbé Durand, a French naturalist, visited and explored very thoroughly the Serra de Caraça, a vast iron mountain in the province of Minas Geraes, and has reported to the French Geographical Society on its mineral wealth, its vegetable and animal productions, and the facility with which it may be worked. Mr. Chandless, the indefatigable English explorer, has been pushing up the southern affluents of the Amazon, though his discoveries come more properly, perhaps, within the boundaries of Peru than those of Brazil; and our own countryman, Prof. James Orton, has been exploring the upper waters of the same great river. The Germans are still reënforcing their colonies in Southern Brazil, and it is not impossible that in the future they may be the means of raising the empire to a higher plane of intelligence and progress than it would ever have attained under the slothful, easy, and anti-progressive sway of the mixed races which as yet form the principal population of the country. From January, 1868, to April, 1869, 5,330 emigrants sailed from Hamburg for the four Brazilian colonies. Prof. Orton's volume, "The Andes and the Amazon," appertains about equally to Ecuador and Brazil, but is replete with valuable information in regard to the navigation of the great river and its tributaries, the physical geography, the geology, fauna, flora, productions, climate, and healthfulness of the Amazonas basin, and the character and condition of the tribes and peoples which inhabit it. He has collected also some vocabularies of several of the Indian dialects. Prof. Orton believes most of the Indian tribes (the Quechnas included) of the Great Basin to have come hither from a point farther south, the region of the La Plata, perhaps, and not from the north, as is generally supposed. One of his discoveries, that of marine-fossil shells *in situ*, at Pebas on the Marañon or upper Amazon, effectually disposes of Agassiz's theory of the glacial origin of the Amazonas basin, and proves that, at no very distant geological period, Guiana was an island. The work is a very valuable addition to a geographical knowledge of South America.

Mr. Porter C. Bliss, an American who escaped from Lopez's oppression in *Paraguay*, in 1868, read a paper before the American Association for the Advancement of Science, at its meeting in Salem, in August, 1869, on "A New Classification of the South American Indians," on the Basis of Philology." It has been stated that there were from 150 to 2,000 distinct though correlated languages spoken by the Indians of South America. Mr. Bliss denies this, and states, as the result of a careful study of the South American languages for many years, that there are not more than twelve or thirteen stock languages among the Indians of the continent, the rest being merely dialects. Of these, the Guarani and the Quechna are the principal and the most widely spoken. These two languages have a considerable vocabulary, while most of the others are meagre, containing not more than a thousand root words. Reduplication was a principle largely concerned in the formation of both the Quechna and Guarani languages. Mr. Bliss had found more than three hundred geographical names formed by this process, such as Mo-co-mo-co, Co-ro-co-ro, Titi-ca-ca, etc.

In *Patagonia*, and the *Straits of Magellan*, there have been two capable explorers the past year—Don Guillermo Cox, in Patagonia, and Captain R. C. Mayne, R. N., one of the Admiralty survey officers who was engaged from 1866 to May, 1869, in making an accurate and careful survey of the straits, a route which is now very generally preferred by both steamers and sailing-vessels, to the more tempestuous route outside the Horn. Captain Mayne states that the straits are 300 miles in length, and from 2 to 20 miles in width. At the entrance from the Atlantic, the land is a low prairie, and the skies are generally bright, but farther on the straits are narrow, shut in by high perpendicular mountains, and drenched by almost constant rains, snow, or hail. He saw much

of the Patagonians and Fuegans. The former, though of good height, averaging for both sexes 5 feet 10 inches to 6 feet, were not such giants as they had been represented. The tallest man he had measured was 6 feet 10½ inches, but his case was exceptional. The Fuegans were small, badly shaped, and ill-featured; but were temperate in their habits, except in their excessive use of tobacco, while the Patagonians were terrible drunkards. He confirms the statement made by other travellers, that the Patagonians kill their old people, to avoid having to provide for them.

Don Guillermo Cox, a Chilian naturalist, has made several visits to Patagonia, and studied very thoroughly the country and its people. He made reports of his explorations, in the "Annals of the University of Chili," where he was a professor, the last being dated in 1868. He states that Patagonia and the islands south of it are occupied by five distinct Indian tribes. 1. The Pehuenches, subdivided into northern and southern Pehuenches, whose district is for the most part north of the Limay, an affluent of the Rio Negro. 2. The Pampas, or Tehuelches of the north, from the Limay to the Cheoput. 3. The Tehuelches of the south, who occupy the southern portion of the peninsula, and differ very little from those of the north. (These two are the Patagonians most generally known, of large stature and intemperate habits.) 4. The Huaicurus, a mixed race, part Tehuelche, and part Fuegan, occupying the northern shores of the Straits of Magellan, and 5. The Fuegans or inhabitants of the island of Terra del Fuego. Of these tribes, the Pehuenches are the only ones who have fixed habitations, the others being nomadic and those on the coast plundering shipwrecked vessels. Don G. Cox confirms the statements of Captain Mayne in regard to the stature of the Tehuelches, who are, he says, the largest of the Patagonian tribes. All these tribes live exclusively upon flesh and fat, rejecting all vegetable food. They use the *bolas*, or lasso with two or three balls attached, to capture animals in hunting. They are polygamists, but adultery is very rare. Owing to their wretched life, abortion is very common, and their numbers are not increasing. The Tehuelches do not exceed 6,000.

Considerable interest has attached for some years past to two lakes in Southern *Chili*, lying in a pass of the Andes, through which it is believed with slight labor an available route for small steamboats might be found across the narrow prolongation of the continent. Dr. Edward Geisse, a Chilian geographer, has within the past year explored more fully the region in which these lakes (Llanquihue and Puyehue) lie. Finding their waters warmer than the atmosphere or the other streams near, he traced the streams which supply them up to their sources, and found that they flowed from very extensive hot springs about 240 feet higher in the mountains. The source of Puyehue, where it leaves the spring, has a temperature of about 149° Fahr., and that of Llanquihue varies from 100° to 122° Fahr.

Proceeding northward, we find little to notice in *Paraguay* except the continuance of the struggle which, though marked by great persistence on the part of the allies, and the most heroic endurance and bravery on the part of the Paraguayans, can only result in the almost complete depopulation of this naturally rich and beautiful country. The contest still continues, though it has recently taken a guerrilla character. The indomitable Lopez and his followers have betaken themselves to the mountains, and, though pursued, do not seem to be conquered or captured.

In *Bolivia* a new gold-field with very rich placers was discovered a few years since, but was not very fully developed until 1868–'69. It is situated in the Quelrada or district of Santa Rosa, lying between latitude 15° and 16° S., and between longitude 64° and 65° W. from Paris. In 1867 only about 50 lbs. of gold (about $11,000) were taken out, but in October, 1868, about 700 men were employed, and the yield had reached $5,500 per day. Since that time it has still further increased; and, as the earth for a depth of about 15 feet seems to be heavily charged with gold, there is a probability of still greater results even with the rude and imperfect processes adopted.

From *Peru* we have accounts more full than heretofore of the exploration of the Ucayali, the Juruá, and the Napo, the latter explored through most of its course by our countryman Prof. Orton and his company. It is about 800 miles in length, and navigable from Napo for boats for 580 miles, and for steamers from Santa Rosa (about 500 miles). Mr. Chandless, whose explorations of the Juruá was mentioned in the AMERICAN ANNUAL CYCLOPÆDIA for 1868, returned to England, in January, 1870, having, it would seem, again attempted the ascent of the Juruá, but was checked by the wars between the savage tribes which were still in progress. The highest point reached was above the mouth of the river Mú, in latitude 7° 11′ 45″ S., and longitude 72° 1′ 30″ W., 982 miles above the entrance of the Juruá into the Marañon.

Careful observations made by Nicholas Whitley, C. E., and Admiral Irminger, of the Danish navy, as well as by officers of the Cunard steamships sailing between Liverpool and New York, prosecuted for a series of years, give some interesting facts respecting the existence and course of warm currents in the northern portion of the ATLANTIC OCEAN. It seems from these observations that a cold current of water flows over the banks of Newfoundland, having a mean temperature of 39° 2′ Fahr., and during the three winter months falling to 32°, 31°, 30°, rising in September to 52°, its maximum. On or near the meridian of 40° W. from Greenwich in the steamship route, the mean temperature of the year is 57° 2′ Fahr., the lowest 54° in February and March, and the

highest 61° in August. From longitude 35° W. to 20° W. from Greenwich, the mean average temperature of the year is 56° 2′ Fahr., rising to 59° or 60° Fahr. in August and September, and sinking to 52° to 54° in the winter months. From 20° to the Irish coast, the temperature is somewhat lower, the mean of the year being 54° 2′ to 55° 1′, the minimum 50° to 52°, and the maximum 59° to 60°.

The Arctic current sets southward over the Newfoundland Banks and comes between the American shore and the Gulf Stream. To this are due our more rigorous winters than those of the west coast of Europe in the same latitude. But it has been discovered that the warm current from the Gulf Stream or tropical waters does not always follow precisely the same course, but is sometimes one or two degrees of longitude east or west of its usual route. These facts are interesting from their bearing on our climate, and on the probabilities of Arctic discovery.

8. EUROPE.—We have space to notice only a few particulars of geographical interest in Europe.

In *Italy*, Mount Ætna, which had been carefully measured in 1864, has again been the subject of measurement, it being very generally supposed that the great eruption of 1865 had altered its configuration and the height of some of its most noted points. The new survey proves the error of this supposition. The result of the admeasurements was as follows:

	1864.	1868.	Difference.
	Feet.	*Feet.*	*Feet.*
Place of Torr the philosopher....	9,481.13	9,483.49	1.36
Threshold of the English cabin...	9,561.69	9,564.39	2.70
Highest point of the brink of the crater.....	10,767.77	10,768.29	0.52

A hydrographical survey of Lake Ladoga, the largest lake of *Russia*, was completed in 1869. It has been long needed. The lake has an area of 6,633 square miles; it is 131 miles in its extreme length, and 98 miles in its greatest breadth. Its greatest depth, 122 fathoms, is attained in its northern portion, and its average depth is about 50 fathoms. Its principal affluents are the Volchoff, the Siassy, the Svir, the Olonka, the Tarfula, and the Voksa. The climate of the lake is very severe. In a cold winter the whole lake freezes over, and the ice is three to four feet thick. Icebergs of considerable size are formed at the northern extremity of the lake. The water is very pure and transparent, but cold, its temperature ranging from 86° F. to 45° F. in the very warmest weather. Fish are abundant at the mouths of the rivers, and of excellent quality. The traffic on the lake is very large.

In *European Turkey*, there were several successive earthquake shocks between the 25th and 28th of June, 1869. The first series were felt on the 25th, and extended from Constantinople to Adrianople. Two days later another series occurred, extending from Serajano to Ragusa. Though these shocks were severe enough to excite considerable terror, there was no destruction of property or life.

9. ASIA.—The Sinaitic explorations in *Arabia* have been prosecuted with great energy during 1869. The surveying party—consisting of Captains Wilson and Palmer, of the Royal Engineers; four non-commissioned officers of the Royal Engineers, all of whom as well as their chiefs had been engaged in the ordnance survey for some years; Mr. Palmer, an excellent and accomplished Oriental scholar; Mr. Wyatt, a naturalist; and Rev. F. W. Holland, who had made three previous explorations of the Sinaitic peninsula—left Southampton, England, October 24, 1868, and reached their destination November 11th. They made a careful trigonometrical survey of Jebel Musa and Jebel Subal, on a scale of six inches to the mile, and of the east of the Sinaitic peninsula, on a scale of two inches to the mile. They made copies and obtained impressions of about 2,500 of the Sinaitic inscriptions, of which twelve or fifteen were bilingual, or written in the Arabic and Greek characters, apparently by the same hand. There are also a few hieroglyphic inscriptions, which seem unconnected with the others. The results of this exploration must be important as determining the possible routes of the Israelites after leaving Egypt, and, unless there is evidence of material change in the topography of the country, the only mountain site which fulfils all the conditions required for Mount Sinai. The expedition, having completed its work, returned to England in May, 1869, and Mr. Palmer has since been engaged in deciphering the inscriptions which, it is believed, will throw much light on the subject. Among the objects of their incidental investigation was the famous *Jebel Nakûs*, or "Mountain of the Bell," an object of superstitious regard by the Arabs. The musical sounds produced at irregular intervals on that mountain, the explorers ascertained, were caused by the loose and sharp grains of sand becoming suddenly dislodged and striking against each other as they rushed down the slope of the mountain, and producing a ringing sound.

The labors of the *Palestine* Exploration Fund Committee were also conducted assiduously during a part of the year, and resulted in laying bare at a depth of from 80 to 106 feet portions of the walls of the city and temple, indicating, by their size, form, and inscriptions, the various epochs to which they belonged. The vast monolithic stones of the old Jebusite fortress, the huge but more highly-finished stones forming the walls erected by Solomon, the subterranean chambers and aqueducts of Hezekiah, the walls as rebuilt by Zerubbabel and Nehemiah, the grand foundations and substructures of Herod, the Roman, the Saracen, the Christian, and the Ottoman city, have each been made manifest in these explorations. The permission to explore within the temple area is still withheld, but the

results already obtained are such as to throw much light on Biblical literature and science.

Turkey in Asia.—Mr. John George Taylor, British consul at Erzeroom, explored, in the beginning of 1869, the region around the northern extremity of Lake Van, and the sources of the Euphrates, a region which no European traveller in modern times has visited. He found it a volcanic country, with one volcano, the Soondulik Dagh, or Oven Mountain, in a state of active eruption. This mountain is not laid down on the maps. There are numerous sulphur geysers, too hot for the hand, bursting with a slight explosion, and sending up a column of steam and sulphurous vapor, surrounding the Murad Su, or Euphrates, which, at this point, flows through a natural tunnel, and the sulphurous waters rush down the rocks and fall into its limpid stream as it emerges from the tunnel. Below, it has cut for itself a deep cañon through the basaltic rocks of the Ala Dagh, while, on the small plateau above, stands the town of Diadeen. Rev. Dr. H. J. Van Lannep, an Armenian by birth, but educated in the United States, and for many years past a missionary of the American Board to his own countrymen, has published, within a few months, a volume entitled "Travels in Little-known Parts of Asia Minor, with Illustrations of Biblical Literature and Researches in Archæology," which is a most valuable contribution to the geography of that region. Since the publication of Thomson's "The Land and the Book," no work of equal value with this in relation to "Bible Lands" has appeared. His careful and protracted explorations for thirty years have been rewarded by the discovery of the most valuable archæological and mythological treasures. In the *Caucasus*, three young Englishmen, Messrs. D. W. Freshfield, Tucker, and Moore, members of the Alpine Club, accompanied by one of the Chamounix guides in the summer of 1868, ascended two of the loftiest peaks of the Caucasus range, Kasbek, 16,546 feet high, and Elbruz, the monarch of the range, 18,526 feet in height, being the first Europeans who had accomplished this very difficult feat. They found, on the slopes at the foot of Elbruz, a remarkable race, the Ossetes, of great personal beauty, and speaking a language closely allied to the Sanscrit. Other small tribes within a limited area speak fifty or sixty different languages, remnants perhaps of the Babel confusion of tongues. Some of the villages of Suanetia, in the upper valley of the Ingur, at the base of Elbruz, are composed of outlaws who had fled from their own countrymen in consequence of their crimes, from whose lawless violence the travellers were in great danger.

Near the close of 1869, Prof. Raphael Pumpelly, a mining engineer and geologist, now professor in Harvard University, who had spent the five years 1860–'65 in explorations in Arizona, Japan, China, Mongolia, and Siberia, published a narrative of his explorations under the title of "Across America and Asia." The volume is one of great interest, and his geological discoveries and surveys in Yesso, and in the coal-districts of China, as well as in Mangolia and Siberia, which had been previously furnished to the Smithsonian Institute and published in one of their volumes, throw great light upon the physical geography of these countries. He saw much of the Ainos or hairy men of Japan, and gives interesting particulars in regard to their character, habits, etc.

The most interesting of all the geographical explorations which have been made known to the world in 1869 was that of the French Exploring Expedition up the Me-Kong or Cambodia River, in *Cambodia* or *Cochin China*. This expedition, which left Saigan, the capital of the French colony in Cambodia, June 5, 1866, and, after two years of great hardship, arrived at Shanghai, China, June 12, 1868, was composed of Captain Doudard de la Grée, of the French navy, Lieutenant Francis Garnier, Doctors Joubert and Thorel, Ensign Delaporte, and M. de Carné, a consular *attaché*. The chief of the expedition, Captain de la Grée, died, after a protracted illness, at Tongchuan, in Yunnan, China, March 12, 1868, and Lieutenant Garnier, who had been for some time conducting a separate branch of the exploration, took charge of the whole from that time. The party ascended the Me-Kong by water wherever it was navigable, and, where it was not, marched along its banks till they reached Muang-Yung, longitude about 98° E. from Paris, latitude 22° N., 2,000 feet above the sea-level, and within the limits of the kingdom of Burmah, which extends east at this point to the boundary of the empire of Anam, where they turned toward the northeast, and, crossing the Me-Kong (here called the Kin-Long-Kiang) at Kieng-hong, entered China, and made their way to Yunnan, the capital of the province of that name, situated on a small lake 6,000 feet above the sea. They arrived here in December, 1867, eighteen months after their departure from Saigon. From Yunnan they marched to Tong-chu-an-fŭ, a considerable city near the right bank of the Yang-tse-Kiang, which they reached early in January, 1868. Here Captain de la Grée, who had been long in bad health, became too ill to be able to go on, and Lieutenant Garnier, after consulting with him, determined to take a part of the company and make an effort to reach Tali-fŭ, in Tsse-Chuan, the capital and headquarters of the great Mohammedan rebellion against the Chinese Government. Tali-fŭ was a city of great importance, on the direct highway between Bhamo, the head of steam navigation on the Irrawady and the great Chinese cities on the upper Yang-tse-Kiang. The attempt to reach it was a hazardous one; the territory between Tali-fŭ and Tong-chu-an-fre was the great battle-ground between the contending parties, and the Mohammedans were at this time terribly incensed against the

imperial troops. No safe-conduct would be respected. But the daring young French lieutenant braved all dangers, and with his little company marched westward on the 31st of January, and, taking a circuitous route to avoid marauding parties, came to the highlands overlooking Tali-fû, after a wearisome and perilous journey, on the 29th of February. Here they were detained for a few days till the Sultan's will could be ascertained respecting them. They were finally permitted to enter the city, and marched to the palace, where the insults of the mob nearly led to retaliation and their destruction. The Sultan at first received them favorably, but a few hours later sent them orders to leave the city the next day, and seemed resolved to find a pretext for putting them to death. Nothing but the resolute firmness and decision of Lieutenant Garnier saved them from being brutally murdered. Making their escape as rapidly as possible, aided by a Catholic missionary whom they found in the mountains, they reached Tong-chuan-fû to find their chief dead. Disinterring his body, they made the best of their way with it to Siû-Chiû-fû, the nearest port on the Yang-tse-Kiang, and embarked there for Shanghai, from whence they returned to France. The whole distance travelled from Cratich, the village on the Me-King, which was their real point of departure, to Shanghai, was 5,392 miles, of which 3,625 were surveyed with care, and the positions in the unknown parts rectified by astronomical observations. They found the plateau, in which the five rivers we have already named take their rise, only about 240 miles wide. It is between 28° and 30° N. latitude, and forms the southeast slope of the great plateau of Thibet.

10. AUSTRALASIA offers little in the way of new discovery during the year 1869. A new expedition in search of Leechardt set out from Melbourne in May or June, 1869, but they have not yet been heard from. An expedition (the third) also set out in December, 1868, to explore the interior from Northern Australia. The interior of the continent is gradually becoming known, and the old ideas of its terrible drought and desolation are dying out. It is a vast basin, like Central Africa and our own Great Salt Lake Basin, most of the rivers of which do not find their way to the sea, but are swallowed up in the sands. Hence there are extensive salt lakes, and soda deposits, and in a dry season a terrible drought, but water is at no time very far below the surface, and these lands will, with proper care and the sinking of artesian wells, eventually prove fertile, and excellent both for grains and pasturage.

11. AFRICA offers far less than usual of interest to the geographer during the past year. The gleanings of science, from the explorations connected with the Abyssinian War, are still spread before the public, and Abyssinia, from being an almost unknown, has become perhaps the best known (after Egypt) of the African states. Dr. Livingstone's letters, though unsatisfactory, seem to imply that the Tanganyika, and another large lake west of it, perhaps an unexpected extension of the Albert Nyanza southward, will prove to be the sources of the Nile. But we shall know more definitely what he has discovered if, as there is reason to hope, he emerges from his long tour of exploration either on the west coast, or on the lower Nile.

In the region lying between the *Zambesi* and the *Limpopo*, Carl Mauch's gold-fields are still attracting attention, though the difficulties of the route thither are sufficient to deter any but the hardiest observers. The full narrative of Mr. St. Vincent Erskine's discovery of the mouth of the Limpopo and its course from its junction with its great affluent, the Lipaluli, has been received, and the journey appears to have been one of great peril and suffering, but happily a successful one. The mouth of the river was found in latitude 25° 15′ 19″ (the mean of two observations) south, and about the 34th meridian of east longitude from Greenwich.

Mosilikatse, the formidable chief of the Matabele, a Kaffir ruler whose name was a word of terror across the whole breadth of the continent in South Central Africa, died in the beginning of 1869, and his son Kuruman, a man of less ability, but also, it is said, less sanguinary disposition, has succeeded him.

Carl Mauch, the German geographer and explorer, has set out on an expedition from South Africa northward to Egypt. His past success in dealing with the natives encourages some hope that he may be successful in his long and perilous journey. The French during the years 1867 and 1868 employed one of the vessels of their African squadron in exploring the region of the Gabûn, and penetrated for a considerable distance up the Ogowai. The result of their explorations beyond defining the course of the Ogowai, and some brief notice of the Fans and other tribes, already described by Du Chaillu and Winwood Reade, does not seem to have been of particular interest. The latter explorer went out again in May, 1868, to endeavor to explore the course of the Niger and the mountainous region lying back from the *Gold Coast*. He was thwarted in his endeavors to reach his destination by way of Lagos or Whydah, and went to *Sierra Leone*, from whence he penetrated 400 miles into the interior, and reached the Niger, or Quorra River. He then returned to Sierra Leone, and, descending the coast to Monrovia, *Liberia*, started January 14, 1870, for Boporah, a large Mandingo town in the interior, accompanied by Prof. Blyden, and some other Liberians.

Gerhard Rohlfs has again been exploring some of the oases of the Sahara, and the Berber lands.

The opening of the Suez Canal, an important geographical event, is elsewhere described in this volume. (*See* EGYPT.)

GEORGIA. The State of Georgia was duly readmitted to its place in the Union by an Act of Congress, in the year 1868, and its constitution, with certain changes, was approved by that body. The Legislature subsequently expelled from their seats all its colored members (*see* AMERICAN ANNUAL CYCLOPÆDIA for 1868), and it was claimed by the most earnestsupporters of the reconstruction acts that, by so doing, it had violated the guarantees req ired of the State by Congress. No person exhibited a more decided disapproval of the course which had been pursued in the General Assembly than Rufus B. Bullock, the Governor of the State. No sooner had Congress assembled on the 7th of December, 1868, than that official submitted a communication in which he declared that "the laws under which the State of Georgia was to have been admitted to representation in Congress have not been fully executed;" and proceeded to give his reasons for making this statement. The government, he said, was merely provisional at the time of the assembling of the Legislature in 1868, and the law, therefore, required "that such persons only as were eligible under the reconstruction acts should be permitted to participate in the necessary provisional legislation precedent to recognition as a State." He continued in the following strain:

> The fact, however, is, that all the candidates for the General Assembly who had received the highest number of votes were, without regard to their eligibility under the law, permitted to take seats in the provisional legislative body, and to participate in the organization and the legislation thereof—having first been simply invited to take an oath prescribed in the new constitution, which constitution had not at that time become, and, under law could not then be, of force.
>
> The result of this failure to execute the law has been a defeat of the purposes which Congress had in view when passing the acts—these purposes having been the establishment of a loyal and republican State government, affording adequate protection to life and property, the maintenance of peace and good order, and the free expression of political opinion.
>
> The wise discernment displayed by Congress, in requiring by its legislation that none but those who were loyal should participate in the establishment of a provisional government which was thereafter to be clothed with the rights and immunities of a State in the Union, charged with the care and protection of the lives and property, and the civil and political rights of its citizens, is made the more apparent by the consequences which have ensued from this failure in the enforcement of that legislation.
>
> I would, therefore, respectfully invite the attention of your honorable body to this subject, and ask that such steps be taken as may to you seem wise and proper for the obtaining of full information in relation thereto; and to the end that loyalty may be protected and promoted by the enforcement of the laws enacted by the representatives of the American people.

This subject received the immediate attention of both Houses of Congress. Senator Pomeroy, of Kansas, introduced a bill into the Senate providing for the reassembling of the Constitutional Convention of Georgia—which had adjourned for one year, subject to being called together if Congress should require any thing further in relation to reconstruction—this convention then to be required to insert in the constitution a qualification for holding office in the State which should not be in conflict with the fourteenth amendment of the Federal Constitution. After some discussion as to the effect of the omission of the convention to make any provision on the subject of office-holding, this bill was referred to the Judiciary Committee. In the House of Representatives the whole subject went to the Reconstruction Committee, who took a large amount of testimony with regard to the state of affairs in Georgia. It was contended on the one hand that the laws were not faithfully executed by the officers of the State, and that they were resisted by the people; that the colored people, and persons belonging to the Republican party, especially those coming from the North, were abused and ill-treated; and, finally, that the people did not show a desire for peace and union. On the other hand, Hon. Nelson Tift, one of the representatives of Georgia in Congress, obtained the testimony of over one hundred persons, mostly judges of courts, mayors of cities, and other officials, to the effect that the laws of the State were faithfully executed, and were not resisted by the people; that the treatment of blacks and Northern white men was kind and conciliatory; and that there was a universal desire for peace and restoration to the Union.

On being asked his opinion as to what should be done, Governor Bullock said that there should be a literal execution of the reconstruction acts, and, in his opinion, these acts required the organization of the Legislature to be made by the admission of those only who could take the test-oath, or had been relieved of their disabilities by Congress. This, he said, would restore the colored members, and place the Legislature of the State in the hands of loyal men, and then "after the adoption by such a body of the fundamental condition, precedent to the State's admission to the Union, under the act of June 25th, all members eligible under the State constitution and the fourteenth amendment would be admitted, and no further action by Congress would be necessary."

While the subject was still in the hands of the Reconstruction Committee, the Hon. Nelson Tift submitted to that body a long statement regarding the condition of affairs in Georgia, which was intended to combat the position taken by Governor Bullock in his first communication to that committee, and his subsequent testimony. He declared that the laws of Congress for the reconstruction and admission of Georgia had been complied with in every particular. In proof of this, he referred to the election for delegates to the convention to form a constitution, the meeting and action of that convention, the adoption of the constitution, and the election of officers by the people, the organization of the Legislature, the striking out of certain sections of the constitution in accordance with the expressed will of Congress, the

adoption of the fourteenth amendment, the inauguration of the Governor, the announcement of the withdrawal of the military, and the restoration of civil law, and the proclamation of the President certifying the compliance of the State with the conditions prescribed by Congress for her admission to representation, "all in perfect accordance with the letter and spirit of the law;" and finally, the unanimous assent of the House of Representatives to the fact that reconstruction was accomplished in Georgia by the admission of her representatives to seats in the House. With regard to the non-exaction of the test-oath at the organization of the Legislature, he showed that it was omitted on the authority of General Meade, after consultation with General Grant, and declared that, if any person had been admitted in violation of the fourteenth amendment of the Federal Constitution, the remedy was "not the destruction of the State government by Congress; not retaliatory laws which shall deprive the whole people of Georgia of their rights under the Constitution, but evidently such proper enforcement of the Constitution and laws as will remove such members as are ineligible under the fourteenth amendment of the Constitution." On the subject of the expulsion of the negro members, he said that "neither the reconstruction acts, nor the civil rights bill, nor the fourteenth amendment of the Constitution, require any State to provide that colored citizens shall be eligible to office;" that the constitution of the State was silent on the subject, and the members of the Legislature had decided that it was necessary that this right should be conferred on those who were born slaves before they could exercise it. If they were wrong, the only proper remedy for this and all similar evils was to be found in the ballot and the courts. He then took up the subject of resistance to law and the treatment of citizens, and referred to the testimony which he had gathered and submitted to the Reconstruction Committee to show that order and a desire for peace prevailed. His conclusions are summed up as follows:

An examination of all the facts shows: 1. That the law of Congress recognizes Georgia as a State in the Union, entitled to representation in Congress, and of necessity having equal rights with other States.

2. That the action of the Legislature, in their decision that colored men were not, under the constitution and laws of Georgia, eligible to office, was a question confided to their jurisdiction by the constitution, so far as members of the Legislature were concerned; and, if they have committed an error in their judgment, it can only be properly corrected by the court, whose judgment, when pronounced, will be the law.

3. That, according to the most reliable official testimony, the condition of affairs in Georgia, considering the circumstances which have surrounded the people, and the trials through which they have passed, is better than the most ardent friend of peace could have expected, and is still improving.

This document drew forth a reply from Governor Bullock, addressed to the chairman and members of the Reconstruction Committee, and dated on the 26th of February. In this he reiterated the statements made by himself before the committee, and accused Mr. Tift of misrepresenting his motives and his language. His only object was, he said, "to secure a loyal civil government" for the State. Mr. Tift saw fit to follow with a response to the Governor's letter, in which he quoted from the testimony before the Reconstruction Committee to sustain his view of the motives and objects of that official, and elaborated at greater length some of the points set forth in his first communication.

While this subject still remained in the hands of the Reconstruction Committee, the term of the Fortieth Congress expired, and the Forty-first was duly organized on the 4th day of March. Meantime, the Senators elected by the Georgia Legislature had presented themselves for admission, and their credentials had been referred to the Judiciary Committee, who reported adversely to their claims. The question of counting the electoral vote of the State also came up, and, after some acrimonious debate, was disposed of. (*See* CONGRESS, U. S.)

The representatives chosen at the same election at which the constitution was ratified had been admitted to the Fortieth Congress on the 25th of July, 1868; but, although it was generally understood in the State that they were elected also for the full term commencing March 4, 1869, it was not so stated in their credentials, and they were not allowed to retain their seats in the Forty-first Congress, so that after the organization of that body the State was again wholly without representatives in the Federal Government.

A bill was finally reported in Congress by B. F. Butler, chairman of the Reconstruction Committee, on the 7th of April, "to enforce the fourteenth amendment of the Constitution and the laws of the United States, and to restore the State of Georgia to the republican government elected under its new constitution." The preamble of this bill declared that the Legislature of the State of Georgia, elected under its new constitution preparatory to the restoration of the State to its place in the Union, had, in violation of the fourteenth amendment of the Constitution of the United States, refused "to purge itself of members" who were prohibited from acting as such by that amendment; that a majority of the persons, in fact, composing that Legislature, had, in violation of the Constitution of the United States, and the constitution of the State of Georgia, and in violation of the fundamental principles upon which Congress had consented to her restoration to the Union, expelled a large number of its legally-qualified members, upon the sole ground that they were persons of African blood, and admitted to their places persons who had not received a majority of the votes of the people; and that it appeared that the local authorities in the State were

wholly unable or unwilling to protect the lives, liberties, and property of unoffending citizens from lawless violence, and had refrained, purposely or for want of power, from bringing offenders to justice, whereby it fully appeared that the people of the State had not complied with the terms, or conformed to the principles upon which its restoration was provided for, and that the government thereof was not, in fact, republican or regular. The body of the bill contained much the same provisions as those contained in the bill passed at the next session of Congress, and given in full below. The present bill, after some debate, was postponed until December. The principal speech, in opposition to the bill, was made by Mr. Beck, of Kentucky, who recapitulated the history of reconstruction in Georgia, and endeavored to show that the law had been fully complied with, and the State once admitted to the exercise of all her functions as a member of the Federal Union. After her restoration had been thus consummated, the course which she had pursued was a matter wholly within her discretion, and formed no stronger ground for "destroying or annulling her State Legislature by congressional action" than a similar course in any other State would give Congress a right to disperse the Legislature and put a military Governor over her. He then attacked the specific provisions of the bill itself, and reflected severely on the motives which prompted Governor Bullock and others to urge a measure of this character. Other speeches were made by Mr. Voorhees and Mr. Bingham, and it was on motion of the latter gentleman that the postponement of the matter was effected.

Soon after the question of completing the reconstruction of Georgia had been brought fully to the attention of Congress, the Legislature of the State assembled at Atlanta in the new building furnished by the city for the purpose. On the first day of the session (January 13th), the Governor submitted a message in which he gave an account of his proceedings at Washington, and his reasons therefor, and reiterated his views on the subject of the reconstruction of the State. His own examination of the reconstruction acts, he said, led him to the following conclusions:

1. Until the full recognition by Congress of Georgia as a State in the Union, there can be no authority for government within her territorial limits except that derived from the laws of the United States.

2. This authority for government is found in the laws known as the reconstruction acts of Congress.

3. The terms and conditions upon which Georgia was to have been admitted as a State are prescribed in the law of June 25, 1868, entitled "An Act to admit," etc.

4. There being nothing in that act which repealed or annulled the requirements previously enacted as to eligibility, those terms and conditions could be legally adopted only by a legislative assembly organized under and by virtue of the laws of the United States then in force, and by a body whose members were eligible under the acts of March 2 and July 19, 1867.

5. Until said terms and conditions should be adopted by such a legislative body as that referred to, the new constitution could have no vitality as fundamental law.

6. In the act of March 7, 1867, the following condition was prescribed for persons holding office under the provisional government:

"* * * no person shall be eligible to any office under any such provisional governments who would be disqualified from holding office under the third article of said fourteenth amendment."

7. That this restriction was not by Congress considered sufficiently comprehensive to insure the establishment of State governments in harmony with its policy, is made manifest by the fact that the following still more restrictive provision was embodied in the supplemental reconstruction act, which became a law on the 19th of July, 1867:

"*And be it further enacted*, * * * That all persons hereafter elected or appointed to office in said military districts, under any so-called State or municipal authority, or by detail or appointment of the district commander, shall be required to take and subscribe the oath of office prescribed by law for officers of the United States."

8. Congress is the sole final interpreter of the true intents and meaning of the reconstruction acts, and the arbiter upon questions of execution. General Grant to General Ord, June 26, 1867: * * * "The law, however, makes the district commanders their own interpreters of their power and duty under it; and in my opinion the Attorney-General and myself can do no more than give our opinion as to the meaning of the laws; neither can enforce his views against the judgment of those made responsible for the faithful execution of the law—the district commanders." Also General Meade to General Grant, July 18, 1868: "My judgment, therefore, is to acquiesce in the decision of the Senate, and leave to Congress such action as may hereafter be deemed proper in case the Senate failed to comply with the law."

His plan for finishing the work of reconstruction was then duly set forth in substantially the same terms which he had used in recommending it to the Reconstruction Committee. He concluded with an urgent recommendation that the Legislature itself take the initiative in the matter, and aid in the consummation of the congressional policy. "Restore the colored members to their seats," he urged; "and exclude every person from participation in your legislation who took an official oath to support the Government of the United States, and afterward gave aid or comfort to the enemies thereof, until such person shall have been relieved by Congress of the disability thus incurred—bearing in mind that the only relief from such disability is found in the action of two-thirds of each House of Congress, and cannot be accomplished by the individual opinion of the person affected that the aid or comfort was not voluntarily afforded." He furthermore suggested that, if these recommendations did not find favor with the members, they should take such action as they might deem proper on the same, and then adjourn until some convenient time in midsummer, leaving the whole matter with Congress, where, if not satisfactorily adjusted by ourselves, the question must be finally disposed of." Neither of these recommendations was heeded by the Legislature, which proceeded to the regular work of the session as if nothing had happened, and passed no less than one hundred and

eighty-eight laws and twenty-nine joint resolutions before adjourning in the early part of April. A large proportion of these acts were for the incorporation of railroads and manufacturing companies, and for the promotion of the material interests of the State.

Among the more important measures of the session was a general jury law, an act to encourage immigration, the tax levy of the year, and an act in relation to the statute of limitation. An act was also passed changing the fiscal year so as to make it correspond precisely with the calendar year; and another, prohibiting the sale of intoxicating liquors on election days within one mile of the city, town, or precinct where elections may be held, under a penalty of fifty dollars' fine or ten days' imprisonment for each offence.

The law for the encouragement of immigration provides for the election by the General Assembly of a domestic and a foreign commissioner, who shall hold office for two years, and "devote themselves to the encouragement of the immigration of good citizens, laborers, artisans, mechanics, etc., and to the investment of capital in lands." They are also required to prepare and circulate such publications as they may deem advisable, tending to promote the object contemplated, and to keep records of lands for sale, and of such other information as may be important for their purposes. The foreign commissioner is required to spend from one to two years in Europe for the purpose of encouraging and facilitating immigration into the State from that quarter. A report is to be made to the Governor, concerning the results of the plan at the end of one year, and ten thousand dollars were appropriated for carrying it into operation. This act did not receive the approval of the Governor, but became a law by lapse of time, and Colonel George N. Lester was elected domestic commissioner and Samuel Weil, Esq., foreign commissioner.

The act in relation to the statute of limitations had reference to the law of 1868, in which it was provided that in all cases arising out of transactions which took place prior to June 1, 1865, the destruction or loss of the property upon which credit was given may be put in evidence, and the debt reduced by the jury according to the equities of the case. (*See* CYCLOPÆDIA, 1868.) The constitutionality of that law had been brought in question on the ground that it impaired the obligation of contracts, and in a case before the Supreme Court, in January, each of the three judges on the bench gave an opinion on the question, two of which were in favor of the constitutionality of the law, and one against it. On account of the doubt which continued to exist with regard to the constitutionality of the law of 1868, the Legislature at this session passed an act which required that all suits arising out of transactions prior to June 1, 1865, should be brought before January 1, 1870, or be forever barred. All cases arising out of transactions since the 1st of June, 1865, are governed by the old statute of limitations of the Code of Georgia.

Several acts of the session were vetoed by the Governor. One of these, "An Act to incorporate the town of Parkerville," was returned without his approval, on the ground that it would "enforce what was commonly known many years since in Georgia as the 'Algerine Law,' or establish a universality of election without regard to age or sex, and based simply on the ownership of property." The provision referred to limited the right to vote for the officers of the proposed town to the owners of lots therein. "It is to be sincerely regretted," said the Governor, "that a measure of this extraordinary character, and so flagrantly violative of the letter and spirit of our constitution, and antagonistic to the principles of republican government, should have received the approval of the respective committees and a majority of the members of each House of the General Assembly."

An act to amend the act of incorporation of the town of Jonesboro was also vetoed. This provided that "all persons who, under the laws of this State, are entitled to vote for members of the General Assembly, and who have resided for three consecutive months immediately preceding the election in the corporate limits of the town, shall vote, and none other;" and also that "no one shall be deemed eligible to hold office in said town who is not eligible to a seat in the State Legislature." On these points the Governor said:

> The constitution of the State guarantees the elective franchise to all citizens who have resided within this State six months, and within the county in which they propose to vote thirty days preceding the election. This section is therefore in conflict with the constitution. As there is no distinction made by the constitution on account of race or color, as to the eligibility of citizens to hold office, and as the Legislature has assumed to decide the question of eligibility as to its own membership in an opposite direction, the enactment of a law prescribing eligibility to office in a municipal government, based upon the decision of the Legislature as to membership, would seem to be inconsistent with the guarantees of the constitution."

The fifteenth amendment of the Constitution of the United States, which was submitted to the Legislatures of the several States by a vote of both Houses of Congress on the 26th of March, was presented to the Legislature of Georgia for its action by Governor Bullock near the close of the session. In his message on this occasion the Governor began by saying:

> It is especially gratifying to learn, as I do from the published proceedings of your honorable body, that senators and representatives, who have heretofore acted with a political organization which adopted as one of its principles a denunciation of the acts of a Republican Congress as unconstitutional, revolutionary, and void, should now give expression to their anxious desire to lose no time in embracing this opportunity of ratifying one of the fundamental principles of the Republican party, as herein proposed,

by a joint resolution of a Republican Congress; and I very much regret that the preparation necessary for a proper presentation of this subject to your honorable body has necessarily caused a short delay, and thereby prolonged the suspense of those who are so anxious to concur.

This amendment is specially designed to secure political privileges to the colored man; and whether its ratification by a General Assembly, which has already violently wrested from him privileges to which he was constitutionally entitled in this State, will be recognized as valid by the power proposing it, unless accompanied by a reversal of the action by which those privileges were denied, is a question which we will not delay here to consider—

and closed with these words:

The ratification of this amendment by your honorable body, and a recognition of its requirements as here indicated, together with those of the fourteenth amendment—which are as yet disregarded—will, I sincerely hope and confidently believe, secure for us full and complete recognition as a State, definitely settle our political differences, and set at rest, finally and forever, the feeling of uncertainty and insecurity which now excites and disturbs a large portion of our people.

The amendment was nevertheless rejected by a vote of 16 to 13 in the Senate, although the House voted to ratify (64 to 58).

While the Legislature was in session a difficulty occurred between the Governor and the State Treasurer, Mr. N. L. Angier, arising out of the financial transactions of the former. This affair attracted considerable attention in the State, and was commented on in Congress as constituting one of the causes which prompted Gov. Bullock in his attempt to get rid of the existing Legislature. In the fall of 1868 the State had entered into a contract with the Fourth National Bank of New York to place in the hands of the officers of that institution a large amount of bonds as collateral securities for advances to be made to the State Treasury. Money was obtained on this contract from time to time, and, after the bonds were issued, still further amounts were obtained by their hypothecation. The whole amount of the bonds issued and sent to the Fourth National Bank of New York, either as security or to be sold, was $600,000. On the 20th of January a resolution was adopted in the House of Representatives, calling on the Treasurer for full information regarding this loan and the money which had been obtained thereon. In his response on the following day, Mr. Angier said, that in the statement of the matter by the bank, which he had received on the 9th instant, that institution had credited itself with a large amount which he knew nothing about, and which had never reached the Treasury. On receiving this statement of the account, he had immediately set out for New York to get a full explanation, and found that Governor Bullock had drawn $35,000, which had never been paid or reported to the Treasury.

As soon as this report was made public, Governor Bullock submitted a counter-statement, in which he said he had been obliged to advance $35,000 to secure the completion of the new capitol building at Atlanta in time for the use of the Legislature, and had drawn for the purpose on the bank in New York. He was prepared to make a full statement of the matter to the Treasurer before the meeting of the Legislature, when he found that officer had gone away to New York. On his return he explained it fully, and wished Mr. Angier to submit his report in reply to the resolution of January 20th to him before it went to the House of Representatives, in order that the matter might be fully exhibited. This was not done; but the Treasurer made his statements, although he was "entirely advised as to the whole matter."

The subject was referred to the Financial Committee of the House for investigation, and that body proceeded to receive the full statement of both the officials concerned, to inquire into the necessity of the expenditures on the new capitol building, and to examine the precedents with regard to the authority of Governor Bullock to make advances of money in the way in which he had made them. In his statement to the committee, Mr. Angier cast still more serious imputations upon the integrity of the Governor, and intimated that he had used the public funds for private purposes. Mr. Bullock, on the other hand, gave a full explanation of his course, and complained that the Treasurer had refused to pay his warrants on various occasions with captiousness and a want of proper respect for the Executive of the State. Two reports were submitted by the committee on the 15th of February. The majority thought that Governor Bullock had committed some errors of judgment, but expressed the belief that "his intentions were pure, and what he did was in good faith," though "without authority of law." They accordingly refused to make any recommendation, except, that the Judiciary Committee be instructed to prepare a bill defining more clearly the duties of the Governor and Treasurer, and giving the latter "exclusive power of negotiating State bonds, by and with the consent of the Governor." The minority report was more severe on the conduct of the Governor, and fully justified the course of Mr. Angier. It closed with a recommendation that no immediate appropriation be made to cover the expenses on the capitol, and that measures be adopted for the security of the Treasury. The minority report was adopted, but resulted in no important legislative action.

The facts with regard to the State capitol were these: When the Constitutional Convention of 1868 was in session, the city of Atlanta offered to furnish suitable buildings for the use of the State government for a period of ten years, provided the capital should be transferred to that place. This offer was accepted, and the city purchased the building known as Kimball's Opera-House for the use of the Legislature and the government offices, and entered into a contract with the former owners to

make such alterations as were necessary for the purpose. Provision was not made, however, for the proper heating, lighting and furnishing of the building, and a question arose as to whether that was included in the agreement of the city. Without waiting for the adjustment of this question, the Governor had authorized the necessary expenses and drawn upon the funds of the State to meet them, thinking that the amount would be repaid by the city, if it were finally determined that it came properly within its agreement with the Constitutional Convention. A joint committee of the General Assembly was afterward appointed to consult with the municipal authorities of Atlanta for the adjustment of the entire difficulty, but it does not appear that a conclusion was reached before the adjournment of the Legislature.

This misunderstanding between the Governor and Treasurer continued to be a source of embarrassment to both, and a somewhat bitter controversy was carried on between them throughout the summer. The following order was issued by the Governor on the 3d of June:

EXECUTIVE DEPARTMENT,
ATLANTA, GA., *June* 3, 1869.

Whereas, N. L. Angier, State Treasurer, has assumed to repudiate the official acts of the Executive in connection with loans and drafts made in pursuance of law, with the Fourth National Bank of the city of New York, which bank was by me appointed financial agent under authority of a joint resolution of the General Assembly, approved October 3, 1868:

Now therefore, I, Rufus B. Bullock, Governor and commander-in-chief of the army and navy of this State, and of the militia thereof, do issue this Executive order, relieving and restraining the said Fourth National Bank, acting as such financial agent, from holding further official intercourse with the said N. L. Angier, Treasurer, and from recognizing any order issued by him, unless specially approved by me; and notifying and directing said bank that henceforth all correspondence and instructions relating to the said financial agent and its connection with this State shall be held with and received from this department only.

Given under my hand and the seal of the Executive Department at the Capitol, in the city of Atlanta, the day and year first above written.

RUFUS B. BULLOCK, Governor.

By the Governor:
EUGENE DAVIS, Sec'y Ex. Dept.

Thereupon Mr. Angier published a statement that he had not repudiated "loans made in pursuance of law," but merely labored to prevent the Treasury from being plundered and to sustain the credit of the State, and this he was determined to do, "regardless of the illegal injunction of His Excellency." He declared the course of the Governor in the use of the public funds to have been in violation of law, and expressed his belief that his object in issuing the present order was to get an opportunity "to draw upon the Fourth National Bank for more funds without authority, to be spent by him in violation of law, greatly to the detriment of the public good."

The Governor appealed to the Comptroller-General, Hon. Madison Bell, to know whether any Executive warrants had been approved by him which were in violation of law. The Comptroller having replied that he believed the Governor's warrants had been fully authorized, was drawn into an unprofitable controversy with Mr. Angier, which lasted several weeks. The only result of the correspondence was, to keep up a fruitless dispute and continue the financial embarrassment of the State.

The question of the right of a negro to hold office in the State of Georgia was settled by a judicial decision of the Supreme Court on the 22d of June. The Legislature had proposed, early in its session, to have this matter tested in the court, and adopted a joint resolution providing for the submission of a test case, but the Governor vetoed the resolution in a message in which he reflected on the legality of the existing government and its power to provide for any final settlement of the question. An actual case, however, soon came up in the county of Chatham, on the following state of facts: Richard W. White had been elected to the office of Clerk of the Superior Court in that county by a majority of the votes cast, and had been duly commissioned to perform the duties of the position. Thereupon William J. Clements, who had received the next highest number of votes, applied to the Superior Court for a writ of *quo warranto* against White, on the ground that he had more than one-eighth African blood in his veins. The latter was summoned to show cause why a *mandamus* should not issue depriving him of the office and putting Clements in his place. The case was tried before Justice Schley, and judgment passed deposing White from the office of Clerk of the Superior Court, and declaring that Clements was entitled to hold the position. The grounds of Judge Schley's decision were substantially the same as those set forth in the dissenting opinion of Judge Warner of the Supreme Court, alluded to below. The case was carried to the Supreme Court on a writ of error and the decision reversed, Mr. Justice McCay and Chief-Justice Brown concurring in the reversal, and Justice Warner dissenting. The two judges, who formed a majority of the court and concurred in granting the negro the right to hold office, did not, however, agree upon the grounds on which that judgment was based, and each read an opinion before the court, which, with the dissenting opinion of Judge Warner, may be regarded as containing the different views held on this important subject by the prominent men of the State.

Mr. Justice McCay set out with the statement that the constitution and laws of the State prior to the late war had nothing to do with the subject. "The constitution or frame of civil government in existence in this State on the 1st of January, 1861," he said, "with all its disabilities and restrictions, was totally submerged in the great revolution

which from 1861 to 1865 swept over the State. . . . . The convention of 1867 met under the laws of the United States, and was elected and composed in total disregard of all the provisions and presumptions, qualifications, disqualifications, and distinctions, of the old organization. The black people participated in its election and its composition, on equal terms, in theory at least, with the white, and nothing can to my mind be plainer than that, by the whole theory then acted upon, they were recognized as forming an integral part of the sovereign people, then assembled in convention to form for their common benefit a constitution and frame of civil government. Such being the facts of the case, it appears to me that this court, deriving its whole authority from the constitution then framed, and sworn to support it, is, from the very nature of the case, absolutely prohibited from recognizing, as then or now in force, either the constitution of 1860 or 1865, or any of the legal or political disabilities or distinctions among the people, dependent upon them or either of them."

He then announced his opinion that the right of the negro to hold office was guaranteed by the new constitution of the State, and laid down the following as the "general principles" on which that opinion was based:

1. The constitution of Georgia, known as the constitution of 1868, is a new constitution, made by, and formed for, a people who at the time were, by the facts of the case, and by the laws of the United States, without any legal civil government; and as the people of Georgia, without regard to past political distinctions, and without regard to distinctions of color, participated on equal terms in the election for the convention, and in its composition and deliberations, as well as in the final ratification of the constitution it framed—in the construction of that constitution, and in the investigation of what rights it guarantees or denies, such distinctions are equally to be ignored.

2. The rights of the people of this State, white and black, are not granted to them by the constitution thereof. The object and effect of that instrument is not to give, but to restrain, deny, regulate, and guarantee rights; and all persons recognized by that constitution as citizens of the State have equal legal and political rights, except as otherwise expressly declared.

3. It is the settled and uniform sense of the word "citizen," when used in reference to the citizens of the separate States of the United States, and to their rights as such citizens, that it describes a person entitled to every right, legal and political, enjoyed by any person in that State, unless there be some express exception, made by positive law, covering the particular person, or class of persons, whose rights are in question.

4. Words used in a statute, or constitution, have their ordinary signification, unless they be words of art, when they have the sense placed upon them by those skilled in the art, or unless their meaning be defined and fixed by law—in which latter case the legal meaning must prevail.

5. By the 1648th and 1649th sections of Irwin's Revised Code, it is expressly declared that among the rights of citizens is the right to hold office, and that all citizens are entitled to exercise all their rights as such, unless expressly prohibited by law; and, as the constitution of 1868 expressly adopted said code as the law of the State, when that constitution uses the word "citizen" it uses it in the sense put upon it by the express definition of the code it adopted.

6. Article 1st and section 2d of the constitution of 1868 expressly declares that all persons born in the United States, or naturalized therein, resident in this State, are citizens of this State, and, as the code adopted by the convention, in express terms, declares that among the rights of citizens is the right to hold office, a colored person born in the United States and resident in this State is, by that section of the constitution, guaranteed eligibility to office, except when otherwise prohibited.

7. Nor would the repeal of those sections of the code, or their alteration, deprive a colored person of the right thus guaranteed. Since it is a settled rule that it is not in the power of the legislature to divest a right or change a constitutional guarantee by altering the legal meaning of the word by which that guarantee was made.

8. The right to vote involves the right to be voted for, unless otherwise expressly provided, since it is not to be presumed, without an express enactment, that the principal is of less dignity or rights than the agent.

9. There being in the constitution of 1868 various special disqualifications of electors for particular offices, and four separate sections detailing disqualifications for any office, and a black skin not being mentioned as one of these disqualifications, under the rule that the expression, etc., of one thing, is the exclusion of others, persons of color, electors, are not disqualified from holding office.

10. There never has been in this State, at any period of its history, any denial in terms of the right to vote or to hold office, to colored persons as such. By the old law, they were either slaves or free persons of color, and these rights were denied them by declaring that they were not and could not be citizens of the State; and when article 1st, section 2d of the constitution of 1868, recognized them as citizens, the right to vote and to hold office, except as otherwise provided by the constitution, was, *ex vi termini*, also guaranteed to them.

11. Ineligibility to office involves not only the denial to the person claiming the place the right to be chosen, but, what is of far greater moment, the right of the selecting power to choose; and to make out a case of ineligibility, there must be such a state of affairs as established not only the want of power to be chosen, but a denial of power in the selecting power to choose.

12. The people of a State, in their collective capacity, have every right a political society can have, except such as they have conferred upon the United States, or some department of the State government, or have expressly denied to themselves by their constitution; and as the right to select a public officer is a political right, the people of that branch of the government clothed by the constitution with the power to choose, may select whomsoever it will, unless the right to choose a particular person, or class of persons, is expressly taken away by the constitution.

Chief-Justice Brown based his opinion entirely on the body of laws known as Irwin's Code, which had been adopted as the law of the State, so far as it was not inconsistent with the constitution of Georgia, or that of the United States. That code had divided the inhabitants of the State into four classes: citizens, residents, aliens, and colored persons; and on citizens only had it conferred the right to hold office. It had provided that "all citizens are entitled to exercise all their rights as such unless specially prohibited by law," and among those rights, that of holding office was enumerated. The judge then argued that the fourteenth amendment of the Federal Constitution and the section of the State constitution

which declared that all persons born or naturalized in the United States, and resident in the State, were citizens of the State and entitled to all the privileges and immunities of citizens, simply transferred negroes to the category of citizens in the classification of the code, and clothed them with all the incidents of that new position. It was not necessary, he said, to inquire whether the privileges and immunities guaranteed to the colored race by the constitution of the State as well as that of the United States included political rights; "it cannot be questioned that both constitutions make them citizens. And I think," he concluded, "that it is very clear that the Code of Georgia upon which alone I base this opinion, which is binding upon all her inhabitants while of force, confers upon *all* her citizens the right to hold office, unless they are prohibited by some provision found in the code itself. I find no such prohibition in the code affecting the rights of this respondent. I am, therefore, of the opinion that the judgment of the court below is erroneous, and I concur in the judgment of reversal."

Mr. Justice Warner, in dissenting from the decision of the court, contended that the fact that the defendant had been made a citizen of the State, and invested with all the privileges and immunities of a citizen, did not give him the right to hold office. "The privileges and immunities of a citizen as such," he said, "are one thing, and his legal right to hold office as such citizen under the authority of the State is another and quite a different question." The authority to hold office must be conferred upon the citizen by some public law of the State, selecting those persons for that dignity "from that class of her citizens which in her judgment will best promote the general welfare of the State." He therefore concludes that the provisions of the State and Federal Constitutions guaranteeing to persons of color the privileges and immunities of citizens does not confer upon them the right to hold office. He then takes up the Code of Georgia and shows that it specifies certain classes of persons whom it declares to be citizens and certain other classes of persons whom it declares not to be citizens, among the latter all persons of color. The right to hold office is conferred upon all citizens as defined in the code itself, and therefore accrues to all those persons included in the classes enumerated as citizens and to no others. Since the adoption of the code, the defendant had been made a citizen entitled to the privileges and immunities of a citizen; but, in order to have the right to hold office, it must be conferred upon him by some affirmative enactment. He differed from a naturalized citizen, in this respect, from the fact that a naturalized citizen being a white man had a common-law right to hold office founded on immemorial usage, while no such right can be claimed for persons of color, they having but recently become entitled to citizenship and never having held office. "When a new class of persons are introduced into the body politic of the State," he said, "and made citizens thereof who cannot claim a common-law right to hold office therein, it is incumbent on them to show affirmatively that such right has been conferred upon them by some public law of the State, since they were made citizens thereof, to entitle them to have and enjoy such right." The conclusion of the opinion is in the following language:

> All male white citizens of the State, whether native-born or naturalized citizens (having the necessary legal qualifications), have a common-law right to hold office in this State; and, in order to deprive them of that common-law right, a prohibitory statute is necessary. A naturalized citizen had a common-law right to hold the office of President of the United States; hence, the prohibition in the Constitution of the United States. But, as colored citizens of the State, who have recently been made such, cannot claim a common-law right to hold office in the State, as no prohibitory statute is necessary to deprive them of a right which they never had under the common or statute law of the State, when, therefore, it is said that colored citizens have the right to hold office in the State, unless specially prohibited by law, it must be shown affirmatively that they had previously enjoyed that right. If they cannot show their right to hold office in the State, either under the common law, the constitution, or statutes of the State, the fact, that they are not specially prohibited from exercising a right which they never had, amounts to nothing, so far as investing them with the right to hold office is concerned. When, and where, and by what public law of the State, was the legal right to hold office therein conferred on the colored citizens thereof? If this question cannot be answered in the affirmative, and the legal authority under which the right is claimed cannot be shown, then the argument, that inasmuch as there is no special prohibition in the law against the right of colored citizens to hold office, falls to the ground. If there was no existing legal right to hold office to be prohibited, the fact that there is no prohibition does not confer such legal right. There was no legal necessity to prohibit that which did not exist.
>
> It is not the business or duty of courts to make the laws, but simply to expound and enforce existing laws, which have been prescribed by the supreme power of the State. After the most careful examination of this question, I am clearly of the opinion that there is no existing law of this State which confers the right upon the colored citizens there to hold office therein; and, consequently, that the defendant has no legal right to hold and exercise the duties of the office which he claims under her authority; and that the judgment of the court below overruling the demurrer should be affirmed.

The question of the validity of marriages between white and colored persons came up at the same session of the Supreme Court, and was decided in the negative, Chief-Justice Brown delivering the opinion of the court. Section 1707 of the Code of Georgia forever prohibits such marriages, and declares them null and void, and the constitution declares that "the social status of the citizen shall never be the subject of legislation." The effect of this provision of the constitution, in the opinion of Judge Brown, is to leave the social rights of the citizens just where it finds them, and to prohibit the repeal of existing laws on the subject. He believed it to be "one

of the wisest provisions in the constitution, as it excludes from the halls of the Legislature a question which was likely to produce more unprofitable agitation, wrangling, and contention, than any other subject within the whole range of their authority." The section of the code prohibiting intermarriages between the races, he said, "is neither inconsistent with, nor is it repealed by, the section of the Constitution now under consideration. It therefore stands upon the statute-book of the State forever prohibiting all such marriages, and declaring them to be null and void."

On the general policy of the law interdicting marriages between blacks and whites, Judge Brown said: "For myself, I do not hesitate to say that it is dictated by wise statesmanship, and has a broad and solid foundation in enlightened policy, sustained by sound reason and common-sense. The amalgamation of the races is not only unnatural, but is always productive of deplorable results. Our daily observation shows us that the offspring of these unnatural connections are generally sickly and effeminate, and that they are inferior in physical development and strength to the full blood of either race. It is sometimes urged that such marriages should be encouraged for the purpose of elevating the inferior race. The reply is, that such connections never elevate the inferior race to the position of the superior, but they bring down the superior to that of the inferior. They are productive of evil and evil only, without any corresponding good."

With regard to the state of society in Georgia during the year, and the alleged outrages and political assassinations within its limits, it is difficult to arrive at the actual facts in consequence of the conflicting statements which have been made and the absence of well authenticated instances. Outrages and disorders have been continually alleged by those who desired to have further congressional action for the reconstruction of the State, and as persistently denied by those who were opposed to this movement. At all events they formed a considerable part of the ground on which Governor Bullock urged the reopening of the subject by the Federal Government, and on which the Forty-first Congress based its measures for the "completion of reconstruction."

The following letter was addressed to the President by a well-known Northern Senator:

NATICK, MASS., *May* 14, 1869.

DEAR SIR: Can nothing be done to stop the outrages in Georgia? These political murders should cease. Nothing animated the people more in the canvass than the idea that the rebel outrages should be stopped. They were checked much by your election; still they go on, and many of our best friends say that we do nothing to stop them, and that we rather say nothing about them. I fear that unless something is done many of our most devoted friends will grow dissatisfied. Cannot a proclamation in regard to Georgia be issued? Cannot these criminals be caught by the army and punished? I am sure something should be attempted. Martial law is this day needed in that, the worst of all the States, for the security of the friends of the country.

Yours truly,

HENRY WILSON.

This letter was referred to General Sherman, and by him sent to General Terry, at that time commanding the Department of the South, for a "thorough investigation and report." After making the necessary investigations, General Terry submitted a report to the Lieutenant-General on the 14th of August. He had, he stated, "reluctantly come to the conclusion that the situation here demands the interposition of the national Government, in order that life and property may be protected, the freedom of speech and political action secured, and the rights and liberties of freedmen maintained." This opinion, he said, was based upon complaints made to him, "reports of officers detached to investigate the alleged outrages, and upon the statements of many persons of respectability and high position from different parts of the State." The following paragraphs contain the substance of his statements on the subject, but no instances are given of the outrages and abuses alleged:

In many parts of the State there is practically no government; the worst of crimes are committed, and no attempt is made to punish those who commit them. Murders have been and are frequent, and the abuse in various ways of blacks is too common to excite notice. There can be no doubt of the existence of numerous insurrectionary organizations known as the "Ku-klux Klans," who, shielded by their disguise, by the secrecy of their movements, and by the terror which they inspire, perpetrate crimes with impunity. There is a great reason to believe that in some cases local magistrates are in sympathy with members of these organizations. In many places they are overawed by them, and dare not attempt to punish them. To punish such offenders by civil proceedings would be a difficult task, even were magistrates in all cases disposed, and had they courage to do their duty, for the same influences which govern them equally affect juries and witnesses. * * * That very many of the crimes which have been committed have no political bearing, I believe; that some of them were prompted by political animosity, and that most of the numerous outrages upon freedmen result from hostility to the race, induced by their enfranchisement, I think cannot be controverted.

The same difficulties which beset the prosecution of criminals are encountered by the negroes, who seek redress for civil injuries in local courts. Magistrates dare not do their duty toward them, and instances are not wanting where it has even been beyond the power of a magistrate to protect a negro plaintiff from violence in his own presence, while engaged in the trial of his case.

After stating that the majority of the people did not approve of these proceedings, and that the Governor and judges of the Superior Courts were ready to do all that came within their power to secure good order and the thorough execution of the laws, the general gave his views regarding the remedy to be adopted in the following terms:

In conclusion, I desire to express my conviction that the only way to restore good order in the State is to resume military control over it for the time being, and ultimately to provide by law that the Legislature shall reassemble as a provisional Legislature,

from which all ineligible persons shall be excluded, and to which all eligible persons elected to it, whether white or black, shall be admitted. Such Legislature would, I believe, enact such laws and invest their executive with such powers as would enable him to keep the peace, protect life and property, and punish crime. The process of resuming military control would, it appears to me, be a very simple one. All that would be required is an order from the President countermanding General Orders No. 55, Adjutant-General's office, July 28, 1868, and orders No. 103, headquarters Third Military District, July 22, 1868, and assigning an officer to the command of the district, excepting the States of Florida and Alabama. This action I respectfully recommend.

General Halleck, commanding the Division of the South, indorsed General Terry's views, and recommended that "the matter be left for the action of Congress."

A short time before the assembling of Congress in December, Governor Bullock issued a proclamation, setting forth what he termed "the recent renewal of active hostilities against the persons and property of colored citizens, and white Republicans, by organized bands of secret assassins," and offering large rewards for certain alleged offenders; and as soon as that body was in session he was again in Washington urging the further reconstruction of the State. He appeared before the Judiciary Committee of the Senate, where he urged the same reasons for a renewal of this process which he had used before the Reconstruction Committee of the House at the previous session. Here, again, he found his old antagonist, Hon. Nelson Tift, who strongly opposed the plan presented by the Governor, and reflected very severely on the entire course of that official, not only in this matter, but in the administration of affairs in the State. He claimed that the fifteenth amendment would have been ratified, if Bullock had not advised members of his own party to vote against it, and that the colored members of the Legislature would have been reseated after the decision of the Supreme Court, if he had not refused to call the Assembly together. The passage of an act to complete the reconstruction of the State had, however, been recommended by President Grant, in his message at the opening of the session, and a bill was very soon introduced in the Senate to effect this object, and, after an animated discussion in both Houses, became a law on the 22d of December. The following is the full text of the act:

AN ACT TO PROMOTE THE RECONSTRUCTION OF THE STATE OF GEORGIA:

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That the Governor of the State of Georgia be, and hereby is, authorized and directed forthwith, by a proclamation, to summon all persons elected to the General Assembly of said State as appears by the proclamation of George G. Meade, the general commanding the military district including the State of Georgia, dated June 25, 1868, to appear, on some day certain to be named in said proclamation, at Atlanta, in said State, and thereupon, the said General Assembly of said State shall proceed to perfect its organization, in conformity with the Constitution and laws of the United States, according to the provisions of this act.

SEC. 2. *And be it further enacted*, That when the members so elected to said Senate and House of Representatives shall be convened as aforesaid, each and every member, and each and every person claiming to be elected as a member of said Senate or House of Representatives, shall, in addition to taking the oath or oaths required by the constitution of Georgia, also take and subscribe, and file in the office of the Secretary of State of the State of Georgia, one of the following oaths or affirmations, namely:

"I do solemnly swear (or affirm, as the case may be) that I have never held the office or exercised the duties of a Senator or Representative in Congress, nor been a member of the Legislature of any State of the United States, nor held any civil office created by law, for the administering of any general law of a State, or for the administration of justice in any State, or under the laws of the United States, nor held any office in the military or naval service of the United States, and thereafter engaged in insurrection or rebellion against the United States, or gave aid or comfort to its enemies, or rendered, except in consequence of direct physical force, any support or aid to any insurrection or rebellion against the United States, nor held any office under or given any support to any government of any kind, organized or acting in hostility to the United States, or levying war against the United States, so help me God; or on the pains or penalties of perjury, as the case may be; or the following oath or affirmation, namely: I do solemnly swear (or affirm, as the case may be) that I have been relieved by an act of the Congress of the United States from disability as provided for by section 3d of the fourteenth amendment of the Constitution of the United States, so help me God; or on the pains or penalties of perjury, as the case may be;" which oath or affirmation, when so filed, shall be entered on record by the Secretary of State of the State of Georgia, and said oath or affirmations, or a copy of the record thereof, duly certified by said Secretary of State, shall be evidence in all courts and places, and every person, claiming to be elected, who shall refuse, or decline, or neglect, or be unable to take one of said oaths or affirmations above provided, shall not be admitted to a seat in said Senate or House of Representatives, or to a participation in the proceedings thereof, but shall be deemed ineligible to such seats.

SEC. 3. *And be it further enacted*, That if any person, claiming to be elected to said Senate or House of Representatives as aforesaid, shall falsely take either of said oaths or affirmations, as above provided, he shall be deemed guilty of perjury, and shall suffer the pains and penalties thereof, and may be tried, convicted, and punished therefor, by the Circuit Court of the United States for the District of Georgia in which district the crime was committed, and the jurisdiction of the said court shall be sole and exclusive for the purpose aforesaid.

SEC. 4. *And be it further enacted*, That the persons elected as aforesaid, and entitled to compose the said Legislature, and who shall comply with the provisions of this act by taking one of the oaths or affirmations above prescribed, shall thereupon proceed, in said Senate and House of Representatives to which they have been elected respectively, to reorganize said Senate and House of Representatives respectively, by the election and qualification of the proper officers of each House.

SEC. 5. *And be it further enacted*, That if any person shall by force, violence, or fraud, wilfully hinder or interrupt any person or persons elected as aforesaid, from taking either of the oaths or affirmations prescribed by the act, or from participating in the proceedings of said Senate or House of Representatives after having taken one of said oaths or affirmations and otherwise complied with this act, he shall be deemed guilty of a felony, and may be tried, con-

victed, and punished therefor, by the Circuit or District Court of the United States for the District of Georgia, in which district said offence shall be committed, and shall be punished therefor by imprisonment at hard labor for not less than two nor more than ten years, in the discretion of the court, and the jurisdiction of said courts shall be sole and exclusive for the purpose aforesaid.

SEC. 6. *And be it further enacted*, That it is hereby declared that the exclusion of any person or persons elected as aforesaid, and being otherwise qualified, from participation in the proceedings of said Senate or House of Representatives, upon the ground of race, color, or previous condition of servitude, would be illegal and revolutionary, and is hereby prohibited.

SEC. 7. *And be it further enacted*, That, upon the application of the Governor of Georgia, the President of the United States shall employ such military or naval forces of the United States as may be necessary to enforce and execute the preceding provisions of this act.

SEC. 8. *And be it further enacted*, That the Legislature shall ratify the fifteenth amendment proposed, to the Constitution of the United States, before Senators and Representatives from Georgia are admitted to seats in Congress.

On the same day on which this measure received the approval of the President, Governor Bullock issued his proclamation at Atlanta, which, after reciting the action of Congress, continued as follows:

I hereby issue this, my proclamation, to summon all persons, elected to the General Assembly of the State of Georgia, as appears by the proclamation of George G. Meade, the general commanding the military district including the State of Georgia, dated June 25, 1868, who are qualified, to appear at Atlanta, in said State, on Monday, 10th day of January next, whereupon such of the said persons as are qualified to hold office, in accordance with the provisions of the act of Congress in such cases made and provided, will be organized in the Senate and House of Representatives respectively, as the Provisional Legislature of the State of Georgia, for the purpose of promoting the reconstruction of civil government in said State, in accordance with the laws of the United States.

RUFUS B. BULLOCK, Provisional Governor.

Two days later the following general order was issued at Washington:

General Orders, No. 83.

HEADQUARTERS OF THE ARMY,
ADJUTANT-GENERAL'S OFFICE,
WASHINGTON, *December* 24, 1869.

Brevet Major-General A. H. Terry, in addition to his duties as Department Commander of the South, is, by order of the President of the United States, appointed to exercise the duties of Commanding General of the District of Georgia, as defined by the act of Congress approved December 22, 1869.

By command of General SHERMAN.
E. D. TOWNSEND, Adjutant-General.

Thus the State of Georgia was found at the close of another year under the military authority of the United States, awaiting the assembling of the Legislature in January, 1870.

Aside from the sad confusion and embarrassment which have prevailed in her political affairs, Georgia has made very fair progress during the year. The negroes appear to have worked, on the whole, industriously, and to have been on cordial terms with their white employers. Preparations were made on a large scale for the production of cotton, and a fair crop was obtained. The following are some of the latest statistics connected with the wealth and resources of the State: number of acres of land, 30,616,025; aggregate value of lands, $87,117,616; value of town and city property, $38,473,905; amount of money and solvent debts of all kinds, $32,110,534; merchandise, $10,934,152. Capital invested in shipping, $208,650; capital in cotton manufactures, $1,461,753; iron-works, founderies, etc., $552,150; capital invested in mining, $126,689; aggregate value of all property in the State, $207,963,696. Several new railroads are in course of construction in the State, including the Macon and Brunswick, 185 miles in length; the South Georgia and Florida Road, from Albany to Thomasville, 55 miles; the Macon and Augusta, 125 miles; the Air Line Road from Atlanta to Anderson, in South Carolina, 120 miles; the Selma, Rome, and Dalton Road; and the Savannah, Griffin, and North Alabama. The Western and Atlantic Railroad, stretching from Atlanta in this State, to Chattanooga in Tennessee, is the property of the State, and yields an annual revenue of about $25,000. The State also owns 10,000 shares in the Atlantic and Gulf Railroad, which are worth about $350,000. No report of the financial affairs of the State, covering the year 1869, has been made.

GERMANY. No notable progress was made in the course of the year 1869 toward a satisfactory solution of the German nationality question and the establishment of German unity. In Baden the Government and the great majority of the legislature agree in desiring an entrance into the North-German Confederation, while Bavaria and Wurtemberg remain opposed to such a policy. The population of the North-German Confederation (according to the census of 1867) amounted to 29,906,092; of the South-German States (Bavaria, Baden, Wurtemberg, Hesse-Darmstadt) to 8,603,446, of Lichtenstein to 8,310. (As to the Germans of Austria, *see* AUSTRIA.)

The religious statistics of the North-German Confederation, in 1867, were as follows: Evangelicals, 21,314,000; Roman Catholics, 8,131,000; Greek Catholics, 2,500; Christian sects, 96,000; Jews, 350,000; all others, 5,200.

The North-German Parliament was opened on March 4th, by the King of Prussia. In the course of his speech he expressed his satisfaction that the prospect of peace had not proved illusory. After referring to various domestic subjects, he alluded to the friendly relations existing between the North-German Confederation and all the foreign powers, fresh evidence of which had been afforded by the peaceful solution of the late dispute between Turkey and Greece. The result of the Paris Conference had proved the estimation in which the European powers held the blessings of peace; and a nation which had shown itself willing and able to respect the independence

of others and protect its own was justified in trusting that peace would be maintained. Herr Simpson was again elected President, the Duke of Ujest first and Herr Benningsen second Vice-President. Several important measures were proposed by the "Bundesrath," or diplomatic committee, the members of which are the representatives of the different Governments composing the Confederation, while the Reichsrath consists of the deputies of the people, elected by universal suffrage and by ballot. It is a privilege of the Bundesrath to prepare each year beforehand the measures to be laid before the Diet for discussion, but the latter Assembly has also the right, according to the Constitution, to present to the Bundesrath for their approval such measures as it may judge opportune.

Count Bismarck was twice defeated in the Parliament in opposing liberal measures. Having, first, opposed as inopportune a motion in favor of freedom of speech in the several Diets of the Confederation, or the inviolability of members of the Diets, the motion was carried by 140 votes to 51. Another resolution, demanding the appointment of a responsible Federal ministry, for war, navy, finances, and commerce, was strenuously opposed by Count Bismarck, but it was adopted by 111 votes against 100.

The Parliament adopted the transfer (proposed by the Federal Chancellor) of the Prussian Ministry of Foreign Affairs to the Federal Budget, and the establishment of the Federal Supreme Court of Commerce at Leipsic. It passed also a Federal electoral law, and sanctioned the equality of all religious confessions before the law. The most important work of the session was the enactment of regulations concerning trade. All the demands for the Federal Budget were granted (among others a new credit for the establishment of the navy), but the Prussian deficit of more than ten millions was at once remanded to the Prussian Diet. The much-abused franking privilege was likewise limited.

Count Bismarck sides with his King in being averse to a reduction in the military establishment, as he considers that North Germany has no other guarantee against the designs of France and Austria. "England and America," he says, "are engaged in a family quarrel, and the opposition would not hear of an alliance with Russia. Under such circumstances North Germany, being left to herself, cannot diminish her military force. The French nation does not desire war, it is true, but it is of an inflammable temperament, and, should war break out, it would rush into it with a violence of which the disunited and phlegmatic German factions have no idea."

The Zollverein Parliament was opened on June 3, 1869, and closed its session on June 23. Its work is referred to in the following throne speech, by which the King of Prussia closed the session:

Honorable Gentlemen: By unremitting activity you have completed the discussion of the bills laid before you by the allied Governments. The commercial treaties with Switzerland and Japan have obtained your consent. The unanimity with which you gave it proves that you look upon these treaties—one of which is to facilitate neighborly relations of a manifold and daily traffic, while the other will procure a broader basis to our navigation and commerce in the distant East—as a further step in the developement of the Zollverein's international relations.

With equal harmony you have agreed to the Zollverein tariff and the bill respecting the customs boundary in the free port of Hamburg. Your amendments to both these bills have been accepted by the Zollverein Council. The allied Governments have been able, to their great satisfaction, fully to concur with you respecting not only the necessary reforms of the tariff of the Customs Union, but also as to the means of carrying out these reforms. I hope that the important organic law which is to take the place of that existing for the last thirty years will adapt itself satisfactorily and durably to the demands of the rapid and manifold developments of traffic and the financial interests of the Customs Union. The changes you have resolved upon with respect to the duty on sugar—an industry of the highest importance regarding the economical affairs of the Union—do not deviate from the views which prompted the allied Governments to lay the bill before you. Its result will be a moderation of the duty on the aggregate consumption, and at the same time an increase of revenue for the Union, covering part of a deficit caused by numerous repeals and reduction of duties during the last years.

The revision of the Customs Union tariff has, I regret to say, not been concluded. I do not give up the hope that, respecting the financial objects of the Union, the differences of opinion which have prevented the completion of this work will be adjusted in the course of time, and I discharge you, honorable gentlemen, with the desire and confidence that this year, too, your meeting may have contributed to strengthen the ties of common institutions connecting all German countries.

On the same day the King closed the session of the North-German Parliament by the following *résumé* of its resolutions and measures, as well as of the general policy of the Government:

Honorable Gentlemen: You have arrived at the close of a session full of activity, which will result favorably to the progress of the confederation and the welfare of North Germany. By passing the election bill you have finally settled the form of voting for representatives of the Reichsrath on the basis of the Constitution, and uniformly throughout the Bund.

The draft of the trade bill has been discussed by you with a carefulness corresponding to the importance and multifariousness of its contents. By the consent of the Bund Council to your resolutions and a mutual compromise on many particulars upon which opinions have differed, you have achieved a work which opens new paths to free motion of industrial activity, and common to all citizens of the confederation. Conformity in the army institutions of the North-German Bund and the Grand-duchy of Baden has allowed the ratification of a convention which, by granting the mutual right of change of abode, affords essential relief to the citizens of both states in the discharge of military duty. The postal treaties with Sweden, the Netherlands, Italy, the Papal dominions, and Roumania, which you have passed, are a valuable supplement to the improvements in international postal traffic in connection with the reforms of our own postage-rates. You have also consented to literary and consular conventions as supplements to the commercial treaties with Italy

and Switzerland. The bill respecting the attachment of wages has been assented to by the allied Governments in the form you have given it. The bill concerning legal trials is a decisive step toward fulfilling one of the constitutional tasks of the confederation; its complete solution is aimed at by the framing of a common civil and criminal statute.

By adopting as laws of the Confederation the German code of promissory bills and the commercial statute, as also establishing a supreme commercial tribunal, you have secured a uniform development of commercial law within the Bund. I greet the new supreme commercial tribunal as an expansion of our institutions and a new guarantee of the Bund's ability to found and develop the common institutes required for national objects, provided the faithful coöperation of the Governments among themselves and with the representatives of the people be sustained by mutual confidence.

The bill on the equality of creeds respecting citizens' communal and state rights accorded with the unanimous views of the Bund Council and met its assent. The changing the stamp duty on bills of exchange, as existing in the several states, into a confederate tax, completes uniform traffic by removing compound stamp duties on bills in circulation, and secures, as does the bill abrogating postal franking privileges, an increase of the revenue of the Bund. Both these laws, however, have also the effect of lessening the revenues of the several state Governments without leading to a proportionate reduction of their allotment toward the finances of the Bund. With regard to other measures proposed for this purpose by the allied Governments, there was, I regret to say, no agreement arrived at. It will now be the duty of these Governments, in order to cover the deficits caused by a previous reduction of taxes on traffic, to confine their expenditures, or provide other sources of revenue, within their legislative jurisdiction.

By assenting to the Confederate budget and increase of the navy loan you have secured for the coming year the means requisite to the Bund Government and given a financial guarantee that the projected enlargement of the navy will be carried out in the future.

The former legitimate increase of the revenues, the financial position of the state has not materially improved at present. You will observe, from the complete statement of the budget for the year 1868, which will be laid before you, that in consequence of unavoidable circumstances on the one hand the revenue has not reached its estimated amount, and that on the other hand the expenditure has exceeded the estimates, and that the latter could not be completely covered by the funds in hand. In the face of these results and of the position of this year's state budget, the endeavor of my Government has been directed to decrease the burdens of Prussia, incurred in consequence of her federal obligations, by an increase of the special revenues of the North-German Confederation. This endeavor has not been followed by the desired success. It has, therefore, been impossible in the estimates for next year, which will shortly be laid before you, to balance the revenue and expenditure, although the latter have been restricted, as far as possible, without affecting important interests of the country. My Government is, therefore, necessitated to resort to additional taxation, in order completely to recover the required expenditure. The restoration and preservation of order in financial affairs is absolutely necessary for the successful development of all the state institutions, and this cannot be delayed. The sacrifices demanded must not be eluded; the longer they are postponed the more oppressive they will be for the country. Convinced that you share these views, I rely confidently upon you not refusing your assent to the propositions of my Government. A bill will be laid before you to alter the legal mode of procedure in the assessment of the classified income tax, in order to secure a more satisfactory working of the existing law. A bill for the establishment of a new administration of the provincial districts throughout the six eastern provinces will largely affect the entire administration of the country. This new law does not merely alter the regulations which have hitherto existed, and which have frequently been pointed out as requiring improvement, a want acknowledged also by the Government. Together with the modification of the present district assemblies, the Government proposes to establish assemblies for the communal administration of provincial districts, which will not only serve to imbue the inhabitants with greater interest in the affairs of their district, but these assemblies will also be required to take upon themselves a part of such general business of the country as has hitherto been in the hands of the state. As soon as, in those districts of the eastern provinces which are the centres of their communal administration, the idea of self-government shall have been realized efficiently, then the extension of the same principle to the rest of the kingdom and its still further development in an ascending scale will follow as natural consequences.

In conformity with the wishes expressed during previous debates, my Government will lay before you the draft of a complete law upon the system of education—one which shall embrace every grade of instruction.

The important deliberations which commenced last session upon the reform of the laws on landed property, and the rights accruing therefrom, will be resumed.

My Government is engaged continually in extending the system of public roads and railways in the interest of the general traffic, and in accordance with the means at its disposal. The Government regrets, however, that it has been compelled to make retrenchments in this branch of the public service, in consequence of the insufficiency of the revenue. The Government is also devoting increasing attention to the development of agriculture. With this object, the concentration of small plots of land, in those parts of the country where this measure has only recently been introduced or facilitated by law, is making visible progress.

The unremitting endeavors of my Government for the maintenance and consolidation of peace, for guarding our relations with foreign powers from being disturbed in any way, have, with God's help, been crowned with success. I confidently trust that also in future the foreign policy which will be directed by me in the same spirit will be followed by the same good results, viz., the establishment of peaceful and friendly relations with all foreign governments, the development of traffic, and the maintenance of the authority and independence of Germany.

Gentlemen—I had lately the gratification of receiving in several provinces of my monarchy manifestations of loyalty and confidence which gave me much pleasure. In that spirit which dictated those manifestations I recognize a fresh security for the steady and hopeful prosperity of the Fatherland, and it will be my unceasing endeavor to promote the same in all directions to the best of my abilities.

Success greatly depends upon your cordial coöperation with my Government, and I rejoice to be able to express my confident hope, that, also during this session, this coöperation for the welfare of the country will not be found wanting.

One of the most important measures realized in North Germany, during 1869, was the completion of the first German naval station, the naval improvements of coast defences, to which the King refers at the conclusion of his speech as follows:

A few days ago I witnessed the—almost completed—works of the first German naval station, a monu-

ment testifying before Europe the energy and intelligence with which Germany has wrung, in a thirteen years' combat, from the refractory elements, this achievement of a great national object. In the lively and diligent sympathy with our maritime interests, which actuates the population of the North-German coast region, I have recognized, with joyous satisfaction, the expression of national feeling which, with increasing power, pervades all parts of the common Fatherland, and ripens the germs which we in common have laid in our Bund Constitution. I therefore confide willingly in the prospect that the allied Governments, in their endeavors to fortify and perfect our common institutions, may further find that encouragement which the Reichsrath has heretofore extended to them.

The harmonious action of the allied Governments and the people's representatives in the common labor for the welfare of Germany shall, in future as heretofore, with the aid of God, enhance the assurance with which Germany calculates upon the preservation and strengthening of its internal and external peace. With this confidence, gentlemen, I express the hope of greeting you again, next year, and even soon after its commencement, in this same place.

The imports into the Zollverein in the first half of 1869 compared, on the whole, favorably with the corresponding period of 1868, as the following *résumé* will show: Of the important articles the following quantities paid duty or were admitted duty free: raw cotton, 1,191,252 centners (compared with the preceding year, 2.9 per cent. less); twist, 163,327 cntnrs. (8 per cent. less); dye-woods, 339,784 cntnrs. (1.5 per cent. more); indigo, 21,796 cntnrs. (3 per cent. more); raisins, 1,488,429 cntnrs. (42 per cent. more); steel, 28,900 cntnrs. (18 per cent. more); coarse hardware, 140,717 cntnrs. (124 per cent. more); iron ore, 2,237,857 cntnrs. (48 per cent. more); flax and hemp, 519,379 cntnrs. (21 per cent. less); grain, 13,217,077 scheffels (43 per cent. less); green concave glass, 12,393 cntnrs. (169 per cent. more); raw hides, 314,682 cntnrs. (80 per cent. more); machines, principally of cast iron, 84,000 cntnrs. (33 per cent. more); do., chiefly of malleable iron, 17,023 cntnrs. (41 per cent. more); raw linen thread, machine spun, 81,266 cntnrs. (97 per cent. more); gray packing linen, 50,399 cntnrs. (11.7 per cent. more); unbleached linen, 28,789 cntnrs. (31 per cent. more); wine, 308,294 cntnrs. (49 per cent. more); dried fruit, 127,363 cntnrs. (54 per cent. more); 171,283 tons herrings (28 per cent. more); coffee, 808,501 cntnrs. (4.3 per cent. more); salt, 429,104 cntnrs. (13 per cent. less); raw tobacco, 296,910 cntnrs. (45 per cent. less); tea, 7,756 cntnrs. (12.4 per cent. more); olive-oil for machinery, 80,082 cntnrs. (63 per cent. more); linseed oil, 195,217 cntnrs. (69 per cent. more); tallow, 95,080 cntnrs. (28 per cent. more); raw silk, 15,967 cntnrs. (8.6. per cent. less); coal, 15,996,208 cntnrs. (7 per cent. more); turf, 224,365 cntnrs. (9¼ per cent. more); petroleum, 710,520 cntnrs. (2 per cent. more); horses, 21,748 (9.9 per cent. less); oxen, 45,307 (20 per cent. more); cows, 28,007 (9.9 per cent. more); pigs, 273,018 (29 per cent. more); raw wool, 363,729 cntnrs. (22 per cent. less); raw woollen yarn, 127,502 cntnrs. (4.6 per cent. less); woollen articles, 35,097 cntnrs. (21 per cent. more).

The North-German merchant navy consisted in 1869 of 5,110 ships, with a united tonnage of 1,299,984.17 tons, of which 146, with 102,-149.40 tons, are steamers. Of these, 3,272 with 642,805.79 tons (including 60 steamers with 9,659,190 tons), belong to Prussia; 440, with 89,585.04 tons (including 1 steamer of 210 tons), to Mecklenburg; 565, with 64,264.42 tons, to Oldenburg; 45, with 111,642 tons (including 21 steamers with 55,385 tons), to Lubeck; 483, with 255,456.60 tons (including 40 steamers with 39,513 tons), to Hamburg, and 305, with 236,230.50 tons (including 24 steamers with 47,228 tons), to Bremen.

The North-German North Sea merchant fleet consisted, in 1869, of 2,982 ships, with a total tonnage of 760,309.67 tons, including 75 steamers, with 87,871.52 tons, and the Baltic fleet as containing 2,128 vessels, with 539,674 tons, including 71 steamers, with 14,277.88 tons. These ships are classified as follows: coasters, under 30 tons, 331 Prussian, 2 belonging to Mecklenburg, 192 to Oldenburg, and 2 to Hamburg, together 527; from 30 to 100 tons, 1,056 Prussian, 17 belonging to Mecklenburg, 180 to Oldenburg, 11 to Hamburg, 20 to Bremen, together 1,284; of 100 tons and upward, 1,885 Prussian, 421 belonging to Mecklenburg, 193 to Oldenburg, 45 to Lubeck, 470 to Hamburg, 285 to Bremen, together 3,299 vessels. Of the 130 great North-German ships of more than 1,000 tons, 14 are Prussian, 37 belong to Hamburg, and 79 to Bremen.

According to a table compiled from official sources showing the telegraphic communication of the North-German Confederation, there were, at the end of December, 1868, 3,180 German miles of telegraphic lines in actual operation, 10,400 miles of telegraphic wires, and 993 telegraphic stations in the territory of the Confederation. Of these stations 237 were in charge of government telegraph-officers, 683 were combined with post-offices, and 73 were conducted by private persons. Besides these, there were 676 railway telegraph-stations in localities where there were no government stations. At the end of the year the number of telegraphic machines amounted to 2,058. In the government telegraph service there were 3,052 *employés* and 551 messengers and assistants. In the course of the year 4,304,600 telegraphic dispatches were sent in, and of these 3,544,650 were for the interior, 435,051 belonged to the Telegraph Union, and 324,909 were international. The number of dispatches which arrived was 4,343,757; 3,-883,235 were delivered, 3,893,081 telegraphed farther, and 1,049,083 transferred, so that the entire amount of all the dispatches which passed through the hands of the officials was 17,474,756. Out of this number about 432,000 were through-dispatches. The entire proceeds

for internal dispatches were 918,984 thlrs.; the share derived from dispatches partially forwarded by other companies, 319,080 thlrs.; for international dispatches 597,474 thlrs.; and for through-dispatches 183,086 thlrs.

The new arrangement that came into operation at the German telegraph offices in 1869 might be extended with advantage to other countries. Parts of telegrams, even single words, may now be registered, the Government undertaking to guarantee their correct transmission. Guaranteed words are underlined, and are simply charged a double rate. Hitherto the charge has been the full double price of the whole telegram. The money-order system between the large cities of North Germany and the United States was put in operation on February 1, 1869.

On May 30, 1869, a Protestant Congress was held at Worms, which included representatives from all the states of Germany. It resolved, by a unanimous vote, against the Pope's exhortation to return to the Roman Catholic Church, condemned the Encyclical Letter and Syllabus, and gave a declaration concluding in the following words: "Finally, we declare all efforts within the Protestant Church tending to establish hierarchical power of the clergy and an exclusive dominion of dogmas as a denial of the Protestant spirit, and stepping-stones only to Rome. Convinced that supineness and indifference on the part of many Protestants have furnished a main support to the reactionary Church party, and constitute also the principal impediment in the most powerful German state against national and church revivification, we admonish all our brethren in faith to be vigilant, and combine together in a strong bulwark against all tendencies menacing spiritual and conscientious freedom."

A "Social-democratic" Congress was held at Eisenach in August, 1869, consisting of 262 delegates from 193 places. It declared that political freedom is the indispensable preliminary condition for the social delivery of the working-classes; that the necessity of common and harmonious efforts suggests an organization of the socialistic-democratic party to work for, an equal, universal, and secret suffrage; the introduction of direct legislation by the people, the abolition of all privileges of classes, property, birth, and faith; the establishment of a national militia instead of standing armies, separation of church and state, full liberty of the press and of assemblage; free public instruction, abolition of all indirect taxes and introduction of a direct and progressive income tax.

A Teachers' Congress, in Berlin, in May, 1869, was very numerously attended, not less than 4,000 pedagogues from all parts of Germany having joined in it. Their discussions and resolutions were mainly directed toward the separation of the school from the church. Among the numberless institutions of learning there are now in Germany sixty-two industrial, eleven polytechnic, and nineteen special commercial schools.

The following cities of the confederacy have more than 50,000 inhabitants: Berlin, 703,000; Hamburg, 218,000; Breslau, 167,000; Dresden, 156,000; Cologne, 120,000; Konigsburg, 106,000; Magdeburg, 101,000; Leipsic, 92,000; Dantzic, 88,000; Frankfort-on-the-Main, 78,000; Hanover and Stettin, 74,000; Aix-la-Chapelle, 68,000; Bremen and Altona, 67,000 each; Barmen and Elberfeld, 65,000 each; Düsseldorf, 63,000; Chemnitz, 59,000; Crefeld, 54,000.

GOD, CHURCH OF. The Rev. E. H. Thomas, editor of the *Church Advocate*, Lancaster, Pa., the principal organ of this Church, gives the following summary of its condition in the year 1869:*

"The Church of God in North America has a membership of from 26,000 to 30,000; about 400 organized churches, 350 licensed ministers, ten Annual Elderships in full connection, and one in Texas, separated during the war, but waiting for reconstruction and reunion; one General Eldership composed of delegates from all the Annual Elderships, which meets every three years. It meets in May and June of next year in this city (Lancaster, Pennsylvania). We have one Church organ, the *Church Advocate*, and one Sunday-school paper, the *Sunday-school Gem*, both published in this city. We have as yet but one institution of learning, Centralia College, Kansas. In faith Armenian, in practice Baptist, but open communion; church government Presbyterian, with an itinerancy, without bishops or presiding elders. Our Elderships are located, three in Pennsylvania and Maryland (one German), two in Ohio, one in Michigan, one and part of another in Indiana, and one and a portion of another in Illinois, one in Iowa, and one in Texas."

The ninth triennial meeting of the General Eldership of the Church of God in North America was held in Lancaster City, Pa., on the 27th of May, 1869. Ministerial and lay delegates were in attendance from the following Elderships: East Pennsylvania, West Pennsylvania, East Ohio, West Ohio, Indiana, Southern Illinois and Indiana, Illinois, Iowa, Michigan, and the German. The charter of incorporation granted by the Pennsylvania Legislature was adopted. A favorable report was made of the mission at Chicago, where the work of establishing the Church has been progressing under difficulties, but with increasing success for five years. A permanent church organization has been obtained, and a church property of considerable value. Six or eight missions are also in successful operation in the East Pennsylvania Eldership, of which the Philadelphia mission is the most prosperous. Several missions have been opened on the Missouri River, and one is contemplated among the freedmen in the South. Increasing inter-

* In a report prepared for Schem's *American Ecclesiastical Almanac* for 1860.

est is taken in missions among the ministers and members, and the contributions for this purpose are larger in proportion to the numbers and resources of the denomination than ever before. But little progress has been made in educational enterprises. Plans prepared at the previous triennial meeting for the establishment of a central school have not, for prudential reasons, been carried into effect. A new appeal was made to the members for donations and bequests for the endowment of the proposed institution. Permission was given the German Eldership to extend its work throughout the United States, without confining itself to particular bounds. The *Church Advocate* at Lancaster, Pa., was adopted as the organ of the Church, and provision made for publishing the proceedings of the elderships in its columns, so that no pamphlet reports will be issued. The next session of the General Eldership will be held at Mt. Carroll, Ill., on the last Wednesday in May, 1872.

GOTTSCHALK, Louis Moreau, an American pianist and musical composer, born in New Orleans, La., May 8, 1829; died at Tijuca, a suburb of Rio Janeiro, Brazil, December 18, 1869. His fondness for music, and his precocious skill as a player, were remarkable. He gave his first concert when but seven years old. He was but twelve when his father sent him to Paris to complete his musical education. In April, 1845, he made his first appearance in that city as a pianist, after four years of close application under MM. Hallé and Bamaty to the mastery of the piano, and a very thorough course in harmony under M. Maleden. He continued his studies in the higher branches of musical composition till 1848, when he gave a series of public concerts in Paris, in which he achieved a great success. In 1849 he appeared through the season, in the principal towns of Switzerland; in 1850 and '51 he was again in Paris, and again won the highest praise, and his concerts were thronged. In 1852 he tested with equal success the extremely critical and not easily satisfied musical world of Spain. In 1853 he returned to the United States, where he was everywhere warmly welcomed. He had given numerous concerts in all our principal cities, and had also visited Mexico, the western coast of South America, and Australia. In June, 1869, after having spent considerable time at Buenos Ayres and Monte Video, he came to Rio Janeiro, where he was most cordially received. He showed the same generous and liberal nature there which had always distinguished him, responding freely to every call for his services for institutions of charity, and winning the love and esteem of all the members of the musical profession by his cordial and affectionate manners. After giving numerous concerts, he had arranged for a great musical festival of some weeks, which was to commence on the 24th of November. The first evening he was very successful, and the performance was the delight of the thousands who attended; on the second evening he fell to the floor unconscious, at the very beginning of the programme, and was only restored after he had been removed to his hotel. He lingered in great suffering for a little more than three weeks, and died, mourned by many thousands of the best citizens of Rio Janeiro. Mr. Gottschalk was as distinguished as a composer as he was as a pianist; indeed, his composition was of very much the same character as his playing, brilliant, ingenious, dashing, at times dreamy, and always gracefully adapted to the sentiment of the hour. Many of his compositions are well known and familiar to thousands of players. His "Banjo," "Night March," "Soldier Song," "Apotheosis," "The Bamboo," "The Plantain-Tree," "Savannah," "The Ossianic Dance," "The Harvest Girl," "The Night of the Tropics," "Young Harry's Chase," "Iota Aragonesa," "Manchega," "Portorella e Cavaliere," and his arrangement of "God save the Queen," are among those of his pieces which will live. His private life was very gentle and amiable, and, among the members of the notably irritable musical profession, few men have been so widely and greatly loved as he. He had received several foreign orders and decorations for his eminence as a pianist; among them the decoration of the Legion of Honor, and that of the order of Isabella the Catholic.

GOUGH, Field-Marshal Hugh, Viscount, K. S. P., G. C. B., G. C. S. I., a distinguished British soldier, commander-in-chief of the British Army in the Chinese and Sikh Wars, born in Limerick, Ireland, November 3, 1779; died in London, March 2, 1869. He entered the army in 1794, and in 1795 participated in the capture of the Dutch fleet, in Saldanha Bay, and the Dutch colony of the Cape of Good Hope. He next served in the West Indies; was present at the attack on Porto Rico, and at the capture of Surinam. In 1809 he went to the Peninsula and commanded the Eighty-seventh Infantry at the battles of Talavera, Barossa, Vittoria, and Nivelle, for which he received a cross. He also took an active part in the sieges of Cadiz and Tarifa, and was severely wounded in the head. It was his regiment that at the battle of Barossa captured the eagle of the Eighth French regiment, and at Vittoria he secured the baton of the French Marshal Jourdan. He was severely wounded a second time at Nivelle. In 1841–'42 he commanded the land forces in China, and for the gallant manner in which he made the attack on Canton he was made a G. C. B., and when the campaign was concluded he was knighted. He was next dispatched to India, where, on the 29th of December, 1843, with the right wing of the army of the Gwalior he defeated a Mahratta force at Maharajpore and captured fifty-six guns. In 1845–'46 he gained several important victories over the Sikh army, for which services he received the thanks of both Houses of Parliament and was raised to the peerage. He also conducted the campaigns of 1848–'49 against the Sikhs in their

last desperate struggle, finally subduing his determined enemy, but at a great sacrifice of life. His skill and success won for him additional rank in the peerage, while the East India Company granted him an annual pension of £2,000 a year. Parliament conferred a similar pension on him and his next two successors in the viscountcy. Lord Gough was colonel of the Royal Horse Guards, colonel-in-chief of the Sixtieth Royal Rifles, colonel of the London Irish Volunteer Rifles, a Knight of St. Patrick, of the Star of India, and of St. Charles of Spain, and a Privy Councillor.

GRAHAM, THOMAS, D. C. L., F. R. S., Master of the Mint, an English physicist and chemist, born at Glasgow December 21, 1805; died in London, September 17, 1869. He was educated at the Glasgow Grammar-School and Glasgow University, and afterward spent two years at Edinburgh, in the special study of chemistry. On his return to Glasgow in 1828, he established a laboratory there for the practical study of chemistry. He was very soon appointed lecturer to the Mechanics' Institute and Andersonian professor in the university. In 1837 he was called from this professorship to the chair of Chemistry in the London University, which he held with a constantly increasing reputation till 1855, when he succeeded Sir John Herschel, as Master of the Mint. Among the chemical discoveries for which he was honorably known, was that of the law of the diffusion of gases, for which the Royal Society of Edinburgh gave him the Keith prize in 1834. In 1862 the Royal Society, London, of which he had been a fellow since 1836, bestowed the Copley medal on him for his valuable speculations on the constitution of phosphates and other salts, and for the discovery of the diffusion of liquids, and the new method of separation by dialysis. Mr. Graham was recognized as one of the ablest chemists in Europe, and had received numerous honors at home and abroad for his attainments. The Academy of Sciences of the Institute of France elected him a corresponding member in 1848, and the University of Oxford conferred on him the honorary degree of D. C. L. in 1855. Of his somewhat numerous scientific treatises, his "Elements of Chemistry," a complete manual on the subject, is best known, and has been widely circulated in England, Germany, and the United States.

GREAT BRITAIN, or, THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND. Area, 120,879 English square miles. Population, according to the census of 1861, 29,321,288; estimated population in July, 1869, 30,621,431. Government, constitutional monarchy. Queen, Victoria I., born May 24, 1819; succeeded to the throne June 20, 1837; crowned June 28, 1838; married February 10, 1840, to Prince Albert of Saxe Coburg and Gotha, who, on his marriage, became Prince-Consort; widowed, December 14, 1861. Heir-apparent, Albert Edward, Prince of Wales, eldest son of Queen Victoria; born November 9, 1841; married, March 10, 1863, to the Princess Alexandra, eldest daughter of Christian IX., present King of Denmark. The actual administration of the affairs of the Government, except in some minor details, is confided to the Cabinet, which is of the same political character as the majority of the House of Commons for the time being. The present Cabinet, which was formed December 9, 1868, consists of the following members: Right Hon. William Ewart Gladstone, Premier and First Lord of the Treasury; Right Hon. Lord Hatherley, Lord High Chancellor; Right Hon. Earl de Grey and Ripon, Lord President of the Council; Right Hon. Earl of Kimberley, Lord Privy Seal; Right Hon. Robert Lowe, Chancellor of the Exchequer; Right Hon. Henry Austin Bruce, Secretary of State for the Home Department; Right Hon. Earl of Clarendon, Secretary of State for the Foreign Department; Right Hon. Earl Granville, Secretary of State for the Colonial Department; Right Hon. Edward Cardwell, Secretary of State for the War Department; his Grace the Duke of Argyll, Secretary of State for the Indian Department; Right Hon. Hugh Culling Eardley Childers, First Lord of the Admiralty; Right Hon. John Bright, President of the Board of Trade; Right Hon. Chichester Fortescue, Chief Secretary for Ireland; Right Hon. the Marquis of Hartington, Postmaster-General; Right Hon. G. Joachim Göschen, President of the Poor-law Board. Besides these members of the Cabinet (whose numbers vary in different administrations, the Commissioner of Works, Chief Secretary for Ireland, Postmaster-General, and the President of the Poor-law Board, being sometimes Cabinet officers, and at others not having a seat in it), there are from twenty to twenty-five other ministerial officers not belonging to the Cabinet, but usually in sympathy with it, and holding their appointments, with a single exception, from the Premier for the time being. The Commander-in-chief of the army is a cousin of the Queen, and his position is not affected by Cabinet changes, but the Chancellor of the Duchy of Lancaster, the Junior Lords of the Treasury and Admiralty, the Under Secretaries of the Departments, the Attorney and Solicitor General, the Judge-Advocate-General, and several other officers, are appointed by the Premier in power. The present ministry, which is the most decidedly Liberal one which has ever held the reins of government in the United Kingdom, came into power as a result of the election of November, 1868, which returned, under the new Reform law, so large a Liberal majority, that the Conservative ministry of Mr. Disraeli, which had appealed to the people in that election, finding themselves in a hopeless minority, threw up their places without notice, and without waiting, as was customary, for the assembling of Parliament. The questions on which that ministry had made shipwreck, and which the

new Cabinet were expected to meet in a very different way, were: the disendowment and disestablishment of the Irish Church; the disposition of the difficult and complicated Fenian question, and the subject of tenant rights; the claim of the Irish people to independent representation and legislation in regard to local matters; educational reform. It was not expected, of course, that all these questions could be settled in a single session of Parliament, but they were all pressing for a hearing, and must be disposed of in their order. The Disraeli Cabinet, though able and adroit, had failed to win the confidence and sympathy of the mass of intelligent English voters, and they looked to the new Cabinet of Mr. Gladstone to give a fair and legitimate expression to their views on these important questions. The engrossing subject of the Parliamentary session of 1869 was the Irish Church disendowment and disestablishment question. (*See* ANGLICAN CHURCHES.)

The only topic of special moment in its relation to the United States, which was discussed in the British Parliament, was the speech of Mr. Sumner, in the United States Senate, on the treaty negotiated by Mr. Reverdy Johnson in regard to the Alabama claims, and the subsequent rejection of that treaty by the Senate, with but a solitary vote in its favor. A gross misunderstanding of Mr. Sumner's position and statements (his speech was not published by any of the English papers) led to intense excitement both in Parliament and throughout the nation; but, as the rejection of the treaty precluded for the time any further negotiation, there was no action taken on the subject in Parliament. Later in the year, after Mr. Motley had been received as the minister from the United States, to succeed Mr. Reverdy Johnson, some correspondence on the subject of the Alabama claims took place between him and Lord Clarendon.

The *commercial condition* of the United Kingdom was much better than in previous years. The plentiful crops of 1868, the reduction in the price of most of the raw materials which were imported for manufacturing purposes, the better and more honest management of the Public Joint-Stock Companies, and the absence of any considerable causes of political disquietude, were among the causes of a higher degree of commercial prosperity. In 1869 the cereal crops were of average amount and good quality, and there were no grounds for apprehending the necessity of an extraordinary importation of breadstuffs, which always produces a depression in trade. The Fenian excitement was not as rife as in former years, and, for the first time in the last twenty years, there was a material reduction in the numbers and estimates for the army.

The railway system of the United Kingdom has been very largely developed. There are 66 railways in the kingdom, having an aggregate length in October, 1869, of 13,569 miles. The traffic receipts for the *week* ending October 31, 1869, was £813,696 = $4,068,480 gold, and, as this was about an average week of the traffic, it would indicate an average yearly business of about $210,000,000. Of these 66 railways, 14 have an extent of 9,895 miles, and an annual income of $176,826,000 gold. The following table gives some particulars in regard to the great roads of the kingdom up to July, 1869:

NAME OF RAILWAY.	Miles open.	Amount of Capital expended.	Average cost per mile.	Semi-Annual Dividend, July, 1869.	Terminus.
Great Eastern	746	£29,472,020	£39,507	5s. p. ct.	Bishopsgate.
Great Northern	487	21,321,860	43,782	2½ p. ct.	King's Cross.
Great Western	1,886	49,822,154	35,928	£1 p. ct.	Paddington.
London and Northwestern	1,446.5	57,950,200	40,076	2½ p. ct.	Euston Square.
London, Brighton, and South Coast	386.5	17,609,894	47,853	nil.	London Bridge.
London and Southwestern	521	17,233,241	33,173	2 p. ct.	Waterloo.
London, Chatham, and Dover	136.75	17,828,311	129,191	nil.	London Bridge.
Metropolitan, including Metropolitan District and St. John's Wood	12.5	10,511,478	{898,636 906,188 342,364}	2 p. ct.	Moorgate street.
Midland	793	34,799,940	44,051	2½ p. ct.	King's Cross.
North London	12	3,308,417	275,701	3½ p. ct.	Broad and Fenchurch Streets.
Southeastern	346	20,170,783	58,297	1½ p. ct.	London Bridge.
Total.....miles....	6,263.25	£280,078,298			

Thus, less than half the length of railway of the United Kingdom, 6,263¼ miles, cost £280,078,298 = $1,400,391,490; while 48,860 miles of railway in the United States, including the enormously expensive Pacific roads, cost $2,212,412,719, or about one-third more for nearly eight times the length.

Statistics for 1868–'69.—The Reform Act of 1868 materially increased the number of electors. The registration for the election of November, 1868, furnished the data for the following table of electors in England and Wales:

	Electors in 1868.	Electors in 1866.	Increase.
Boroughs	1,220,715	514,026	706,689
Counties	791,916	542,633	249,283
Total	2,012,631	1,056,659	955,972

Showing that the number of electors, or as we should say of voters, was nearly doubled. With this enlargement of the franchise, however, the registered voters are not quite one-tenth of the population, while in the United States the voters range from one-fifth to two-ninths of the population.

FINANCES. 1. *Revenue and Expenditure.*—The revenue actually collected for the year ending March 31, 1869, was £72,591,991 = $362,959,955, and the expenditure £75,497,816 = $377,489,080, leaving a deficiency of nearly $14,500,000 to be made up from the receipts of the next year. This deficiency was due mainly to the extraordinary expenses of the Abyssinian War in 1868. The new Chancellor of the Exchequer, Right Hon. Robert Lowe, proposed to adopt a new method of collecting the revenue, by a single payment made early in the year, instead of divided payments through the year as heretofore, and estimated that there would be a saving thereby of £3,350,000 = $16,750,000. The estimates of revenue and expenditure for the year ending March 31, 1870, were, revenue, £72,855,000 = $364,275,000, and expenditure £68,223,000 = $341,115,000. Of this estimated revenue £22,450,000 = $112,250,000 was expected from customs or duties on imports; £20,450,000 = $102,250,000, from excise, which includes distilled spirits, wines, beer and ale, alcohol, tobacco and snuff, tea, chicory, patent medicines, vinegar, race-horses, railway travel, and licenses from certain classes of dealers; from stamps, £9,350,000 = $46,750,000, under which are included nearly the same items as in our revenue laws; from assessed taxes, including armorial bearings, carriages, horses, and duties on horse-dealers, houses, and male-servants, £3,550,000 = $17,750,000; from income tax, £8,800,000 = $44,000,000. The income tax in England is laid under Schedule A, on the income from lands, tenements, and is 5d. in the pound, equal to 2.08 per cent. on the valuation; in Schedule B, on occupiers of farms, etc., 2½d. per cent. in the pound, equal to 1.04 per cent.; on the same classes in Scotland and Ireland, 1¼d. in the pound, or about 0.71 per cent.; under Schedules C and D, embracing incomes from other sources, 5d. per pound, equal to 2.8 per cent. Incomes under £100 = $500 gold, are exempt, and from incomes of £200 = $1,000, £60 = $300 is deducted. From crown lands, £375,000 = $1,875,000 was expected; from the post-office, £4,880,000 = $24,400,000; and from miscellaneous sources, £3,000,000 = $15,000,000. Of the expenditures £26,700,000 = $133,500,000, was for the interest and management of the national debt. £1,700,000 = $8,500,000 gold, for the *charges on the consolidated fund*, of which about £500,000 = $2,500,000 gold, was for the Queen's civil list, or her personal income and the support of the royal household, and for annuities and pensions to the Prince of Wales and other members of the royal family—this sum being independent of the Queen's private revenue as Duchess of Lancaster, which is about $145,000 more, and of the Prince of Wales's income as Duke of Cornwall, which is about $276,000 per annum.

The *Army* and *Navy* expenses are estimated at £24,227,000 = $121,135,000, an unusually small sum, the expenditure for these two departments in the year ending March 30, 1869, having been, including part of the cost of the Abyssinian expedition, £31,366,545 = $156,832,725.

The *collection of the revenue* was estimated to cost £4,976,000 = $24,880,000.

The *packet service*, £1,090,000 = $5,450,000, and *miscellaneous civil service estimates*, including the Churches of England, Scotland, and Ireland, Education, British Museum, etc., £9,530,000 = $47,650,000.

The *national debt* of the United Kingdom, the interest and management of which consumes about two-fifths of the gross income of the kingdom in any given year, amounted in 1869, including the terminable annuities as they stood that year, to £796,861,067=$3,984,305,335 in gold. The average share of each individual of the population in the national debt, in 1869, was £25 11s. 2d. = $127.79, and in the annual interest, 17s. 7d. = $4.39.

THE ARMY AND NAVY. 1. *Army.*—The total army force of the United Kingdom for the year 1869–'70 was 127,336 men, viz.: 7,578 commissioned officers; 13,398 non-commissioned officers, trumpeters, and drummers, and 106,490 rank and file. The staff and departmental officers numbered 875. The salary of the Field-Marshal, General-commanding-in-chief (the Duke of Cambridge) is £5,999=$30,000. (This is aside from his annuity of £12,000=$60,000 as Duke of Cambridge.) The pay of a general commanding an army is £3,458=$17,290; of a general not in the field, £2,075=$10,375; of a lieutenant-general, £1,383=$6,915; of a major-general, £691=$3,455; of a brigadier-general, £520=$2,600; of a colonel, £415=$2,075. As most of the general officers are also titular colonels of regiments, and draw pay for that office, though the duties are performed by a lieutenant-colonel, their pay is not so meagre as may be supposed. Most of those who have seen service have also some pension, annuity, or special allowance, and as all but members of the aristocratic families are practically excluded from the higher offices of the army, they have usually other sources of income aside from their military pay.

The British forces in India, for the year 1869–'70, amounted to 63,707, of whom 3,596 were commissioned officers, 5,299 non-commissioned officers, and 54,812 rank and file.

Aside from these two armies, there was provision made for four classes of reserve; the disembodied militia, whose number was stated to be 128,971; the yeomanry cavalry, 15,455; the volunteers, 199,306, of whom but 174,548 were reckoned efficient; and the army reserve,

including enrolled pensioners, the number of whom is not given. The allowance for army expenses, £14,230,400 = $71,152,000, for the year 1869–'70, was divided, as usual, into four classes: the expense of the regular forces, £7,885,700=$39,428,500; the pay and allowance of the four classes of reserves named above, £1,537,200 = $7,686,000; for effective services, the necessary stores, ammunition, military education, military surveys, etc., £2,624,700 = $13,128,500; and non-effective services, such as rewards for distinguished service, pay of general officers, retired, full, and half-pay pensions, etc., £2,182,800 = $10,914,000.

2. *Navy.*—The British navy, like the army, has a great burden of superannuated and retired officers borne on its pay-rolls, which adds largely to its cost, while contributing nothing to its efficiency. Thus there are three admirals of the fleet, all past service; twenty admirals, of whom only two are in commission; twenty-four vice-admirals, of whom only six are in commission; and forty-eight rear-admirals, of whom only six are in commission. The amount appropriated for this non-effective service was £1,516,525 = $7,582,625. One hundred and sixty ships of all sizes were in commission for foreign service, and 121 for coast-guard and duty on the home-stations, receiving-ships, tenders, tugs, etc.; and 349 were in reserve or building, very few of which could be put in commission without considerable delay, and many were nearly worthless. This fleet was manned by 33,644 sailors, officers, and men; 6,455 boys, and 6,988 marines; making a total naval complement of 47,097. The iron-clad fleet, in September, 1869, consisted of 29 steamships completed and in commission, and 14 in various stages of building, several of which have since been finished and put in commission. These 43 iron-clads will have cost, when completed, about £10,700,000 = $53,500,000. Several of them are very formidable vessels, the Monarch, one of the latest and costliest (her bills for construction exceeding $1,900,000), being, perhaps, the finest armored ship afloat. She is of iron throughout, carries seven guns, and is of 1,100 horse-power, and very fast.

The appropriation for the navy, for 1869–'70, was £9,996,641 = $49,983,205.

3. Income.—It is estimated that three per cent., or, in round numbers, about one million of the population of the United Kingdom, belong to the landholder or aristocratic class, including the families of the 350,000 landholders; about 20 per cent., or 6,000,000, to the middle class, traders, and brain-workers, and 77 per cent., or 23,000,000, to the lower class, or manual laborers. The total annual income of the population is estimated at £600,000,000 = $3,000,000,000, of which £350,000,000 = $1,750,000,000 belongs to the upper and middle classes, that is, to 7,000,000 of the population, and £250,000,000=$1,250,000,000, to the manual-labor class, or 23,000,000 of the population, the ratio being $54.35 per head to the latter and $250 to the former class. The income of the manual-labor class is not, with very rare exceptions, made the subject of direct taxation. The income-tax is collected from the upper and middle classes, almost exclusively, and mainly from less than three millions of these. The amount of income-tax, in the year 1868–'69, was £8,618,000 = $43,090,000, of which about one-third was from property in lands, tenements, and hereditaments: one-twentieth from leaseholders, one-tenth from profits arising from annuities, dividends, and shares of annuities, payable out of the public revenue (analogous to our income-tax on the dividends of United States bonds), eleven twenty-fifths from profits arising from any profession, trade, or employment, and one-sixteenth from salaries, stipends, or annuities, payable out of the public revenue.

4. Commerce and Industry.—The total amount of imports into the United Kingdom, for the year ending January 1, 1869, was £294,693,608 = $1,473,468,040. The total exports were £227,778,454 = $1,138,892,270. Of the imports, £227,700,061=$1,128,500,305, were from foreign countries; and of these £43,062,373 = $215,311,855 were from the United States. There were from the British possessions (colonies), £66,993,547 = $334,967,735. Of the exports, £174,060,626 = $870,303,130, were to foreign countries, of which £23,801,851=$119,009,255, were to the United States. The exports to the British possessions were £53,717,828=$268,589,140.

Of the imports, £130,906,116, or more than three-sevenths were composed of five articles, raw cotton, grain, wool, tea, and raw silk. Of cotton, the total value imported was £55,198,522 = $275,992,610, a decided falling off from 1866, when the cotton import was valued at about $390,000,000. The difference was due mainly to a reduction in the price of cotton. Of grain, the amount imported was, £39,420,290 = $197,101,450. Of wool, £15,114,805 = $75,574,025; of tea, £12,431,454 = $62,157,270, and of raw silk, £8,741,045 = $43,705,225.

The five principal articles of export made up £113,659,595 = $568,297,975, or almost exactly one-half the total exports of the year. These articles were cotton manufactures, £67,541,291 = $337,706,455; woollen and worsted manufactures, £19,525,645 = $97,628,225; iron and steel, £15,021,907 = $75,109,535; linen manufactures, £7,094,319=$35,471,595. The customs revenue is collected almost entirely from duties on the following articles of import, all the rest with very trifling exception being free: chiccory, cocoa, and chocolate, coffee, corn (or grain), dried fruits, including currants, figs, prunes, and raisins, rum, brandy, and other spirituous liquors, sugar, molasses, tea, tobacco and snuff, and wine. Nine-tenths of the whole revenue is collected from spirituous liquors, wine, tobacco, and sugar and molasses.

Shipping.—The number and tonnage of reg-

istered sailing-vessels engaged in the home trade for the year ending January 1, 1869, was 11,787, of a burden of 804,749 tons, and employing 39,448 men, exclusive of the masters. The number of steam-vessels in the home trade the same year was 729, of 153,265 tons' burden, and employing 9,755 men. The number of sailing-vessels, partly in the home and partly in the foreign trade, was 1,432, of 240,921 tons' burden, and employing 8,688 men; of steam-vessels in the same trade, 134, of 52,150 tons' burden, and employing 2,339 men. In the foreign trade exclusively, there were 7,306 sailing-vessels, measuring 3,646,150 tons, and employing 105,704 men, and 862 steam-vessels, measuring 619,199 tons, and employing 31,568 men; making a total of 22,250 vessels, of 5,516,434 tons' measurement, and employing 197,502 men.

The total entrances and clearances of shipping, British and foreign, at ports of the United Kingdom, in the year ending January 1, 1869, was of British vessels, 22,660,424 tons, and of foreign 11,020,555 tons, making a total of 33,680,979 tons; the British vessels being two to one to those of all other nations put together. The American tonnage entering British, or indeed any other foreign ports, is very small, less than one-third what it was before the war, thanks to the depredations of the Alabama, Shenandoah, etc. During the year 1868, 879 sailing-vessels and 232 steamers, with an aggregate tonnage of 379,573 tons, were built in the United Kingdom. The total number of vessels belonging to the United Kingdom, January 1, 1869, was 40,299; tonnage, 7,235,702, and they employed, including masters, 341,149 men.

Textile Industry.—The total import of cotton into the United Kingdom in 1868 was 3,660,127 bales, or 1,328,084,016 lbs. Of this, 915,120 bales, or 322,620,480 lbs., were exported. In the first six months of 1869, 1,581,953 bales were received, indicating an import for the year of about 3,100,000 bales, or about 550,000 bales less than the preceding year.

The import of wool in 1868 was 252,744,155 lbs., and the export 105,070,311 lbs., leaving 147,673,844 lbs. of imported wool for home consumption. To this is to be added the home product, the amount of which is not stated.

The imports of flax, hemp, and jute, during 1868, were very large in consequence of the partial failure of the flax crop in Ireland and Scotland in the preceding year. Over $21,000,000 worth of flax were imported between January and November, 1868, and very large quantities of Manila, Russian, and East-India hemp and jute. Yet neither the woollen nor the linen manufacture yielded satisfactory returns to the manufacturers.

The imports of raw silk during the year 1868 were 6,837,362 lbs., the greater part being Chinese, Japanese, and Bengal silks; the Persian, Italian, and Brutia silk amounting, in all, to less than 400,000 lbs. The export of raw and thrown silk was 4,050,000 lbs. The prices were so high that nearly all the manufacturers and importers lost money. In 1869 the importation was still heavier, but with a somewhat better market.

The number of persons employed in the several branches of textile industry in England and Wales, in 1868, was 673,334. Of these, 357,052 were employed in cotton manufactures; 101,938 in woollen; 128,410 in worsted; 39,956 in silk; 21,859 in flax; 1,330 in hemp; 1,760 in jute; 6,419 in hosiery; 3,187 in shoddy; 828 in horsehair; 19 in felt; 3,821 in elastic goods; and 6,755 in lace. In Scotland and Ireland, 184,630 persons are employed mainly in the manufacture of cotton, woollen, and linen goods. The totals for the United Kingdom in textile industries are, 6,417 factories; 41,516,484 spindles; 549,365 power-looms; horse-power, ———, steam, 337,851, and water, 29,830; total number of persons employed, 857,964.

Minerals and Metals.—The total production of minerals and metals in the United Kingdom, in the year 1868, was of the value of £43,525,524 = $217,627,620. The most important, both in quantity and value of these products, was coal, of which 103,141,157 tons were raised, of the value of £25,785,289 = $128,926,445. Next in value was pig-iron, of which 4,970,206 tons were smelted, valued at £12,381,280=$61,906,400. Of copper, 9,817 tons were produced, valued at £761,602 = $3,808,010, and 157,335 tons of copper ore were raised, valued at £642,103 = $3,210,515; of lead, 71,017 tons were produced, value £1,378,404 = $6,892,020, and 95,236 tons of lead ore were raised, value, £1,150,768 = $5,753,840; of tin ore, 13,953 tons were raised, value, £770,205 = $3,851,025, and 9,300 tons of metallic tin produced, valued at £901,400 = $4,507,000. Of silver, 835,543 ounces, value, £229,773=$1,148,865. Of salt, 1,513,840 tons were produced, valued at £927,227 = $4,636,135; of clays, fine and fire, 1,012,479 tons, of the value of £317,770 = $1,588,850.

Emigration.—The total number of emigrants from the ports of the United Kingdom in 1868, to all quarters, was 196,321. Of these, 155,532 came directly to the United States; 21,062 to British America (and the greater part very soon to the United States); and 12,809 to the Australian Colonies and New Zealand. Of these 196,321 emigrants, 58,268 were English, 14,954 Scotch, 64,961 Irish, and 51,956 foreigners, while the origin of 6,182 was not distinguished; 44,309 were married; 107,468 were single; adults, 38,416 were children under 12 years of age, and of these, 8,096 under one year. Of the adults, 94,765 were men, and 57,012 women. Of the men, 14,454 had trades; 7,258 were farmers, 50,515 were general or agricultural laborers, 7,171 were gentlemen, professional men, and merchants. Of the women, 8,592 were domestic servants. In 1869, the emigration was much larger, owing to the continued depression in many branches of business, and it is likely to increase still further for some

time to come. Just at the close of the year 1869, a meeting was held in London under the presidency of the Lord Mayor, for the purpose of devising ways and means for promoting and greatly enlarging the emigration to the United States and the British colonies. At this meeting, it was stated by Sir James Lawrence that there were hundreds of thousands of people who would be glad to avail themselves of help to emigrate to Canada, Australia, or the United States, on condition of afterward repaying the amount advanced to them. The Lord Mayor said that there were between 70,000 and 80,000 skilled artisans who could not at this time find employment in England, and added that he felt that the sending of skilled laborers out of the country was sending away the very best portion of the community, but there was no alternative, they must either remove them or starve them. The rate-payers are so heavily oppressed by the constantly-increasing poor rates, that they declare that unless relieved they must soon become paupers themselves.

Pauperism in the United Kingdom.—The increase of pauperism since 1866 has been alarming. There had been a period of great distress from the dearth of cotton, culminating in the winter of 1862–'63 (*see* ANNUAL CYCLOPÆDIA for 1863), but from that time until the autumn of 1866 there had been a fair amount of prosperity among the working-classes. The financial panic of that year, and the subsequent extreme fluctuations in the price of cotton, wool, silk, and other raw materials, have continued to exert a malign influence upon manufacturing, and the number not only of unskilled but of skilled laborers who are only kept from starvation by the aid received from the Poor-Law Unions is one of the most serious difficulties with which the statesman is called to grapple. When one-tenth of the entire population are in receipt of temporary or permanent relief from the constituted authorities, aside from the aid afforded by private charity, and when a very considerable proportion of this pauperized class are skilled workmen of various trades, there is ground for suspicion of wrong policy somewhere. In the year ending on Lady's Day (about the 20th or 25th of March), 1866, the entire number receiving *permanent* parish relief from the poor-law guardians in England and Wales was 920,844. Of these 149,820 were able-bodied paupers, and the remainder not able-bodied. In 1867 the number was 958,824, and the proportion about the same. In 1868 it had risen to 1,034,823, of whom 185,630 were able-bodied. In 1869 the number was 1,039,549, and 183,162 were able-bodied. But these numbers do not include vagrants, nor the so-called casual poor, to whom temporary relief is given. In this class (divided into indoor and out-door relief) are included the greater part of these unemployed workmen. A report laid before Parliament in June, 1869, gives the number of these for each year preceding that ending in March, 1868. For the year ending March, 1869, the returns were not received. For the year ending March, 1868, the number receiving in-door relief was 150,040; those in receipt of out-door relief, 842,600, giving a total of 992,640, and making with the other paupers of that year a grand total of 2,027,463 for England and Wales alone. The amount expended for the relief of these dependent classes alone, in that year, was £8,108,829=$40,544,145. That these figures, large as they are, have been materially increased in the nearly two years which have since elapsed is the concurrent testimony of all those who have had occasion to examine the condition of the poor in Great Britain.

In *Scotland* the latest return of paupers and dependants is to the 14th of May, 1868, and gives the total as 128,976, exclusive of the casual poor and vagrants, whose number is not given. If these bear the same proportion to the permanent paupers which they do in England, they should make the grand total about 222,000, and would make the ratio of the dependent poor to the whole population about one to fourteen.

In *Ireland* the returns are for the year ending February 20, 1869, but are obscure. We gather from them that in that year 288,953 were relieved in the work or almshouses, and 19,624 receiving out-door relief. Elsewhere they state that medical out-door relief was furnished, during the year, to 767,759 cases, or about one in every eight of the population. The vagrancy which is so common in Ireland seeks relief generally in begging, and hence the vagrants are not on the books of the poor-law unions to any thing like the extent that they are in England.

Statistics of Crime.—The number of persons committed for trial for felony in England and Wales, in 1868, was 20,091; of these 15,033 were convicted, and 5,015 acquitted. In convict prisons on the 1st of March, 1869, 6,920 male convicts, and about 1,300 female convicts. Aside from these there are a very large number arrested, tried, and convicted on summary process (in police courts, and before county or borough magistrates). These summary convictions amounted, in 1867, to 335,339, out of 474,665 persons proceeded against. There is no reason to suppose that the number was less in 1868. In 1867 there were 167,252 persons in prison on the 29th September, and 145,184 had been committed to prison during the year. There is but slight variation in these aggregates from year to year. There were on the 1st of January, 1869, 64 reformatory and industrial schools in Great Britain (exclusive of Ireland), and 6,248 children in them. The annual expense was £121,697=$608,485.

In *Scotland*, in 1868, there were 3,384 persons charged with criminal offences, of whom 2,822 were tried, 2,490 convicted, and 297 acquitted. This was exclusive of summary trials by police justices and burgh magistrates. How

many there were of these does not appear. The number of vagrants reported by the constabulary for the year ending March, 15, 1869, was 68,036. The number had increased 5,962 from the previous year, and 18,664 in two years.

In *Ireland*, in 1868, 4,127 persons were committed for trial, of whom 2,394 were convicted, and 1,709 acquitted. The summary trials are not reported.

The *police* force of England and Wales, which includes the metropolitan, city, and borough police, and the county constabulary, numbered in January, 1868, 26,073 persons, and its entire cost for the year preceding, was £1,920,508=$9,602,540. The police force in Scotland, in 1869, was 1,878. In June, 1869, the police force in Ireland, including an extra force of 137 men, for Cork city, was 12,994 men, and 380 horses. Its entire cost for the year preceding was £899,872=$4,499,360.

EDUCATION.—The grant for popular education in Great Britain, in 1869, was £840,711=$4,203,555, and in Ireland, £373,950=$1,869,750, making a total for the United Kingdom of $6,073,305 for a population of over 30,000,000. The number of schools receiving annual grants in Great Britain, September 1, 1868 (the latest report yet published), was 14,834, besides which 748 were simply inspected, making a total of 15,572 schools, an increase of 981 from the previous year. The number of certificated teachers was 13,387; of assistants 1,279; and of pupil teachers 13,187. The capacity of these schools for the accommodation of scholars was about 2,400,000, but the attendance at the time of inspection was 1,527,665; the average attendance was 1,241,780, or about five per cent. of the population. The maintenance of these elementary schools, in 1868, cost £1,552,542=$7,762,750, of which £484,010=$2,420,050 was from the government appropriation, and $5,342,660 from endowments, scholars' fees, and the funds of the National School Societies. These societies, numbering 194,745 members, paid, in 1868, for these elementary schools from their subscribed funds £492,941=$1,971,764, and in addition £144,547=$722,735 for building school-houses, and £28,540=$142,720 for the support of training-colleges. Besides these annual-grant schools, there are schools of an inferior grade not inspected, not taught by certificated teachers, and receiving no portion of the government grant, in which there are 1,017,632 scholars, and 321,768 scholars taught in week-day schools of a superior character, or, as we should say, the higher grade of private schools.

The expenditure for building school-houses for the year ending January 1, 1869, was £179,010 = $895,050, of which £34,463 = $172,315, was from public grants, and £144,547 = $722,735, subscribed privately or otherwise. Of this last sum, £131,333 = $656,665, was for Church-of-England schools. The character of the teaching and the standard of attainment in these elementary schools is very low, though improving, and better than in the schools not taught by certificated teachers. Dictation-exercises, reading, writing, and the elementary rules of arithmetic, are the usual range of studies, and even in these, a considerable proportion of the scholars (20.7 per cent., the inspectors say) cannot pass even the very low grade of examination instituted by the inspectors. The average wages of certificated masters, from all sources, were, in 1868, £91 6s. = $456.50 (about $38 per month), and this was an advance of $31 on 1866. Of certificated mistresses of the highest grade, the average salary was, in 1868, £56 2s. = $280.50, an increase of $5.50 on 1866. Of certificated mistresses of infant-schools, the average salary, in 1868, was £54 16s. = $274, an advance of $11.50 on 1866. Fifty-two per cent. of the teachers had, in addition, a house or lodgings (mostly in the country) rent-free.

The buildings for *Normal Schools* have cost £445,977 = $2,229,885, of which £308,010 = $1,540,050 was subscribed, and £137,967 = $689,835 granted by the Government. The expenditure for these for 1868 was £100,586 = $502,930. There were 2,286 resident students, 906 male, 1,380 female; and 1,245 non-residents, 457 males, and 788 females. Of the great endowed schools, the colleges and universities of the United Kingdom, a full account has been given in previous volumes of the ANNUAL CYCLOPÆDIA.

RELIGIOUS STATISTICS. — The Established Church in England (Protestant Episcopal) is governed by 2 archbishops, 26 bishops (24 of them in the House of Lords), 30 deans, 71 archdeacons, 610 rural deans, and about 18,000 clergy of all classes. The incomes of the two archbishops, £15,000 = $75,000, and £10,000 = $50,000, and of several of the bishops, are large, but many of the 13,000 benefices have but a small income. The whole annual income of the Established Church is, in round numbers, about £5,000,000 = $25,000,000. The church population is estimated at 12,500,000, and there are 5,500,000 church-sittings available for them. The Established Church in Ireland, which is to be disestablished in January, 1871, has about 700,000 members, 2 archbishops, 10 bishops, and about 1,700 clergy. There are also 45 colonial sees, with 2,106 clergy, and 6 missionary bishops.

The Roman Catholic Church has in England 1 archbishop and 12 bishops, 67 communities, 232 convents, and 20 colleges, 1,690 clergy, 1,329 churches, with about two million adherents; in Scotland, 1 archbishop and 2 bishops in *partibus infidelium;* in Ireland, 4 archbishops, 24 bishops, 1,391 clergy, and 4,490,583 adherents.

The Established Church of Scotland (Presbyterian) has 16 synods, 84 presbyteries, about 1,300 ministers, 1,250 churches, and 1,800 Sunday-schools, with 140,000 scholars. Its adherents number about 1,500,000. Its annual contributions for home and mission purposes are

about $700,000. The Free Church of Scotland (Presbyterian) is a voluntary church, a secession from the Establishment, and has 16 synods, 71 presbyteries, 880 ministers, 923 congregations, and about half a million adherents. It has 81,891 scholars in its Sunday-schools, and raised, in 1867, £367,527 = $1,842,635 for home and mission purposes. It has a sustentation-fund, from which is paid annually to its clergy an average sum of £140 = $700, by way of salary, and they have in addition, in a large proportion of the churches, manses or parsonages. The other Presbyterian bodies of the United Kingdom are: the United Presbyterian Church, extending over the whole kingdom, with 81 presbyteries, 593 churches, 575 ministers, and about 160,000 members, which raises £260,000 = $1,300,000 for benevolent purposes; the Presbyterian Church in Ireland, with 37 presbyteries, 598 ministers, 560 congregations, 123,000 members, 58,000 scholars in its Sunday-schools, and raising £84,000 = $420,000 for benevolent objects; the Presbyterian Church in England, with 7 presbyteries, 113 churches, 110 ministers, 20,000 communicants, and 15,500 Sunday-scholars; and six smaller bodies, with an aggregate of about 137 churches and 136 ministers.

Of the Dissenting communities, the Methodists, divided into the Wesleyan Body, the New Connection, the Primitive Methodists, the Bible Christians, and the Methodist Free Church, are the most numerous. They count, in all, about 618,000 communicants. The Wesleyan Body has 5,024 chapels, 2,215 ministers, 317,200 members, and 826,775 Sunday-scholars. The New Connection has 659 chapels, 259 circuit, and 1,274 local preachers, 38,095 members, and 75,416 Sunday-scholars. The Primitive Methodists have 3,360 chapels, 161,229 members, 943 itinerant and 14,169 local preachers, and 258,857 Sunday-scholars. The Bible Christians have 417 chapels, 65 itinerant and 957 local preachers, 26,221 members, and 22,000 Sunday-scholars. The Methodist Free Church has 817 chapels, 271 itinerant and 3,246 local preachers; 70,000 members, and 140,000 Sunday-scholars.

The Independents or Congregationalists have 78 associations, 3,300 churches, 2,876 ministers and missionaries, and about 340,000 members. The Welsh Calvinistic Methodists and the Countess of Huntingdon's Connection, who are also Congregationalists in doctrine, have 759 chapels, 700 ministers, 95,000 members, and 140,000 Sunday-scholars.

The Baptists, of whom there are several separate sects, have 2,447 churches, 2,000 ministers, 231,506 members, and 267,396 Sunday-scholars. They raise for benevolent and missionary purposes about $700,000 per annum.

The Unitarians have 277 ministers, 270 chapels, and about 80 missionary stations. The Jews have 80 synagogues, about 100 ministers, and 50,000 adherents. The Friends have 327 meeting-houses, 665 ministers, and 17,000 members. The Moravians, 88 churches, 55 ministers, 5,550 members, 3,220 communicants, and 6,200 Sunday-scholars. The New Jerusalem Church has 50 societies, with 3,724 registered members, 56 schools, and 9,384 Sunday-scholars. The Mormons have 82 churches. There are also numerous minor sects.

GREECE, a kingdom in Southeastern Europe. The present ruler is George I., "King of the Hellenes," born December 24, 1845, the third son of the King of Denmark, brother-in-law to the Prince of Wales and to the hereditary Grand-duke of Russia. Queen Olga is the daughter of the Grand-duke Constantine, a younger brother of the Emperor of Russia. The issue of the union are two sons, Prince Constantine, born at Athens, August 5, 1868; and George, born June 24, 1869. The King has thus far displayed no marked ability, but it must be admitted that he rules over a disorganized country, inhabited by a race which is rather turbulent and lawless, and that the country is laboring under financial mismanagement and the effects of yet novel institutions. He succeeded to the throne, after the overthrow of King Otho by a successful revolution, by virtue of a protocol signed by the protecting powers, June 5, 1863. He was declared to have arrived at his majority, June 27, 1863, by the Greek National Assembly; arrived at the Piræus on the 30th of October, and the next day assumed the crown. The legislative power, according to the Constitution of 1864, resides in a single Chamber of Deputies, who are elected for four years by direct vote, and are 170 in number. There are a supreme court (Areopagus), four courts of appeal, a court of claims, and sixteen district tribunals. The population of Greece proper is 1,096,810, that of the Ionian Islands, 251,172, making a total of 1,348,522. The population in the towns has been increasing. The Greek rite is the national religion, but the Latin rite is tolerated. On the main-land the Greek Church has four archbishops and four bishops, in Peloponnesus four archbishops and six bishops, in the Ægean Islands one archbishop and three bishops, and in the Ionian Islands five archbishops and bishops. The Latins have two archbishops and four bishops.

At the close of the year 1868, the Turkish Government had accepted the proposition of a European Conference which had been made by Prussia, France, and Russia, for the purpose of settling in a peaceable manner its conflict with Greece. Its consent had been given, however, on the condition that its ultimatum of December 11th should be the basis of the negotiations. The Conference was held in Paris, from January 9th to February 18th. In its first sitting it received the following note, presented by the Greek plenipotentiary, A. B. Rangabé:

I deeply regret to be unable to accept the invitation you honored me with, to assist at the sittings of the Conference with a consultative voice.

The object of the Conference being to deal with a

difference which has sprung up between Greece and Turkey, Greece cannot take part in it unless she assists at it on the same footing as the other party. She cannot accept a position of inferiority.

If one of the contending parties is called to sit in the Conference in virtue of her title of great power, Greece, without wishing to lay any stress upon that appreciation, cannot admit the doctrine that the great powers only have the right of having, in contests to which they are parties, a voice which is refused to their adversaries.

If it is because she signed the Treaty of Paris of 1856 that Turkey is admitted to the Conference, and that Greece is excluded from it, I am bound to observe that the special incident to which the Conference proposes to limit its work has no connection whatever with the stipulations of that treaty, which, being taken for the basis of the Conference, presents the serious inconvenience of making an unequal position for the two parties equally concerned, and which put forward mutual grievances.

Whether the Conference has in view an act of arbitration or a work of conciliation, in both cases Greece must take part in it only on the same footing as Turkey.

I have the honor to hand the present remonstrance to the members of the Conference, confiding in their feelings of equity. In case the Conference should not think proper to do justice to it, I am instructed to withdraw and to take no part in its deliberations.

In the ensuing note of Rangabé, explaining the motives of his refusal to assist at the Conference, he states the causes of the conflict, replies to the Turkish ultimatum, and offers conditionally certain measures of compromise on the part of his Government. The following is the text:

1. *Causes of the Conflict.*—The powers assembled in conference having decided that they would confine themselves to the consideration of the present difference only, without reference to its primary cause, it is evident that the sole immediate cause to which the rupture can be attributed is to be found in the very strong notes and the ultimatum recently addressed by the Ottoman Government to Greece. There has not been on the part of the latter any thing which could be considered as a provocation.

It cannot be said that the constant attitude of Greece toward Turkey during the last three years constitutes this provocation. This attitude is not a new fact which could properly justify a sudden resolution. It has been, moreover, on many occasions, on the part of the Greek minister, the subject of free explanations, the importance of which the Turkish Government appeared to understand and to be satisfied with. After all, to go back to this distant cause would be to overstep the limits fixed by the Conference, and Greece would then have the right to claim also an examination of the causes which led to her conduct, and to seek to justify the liveliness of her sympathies for the Cretans.

But it has been said, it is just because the grievances were old, that the cup was full of them, only one drop was required to make it run over: this drop was the insult given to the Turkish minister by the volunteers, who, on their way to Crete, passed under his windows, in full daylight, with their flag flying, the Greek Government being unable or unwilling to prevent them.

This fact, deplorable as it would have been, even supposing that its authors had only in view to brave or to compromise the government, was, nevertheless, of an order which, between governments careful of the peace of the world, was capable of arrangement by explanations or reparations demanded and received in a spirit of conciliation. But the incident did not take place; M. Delyannis, the Greek Minister of Foreign Affairs, in one of his answers to M. Photiades Bey, expressly told him so. This denial, which would have been impossible had it not been true, remained without a reply. Action was, therefore, taken at Constantinople with lamentable precipitancy, on information too lightly received and communicated. The rupture was provoked by an ultimatum which was not justified by any new or immediate cause.

2. *Ultimatum.*—Let us pass to the ultimatum itself; let us examine its conditions, to see how far they are practical or just, and to what point Greece owed it to herself to reject them, or could conform herself to them to serve the interests of peace. These conditions are five in number:

First Point.—That Greece shall assume the express obligation to conform herself for the future to existing treaties between herself and Turkey, and in general to international laws.

Second Point.—To punish, in conformity to the laws, those who have been guilty of attacks upon Ottoman soldiers or citizens, and to indemnify the victims of these crimes.

Third Point.—That the Cretan families should be allowed freely to embark to return to their homes, and that the Greek Government should effectually protect their reëntry into their own country.

Fourth Point.—That the ships the Enosis, the Crete, and the Panhellenium, be disarmed, or, at least, that the Greek ports be closed against them.

Fifth Point.—That the bands of volunteers now existing shall be broken up, and that the formation of new ones shall be prevented.

Having replied to each of these five points severally, Rangabé sums up as follows, and shows the willingness of Greece to accept an amicable arrangement:

But the Porte did not content herself to send to Greece an ultimatum so ill supported. It also accompanied it by violent measures, which have greatly aggravated the difficulties of the situation. One of her naval officers gave chase with hostile intentions, in the Greek Archipelago, to a merchant-ship with the Greek flag, menaced violent measures, and blocked up one of the ports of Greece. The Greek subjects have been requested to leave Turkey in a very short time, to the great injury of their material interests, and the Turkish ports have been shut up to the Greek ships, thereby inflicting on our trade an incalculable loss. Greece has not had recourse to reprisals. She deems it is a duty imposed upon her by justice and humanity to lessen as much as possible the disastrous effects of a conflict, and not to make innocents suffer by them. She has declared that the Ottoman subjects established on her territory would continue to enjoy the protection of her laws. In conformity with the decision of the legal advisers of the crown, a copy of which is hereby annexed, she recognizes that the Turkish rear-admiral was entitled to summon before the competent courts of justice the captain of the Enosis, of whose conduct he complains. Having shown such a spirit of moderation, Greece has the right to insist that, before resuming her ancient relations of friendship with Turkey, Turkey should authorize, on her own side, the indictment of the Turkish rear-admiral on the charges brought against him by the captain of the Enosis; that she should give reparation for the treatment she has inflicted on Greece; that she should indemnify Greece for all the great losses she has suffered from the measures ordered by the Porte. Lastly, that she should give real guarantees for henceforth behaving better toward the Greeks, and treating them on the same footing as the subjects of the other European nations.

To sum up these considerations, we shall say that Greece declines the responsibility of the immediate cause of the actual rupture, reserving to herself to come back to the oldest causes, should the question about them be raised. Of the five points of the ultimatum, the first two, as in the order enumerated in

this memoir, have no importance at all; that the third is admitted by Greece, entirely and without restriction; that the two others are repulsed by the principles of international law, as well as by the national legislation. Consequently, Greece could not submit to them without renouncing her rights, without treading upon the liberties of her citizens; lastly, without exposing herself to consequences that would be full of dangers to her as well as to other countries. The ultimatum ought to be entirely withdrawn, partly as unjust; Turkey ought to defer to competent courts of justice the conduct of the rear-admiral and grant to Greece reparation and indemnities determined by an equitable examination, and Turkey ought also to guarantee that, in the future, she would treat the Greek subjects on the same footing as the most favored nation. On its side the Greek Government would promise, in the most formal way: 1. To put no obstacle to the departure of the Candiotes willing to return to their native country, not to allow any authority nor any Greek subject to oppose such departure, and to severely punish all those who should attempt it. 2. Not to permit any officer, non-commissioned officer, soldier, or civil employé of the State to take up arms on behalf of the insurgents. 3. Not to permit that any ship belonging to the State, with full armament or otherwise, should convey ammunition and assistance to the Cretans. 4. To authorize the indictment of the captain of the Enosis upon a legal complaint of the Turkish rear-admiral.

After the Conference had closed its deliberations, Count Charles Walewski was sent as bearer of the protocol to Athens. The text of the protocol is as follows:

Justly concerned for the dangers which may result from the breach of relations between Turkey and Greece, the powers who signed the treaty of 1856 have come to an understanding to make up the quarrel which has arisen between the two states, and, with this view, have authorized their representatives at the court of his Majesty the Emperor of the French to meet in conference. After careful consideration of the documents exchanged between the two governments, the plenipotentiaries have agreed to regret that, yielding to impulses by which its patriotism has misled it, Greece has given ground for the complaints preferred by the Porte in her ultimatum addressed on December 11, 1868, to the Minister for Foreign Affairs of his Majesty the King of the Hellenes. It is, in fact, beyond doubt that the principles of the law of nations require of Greece, as of all other nations, not to permit the recruitment of bands on its territory, nor that ships should be armed in its ports, for the purpose of attacking a neighboring state. Persuaded, besides, that the Cabinet of Athens cannot misunderstand the thought which inspires this appreciation on the part of the protecting powers of Greece, as on that of the other powers who signed the Treaty of 1856, the Conference declares that it is incumbent on the Hellenic Government to observe for the future in its relations with Turkey the rules of conduct which are common to all governments, and thus to comply with the demands preferred by the Porte, as regards the past, by at the same time reassuring it for the future. Greece should, therefore, for the future abstain from favoring or tolerating the formation within its territory of all bands meant to act against Turkey, and should take the necessary measures to prevent the armament in its ports of vessels intended to aid, in whatever manner, any attempt at insurrection within the possessions of his Majesty the Sultan.

As regards the private damage incurred by Ottoman subjects, the Cabinet of Athens in no way contests the right of Turkey to recover judicially whatever compensation may be due, and Turkey, on its side, having accepted the jurisdiction of the Hellenic tribunals, the plenipotentiaries do not consider themselves called on to investigate crimes nor to discuss complaints preferred on this point. As to the demand of the Sublime Porte which concerns the return home of the Turkish subjects who have taken refuge on Greek territory, the Conference takes note of the declarations made by the Cabinet of Athens in its note of December 9th, and is convinced that it will, so far as depends upon it, facilitate the departure of such of the Cretan families as may wish to return to their country.

The Conference cannot doubt that, in presence of the unanimous expression of the opinion of the plenipotentiaries on the points submitted for their consideration, the Hellenic Government will at once reconcile its acts with the principles which have now been recalled to its recollection, and that the complaints expressed in the *ultimatum* of the Sublime Porte will be definitely removed.

This declaration will, without delay, be brought to the knowledge of the Cabinet of Athens, and the plenipotentiaries feel convinced that the Sublime Porte will abandon the measures announced by it as the result of the rupture of diplomatic relations.

The Greek ministry disapproved of this decision of the Conference, and gave in its resignation on February 2d. The King, however, was determined to yield, and accepted the resignation.

After several fruitless attempts to obtain a ministry sufficiently strong, yet willing to submit to the protocol of the Paris Conference, a new ministry was definitively constituted on February 6th, consisting of the following members: Zainis, President of Interior; Sontros, War; Avierino, Finance; Polialix, Justice; Sarava, Public Worship; Trigetos, Marine; Theodore Delyannis, Foreign Affairs (cousin of the former minister D.). The latter at once notified the Paris Conference, by the following dispatch, that Greece accepted the decision of the Conference:

ATHENS, *February* 6, 1869.

To the French Minister of Foreign Affairs:

SIR: My predecessor, M. Delyannis, has handed over to me the letter you were kind enough to write on the 20th of January, together with the accompanying declaration issued by the plenipotentiaries of the six great powers assembled in conference at Paris, with a view to examine, in a spirit of conciliation, the difficulty which has arisen between Greece and Turkey.

I cannot disguise the fact that the result of the deliberations of the Conference has been received by the whole Greek nation with sentiments of painful emotion; and as a ministerial crisis occurred, and lasted for many days, no reply could be made during this interval to the letter of your Excellency.

The ministry to which I have the honor to belong made it its duty, as soon as it was fully constituted, to take the contents of your letter, and of the declaration accompanying it, into serious consideration.

The King's Government has seen, with regret, that the minister of his Majesty at Paris could not take part in the labors of the Conference, by reason of the position of inferiority in which he was placed with reference to the Turkish plenipotentiary.

Looking at the unanimity displayed by the six chief European powers, and at your declaration that the plenipotentiaries, in dismissing all controversy as to facts, only wished to lay down the rules of conduct which ought to govern the relations of Greece and Turkey, I lose no time in informing you that the King's Government adheres to the general principles of international law laid down by the declaration of the Conference, and is prepared to regulate its attitude in conformity with those principles.

While praying your Excellency to bring this adhesion to the cognizance of the Conference, I entertain the hope that the six great powers, appreciating the difficulties of the situation, will do justice to the desire of Greece to defer to their wishes, and to contribute what in her lies to the maintenance of general tranquillity.

I take this opportunity to express my high esteem for your Excellency, and remain, etc.,

THEODORE P. DELYANNIS.

The new ministry also issued at once instructions to the military and naval officers, countermanding the orders for warlike preparations. A Greek *chargé d'affaires* arrived, March 20th, at Constantinople, to renew the diplomatic relations with Turkey.

The new Chambers, in June, were opened by the King. He announced that new laws would be required for the organization of the educational system of the country. He said that it was the intention of the nation to fulfil her monetary obligations; therefore, a further development of her resources was desirable, and, in that connection, proposed the cutting of a ship-canal through the Isthmus of Corinth.

The army is composed of 561 officers, 2,125 sub-officers, and 8,774 privates—total, 11,464; but has been raised to an effective force of 31,300, comprising 14,300 regular and 17,000 irregular troops. The exact strength of the navy is not certain. At the beginning of 1866 it was composed of one frigate, two corvettes, seven steamers, and twenty-six transports, carrying 114 guns.

The budget for 1868 was: Receipts, 46,666,404 drachmas, or $8,066,619.88; expenses, 46,745,000 drachmas, or $8,080,205.76, being $5.99 *per capita*. This is not a fair exhibit, however, since the deficiency for 1864 amounted to 6,000,000 drachmas, and that of 1865 to between four and five millions—that for 1867 not yet having been published. It is thus proper to infer a deficiency in last year's estimates. The amount of the public debt it is difficult to ascertain. The official account of 1865 made it $51,823,342.76, or $38.42 *per capita;* the report of the Minister of Finance, in 1866, made it $42,546,533.04, or $30.80 *per capita;* while the *Elois*, an Athenian journal, produces official evidence to show that it is actually $88,917,711.52, or 65.98 *per capita*.

GREEK CHURCH.* One of the most important events in the whole recent history of the Greek Church is undoubtedly a letter addressed by the Patriarch of Constantinople to the Archbishop of Canterbury, in reply to one written by the Archbishop to the Patriarch, forwarding a copy of the English Prayer Book. The Patriarch's letter is dated September 26 (i. e., October 8, N. S.), 1869, and was published in the Constantinople newspaper, *Neologos*, on October 11 (23d). The letter (as translated by the Rev. George Williams) reads as follows:

* For the latest statistics of the Greek Church, *see* AMERICAN ANNUAL CYCLOPÆDIA for 1868.

✠ Gregory, by the mercy of God Archbishop of Constantinople, the new Rome, and Œcumenical Patriarch, to the most holy Archbishop, the Metropolitan of Canterbury, and Exarch of the Christians of the Anglican Confession in Great Britain, the Lord Archibald Campbell: peace from God and brotherly salutation in Christ.

Having received, with the greatest joy, the highly-esteemed letter sent by your venerable Sanctity to our humility, we were moved to the inmost heart, as was meet, both at the thanks you so kindly expressed to us, for the fulfilment of what was at once a Christian and canonical duty, in sending our Protocyncellus to the consecration performed by the most beloved of God, the Bishop of Gibraltar, the Lord Charles Amyand, and also at the communication in a spirit of brotherly love of your desire and prayers, that there may be upon earth one elect flock and one Chief Shepherd—our Lord, uniting those that are divided, and guiding all, so that they may think and speak the same thing, and work together for the increase of His Kingdom.

We also night and day, praying our God and Saviour for these very things, do not cease, on every occasion, both to rejoice and, so far as we can, to coöperate readily in every good work and every good design, tending to the edification and perfection of our neighbor, and to the enlightenment and common agreement of all, and to the unity that is in Christ Jesus. Nor do we only pray for this; but we also expect and anticipate it from the common Father, and God the Saviour, and His Spirit; when many shall be taught, and the knowledge of the most ancient and unadulterated Orthodoxy shall be extended which the primitive and Catholic Church of Christ delivered to us, free from error, through the Apostolic heralds of God, and the God-bearing Father, and the seven venerable and God-moved Œcumenical Councils.

But, as to the burial of your countrymen, be it known to your much-desired Holiness, that even if we had not been expressly exhorted and requested by any of the venerable British bishops, we would of ourselves have granted every permission to bury English strangers deceased within our cemeteries, at the request of their relatives; well-knowing that "the earth is the Lord's, and the fulness thereof." This, then, we will much rather permit for the future, from consideration to your Holiness, beloved of Christ, and in recompense, as is meet, of the tribute of brotherly kindness, on the sole condition that no private right of property is in any case acquired in the ground in which they are buried.

Having very gratefully received the sacred Prayer Book of your Anglican Confession, presented to us by you, we have deferred an answer chiefly on this account, that having more leisurely perused this Ecclesiastical Book, we might more accurately ascertain how far it inclines to or diverges from genuine Evangelical and Catholic teaching; and how far it confirms that statement of the Preface (p. 7), that "it contains nothing contrary to the Word of God, and to sound doctrine."

In the mean time, having gladly received the Encyclical Epistle published by the Anglican bishops assembled two years since in England, to which is prefixed the commendatory letter of your ever-to-be-remembered Eminence, and perceiving from it that they distinctly confess and affirm, simply and in general, that they hold firmly and immovably the Holy Scriptures as the Word of God, and that they maintain the Creeds of one Holy and Apostolic Church, and keep pure and undefiled its ancient order and worship * * * and reject all novelty, and are endeavoring to publish abroad in all the earth the saving preaching of the Gospel—perceiving, we say, all this so distinctly and generally affirmed in words, we rejoiced greatly in our soul, suspecting the approach and dawn of the gathering together in one and the same fold of the Lord, and the union of all the spiritual sheep elsewhere.

But on descending to the particulars of the contents of the Prayer Book, and of the distinguished Confession of the Thirty-nine Articles contained in it—since in the perusal of them, both the statements concerning the eternal existence of the Holy Spirit, and those concerning the Divine Eucharist; and further, those concerning the number of the Sacraments, concerning Apostolical and Ecclesiastical tradition, the authority of the truly genuine Œcumenical Councils, the position and mutual relations of the Church on earth and that in heaven; and moreover the honor and reverence due from us to those who are, in theory and practice, the heroes of the faith—the adamantine martyrs and athletes—since we say, these statements appeared to us to savor too much of novelty; and that which is said (p. 592, Art. 19), "As the Churches of Jerusalem, Alexandria, and Antioch have erred, so also the Church of Rome hath erred, not only in their living and manner of ceremonies, but also in matters of faith," deprives the Eastern Churches of the orthodoxy and perfection of the faith—(let us be permitted to say that accusations of our neighbor are out of place in a distinguished Confession of Faith)—these statements throw us into suspense, so that we doubt what we are to judge of the rule of Anglican orthodoxy. We would therefore pray with our whole soul to the Author and Finisher of our salvation to enlighten the understanding of all with the light of His knowledge, and to make of all nations one speech of the one faith, and of the one love, and of the one hope of the Gospel; that with one mouth and one heart, as merciful children of one and the same Mother, the Church—the Catholic Church of the First-begotten—we may glorify the Triune God.

May His saving grace be with your Holiness, dearly beloved to us in Christ, and with all the God-beloved flock subject to you.

September 26, 1869.

The letter made a sensation both in England and in the East, and greatly strengthened the hopes of those who look forward to a final union of the Eastern and the Anglican Churches. A French newspaper of Constantinople, entitled *Le Phare du Bosphore*, edited by a member of the Orthodox Church, says: "At the time when Panslavism, represented by the Orthodox Cabinet of the North, is inciting the Bulgarians to rebel against the Œcumenical Church of Constantinople, and when the court of Rome is assembling the chiefs of the Catholic Church in order to strengthen, if possible, the tottering basis of the temporal power of the Popes, the union of the three—namely, the Œcumenical, the Armenian, and the Anglican Churches—is being prepared, without either pomp, demonstration, or noise. If political circumstances, and the troubles in which Orthodox Jesuitism—Panslavism—have thrown the Œcumenical Church, have a little delayed the smoothing of the path which leads to the triple union of these Churches, we can easily understand that for the future the three churches will do their best to attain their object. For our part we most earnestly wish for the success of this great end, and will never cease to further it as much as is within our power."

In November, 1869, another act of the Patriarch of Constantinople gladdened the hearts of the friends of the union movement. The Patriarch and synod of Constantinople addressed a letter to every bishop of the Patriarchate, directing each of them, in accordance with a request made by the Archbishop of Canterbury, to issue orders to the priests in the diocese to bury in the churchyard of their parish, whenever so desired, members of the English Church dying among them. The Patriarch in this letter directs that, when a priest of the English Church is present, then the cemetery shall be given up to him, and that, in the absence of any minister of the English Church, two priests of the Orthodox Church shall accompany the body of every member of the English Church. The Patriarch himself has selected from the long office for burial—because of its great length rarely or never read entire—such portions as are in conformity with the burial-office of the English Church.

The greatest trouble which the Greek Church has had during the present century proceeds from the Bulgarian question, which has of late obtained a political no less than an ecclesiastical importance; for a proper understanding, a brief history of the question is indispensable. After a long contest between the Bulgarians and the Greek Emperors, in the fifth century, Bogoris, one of their kings, established a peace with the Emperor of Constantinople, and accepted the Christian religion. His people followed his example, and the Bulgarian Church was placed under the supervision of the Greek Patriarch till fifty years later, when Simeon became King. He broke the treaty, marched against Constantinople and compelled the Emperor, Romanus, to concede the complete political and ecclesiastical independence of the Bulgarian Church. The power of the Bulgarians ended with Simeon. Overcome on the North by the Russians, and on the South by the Byzantines, they were again placed under the Greek Patriarchs, and did not regain the enjoyment of ecclesiastical independence till the latter part of the twelfth century. In 1393 their country was conquered by the Turks. For a while many of the Bulgarians became outwardly Mohammedans, but, as religious freedom increased, returned to their earlier faith, and the Bulgarian Church was made an appanage of that of Constantinople. Good feeling prevailed then between the Bulgarians and the Greeks, and the Sultan filled the Bulgarian sees with Greek prelates, who were acceptable to the people. As the Bulgarian nobility was exterminated and the people oppressed by wars which followed, there was, until the beginning of the present century, scarcely a single voice raised against the foreign Episcopate. But the national feeling began to assert itself about fifty years ago, and the Greek Patriarch was compelled to authorize several reforms. Abuses continued, however, and the national feeling increased, so that the Patriarch was obliged, in 1848, to approve the erection of a Bulgarian Church and of a school for the education of priests in the capital. The demand of the Bulgarians for the restoration of their

nationality, in 1856, again aroused the slumbering zeal of the Greeks, and the differences between the two nationalities have continued very active till the present time. The Porte in 1862 named a mixed commission to investigate and settle the difficulties. It proposed two plans of adjustment.

According to one of these plans, the Bulgarian Church was to name the bishops of those districts in which the Bulgarian population is in the majority. The other plan accorded to the Bulgarians the right to have a metropolitan in every province, and a bishop in every diocese where there is a strong Bulgarian population. Both plans were rejected, and the Turkish Government, having been to considerable pains for nothing, left the contentionists to settle the controversy in their own way. Accordingly, the Greek Patriarch, in 1869, proposed a general council, and solicited the different churches of the Greek confession for their opinions and advice on the subject. Greece, Roumania, and Servia, declared themselves in favor of the council. On the other hand, the Holy Synod of St. Petersburg, for the Russian Church, declared the claims of the Bulgarians to be excessive, and that, although it considered a council the only lawful means of settling the points at issue, it feared a schism if the demands of the Bulgarians were not contradicted, and was further afraid that the fulfilment of the demands of the canons would be refused, and advised the continuance of the *status quo*. The real questions, of which the settlement has been thus put off, are not ecclesiastical, but national. The Bulgarians, however, irresolute as they may have been in former times in ecclesiastical concerns, are now in earnest about them. They are not striving for any change in the creed, but for a complete separation from the jurisdiction of Constantinople. The dissension between the Bulgarian nation and the Patriarch of Constantinople has greatly favored the missionary efforts of the Roman Catholic priests among them. Several years ago the Pope appointed Mgr. Sokolski the first bishop of those Bulgarians who had entered the union with Rome, and who constituted the nucleus of a united Bulgarian Church, which, like the other united Oriental Churches, accepts the doctrines of the Roman Catholic Church, but is allowed to retain the ancient customs of the national Church (marriage of the priest, use of the Slavic language at divine service, etc.). Mgr. Sokolski was quite on a sudden carried off from Constantinople (as was commonly thought, by Russian agents), and has never been heard of again. In 1855 Raphael Popof was consecrated the successor of Sokolski. He resides at Adrianople, and under his administration the membership of the United Bulgarian Church increased (up to 1869) to over 9,000 souls, of whom 3,000 live in Constantinople, 2,000 in Salonichi and Monastir, 1,000 in Adrianople, and 3,000 in the vicinity of Adrianople. The clergy of this church consisted of ten secular priests.

Another difficulty arose in the Greek Church, in the course of the year 1869, in consequence of the excommunication of the new Patriarch Nilos of Alexandria by the Patriarch of Constantinople. The Patriarchs of Antioch and Jerusalem declared this measure to be entirely unjustified. The Holy Synod of the Kingdom of Greece sent the Archbishop of Phokis, one of the most learned bishops of the Church, as a special envoy to both parties, to prevent the excommunication, but his mission was unsuccessful.

According to a summary which was furnished to Prof. Seymour, of the General Theological Seminary at New York, by the Rev. Charles R. Hale, chaplain in the United States Navy, the hierarchy of all the Russias consisted in 1868 of four metropolitans—of Kiev and Galicia, Novgorod and St. Petersburg, Moscow and Kolomna, Lithuania and Vilna—twenty-one archbishops, thirty-two bishops, twenty-eight vicar-bishops, and sixteen bishops demissionary.

The Holy Governing Synod of all the Russias in that year was composed as follows: Arsenius, Metropolitan of Kiev and Galicia; Isidore, Metropolitan of Novgorod and St. Petersburg; Innocent, Metropolitan of Moscow and Kolomna; Joseph, Metropolitan of Lithuania and Vilna; Eusebius, Exarch of Georgia, Archbishop of Kartalenia and Cachetia; Eugene, Archbishop (Demissionary) of Jaroslav and Rostov; Basil, Archbishop (Demissionary) of Polotsk and Vitebsk; and the Archpriest Basil Bajanoff, chaplain to their Majesties, and Chaplain-General of the corps of Guards and Grenadiers. Besides, the Archbishops of Nijni Novgorod and Arsamas, and of Kharkov and Aktyr, and the Archpriest John Rojdestvarsky, the Ober-procurator and the Vice-procurator, are entitled Prisoutsvouustchie, and take part in the deliberations of the Holy Synod, but are not, strictly speaking, members of it.

The following statistics of the Russo-Greek Church were compiled by the Countess Olga Pontiatine for the year 1865: monasteries, 393; monks, 5,695; convents, 148; nuns, 3,069; churches, 34,909; chapels, 130; parochial clergy, 37,702; clerks and deacons, 76,587; hospitals, etc., at monasteries and churches, 550; schools at monasteries and churches, 19,437; *number of Orthodox*, 55,000,000; *number of converts:* Roman Catholics, 49,000; Armenians, 23; Protestants, 589; Rascolnicks, 1,407; Jews, 487; Mohammedans, 529; heathen, 2,189; *Edinovertzi*, 802. Total converts, 54,968. There are no correct statistics as to convents and nuns in the Crimea, Bessarabia, Ekaterinoslav, Volhynia, Tomsk, and the Exarchate of Georgia, nor concerning the churches and clergy in Volhynia and Tomsk. In 1866, 519 churches were erected.

The clergy of the Greek Orthodox Church of Russia are divided into three classes: the

black, or the clergy of the cloisters, to whom belong all the dignitaries, and by far the larger portion of the teachers in the clerical schools; the white, or secular clergy, the members of which form an hereditary caste and are obliged to marry, but on the death of the wife leave the clerical rank, or enter the cloister; and the servile clergy, likewise an hereditary rank, to whom belong the deacons, sacristans, choir-singers, and the church-scholars who have not been able to pass examination. All nominations are in the hands of the bishops, who, with their court-circle of monks, exercise an almost unlimited authority. It appears from the statistical reports that from 1841 to 1857 a total of 1,569 women and 4,147 men entered the Russian cloisters, of whom more than two-thirds were descendants of the clerical order, and only 88 noble. A prejudice prevails among the higher classes of Russian society against the Greek cloister-life; Russians of rank, who wish to become monks, frequently go abroad, become Roman Catholics, and generally enter the order of Jesuits. Since the emancipation of the serfs the peasants are also less inclined to enter the cloisters, but prefer to unite with the secret societies of monks of the sect of old believers. According to the Russian law, no one, who has not gone through the course of the seminaries, can go into a cloister before his thirtieth year. But favor is shown the sons of priests who cannot pass examination, and their novitiate, instead of three years, is allowed to endure from twelve to fifteen years. Thus every cloister has a number of indolent and stupid youth, whose time is divided between menial employments and idleness. Besides these people, there are connected with the cloisters those monks who have mastered the seminary course with honor, or have obtained learned degrees at the Academy, for the monastic clergy possess all the higher offices, and the directors of the clerical institutions take especial care to gain their most gifted pupils for the tonsure. The bishops are the overseers of the clerical institutions in their districts, and give the monastic clergy, to which they belong themselves, the preference. In this control by the monks of the educational institutions lies the guarantee of their continued increase. In it also is the foundation of the hostility between the "black" and the "white" clergy. This hostility forms the characteristic peculiarity of the Russian clergy, and the standing mark for the assaults of the reform press.

The Russian monks have been very richly recompensed by the Government for the confiscation of their lands and the curtailment of their prerogatives, and have received large rewards from the public for the exercise of clerical offices, so that the receipts of the most prominent monasteries amount to half a million silver rubles. The Alexander Newsky Monastery in St. Petersburg has been paid for burial-places within its walls from 1,500 to 3,000 rubles. The monasteries send out monks with registry-books, in which laymen subscribe certain sums of money for particular prayers. A monk of Athos collected in this manner 20,000 rubles. At the coronation of the present Czar there were 800 of these collectors in Moscow, and the Czar was obliged to restrain them. The Sergius Cloister at Moscow receives from the collector's books, which it has placed all along the railway from Moscow to St. Petersburg, 200,000 rubles annually. In time of epidemics, a holy image, which is taken to the sick by two, four, or six horses, according to rank or condition, has brought in 27,000 rubles. The monasteries have also the privilege of baking the sacramental wafers, from which a monastery at Kiev realizes about 50,000 rubles. There are no begging or barefooted monks in Russia, and the monasteries are richer than even in Roman Catholic countries. The so-called cloisters with particular lines are held in especial regard, in which only simple wants of the monks are cared for on the side of the cloister, and the surplus is divided among the members without taking account of it. The Episcopal houses, with their many monks, have monastic rights and privileges; among them, the incense and the catechism in each diocese are the monopoly of the bishop.

In contrast with this wealth, the poverty of the secular clergy is pitiable; the entire real property brings to nearly 190,000 priests not more than 86,000 rubles rent, the members receive from the state at most 300 rubles, and the rest of their support is drawn from fees, which in the large cities are not inconsiderable, but in the rural districts are exceedingly small. In some cases they may amount to from 4,000 to 5,000 rubles, but do not average more than from 150 to 200 rubles. An annual circuit, which the priest makes at Epiphany, at the head of his dependants, from house to house, is the chief source of revenue. But it frequently happens that the servant meets the priest in the hall, and offers him a gift, but forbids his blessing the house—which is the essential point. Not much more pleasurable is the duty laid upon the poor priests of seeing that each Russian partakes of the sacrament once in every year. They depend largely upon the communion-offerings for support.

The classical authors of Russian literature are forbidden in most of the seminaries, as are also the possession of newspapers, and a resort to the libraries, which had increased very much in the last ten years. Whence it comes that such scholars, who have completed the course of the clerical schools, and will not become priests, often cannot pass even the reception examination for the university, and that, although 5,000 graduates in theology have gone out from the clerical academies since 1859, not more than a dozen and a half of theological works have appeared. And the pupils, forbidden wholesome lectures, turn to the revolutionary and atheistical works of the

German and French communists. It is a fact that a large number of the turbulent spirits of Young Russia received their education in the ecclesiastical institutions.
